FOR CHOCOLATE COATINGS, CHOCOLATE CANDY, HOT CHOCOLATE POWDER, AND CHOCOLATE.
Claims use since about the beginning of the year 1928.

Reg. No. 284,865. Registered July 7, 1931. ANNA MYERS PURE FOOD, INC., Newark, N. J. Republished by Anna Myers Pure Foods, Inc., Garfield, N. J., a corporation of New Jersey.

Mrs. Anna Myers
MEXICAN
CHILLI RELISH

The words "Mexican Chilli Relish" are disclaimed apart from the mark as shown.
FOR PRESERVED PICKLES.
Claims use since Feb. 15, 1930.

Reg. No. 289,677. Registered Dec. 1, 1931. ORIENTAL SHOW-YOU COMPANY, INC., Columbia City, Ind., a corporation of Indiana. Republished by registrant.

The drawing is lined for the colors blue, red, and gold.
FOR CANNED FOODS—NAMELY, CHOP SUEY (WITH MEAT), VEGETABLE CHOP SUEY (WITHOUT MEAT), CHOW MEIN NOODLES, BEAN SPROUTS, MIXED VEGETABLES, BAMBOO SHOOTS, AND WATER CHESTNUTS.
Claims use since Mar. 1, 1925.

Reg. No. 301,356. Registered Feb. 28, 1933. FOREMOST DAIRY PRODUCTS INCORPORATED, Jacksonville, Fla. Republished by Foremost Dairies, Inc., Jacksonville, Fla., a corporation of Delaware.

FOREMOST

FOR ICE CREAM.
Claims use since Mar. 8, 1929.

Reg. No. 302,599. Registered Apr. 25, 1933. Foremost Dairy Products Inc., Jacksonville, Fla. Republished by Foremost Dairies, Inc. (1946), Jacksonville, Fla., a corporation of Delaware.

DIXIE DOODLE

The words "A Delicious Frozen Confection" and the words "Net Weight 2 Oz." are disclaimed apart from the mark as shown.

FOR ICE CREAM, SHERBETS, AND CUSTARD.

Claims use since Oct. 1, 1931.

Reg. No. 343,706. Registered Mar. 2, 1937. Rosenberg Brothers, Medford, Oreg. Republished by Harry and David, Medford, Oreg., a corporation of Oregon.

ROYAL RIVIERA

FOR FRESH PEARS.

Claims use since Aug. 14, 1936.

Reg. No. 347,007. Registered June 15, 1937. The Acme Flour Mills Co., Oklahoma City, Okla., a corporation of Kansas. Republished by registrant.

SPEED KING

FOR WHEAT FLOUR.

Claims use since July 1, 1936.

Reg. No. 349,723. Registered Aug. 31, 1937. Citrus Products, Inc., Olive, Calif. Republished by Motual Orange Distributors, Redlands, Calif., a corporation of California.

PAR GOLD

FOR CANNED CITRUS FRUIT JUICES FOR FOOD PURPOSES.

Claims use since Mar. 13, 1937.

Reg. No. 350,674. Registered Oct. 5, 1937. Rancho Sespe, Fillmore, Calif. Republished by Keith Spalding, trustee under the will of Eudora Hull Spalding, deceased, Pasadena, Calif.

Silver Stripe

FOR FRESH CITRUS FRUITS.

Claims use since January 1933.

Reg. No. 354,039. Registered Feb. 1, 1938. Cherry Growers Packing Company, Traverse City, Mich. Republished by Cherry Growers, Inc., Traverse City, Mich., a corporation of Michigan.

REDDI-MAID

FOR CANNED FRUITS, PARTICULARLY CHERRIES AND APPLES.

Claims use since Dec. 21, 1934.

Reg. No. 355,109. Registered Mar. 8, 1938. The Cudahy Packing Company, Chicago, Ill., a corporation of Maine. Republished by registrant.

WESTERN PRIZE

The word "Prize" is disclaimed apart from the mark as shown.

FOR DRESSED POULTRY.

Claims use since July 12, 1937.

Reg. No. 355,782. Registered Mar. 29, 1938. Hearsh Brothers, Los Angeles, Calif., a firm. Republished by registrant.

VITA-FUL

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, LEMONS, AND GRAPEFRUIT.

Claims use since Nov. 16, 1937.

Reg. No. 360,949. Registered Oct. 4, 1938. Foremost Dairies, Inc., Jacksonville, Fla. Republished by Foremost Dairies, Inc. (1946), Jacksonville, Fla., a corporation of Delaware.

FOREMOST ICE CREAM

The drawing is lined for the colors red and blue. The words "Ice Cream" and "Certified Formula" are disclaimed apart from the mark as shown.

FOR ICE CREAM.

Claims use since Apr. 1, 1037.

Reg. No. 366,886. Registered May 2, 1939. Lewis Terven, Salinas, Calif. Republished by Lewis A. Terven Company, Salinas, Calif., a corporation of California.

GOLD BRICK

FOR FRESH VEGETABLES.

Claims use since Oct. 11, 1938.

Reg. No. 377,349. Registered Apr. 30, 1940. California Olive Association, San Francisco, Calif., a corporation of California. Republished by registrant.

MEMBER OF CALIFORNIA OLIVE ASSN.

FOR CANNED OLIVES.

Claims use since Nov. 28, 1939.

Reg. No. 379,295. Registered July 9, 1940. Ramirez & Feraud Chili Co., Ventura, Calif., a firm. Republished by registrant.

The representation of a label is disclaimed apart from the mark as shown. The drawing is lined for the color yellow.

FOR CANNED SPANISH RED CHILI SAUCE AND CANNED BEANS WITH CHILI SAUCE.

Claims use since Feb. 3, 1922.

Reg. No. 379,825. Registered July 30, 1940. Ambrosia Chocolate Company, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOOD OF THE GODS

The word "Food" is disclaimed apart from the mark as shown.

FOR SWEET AND BITTER, SOLID AND POWDERED CHOCOLATE AND COCOA PREPARATIONS FOR FOOD BEVERAGES, CHOCOLATE, COCOA, AND CANDY.

Claims use since January 1928.

Reg. No. 382,954. Registered Nov. 19, 1940. Superior Fisheries, Inc., Los Angeles, Calif. Republished by Parrott & Co., San Francisco, Calif., a corporation of California.

DIXIE PRIZE

The word "Prize" is disclaimed apart from the mark as shown.

FOR CANNED MACKEREL AND CANNED SARDINES.

Claims use since Jan. 21, 1940.

Reg. No. 383,955. Registered Dec. 31, 1940. Flash Luncheonette, Inc., New York, N. Y., assignor to King Features Syndicate, Inc. Republished by The Hearst Corporation, New York, N. Y., a corporation of Delaware.

DAGWOOD

FOR SANDWICHES.

Claims use since Feb. 24, 1940.

Reg. No. 387,145. Registered May 6, 1941. Ambrosia Chocolate Company, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Fudg-in

The word "Fudg" is disclaimed apart from the mark as shown.

FOR PREPARED CHOCOLATE POWDER, TO BE USED IN THE PREPARATION OF FUDGE ICE CREAM.

Claims use since Jan. 24, 1940.

Reg. No. 396,038. Registered Aug. 11, 1942. Cherry Growers, Inc., Traverse City, Mich., a corporation of Michigan. Republished by registrant.

SUCRO

FOR FRUITS PRESERVED IN SUGAR, SOLD IN TINS AND IN BULK, FOR USE IN ICE CREAM, FROZEN DESSERTS, TOPPINGS, OR OTHER USES.

Claims use since January 1941.

Reg. No. 399,320. Registered Dec. 29, 1942. Canners Exchange Inc., Springfield, Mo., a corporation of Missouri. Republished by registrant.

Staff-o-Life

FOR CANNED VEGETABLES AND CANNED BLACKBERRIES.

Claims use since the year 1935.

Reg. No. 399,909. Registered Feb. 2, 1943. Lewis Terven, Salinas, Calif. Republished by Lewis A. Terven Company, Salinas, Calif., a corporation of California.

HI-SCORE

FOR FRESH VEGETABLES.

Claims use since May 16, 1939.

Reg. No. 407,156. Registered May 23, 1944. GLASER, CRANDELL CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

DERBY

FOR PREPARED MUSTARD; PREPARED MUSTARD, SALAD STYLE; PREPARED MUSTARD, METROPOLITAN STYLE.
Claims use since 1890.

Reg. No. 432,672. Registered Sept. 9, 1947. COSTA DISTRIBUTING CO. OF EL CENTRO, El Centro, Calif., a firm. Republished by registrant.

DESERTAIRE

FOR FRESH VEGETABLES—NAMELY, LETTUCE AND MELONS.
Claims use since Sept. 5, 1946.

Reg. No. 437,268. Registered Mar. 9, 1948. ORANGE BELT FRUIT DISTRIBUTORS, Pomona, Calif., a firm. Republished by registrant.

BENEFIT

FOR FRESH CITRUS FRUITS.
Claims use since 1941.

Reg. No. 438,542. Registered Apr. 27, 1948. CARAVETTA FOODS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

RIVIERA

FOR CHEESE.
Claims use since Nov. 3, 1920.

CLASS 47

WINES

Reg. No. 406,765. Registered Apr. 25, 1944. STANDARD DISTILLERS PRODUCTS INCORPORATED, Baltimore, Md. Republished by Standard Distillers Products, Baltimore, Md., a co-partnership.

KENMONT

FOR WINE.
Claims use since Aug. 30, 1943.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 69,996. Registered July 21, 1908. H. & G. SIMONDS, LIMITED, Reading, England, a corporation organized under the laws of Great Britain. Republished by registrant.

THE HOP LEAF

FOR ALE.
Claims use since July 1870.

Reg. No. 439,119. Registered June 1, 1948. HAFFENREFFER & CO. INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Haffenreffer

FOR ALE.
Claims use since May 19, 1941.

Reg. No. 439,120. Registered June 1, 1948. HAFFENREFFER & CO. INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

PICKWICK ALE
Haffenreffer

No claim is made to the word "Ale" apart from the remainder of the mark.
FOR ALE.
Claims use since June 19, 1946.

CLASS 49

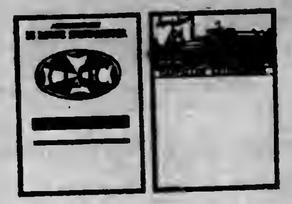
DISTILLED ALCOHOLIC LIQUORS

Reg. No. 89,213. Registered Dec. 3, 1912. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

TAFFEL AKVAVIT
AALBORG.

The words "Medailler for Sprit Akvavit og Braendevin, Rectificeret Fuselfri Filtreret Taffel Akvavit Actieselskabet De Danske Spritfabrikker Aalborg" are disclaimed apart from the mark as shown.
FOR BRANDY KNOWN AS "AQUAVITAE."
Claims use since Aug. 9, 1881.

Reg. No. 157,846. Registered Aug. 22, 1922. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.



The trade-mark consists of an oval etiquette in which a Maltese cross on red ground is displayed.
FOR SPIRITUOUS LIQUORS—THAT IS TO SAY, WINE, WHISKY, BRANDY, ETHYL ALCOHOL, AND LEES USED IN THE MANUFACTURE OF DISTILLED LIQUORS.
Claims use since 1885.

Reg. No. 329,602. Registered Nov. 5, 1935. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

CLOC

FOR BRANDY AND ALCOHOLIC CORDIALS AND LIQUORS.
Claims use since 1922.

Reg. No. 334,711. Registered May 12, 1936. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

FOR LIQUEUR—NAMELY, ALCOHOLIC CORDIALS, BRANDY, WHISKEY, AND KUMMEL.
Claims use since 1922.

Reg. No. 335,315. Registered June 2, 1936. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

AALBORG AKVAVIT.

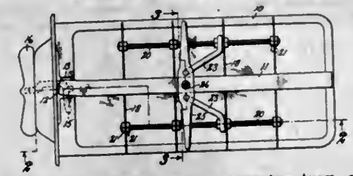
FOR BRANDY KNOWN AS "AQUAVITAE."
Claims use since about 1830.

Reg. No. 386,810. Registered Apr. 22, 1941. STANDARD DISTILLERS PRODUCTS, INC., Baltimore, Md. Republished by Standard Distillers Products, Baltimore, Md., a co-partnership.

Egg-cell-ent

The words "Trade-Mark" and "Baltimore, Md." are disclaimed apart from the mark as shown.
FOR EGG-NOG.
Claims use since Nov. 19, 1940.

REISSUES

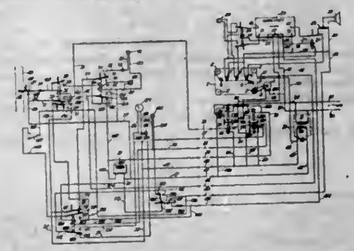


MAY 10, 1949

23,109
MIXING FAUCET
Carmelo V. Di Pietro, Birmingham, Mich.
Original No. 2,401,914, dated June 11, 1946, Serial No. 462,439, October 17, 1942. Application for reissue June 7, 1947, Serial No. 753,288
11 Claims. (Cl. 299—121)

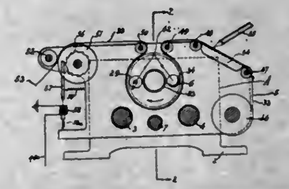
1. A faucet for dispensing water under pressure comprising a body having a valved passage therethrough, an outlet nozzle on the body in communication with the outlet end of the passage, a porous flexible member through which the water passes in flowing from the body to the nozzle, and means for adjusting the porosity characteristics of said member thereby regulating the velocity of the water passing into the nozzle.

23,110
REFRIGERATION
Robert Lay Hallock, Larchmont, N. Y.
Original No. 2,215,324, dated September 17, 1940, Serial No. 178,060, December 4, 1937. Application for reissue September 6, 1941, Serial No. 409,903
5 Claims. (Cl. 62—108.5)



1. The combination with a freezing tray, of a unitary metallic grid structure for disposition in said tray and removable therefrom as a unit comprising a longitudinal member, a plurality of bendable webs connected therewith, a plurality of arms pivotally connected to said longitudinal member, and means whereby movement of said arms causes a bending of said bendable webs to free ice cubes therefrom.

23,111
PROCESS FOR PRODUCING CHLORINE DIOXIDE
Torsten Gustaf Holst, Ornskoldsvik, Sweden, assignor to Mo Och Domsjö Aktiebolag, Örnskoldsvik, Sweden, a limited company of Sweden
No Drawing. Original No. 2,373,830, dated April 17, 1945, Serial No. 506,859, October 19, 1943. Application for reissue July 23, 1947, Serial No. 763,177. In Sweden June 2, 1943
14 Claims. (Cl. 23—152)



1. In a process for producing chlorine dioxide by reacting a metallic chlorate with a gaseous reducing agent, the step of bringing the gaseous reducing agent to act upon the chlorate in an aqueous solution acidified in advance by means of any strong acid, with the exception of halogenic acids, said solution being at least 2-normal with regard to its content of free acid.

23,112
COIN-OPERATED VOICE RECORDING MACHINE
Edmund M. Squire, Radburn, N. J., assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Original No. 2,379,548, dated July 3, 1945, Serial No. 433,911, March 9, 1942. Application for reissue June 28, 1946, Serial No. 679,971
7 Claims. (Cl. 179—100.2)

1. In a recording and reproducing machine having a record structure forming an endless flexible magnetic recording medium and including a control element, manual starting means, and control means including means operable by said control element and responsive to each passage of said medium through said machine, whereby the completion of the first passage of said medium will condition said machine for reproducing and the completion of the second such passage will automatically stop said machine.

23,113
INSIDE SCANNING FACSIMILE MACHINE
William S. Tandler and David S. Walker, New York, N. Y., assignors, by mesne assignments, to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Original No. 2,435,250, dated February 3, 1948, Serial No. 523,824, February 25, 1944. Application for reissue October 7, 1948, Serial No. 53,331
8 Claims. (Cl. 178—6.6)

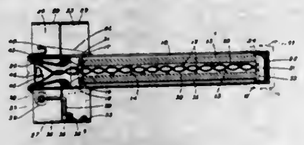
1. In a machine for facsimile systems, a stationary frame having a pair of uprights, a cylin-

drical support movably mounted between said uprights, means on said frame for supporting a paper supply roll at one side of said cylindrical support, paper feed mechanism mounted on said frame at the other side of said support, said mechanism including a rotary member, a pair of closely spaced rollers mounted between said uprights to guide a continuous sheet of paper from said supply roll around the outer surface of said cylindrical support and into engagement with said rotary member, an electric actuating device connected to said rotary member in such driving ratio that the energized device rotates said member a predetermined amount to draw a measured length of paper from the supply roll around said cylindrical support, said closely spaced rollers holding the measured length of paper against the outer surface of said cylindrical support which thereby automatically shapes the paper into cylindrical form for inside scanning, a rotary hollow shaft supported by said uprights and passing centrally through said cylindrical support, a scanner arranged to operate through said hollow shaft on the inside surface of a sheet mounted on the outside of said cylindrical support, and means for producing relative axial displacement of said scanner and the supported sheet during a scanning operation.

PLANT PATENTS

GRANTED MAY 10, 1949

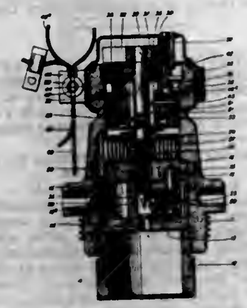
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.



835
HYBRID MALLOW PLANT
Ernest Hemming, Easton, Md., assignor to Eastern Shore Nurseries, Inc., Easton, Md., a corporation of Maryland
Application August 27, 1947, Serial No. 770,847
1 Claim. (Cl. 47—60)

A new and distinct variety of mallow plant, characterized as to novelty by its rich red color of flowers, of medium size, and opening flat with overlapping petals; its deeply cut, dark green and shiny foliage, lacking the usual coarseness and hairiness of other varieties; by the hardiness of the plant, its medium size habit of growth and reddish color of stem, substantially as shown and described.

PATENTS



GRANTED MAY 10, 1949

2,469,350
ROCKET DEVICE
Charles C. Lauritsen, Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application April 2, 1943, Serial No. 481,645
4 Claims. (Cl. 102—49)

2. In a rocket motor having a hollow body for receiving a combustible propellant charge, the combination of an electrically operable igniter in the body for igniting the charge, a pair of contact rings extending around the body and through which the igniter is energized, spiral fins connecting the rings to the tail portion of the body, means for insulating the rings from each other, and means extending through the body for electrically connecting said igniter to the rings.

2,469,351
FUSE
Charles C. Lauritsen, Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application April 2, 1943, Serial No. 481,647
1 Claim. (Cl. 102—76)

A fuze comprising a casing, a flywheel in the casing, a firing pin threaded in the casing and extending through the flywheel, the pin being rotatable with the flywheel and movable endwise therein, a driving spring coiled around the firing pin for rotating the flywheel to screw the pin from a safe to an armed position, a setback collar on the firing pin rotatable with the pin and movable endwise thereon, a detent engageable in an opening in the collar to lock the pin against rotation, biasing means for urging the collar into locking relation with the detent, the collar being movable against the biasing means by a force of setback to disengage the detent from said opening and release the firing pin, actuating means for moving the detent to an inoperative position wherein the collar and the firing pin are free to rotate, said last means being inoperative when the detent is in said opening, a locking member normally securing the detent against movement by said actuating means and urged toward an inoperative position, a laterally extending element on one end of the firing pin and operable upon impact with a target to actuate the pin for firing the fuze, said element being engageable with the locking member to secure the firing pin against rotation, a cap on the casing for shielding said element and holding said member in its locking position, and means including an arming wire for securing the cap on the casing and operable by actuation of the wire to release the cap and said locking member.

2,469,352
FUSE
Charles C. Lauritsen, Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application April 2, 1943, Serial No. 481,648
4 Claims. (Cl. 102—81)

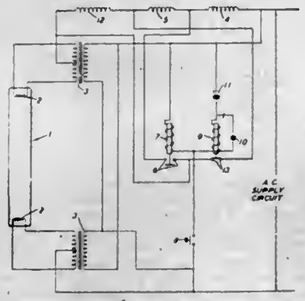
1. A fuze comprising a firing device, safety means normally maintaining the firing device ineffective and movable to an operating position to render said device effective, a pair of opposed bell-crank levers each having one arm locking the safety means in its normal position against movement, a diaphragm adjacent the other arm of each lever and operable hydrostatically to move the levers for releasing the safety means, and a member on the central portion of the diaphragm engaging the free end portions of said last arms and confining said free end portions between the diaphragm and said member, whereby the levers are interlocked with the diaphragm.

2,469,353
CEMENTING EARTH BORES
Irwin W. Alcorn, Houston, Tex., and Donald C. Bond, Northbrook, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application October 11, 1944, Serial No. 558,272
3 Claims. (Cl. 166—22)

1. The method of cementing oil and gas producing earth bores comprising, pumping into the earth bore a hydraulic cement slurry containing approximately 0.1 to 4.0 per cent by weight of soy bean protein and an alkali metal hydroxide in the amount of about 10 to 20 per cent of the weight of the soy bean protein and 0.01 to 0.8 per cent by weight of the total composition and allowing the slurry to set.

2,469,354
PRODUCTION OF OIL
Donald C. Bond, Northbrook, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application October 24, 1945, Serial No. 624,335
4 Claims. (Cl. 166—22)

1. The method of increasing the flow of oil from a subterranean oil producing formation containing a plurality of earth bores comprising, injecting into at least one of said bores a substantially dry carrier gas containing about one volume of the vapor of a readily volatile hydrolyzable halosilane per 5,000 to 10,000 volumes of the dry gas, which vapor upon contact with moisture in the earth formation hydrolyzes to deposit on solid particles comprising the formation a film preferentially wettable by oil.



2,469,355
PRODUCTION OF ALKYLHALOSILANES
Lee De Pree, Holland, and Arthur J. Barry and Donald E. Hook, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application November 13, 1946, Serial No. 709,422
9 Claims. (Cl. 260—448.2)

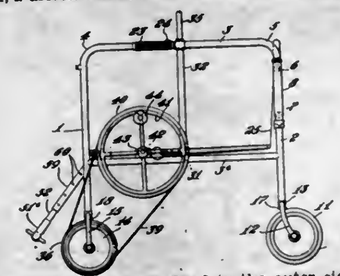
1. The process which comprises reacting an alkyl halide, in which the alkyl radical contains a plurality of carbon atoms, with an inorganic halosilane consisting of hydrogen, halogen, and silicon atoms and having both hydrogen and halogen atoms attached directly to the silicon atom, at a pressure of at least 100 pounds per square inch and a temperature between 250° and 400° C. to form an alkylhalosilane.

2,469,356
STABILIZED NATURAL SOIL COMPOSITION
Claude G. Hammond, Athens, Ga., assignor to Alice S. Hammond, Athens, Ga.
No Drawing. Application June 27, 1947, Serial No. 757,670
6 Claims. (Cl. 106—98)

1. A settable building composition consisting of a mixture of natural soil which contains clay in varying proportions and a sand content of from 25% to 70% by volume, a hydraulic cement consisting principally of a mixture of calcium silicates, calcium aluminates and calcium ferrites, and water in the proportions by volume of from 5 to 18 parts of said cement to approximately 94 parts of said natural soil with water added in sufficient quantity to produce a plastic, settable mass, and a copper salt of the group consisting of copper sulphate and copper chloride in the approximate percentage of $\frac{100}{320}$ based on the weight of water in the mixture.

2,469,357
ELECTRIC DISCHARGE LAMP SYSTEM AND METHOD OF OPERATION
Harry Kebbell Bourne, Rugby, England, assignor to General Electric Company, a corporation of New York
Application October 8, 1946, Serial No. 701,966
In Great Britain December 27, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires December 27, 1959
3 Claims. (Cl. 315—106)

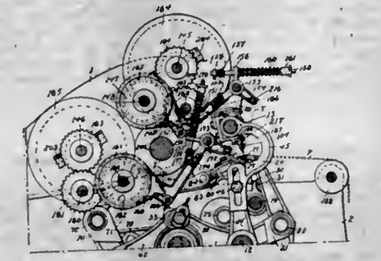
1. A method of producing intermittent flashes of light by utilizing an electric discharge lamp energized from a source of current through an impedance, which method comprises intermittently short-circuiting the impedance to increase the power input to the lamp, maintaining the arc discharge in the lamp during periods of reduced power input, and controlling said impedance to increase the value of the current transmitted to the lamp to a value greater than that existing during periods of reduced power input and less than that existing during periods of increased power input, when the period of reduced power input is in excess of a predetermined time.



2,469,358
PREPARATION OF HYDRAZONITRILES FROM AZINES OF BUTYL KETONES
Witty Lysle Alderson, Jr., and James A. Robertson, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 22, 1947, Serial No. 736,586
6 Claims. (Cl. 260—465.5)

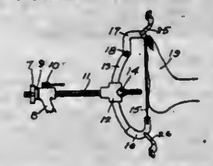
1. In the preparation of hydrazonitriles, the step wherein the azine of a dialkyl ketone, one alkyl of which is butyl and the other alkyl is of 1 to 4 carbons is reacted with hydrogen cyanide by treatment with at least two moles of the latter per mole of ketazine in a reaction system containing not more than 50%, based on the weight of hydrogen cyanide, of water.

2,469,359
PORTABLE SUPPORT
Butler Ames, Boston, Mass.
Application January 24, 1945, Serial No. 574,364
1 Claim. (Cl. 280—211)



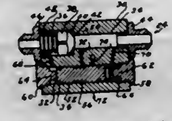
A foldable support, for invalid or similar use, of the kind which comprises a pair of supporting

units, a rigid back of fixed width, hinge means connecting the back to each supporting unit, each unit including a hand rail and a stretcher bar spaced below and substantially parallel to the corresponding hand rail, each unit having front and rear supporting wheels, a swivel bracket for the rear wheel of each unit, said brackets being arranged to turn about substantially vertical axes, characterized in that the front wheel of each unit is mounted in a non-swiveling bracket comprising spaced fork arms providing supports for the opposite ends of a shaft on which the front wheel turns, a manually rotatable drive wheel mounted on the stretcher bar of each unit at the outer side of said unit, each drive wheel having a grooved rim, a driven wheel, of substantially less diameter



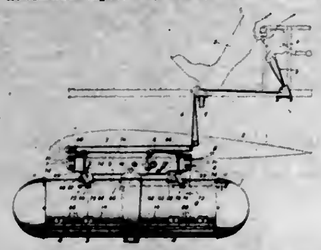
than the drive wheel, fixed to the outer side of and coaxial with and of a diameter less than that of the front supporting wheel of the corresponding unit, each driven wheel being disposed in the vertical plane of the corresponding drive wheel, the fork arms of each front bracket being spaced apart to accommodate the front supporting wheel with its associated driven wheel, and an endless drive band engaging the grooves of the drive and driven wheels of each unit, respectively, each manually rotatable drive wheel being provided at its outer side with a knob designed to be grasped by the operator for turning the drive wheel, each drive wheel being bodily adjustable relatively to the respective stretcher bar thereby properly to tension the drive band.

2,469,360
KNITTING MACHINE
Roy C. Amidon, Reading, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Application October 16, 1943, Serial No. 506,561
48 Claims. (Cl. 66—86)



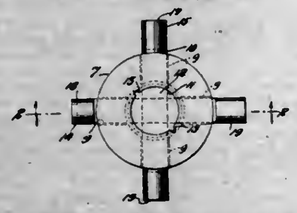
1. In a flat knitting machine: two knock-over sinkers spaced apart and each including a blade and a nib; a stationary needle guide located below the sinkers and having a tongue, the end of which is held in the space between the sinkers; a needle having a hook disposed to cooperate with said tongue for effecting closure of the needle; means for reciprocating said needle to pass its hook end into and out of the space between said sinkers; at least one thread guide for placing a thread on said needle; means to actuate said thread guide; and means to move said sinkers in the general longitudinal direction of the axis of the needle and back and forth in a direction generally normal to said axis.

2,469,361
ORTHOPEDIC FOOT PLATE DEVICE
Roger Anderson, Seattle, Wash.
Application October 17, 1945, Serial No. 622,785
7 Claims. (Cl. 128—84)



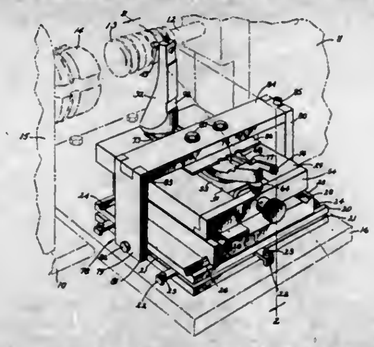
1. An orthopedic foot plate device comprising a traction means; an arcuate frame member connected with said traction means for angular movement about its center of curvature and with its said center aligned with and opposite said traction means; and a foot plate, for supporting a foot with the ankle joint substantially aligned with the center of curvature of the arcuate frame member, secured to said frame member.

2,469,362
FLUID PUMP AUTOMATIC AIR BLEED VALVE
Nicholas Bashark, Dayton, Ohio
Application October 2, 1944, Serial No. 556,816
8 Claims. (Cl. 277—60)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A valve mechanism comprising a body having a flow passage therethrough, with inflow and outflow ends adapted respectively to receive and to discharge hydraulic fluid under pressure, a check valve in said flow passage intermediate said ends biased for flow from the inflow to the outflow end, a passageway connecting a point in said flow passage upstream of said check valve to a point in said flow passage downstream of said check valve, a vent connecting said passageway to the atmosphere, an opening connecting said passageway to said flow passage upstream of said check valve, an air bleed valve movable in said passageway to open or close said vent, one end of said air bleed valve being sensitive to the pressure upstream of said check valve to be moved by said upstream pressure to the closed position, and the other end of said air bleed valve being sensitive to the pressure downstream of said check valve to be moved by said downstream pressure to the open position, and a resilient means urging said air bleed valve to its open position.

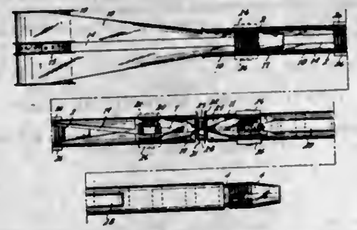
2,469,363
EXTERIOR BOMB CONTAINER
Harry J. Biondi, Gaithersburg, Md.
Application November 5, 1943, Serial No. 509,083
8 Claims. (Cl. 89—1.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a bomb container, a normally closed container comprising a metal shell having a horizontal division wall and a pair of end walls thereon within the container, a pair of opposed doors hinged on the bottom of the container, means for positively locking and releasably holding said doors in a closed position, comprising a pintle mounted on the top of the horizontal division wall, a short lever revolvably mounted on the pintle, means for operating the short lever mounted on the pintle, a pivotally mounted latch-lever on the said end wall of the container, means connecting the short lever and the upper end of the latch-lever, a door latch carried by the said end division wall in slidable engagement with the lower end of the latch-lever, for the purpose of releasing the said doors, automatic means for operating the latch-lever in a reverse direction in order to lock the door latch in connection with said doors, after a bomb discharging operation has been performed, and automatic means in engagement with the doors for closing same after a discharge of bombs, and adapted to cooperate with the locking latch, to positively lock said doors within the body outline of the container.

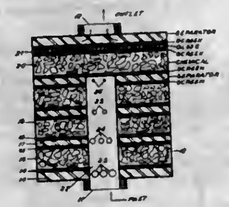
2,469,364
MORTISED BLOCK PUZZLE
John D. Boyle, Greenwich, Conn.
Application February 6, 1946, Serial No. 645,801
3 Claims. (Cl. 273—160)

1. A puzzle comprising a block having a central chamber and substantially cylindrical passages intersecting said chamber in a common plane and crossing each other at right angles, pegs in crossed relation having substantially cylindrical end portions slidably operable in said crossed passages and substantially semicylindrical intermediate portions slidably engaged over each other, one of the substantially cylindrical end portions of one of said pegs being slightly shorter than the other end portions and the intermediate, substantially semicylindrical portion of that particular peg being tapered in thickness toward said shorter end portion.



2,469,365
TOOL FOR DRESSING GRINDING WHEELS
Oscar M. Braaten, Rock Island, Ill.
Application February 23, 1945, Serial No. 579,483
18 Claims. (Cl. 125—11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine for forming a desired contour on a rotatable element, in which the machine includes means for rotating the element on a longitudinal horizontal axis, the combination of a support, a first member, a tool-carrying member, means supporting the tool-carrying member on the first member and the first member on the support and arranging one of said members for movement longitudinally of the support and the other member transversely of the support, a tool standard including a belt-engaging portion, means mounting the tool standard on the tool-carrying member for movement with the members and including a vertical pivot providing for angular movement of the tool standard with respect to said members, a control member including a belt-engaging portion, means mounting the control member on the tool-carrying member whereby said first and tool-carrying members may be moved by the control member, said means including a vertical pivot providing for angular movement of the control member with respect to said first and tool-carrying members, a belt trained about the belt-engaging portions of the tool standard and the control member for imparting angular movement of the latter to the former, and a template formed according to the contour desired on the element for guiding the movement of the tool standard and members.



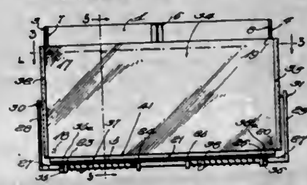
2,469,366
METHOD OF WRAPPING AND LABELING RECEPTACLES
Wendell T. Burbank, Three Rivers, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich., a corporation of Michigan
Application September 8, 1947, Serial No. 772,664
14 Claims. (Cl. 93—3)

1. The method of wrapping and labeling groups of nested receptacles having inset bottoms with heat sealable wrapping material comprising the steps of advancing a strip of transparent heat sealable material and a label strip superimposed thereon and facing downwardly and conforming the wrapping strip to an upwardly facing channel section, placing groups of nested receptacles in spaced relation on said conformed wrapping strip with their tops facing rearwardly and advancing the wrapping and label strips with the groups with a step by step movement, wrapping the wrapping strip around the groups successively as they are advanced and overlapping and heat sealing at least a portion of the overlapping longitudinal edges of the wrapping strip at the sides of the groups, collapsing and heat sealing

the wrapping strip so wrapped around the groups at spaced points between each group while the groups are at rest and severing between such spaced heat sealed points, thereby providing an individual wrapper for each group in advance of the point of end sealing and severing, frictionally holding the group at the front of the point of end sealing of the wrapped material and advancing the following group into nested relation therewith and thereby tucking the trailing sealed end of the wrapper into the rear receptacle of the preceding group and the front end of the wrapper of the following group into the recessed bottom of the front receptacle of such group.

2,469,367
CANISTER AND DISTRIBUTOR THEREFOR
David S. Burgess, Eugene A. Ramskill, and Roman R. Miller, Washington, D. C.
Application September 17, 1942, Serial No. 458,666
9 Claims. (Cl. 23—281)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a canister having a pair of openings and a plurality of separated layers of gas reactive material enclosed thereby, a conduit for controlling distribution of gas between said openings through a plurality of said layers, said conduit extending transversely through a plurality of said layers and having at least one opening at the separations between said layers through which said conduit extends, said conduit openings decreasing in total area at each separation to cause the flow of gas between said conduit and said separations to decrease progressively as the number of by-passed layers increase.



2,469,368
FROTH FLOTATION OF SULFIDE ORES WITH PHENYL-IMIDO-AMYL-DITHIO-CARBONATE
Roberto Carvajal and Juan José Quiroga, Sewell, Chile, assignors to Kennecott Copper Corporation, New York, N. Y., a corporation of New York
No Drawing. Application December 4, 1946, Serial No. 713,910. In Chile February 19, 1946
2 Claims. (Cl. 209—166)

1. The method of concentrating a metal sulphide ore which comprises subjecting the ore in the form of a pulp to a froth flotation operation in the presence of a compound having the following structural formula:

in which R' represents an amyl radical, R'' represents a phenyl radical and M represents hydrogen, a metal or an ammonium radical.

2,469,369
COMMUNICATIONS COPY AND SCHEDULE HOLDER
Lawrence E. Clark, Arlington, Va.
Application October 29, 1946, Serial No. 706,297
6 Claims. (Cl. 40—105)

1. A message holder comprising a container of substantially rectangular contour arranged to be mounted adjacent a supporting surface, a transparent sheet supported in spaced relation to said container and conforming with the shape of one side of said container, a coacting transparent sheet movable toward and away from the aforementioned transparent sheet, and means extending from said container and pivotally connected with said last mentioned sheet for journaling said last mentioned sheet with respect to the major axis of said container and for controlling the movement of said last mentioned sheet in planes substantially parallel to the plane of said first mentioned transparent sheet.

2,469,370
PROCESS OF PRODUCING UNSATURATED PRODUCTS
Ivor M. Colbeth, Maplewood, N. J., assignor to The Baker Castor Oil Company, Jersey City, N. J., a corporation of New Jersey
No Drawing. Application March 6, 1946, Serial No. 652,491
15 Claims. (Cl. 260—405.5)

1. The process which comprises reacting an ester of a monobasic, hydroxy fatty acid and of a

straight chain alcohol, said alcohol having not more than two hydroxyl groups per molecule and having a boiling point not higher than about 206° C., with a boron compound chosen from the group consisting of boric acid, boric anhydride, metallic borates, and the sulfate, pyrosulfate, halides, and acetate of boron to increase the unsaturation of the ester and to produce a pale viscous product, said reaction between said ester and said boron compound being effected by heating the reaction mixture to at least 180° C. and to not more than 260° C. until the boron esters are formed, and continuing the heating at an increased temperature in the range from 190° C. to 300° C. until the dehydration reaction is substantially complete.

2,469,371

PROCESS OF REACTING GLYCERIDE OILS

Ivor M. Colbeth, Maplewood, N. J., assignor to The Baker Castor Oil Company, Jersey City, N. J., a corporation of New Jersey

No Drawing. Application August 14, 1946, Serial No. 690,598

18 Claims. (Cl. 260—22)

1. A process for the preparation of partial esters of polyhydric alcohols and higher fatty acids, which comprises the steps of (1) reacting a substantially neutral fatty oil with methyl alcohol in the presence of an esterification catalyst at a temperature in the range from about 15° C. to about 50° C. until the ester interchange reaction is substantially completed and the fatty oil is substantially converted to methyl esters of the fatty acids of said fatty oil, the quantity of methyl alcohol being at least 6 moles for each mole of triglyceride present in said oil, (2) further reacting the thus formed mixture of glycerine and methyl esters of fatty acids with added polyhydric alcohol by heating the entire reaction mixture between about 65° C. and about 95° C. until the methyl esters of the fatty acids are converted to partial esters of the polyhydric alcohol component present and the free methyl alcohol is distilled off, and (3) recovering the partial ester of the polyhydric alcohols.

2,469,372

NONSLIPPING RUBBER BASE MATERIALS

Robert W. Cuthill, Springfield Township, Delaware County, Pa.

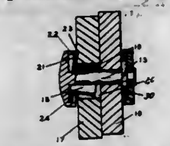
Application January 29, 1946, Serial No. 644,014

3 Claims. (Cl. 260—750)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A non-slip safety tread comprising by volume not less than 40% rubber matrix, 35% pigment, and 25% large granular particles of cork and hardwood intermixed therethrough with the hardwood considerably exceeding the cork in percentage.

2,469,373



SCISSORS JOINT AND BLADE TENSION MEANS

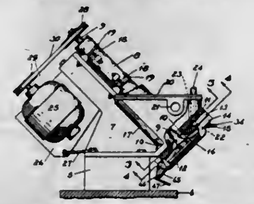
Donivan C. Feather, Portland, Oreg., assignor of one-third to James B. Pfouts, Portland, Oreg.

Application January 29, 1945, Serial No. 575,046

6 Claims. (Cl. 30—269)

1. Means for automatically increasing the tension on the blades of scissors or the like, including a pivot uniting the blades, the blades being formed with pivot receiving openings of a size to permit relative tilting of the pivot, an independent tensioning element responsive to such pivot

tilting, and means for tilting the pivot and tensioning the element to increase the pressure on the blades under increasing resistance in the operation of the blades.



2,469,374

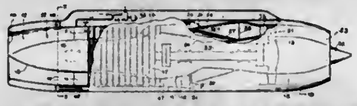
GRAVITY FEED CENTRIFUGAL PUMP

John H. V. Finney, Denver, Colo.

Application February 16, 1945, Serial No. 578,250

11 Claims. (Cl. 103—103)

1. A centrifugal pump of the gravity feed type comprising a support for mounting said pump on a supporting surface, a spindle and spindle bearing mounted on said support at an inclination to the vertical, an impeller on the lower end of said spindle, a casing positioned near to the bottom of said support and surrounding said impeller and removably secured to said support, said casing having upwardly opening intake and discharge ports, and means providing a feed chamber having a drain opening in communication with said intake port, the inclination of said spindle being sufficient to afford removal of said casing to secure access to said impeller while the remainder of said pump is in its normal operating position.



2,469,375

DEICING APPARATUS FOR COMPRESSORS

Charles D. Flagle, Swarthmore, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 24, 1945, Serial No. 618,140

5 Claims. (Cl. 230—1)

1. In an air compressor having a suction passage for supplying air thereto from the atmosphere and a plurality of inlet guide vanes disposed in said passage for directing air to said compressor, apparatus for detecting the formation of ice on said guide vanes due to freezing of moisture condensing from the atmosphere and comprising means including one of said guide vanes formed hollow to provide a chamber, an outlet orifice for said chamber, means for removing air from said chamber through said outlet orifice, an inlet orifice for supplying air from said suction passage to said chamber and subject to area restriction due to ice formation, and means operated in response to reduction in pressure in said chamber occasioned by said restriction of said inlet orifice for admitting heated fluid to said passage upstream of said guide vanes.

2,469,376

MIXTURES OF ALKYL ARYL SULFONATES

Lawrence H. Flett, Scarsdale, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application March 25, 1946, Serial No. 657,052. In Canada July 28, 1941

16 Claims. (Cl. 260—505)

1. A composition comprising a solid mixture of alkyl aryl sulfonates in which the alkyl groups are derived from a hydrocarbon mixture which boils for the most part above 100° C., which solid mixture develops a rancid odor on being stored, and in admixture therewith a fraction of a percent of its weight of an amino-aromatic compound having not more than 10 nuclear carbon atoms per aromatic nucleus, as an odor inhibitor.

2,469,377

MIXTURES OF ALKYL ARYL SULFONATES

Lawrence H. Flett, Scarsdale, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application March 25, 1946, Serial No. 657,053. In Canada July 28, 1941

11 Claims. (Cl. 260—505)

1. A composition comprising a solid mixture of alkyl aryl sulfonates in which the alkyl groups are derived from a hydrocarbon mixture which boils for the most part above 100° C., which solid mixture develops a rancid odor on being stored, and in admixture therewith a fraction of a percent of its weight of a non-benzenoid organic oxidation inhibitor, as an odor inhibitor.

2,469,378

MIXTURES OF ALKYL ARYL SULFONATES

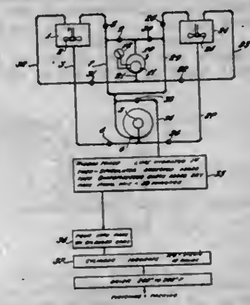
Lawrence H. Flett, Scarsdale, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application March 25, 1946, Serial No. 657,054. In Canada July 28, 1941

11 Claims. (Cl. 260—505)

1. A composition comprising a solid mixture of alkyl aryl sulfonates in which the alkyl groups are derived from a hydrocarbon mixture which boils for the most part above 100° C., which solid mixture develops a rancid odor on being stored, and in admixture therewith not more than 2 percent of its weight of a heterocyclic organic oxidation inhibitor, as an odor inhibitor.

2,469,379



HEAT INSULATING MATERIALS AND METHOD OF MAKING

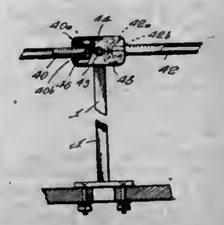
Lewis H. D. Fraser, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio

Application April 24, 1945, Serial No. 589,971

7 Claims. (Cl. 106—86)

1. The method of making a light weight open fibrous structure comprising forming a stable dispersion in water spiculated fibres selected from the group consisting of asbestos and cellulose fibres, lime and finely divided silica, the lime being present in proportion to spiculated fibres of at least about 1.5 to 1 by weight, and the silica being present in not less than equi-molecular proportions of the lime, said spiculated fibres being predominantly of cross-sectional dimensions from about one-tenth to three microns and of lengths which are at least about three times their

respective cross-sectional dimensions and being from about 1/25% to not greater than about 5% by volume of the water, reacting said lime and silica by heating the mixture while preventing substantial loss of water to form a solid, hydrous, lime silicate, said dispersion retaining its stability during the reaction and said spiculated fibres and reaction product forming an integrated structure having substantially the volume and shape of the dispersion and which volume and shape are substantially retained upon dewatering.

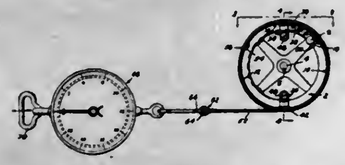


2,469,380

HIGH POTENTIAL EQUALIZER FOR STANDOFF INSULATORS

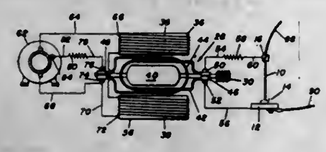
Joseph F. Frese, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a corporation of Maryland

Original application March 1, 1944, Serial No. 524,594, now Patent No. 2,399,430. Divided and this application October 20, 1944, Serial No. 559,535



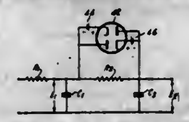
4 Claims. (Cl. 174—94)

1. A potential equalizing surface device comprising a pair of substantially hollow shell-like metallic members electrically and mechanically connected edge to edge to form a substantially uninterrupted continuous surface, in symmetrical arrangement, and internal connecting means



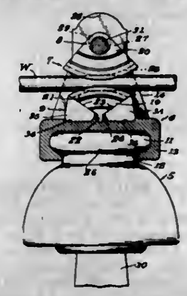
formed in opposite ends of said members for establishing an electrical circuit through said device, connectors projecting into said internal connecting means, and screw means extending through and wholly confined within one of said members and engaging said connectors for securing said connectors in interlocked relations.

2,469,381
HANDWHEEL LOAD MEASURING DEVICE
Andrew J. Galko, Aberdeen, Md.
Application August 2, 1945, Serial No. 608,581
3 Claims. (Cl. 73—133)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device for measuring the tangential force necessary to rotate a handwheel, an elongated strip having a width greater than the maximum axial dimension of the rim of said handwheel and a length sufficient to provide overlapping ends when positioned about the periphery of said handwheel to form a drum, means to secure said ends together, means to secure said strip to said handwheel, a pull rope wound about said drum and having one end secured thereto, the other end of said rope being adapted for attachment to the tension responsive element of a scale, the frame of said scale having means for applying tension to said rope to thereby unwind the same and cause said scale to indicate the tension in said rope.

2,469,382
WELDING EQUIPMENT
Charles T. Gayley, Lansdowne, Pa.
Application November 20, 1946, Serial No. 711,079
4 Claims. (Cl. 219—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

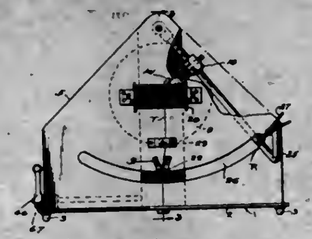


1. Welding apparatus comprising means for holding an electrode, and means including an electric motor for moving said holding means relative to the weld, said electric motor having a field winding adapted for excitation from a source of constant voltage, said electric motor also having a pair of opposed armature windings, one of said armature windings being adapted for excitation from a source of constant and adjustable voltage, the other of said armature windings being adapted for excitation by the voltage across the welding arc.

2,469,383
METHOD AND APPARATUS FOR REMOVING RANDOM FLUCTUATIONS FROM INTENSITY MEASUREMENTS
Clifford Jesse Gibbs, Houston, Tex., and James Henry Stein, Garden City, N. Y., assignors to Texaco Development Corporation, New York, N. Y., a corporation of Delaware
Application March 4, 1944, Serial No. 525,050
13 Claims. (Cl. 250—83.6)

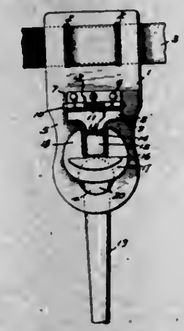
1. In a process for continuously indicating a voltage the average value of which varies and is superimposed by random fluctuations and in which said voltage is impressed upon a resistance and a capacitance connected in series so that random fluctuations will be smoothed out, the product of said resistance and capacitance determining the time constant of the smoothing circuit, the method of adjusting said time constant so that said voltage changes will be indicated without being affected by the smoothing action of the resistance-capacitance circuit which comprises lowering the effective value of the product of said resistance and capacitance upon the occurrence of a change in the average value of said voltage.

2,469,384
INSULATOR FOR LINE WIRES
James L. Grupen, San Gabriel, Calif.
Application January 25, 1947, Serial No. 724,335
13 Claims. (Cl. 174—169)



1. An insulator for a line wire comprising a dielectric member, a metallic extension thereon and formed with a bifurcating slot, opposed arcuate wedges in said slot, said wedges having coacting faces, and a shaft having an eccentric bearing for one wedge member, whereby one wedge may be moved toward and from the other by rotation of said shaft.

2,469,385
RAZOR BLADE TESTING DEVICE
Eugene D. Hallock, Snyder, N. Y.
Application April 6, 1945, Serial No. 586,999
11 Claims. (Cl. 73—104)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an apparatus for testing the sharpness of a cutting edge, means to support the cutting edge,

an obstruction capable of being severed by the cutting edge in the path of movement of the cutting edge, means to positively drive the cut-

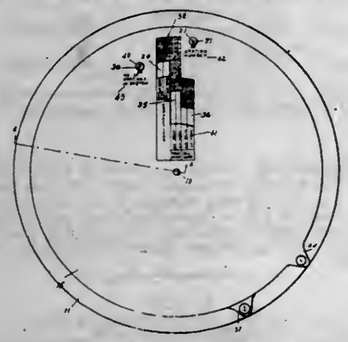
ting edge against the obstruction, and additional means to adjust the driving means to vary the velocity of the cutting edge supporting means.

2,469,386
SPUD WRENCH HOLDER
Adolph N. Hanson, Coulee Dam, Wash.
Application January 3, 1947, Serial No. 719,977
4 Claims. (Cl. 224—5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A spud wrench holder which comprises a member provided with an opening to receive the handle of a bifurcated wrench, and a wrench locking element attached to the said member adjacent the opening therein and having one portion thereof adapted to lie between the bifurcated jaws of a wrench and another portion thereof adapted to rest against the face of a bifurcated wrench end, whereby the wrench is retained against accidental displacement from the holder when the holder and wrench are in any position.

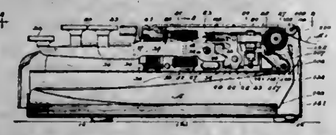
2,469,387
CONVERSION UNIT FOR FIRE FINDERS
William Heckman, Longmire, Wash., assignor to the United States of America as represented by the Secretary of the Interior
Application December 4, 1946, Serial No. 713,947
3 Claims. (Cl. 33—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a fire finder of the type adapted for orientation at a fixed lookout station comprising a revolubly mounted sight bearing ring, a front sight and a rear sight mounted on said ring at opposite ends of a diameter, a support within said ring for a contour map of the area assigned to the station and suitable graduations on said ring and said rear sight, the combination with a



conversion unit which comprises a shutter extending laterally from said front sight and having a horizontal edge adapted to be aligned with a horizontal wire of said front sight and a companion laterally extending shutter having a horizontal edge adjustably mounted on said rear sight.

2,469,388
MULTIPLE LENS HAND TYPE OPHTHALMOSCOPE
Joseph E. Heid, New York, N. Y., assignor to American Cystoscope Makers, Inc., New York, N. Y., a corporation of New York
Application April 24, 1946, Serial No. 664,532
8 Claims. (Cl. 88—22)



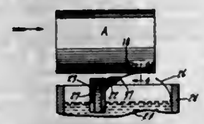
1. In an ophthalmoscope, a back plate having a sight aperture, a transparent window across said aperture, a cover plate spaced from said back plate and having a sight opening aligned with said sight aperture, a transparent window across said sight opening, a disc rotatably disposed between said plates and rotatable with respect thereto, a plurality of dioptrically different lenses carried by said disc and arranged to be brought successively into alignment with said sight opening and said sight aperture upon rotation of said disc, and means for preventing particles of foreign material in the atmosphere from passing between either of said plates and said disc and from being deposited on said lenses, said means comprising a continuous circular tongue, concentric with the axis of rotation of said disc, carried by one of said plates and registering with a groove formed in said disc and a like tongue carried by said disc and registering with a groove formed in the other of said plates.

2,469,389
INDICATOR
Karl H. Hellman, New York, N. Y., and Henry N. Schmidt, Philadelphia, Pa.
Application June 4, 1947, Serial No. 752,482
5 Claims. (Cl. 35—74)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An indicating device comprising a plurality of superimposed discs arranged for rotation relative to each other about a common axis, said device including: a data disc having groups of data inscribed thereon with each group comprising at least a pair of columns of data disposed in substantially parallel relation to a radius of the axis of rotation, an identifying data index inscribed adjacent each of the groups of data; a masking disc having a series of data openings of varied sizes and a series of index openings arranged so that any selected data opening may be brought into registration to expose at least a portion of any selected group of data under which conditions the corresponding data index identifying the selected group of data will be in registration with a selected index opening, an identifying masking index inscribed adjacent each data opening; and an inspection disc having an inspection opening arranged for registration with the selected data opening and the selected group of data, a further opening for registration with the selected index opening and the corresponding data index, and a further opening for registration with the masking index adjacent the selected data opening.

2,469,390
KEY LEVER SPACER AND GUIDE FOR STENOGRAPHIC MACHINES
Hunter E. Hooe, Chicago, Ill., assignor to Victor Adding Machine Co., Chicago, Ill., a corporation of Illinois
Application May 10, 1946, Serial No. 668,872
4 Claims. (Cl. 197—106)

1. A key lever spacer and guide for a stenographic machine having a plurality of pivotally secured key levers comprising a series of parallelly arranged rollers spaced from each other for slidably receiving a single key lever between each pair of adjacent rollers, fixed means journaling said rollers in spaced relation, and separate means limiting axial movement of said rollers to maintain the same engaged in said fixed means.

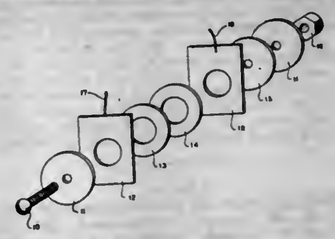


2,469,391
QUICK RELEASE DEVICE FOR PARACHUTE HARNESSES
James W. Horning, Bloomsburg, Pa.
Application July 9, 1946, Serial No. 682,243
12 Claims. (Cl. 24—205.17)

1. A quick release device for a parachute harness comprising a block formed with a pocket open along its top and at one end and having side walls formed with longitudinally extending slots and a bottom formed with a transversely extending opening, ears extending downwardly from the bottom at opposite sides of the opening, a tongue extending downwardly from the block at the front side thereof opposite space between the ears, a hook pivotally mounted between said ears and having its bill extending towards the tongue and its shank extending upwardly through the opening in the bottom of the pocket when in an operative position, a stem projecting from the block at the closed end of the pocket for engagement by a shackle of a shoulder strap of a harness, plates formed with openings for receiving the bill of the hook and suspending the plates from the hook, said plates having stems at lower ends for engagement by shackles of leg straps of a harness, a retainer having one end pivotally mounted at the open end of the pocket and of a length adapting it to be swung to a horizontal position in the pocket, said retainer having a head at its free end resting upon the bottom of the pocket when the retainer is in the horizontal position, said retainer resting upon the upper end of the shank of the hook when horizontal and preventing tilting of the hook to a position releasing the plates and the head of the retainer having a recess formed across its upper portion, a yoke having a cross bar and side bars and a head connecting the side bars and provided with a stem for engagement by the shackle of a second shoulder strap of a harness strap, said yoke fitting into the pocket and extending longitudinally therein with its cross retainer engaged in the recess of the bar and its side bars extending along opposite sides of the retainer, a bridge extending between side bars of the yoke and across the upper face of said retainer, a keeper pivoted upon said bridge and having an upstanding handle and arms projecting from opposite sides for engaging in the slots of the side walls of the pocket to hold the keeper in place when turned to a securing position, a latch carried by said body and consisting of a resilient strip disposed vertically and having a lower end secured to the block and its upper end portion bent to form a bill overlapping

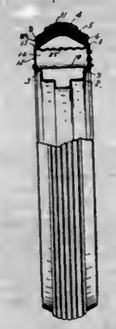
the top of the block, a tooth carried by said resilient strip for passing through the slot of the front wall of the pocket and engaging an arm of the keeper to prevent turning of the keeper to a releasing position, and a lever pivoted in vertical position to the keeper with its upper portion in position to be engaged by a hand grasping the handle of the keeper and its lower end in position to engage the bill of the latch and move the latch away from the block to withdraw its tooth from the slot in the front wall of the pocket and allow turning of the keeper to a releasing position.

2,469,392
CAN SOLDERING METHOD AND APPARATUS
Lyman L. Jones and Johan B. Ystrom, Seattle, Wash., assignors to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 5, 1946, Serial No. 707,876
5 Claims. (Cl. 113—112)



1. An apparatus for soldering the side seams of metallic can bodies, the combination of a horn for guiding can bodies horizontally with their seams at the bottom, a solder reservoir located beneath said horn for holding molten solder, means for heating the solder in said reservoir, a nozzle connected with and located in said reservoir for discharging molten solder upwardly into space and along a plane passing through the axis of said horn, feeding devices for advancing can bodies at a predetermined rate of travel along said horn and in the same general direction of said solder discharge, and projecting means located in said reservoir for forcing molten solder through said nozzle at a predetermined pressure to cause the crest of the solder trajectory to reach into and be tangent with the path of travel of the side seams of said advancing can bodies said projecting means imparting to the solder stream a velocity substantially equal to the advancement of said can bodies on said horn whereby the solder extracted from the stream of solder is deposited in the passing can body seams.

2. The method of soldering joints of metal articles, comprising in combination, the steps of providing a supply of molten solder, projecting a jet of molten solder into space from said solder supply along a uniform path, and feeding the articles into solder receiving position adjacent said solder supply by passing the joint to be soldered in the general direction of and through the trajectory of solder the trajectory being substantially tangent to the path of the seam to deposit a thread of solder in the joint.



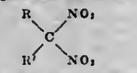
2,469,393
RECTIFIER
Irvin Levin, Asbury Park, N. J.
Application February 8, 1945, Serial No. 576,864
3 Claims. (Cl. 175—366)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of making an iron oxide-magnesium rectifier unit which comprises providing iron and magnesium discs having a thickness of the order of 5 mils, heating said iron disc at red heat for a period of time sufficient to form a layer of magnetic ferroso-ferric oxide over a surface of said iron disc, cooling said iron disc to the black color, immediately applying a clean surface of said magnesium disc in contact with said layer

of the hot iron disc, pressing said discs together and permitting the same to cool to a lower temperature and assembling the discs in the rectifier unit.

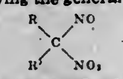
2,469,394
CUSHIONED TIRE
Hugh C. Lord, Erie, Pa.
Application October 24, 1942, Serial No. 463,207
9 Claims. (Cl. 152—327)

1. A cushioned tire comprising rigid side walls, a span of resilient material such as rubber secured between the walls and free to flex inwardly through shear of the rubber relatively to the side walls under inward thrust, and a stop surface initially spaced from the inner surface of the span and limiting the inward movement of the span subjected to inward thrust, the stop member being corrugated providing for progressive engagement of the inner surface of the tire with the member.



2,469,395
PRECIPITATION OF CELLULOSE TRIACETATE
Carl J. Malm and Carlton L. Crane, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 30, 1946, Serial No. 658,570
8 Claims. (Cl. 260—230)

1. A method of preparing a powder precipitate of cellulose triacetate which comprises mixing an esterification mass, which contains an acylation



catalyst and in which the cellulose triacetate is dissolved, with a neutralizing agent for the catalyst and with 20–40% aqueous acetic acid to dilute the mass to approximately 55–65% aqueous acid, heating the solution to a temperature above 170° F., then rapidly mixing into the solution sufficient 10–30% aqueous acetic acid to bring the acid concentration of the mass down to 30–40% thereby precipitating the cellulose triacetate and forming a slurry, and within fifteen minutes cooling the slurry to a temperature below 120° F. at which the aqueous acid remains liquid and separating the cellulose triacetate particles from the liquid with which they are in contact.

2,469,396
PREPARATION OF DINITROPARAFFINS
John H. McCracken, Cumberland, Md., and George S. Crandall, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application January 29, 1946, Serial No. 644,196
6 Claims. (Cl. 260—644)

1. The method of preparation of a dinitroparaffin having the general formula:

wherein R and R' are lower alkyl groups, which comprises contacting a pseudonitrole at a temperature up to about 10° C. above its decomposition temperature with nitrogen tetroxide, said pseudonitrole having the general formula:

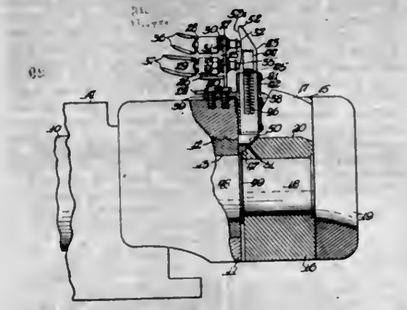
wherein R and R' are as defined above.

2,469,397
ELECTRICAL CONNECTOR
Melvin E. Mesek, Chicago, Ill.
Application November 14, 1945, Serial No. 628,627
1 Claim. (Cl. 173—328)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

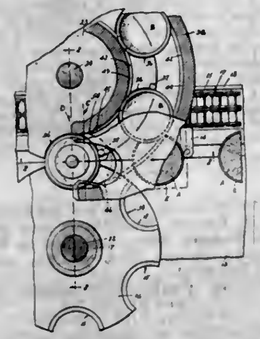
A connector for electrical conductors comprising a pair of male and female connector elements, each of said elements comprising a cylindrical conducting core, a conductor receiving aperture extending into one end thereof, a hard barrel squeezed about said end compressing said end to hold the conductor received within said apertured end, the other ends of said cores having, respectively, an axially aligned extending male plug and an axially aligned cooperating female socket, a sleeve tightly fitting each core from its cooperating end as far as said barrel at the other end, a plurality of angularly outwardly extending ears on said sleeve and a tubular insulating casing embracing said sleeve, said casing being provided with internal recesses corresponding in location with said ears of said sleeve to receive said ears therein and hold said casing on said sleeve.

2,469,398
ABRASIVE WHEEL AND METHOD OF MAKING THE SAME
Erwin Meyer, Detroit, Mich., assignor to Abrasive Dressing Tool Company, Detroit, Mich., a partnership composed of Jerry Krandall and Sadie Krandall
Application April 12, 1946, Serial No. 661,729
11 Claims. (Cl. 51—298)

2. The method of forming a diamond cutting wheel in a continuous process which comprises the steps of assembling a blank comprising a layer of synthetic resin powder, a layer of diamond impregnated synthetic resin powder and a layer of synthetic resin powder in that order, subjecting the blank to temperature and low pressure until the resin is semi-cured, then increasing the pressure to completely cure the resin and render the blank more dense and thereafter removing the first mentioned layer from the wheel.



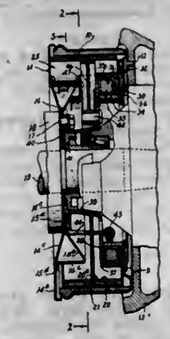
2,469,399
DISPOSABLE DISPENSING DEVICE
Charles E. Munson, Summit, N. J., assignor to Ciba Pharmaceutical Products, Inc., Summit, N. J., a corporation of New Jersey
Application April 17, 1945, Serial No. 588,836
4 Claims. (Cl. 128—260)



1. A liquid dispensing and measuring device comprising a tubular container provided with a cone shaped end providing an orifice, a mass of liquid absorbing material within said container, means for compressing said material against said end to discharge absorbed liquid therefrom, and a tubular deformable member interposed between the other end of said container and said compressing means and adapted to be permanently deformed upon actuation of said compressing means in discharging liquid from said absorbent material, thereby providing a positive indication that the device has been used.

2,469,400
FIRING AND LOADING SAFETY FOR AUTOMATIC GUNS
Charles Wayne Newell, Moline, Ill.
Application September 21, 1945, Serial No. 617,886
11 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

10. In a gun having breech mechanism, mounted for recoil and counter-recoil including a chamber and a breechblock mounted for opening and closing, the combination with said breech mechanism of a pair of safety devices mounted adjacent said mechaniam and fixed against recoil, and a single control member mounted on said mechanism, operatively associated with said devices and operable in response to presence or absence of a shell in said chamber for controlling one device and operable in response to opening and closing of said breechblock for controlling said other device.



2,469,401
CAN CLOSING MACHINE
Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 3, 1945, Serial No. 632,292
2 Claims. (Cl. 113—14)

1. In a can closing machine for sealing covers onto filled cans, the combination of a rotatable sealing turret having spaced peripheral pockets for receiving cans and covers for sealing, a can feed-in device for propelling filled cans along a straight line path of travel toward said sealing turret and for introducing them into said sealing turret pockets, a can cover feeding device for advancing can covers along a curved path of travel and for introducing a can cover into a sealing turret pocket in a position above a can received in said pocket, means for moving an advancing can cover out of its curved path of travel and into a straight line path of travel in alignment with the straight line path of travel of the moving cans, and means disposed adjacent the path of travel of said covers for supporting and gradually lowering the aligned advancing cover to position it on said received and pocketed can for retaining the fluid contents in the can during further movement.

2,469,402
BRAKE ANCHOR
John George Oetzel, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill., a corporation of Illinois
Application December 7, 1944, Serial No. 567,004
3 Claims. (Cl. 188—206)

1. An anchor for a friction brake mechanism comprising a generally flat sheet metal ring, a coaxial sheet metal ring having a cylindrical outer portion abutting and rigidly secured to said first ring, an inner portion converging inwardly toward and secured to the first ring, and a sheet metal channel having its flanges out-turned and secured against said cylindrical portion, said channel projecting from said second ring parallel to the axes of the rings.

2,469,403
THREE AXIS ATTITUDE AND DIRECTION INDICATOR
Joseph B. Parker, Jr., Syracuse, N. Y.
Application June 5, 1946, Serial No. 674,407
9 Claims. (Cl. 33—204)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A directional horizon or three axis indicator for aircraft comprising; an instrument case having an indexed window opening; a gimbal shaft longitudinally rotatably mounted within the instrument case with the axis of rotation passing centrally through the said window opening; a gimbal ring, having parallel trunnions on the inner periphery, centrally supported on the said gimbal shaft with the diametrical axes normal to the said gimbal shaft axis of rotation; an attitude sphere rotatably mounted on the trunnions with its axis perpendicular to and in the plane of the axis of the said gimbal shaft; a transparent truncated hollow directional sphere disposed over the said attitude sphere and rotatably supported by the said gimbal ring on an axis perpendicular to the axes of the said gimbal shaft and the said attitude sphere, the directional sphere axis being in the plane of the attitude sphere axis; reference indices on the spheres for

determining the attitude and directional references by observing the relation of the spheres with each other and with the index of the window opening; and means for stabilizing in a predetermined oriented position the gimbal ring on the said gimbal shaft axis, the said attitude sphere and the said directional sphere.

2,469,404

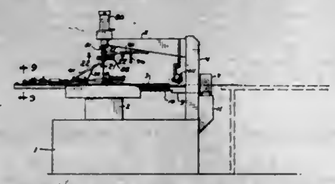
POLYACETAL POLYSULFIDE POLYMERS

Joseph C. Patrick, Morrisville, Pa., assignor to Thiokol Corporation, Trenton, N. J., a corporation of Delaware

No Drawing. Application August 29, 1944, Serial No. 551,775

4 Claims. (Cl. 260—608)

1. Process which comprises heating formaldehyde with a glycol having the general formula OH.R.SS.R.OH when R is a divalent alkylene radical condensing the formaldehyde and said glycol and obtaining a polymeric condensation product.



2,469,405

APPARATUS FOR BENDING TUBING INTO SERPENTINE COILS AND SWEEP MECHANISM AND STOP THEREFOR

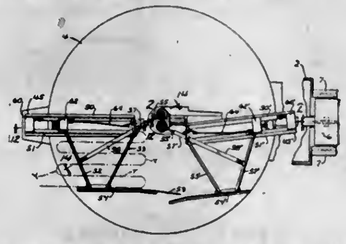
Arthur W. Payne, Detroit, Mich., assignor to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan

Application May 14, 1947, Serial No. 748,019

14 Claims. (Cl. 153—46)

1. An apparatus for shaping stock of elongated form, such as tubing, into coils of serpentine form having a succession of reverse bends, comprising bending means alternately operable to form reverse bends in the stock, means for advancing the stock between the alternate operations, a fixed support about the bending means upon which the formed coil portions are moved in opposite directions as successive bends are made, and a sweep mechanism movable over the support and with the bending means in its alternate operations for engaging the formed coil portions as it is moved to support said coil portions against distortion.

2,469,406



APPARATUS FOR BENDING TUBING INTO SERPENTINE COILS AND SWEEP MECHANISM AND INDEX THEREFOR

Arthur W. Payne and Arthur M. Wallace, Detroit, Mich., assignors to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan

Application May 15, 1947, Serial No. 748,312

15 Claims. (Cl. 153—46)

1. An apparatus for shaping stock of elongated form, such as tubing, into coils of serpentine form having a succession of reverse bends, comprising bending means alternately operable from a rest position in opposite directions to form reverse bends in the stock, means for advancing the stock between the alternate operations while the bending means is in the rest position, a table upon which the formed coil portions are swung, first in one direction and then the opposite direction from the position of rest as the bending means performs its alternate bending operations, a sweep structure for sweeping the table having two substantially opposite sweeps, driving means between the bending means and the sweep structure operable to swing the sweep structure in a bending operation so that one sweep supports the formed coil portions while the other sweep moves substantially to a rest position for receiving the advancing tube and coil portions, said driving means being operable for movement of the bending means back to rest position independently of movement of the sweep structure.

14. In an apparatus having mechanism operated in an oscillatory fashion, means for yieldably checking the oscillatory movements and for indexing the mechanism, comprising an oscillatory shaft, a cross arm mounted on the shaft, relatively strong spring means effective alternately upon opposite ends of the cross arm to yieldably check the oscillatory movements, a relatively light spring means, an inclined face on each end of the cross arm and means for yieldably and disengageably acting on the said inclined faces alternately under the action of the relatively light spring means when the relatively strong spring means is flexed to check the rebound of the relatively strong spring means and to index the mechanism.

2,469,407

TREATMENT OF TEXTILE MATERIALS

Donald H. Powers, Winchester, and Elmer H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application December 1, 1945, Serial No. 632,284

14 Claims. (Cl. 117—161)

1. The method of finishing textile fabrics which comprises treating the fabric with an aqueous solution of alkylene polyamine and a salt of copolymerized styrene maleic anhydride selected from the group consisting of ammonium salts and amine salts, said polyamine being added in amounts varying between 5 and 30% on the weight of said salt, and then drying the fabric, whereby said treating agents react to form an insoluble resin on the fabric.

2,469,408

TREATMENT OF TEXTILE MATERIAL

Donald H. Powers, Winchester, and Elmer H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application December 1, 1945, Serial No. 632,285

12 Claims. (Cl. 117—145)

1. The method of finishing textile fabrics which comprises treating the fabric with an aqueous solution of an ammonium salt of copolymerized styrene-maleic anhydride and a water-soluble alkyl ether of methylol melamine, said salt being deposited on the fabric in amounts varying from 2 to 15% by weight, said ether being added in amounts varying between 2 and 20% on the weight of said salt, and then drying the fabric, whereby said treating agents react to form an insoluble resin thereon.

2,469,409

TREATMENT OF TEXTILE MATERIALS

Donald H. Powers, Winchester, and Elmer H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application December 1, 1945, Serial No. 632,286

14 Claims. (Cl. 117—161)

1. The method of finishing textile fabrics which comprises treating the fabric with an aqueous solution of a substance selected from the group consisting of formaldehyde and water-soluble polymers of formaldehyde and a salt of a copolymer prepared by copolymerizing a substance selected from the group consisting of styrene and substituted styrenes with a substance selected from the group consisting of maleic anhydride and partial esters of maleic anhydride, said salt being selected from the group consisting of ammonium salts and amine salts, and being deposited on the fabric in amounts varying from 2 to 15% by weight, said substance being added in amounts varying between 1 and 20% on the weight of said salt and then drying the fabric, whereby said treating agents react to form an insoluble resin on the fabric.

2,469,410

ULTRAVIOLET LAMP

Harvey C. Rentschler, East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 5, 1945, Serial No. 576,256

2 Claims. (Cl. 176—122)

1. A discharge lamp comprising an envelope with a light-transmitting portion and enclosing a pair of spaced electrodes in a rare gaseous filling admixed with mercury vapor, the light-transmitting portion, at least, of said envelope being formed of ultra-violet transmitting glass known as "Vycor," consisting of approximately 96% SiO_2, 3% B_2O_3, and the balance Al_2O_3 with impurities including traces of Na_2O and As_2O_3 which does not solarize substantially during the normal life of the lamp and which has a low transmission for ozone producing radiations.

2,469,411

MECHANICAL PENCIL

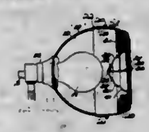
Jesse J. Robbins, Glendale, Calif., assignor to Stylofede Corporation, Glendale, Calif., a corporation of California

Application November 13, 1945, Serial No. 628,063

17 Claims. (Cl. 120—17)

1. A device of the class described comprising: a housing; a bushing in said housing rigid with respect to said housing; a second housing slidable within said first housing; resilient means between said first and said second housings; a tube threaded in said second housing; said tube being slidable within said bushing; a lead receiving tube slidable within said first tube; lower clutch means adapted to releasably grip said lead, said clutch means comprising a lower sleeve having a tapered bore, and fingers comprising slidable on said lead receiving tube, said sleeve the lower extremity of said lead receiving tube; upper clutch means adapted to releasably grip

said lead, said clutch means comprising an upper sleeve slidable on said lead receiving tube, said sleeve having a tapered bore, and fingers comprising the upper extremity of said lead receiving tube; and lever means associated with said bushing, said upper sleeve and said first tube and adapted to actuate said clutches into or out of gripping engagement with said lead, there being a spring interposed between said second housing and said lower sleeve.



2,469,412

THERAPEUTIC LAMP

Carl B. Roebken, Washington, D. C.

Application March 29, 1945, Serial No. 585,519

2 Claims. (Cl. 128—398)

1. A therapeutic lamp including a main concavo-convex reflector having an inner concave reflecting surface, a source of light in the form of an electric lamp disposed in the reflector centrally thereof, an auxiliary reflector of substantially less diameter than the main reflector and consisting of a series of connected concentric concavo-convex reflecting surfaces of progressively increasing diameters which are superposed with the reflector surface of the largest diameter placed outwardly and the reflector surface of the smallest diameter placed inwardly and with the convex surfaces placed inwardly with respect to the main reflector supported in front of and in spaced axial alignment with the electric lamp to reflect heat and light waves or rays between the main reflector and the series of reflector surfaces thus providing the reflection of two separate and distinct light and heat waves or rays which are projected beyond the lamp into two distinctively and separately formed bands or waves of

light and heat waves or rays, one band of the light and heat waves or rays being projected to a focal area forwardly of the lamp and the other band of light and heat waves or rays being projected in an annular zone radially outwardly of the focal area.

2,469,413
PROCESS FOR PREPARING BARIUM ALUMINATE

Paul S. Roller, Hyattsville, Md., assignor to the United States of America as represented by the Secretary of the Interior

No Drawing. Application April 17, 1948, Serial No. 662,773
5 Claims. (Cl. 23—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process of producing barium aluminate comprising the steps of mixing a small proportion of sodium carbonate as a separate component with barium sulfate and alumina, and heating said mixture at a temperature in the range of about 1200° centigrade to about 1600° centigrade.

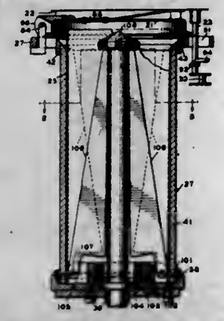
2,469,414
CHLORATE CANDLES AS OXYGEN YIELDING COMPOSITIONS

William H. Schechter, Lawrence, Kans.

No Drawing. Application July 12, 1948, Serial No. 38,195
5 Claims. (Cl. 252—187)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. As a gaseous oxygen source, a fused chlorate candle, consisting essentially of from about 70% to about 90% by weight of an alkali metal chlorate, a minor amount of iron sufficient to maintain the decomposition of the chlorate upon ignition thereof, and in amount of inert filler approximately equal to that of the iron.

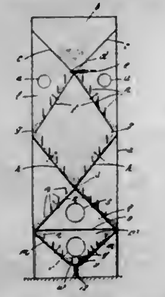
2,469,415
HYDROXYARYL ALICYCLIC CARBOXYLIC ACIDS



Erwin Schwenk, Montclair, N. J., and Domenick Papa, Brooklyn, N. Y., assignors to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey

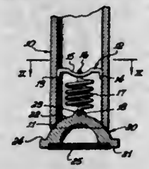
No Drawing. Application January 30, 1947, Serial No. 725,266
7 Claims. (Cl. 260—520)

1. Compounds of the general formula



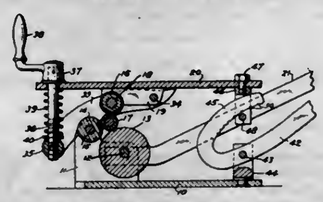
$$R-CH_1-CH-R_1$$
$$\quad\quad\quad

ning movement of said sheet supporting member and means stationary with respect to said supporting member and normally positioned in



spaced relation thereto, said means being positionable by said scanning movement to secure to a sheet to said supporting member for scanning purposes.

2,469,424
MEANS FOR DRYING GRAIN
George Wood, Haselton, Cheltenham, and James Mahon, Cold Aston, Cheltenham, England
Application April 14, 1945, Serial No. 588,290
In Great Britain December 16, 1943
3 Claims. (Cl. 34—65)



1. Means for drying grain comprising a wide hopper having a narrow slot leading from substantially its full width at its bottom, a drying chamber therebelow, and means for conveying grain delivered from said slot through said chamber in wide shallow streams while exposing the grain therein to a drying atmosphere, said means comprising a plurality of substantially flat bed plates of foraminous material arranged in said chamber in superimposed pairs with the bed plates of said pairs alternately divergent and convergent in downward direction, each bed plate having its transverse axis horizontal and its longitudinal axis inclined at an acute angle to horizontal, the bed plates of the uppermost pair being downwardly convergent and having their upper edges disposed together below and spanning the width of said slot so that they receive and convey grain therefrom upon their upper surfaces, gaps between the lower edges of the divergent bed plates and the walls of said chamber and between the adjacent lower edges of the convergent bed plates so that grain may pass down the superimposed bed plates successively to the bottom of said chamber, a multiplicity of spaced apart baffle plates disposed above and extending horizontally across each bed plate at a distance therefrom to pass a wide shallow stream of grain between each baffle plate and its bed plate, each baffle plate extending vertically to a height above the level of repose of grain adjacent thereto on its bed plate so that the grain will not cascade over the tops of said baffle plates, said chamber having an outlet for a drying atmosphere above said uppermost pair and having an inlet for such atmosphere beneath a lower pair of said bed plates so that air passed from the inlet to the outlet will flow through the bed plates therebetween, a partition extending substantially across said chamber between said lower pair and a lowermost pair of bed plates therebelow, and an outlet for a cooling atmosphere in said chamber beneath said partition so that cold air may be drawn through the lowermost bed plates and exhausted from beneath said partition.

2,469,425
SELF-ALIGNING FURNITURE FOOT
Arthur A. Andersen, Los Angeles, Calif.
Application May 13, 1946, Serial No. 669,424
7 Claims. (Cl. 45—137)

1. A self-adjusting furniture foot construction comprising: a tubular leg portion, the lower end thereof being provided with an inwardly facing virtually conical seat; an anchor member extending transversely across the interior of the tubular portion and spaced from said lower end; a foot member provided with a base and a virtually hemispherical upper surface adapted to slidably contact the seat on the lower end of the tubular portion; and spring means connected to the anchor and foot member for yieldably urging the foot member against the end of the tubular portion.

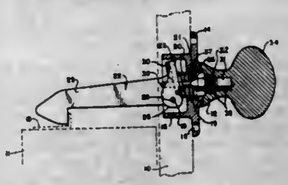
2,469,426
DEVICE FOR CRIMPING TUBULAR ARTICLES
Felix M. Anthony, Piedmont, Calif.
Application January 29, 1946, Serial No. 644,116
2 Claims. (Cl. 153—9)

1. A device for crimping tubular articles comprising a base, a driving roller and an idler roller supported relative to the base for rotation on parallel axes to support between them a tubular article to be crimped, a top plate overlying the base and said rollers, a forming roller carried by the top plate on an axis parallel to the axes of the driving and idler rollers and in a position to engage the article supported by them, means supporting the top plate comprising an arm pivoted intermediate its ends relative to the base and extending forwardly and rearwardly of all of the rollers, a pivotal connection between the forward end of said arm and the top plate, and adjustable pivotal means connecting the rearward end of the arm and the top plate for adjustment of the forming roller relative to the other rollers without substantial alteration of the relative positions of the top plate and base at their forward ends.

2,469,427
PROCESS FOR TREATING WOOD
Roy H. Baechler, Madison, Wis.; dedicated to the free use of the People in the territory of the United States
No Drawing. Application July 30, 1946, Serial No. 687,050
4 Claims. (Cl. 167—38.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A wood-preservative solution containing a soluble nickel salt, alkali metal ion, arsenic acid ion and a dichromate in such proportions that the alkali metal is approximately the chemical equivalent of the anion of the nickel salt, and the ratio of chromium to nickel is at least about 2:100 and not greater than about 60:100.

2,469,428
TANNING PRODUCT AND PROCESS
Harold C. Beachell, Lakewood, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 1, 1946, Serial No. 707,343
6 Claims. (Cl. 8—94.24)



1. A tanning composition comprising an interpolymerization product of quinone and resorcinol, the molar ratio of quinone to resorcinol being from 0.6:1 to 4:1, said polymeric product having more than four six-carbon (C_6) rings per molecule, having a ratio of about two oxygen-containing groups selected from the class consisting of quinone-oxygen and hydroxyl for each six-carbon ring and being further characterized as water-soluble, amorphous, precipitated by acid, and able to precipitate gelatin; and the composition containing additionally about 25 to 150%, based upon the weight of the polymer, of a water-soluble, boron-oxygen compound selected from the group consisting of boric acid and an alkali borate.

2,469,429
ABRASIVE AND POLISHING HEAD
Arthur P. Beam and Harry Raymond Beam, Shelton, Conn.
Application October 10, 1946, Serial No. 702,408
1 Claim. (Cl. 51—197)

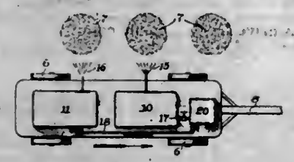
A supporting head for an abrasive or a polishing element, comprising a lightweight, thin resilient stamped sheet metal disk of hard aluminum alloy consisting of 4.4% copper, 0.5% manganese, 1.5% magnesium, and 93.6% aluminum, said disk having an annular working portion, and a drawn, dished center portion located within and close to said working portion, and said disk being characterized by a total lack of heat treatment after its formation; and a stub driving spindle secured to and at one end passing through the center portion of the disk, said spindle extending axially from the disk and having a shank for insertion into a drill chuck to be gripped thereby, the end of the spindle within the dished portion of the disk lying wholly below the mouth of said portion.

2,469,430
DOOR LATCH
Alfred H. Bowlser, Jr., Inglewood, Calif.
Application October 30, 1945, Serial No. 625,475
6 Claims. (Cl. 292—124)

1. A latch having a supporting disc, a latch finger, a plate supporting said latch finger and pivotally supported adjacent one edge by said disc, said plate and said disc having aligned central orifices, a spring urging the other edge of said plate away from said disc, a shaft extending loosely through said orifices, a key on the shaft end which extends through said plate, a cam ridge on the face of said plate adjacent said key extending radially from said orifice of said plate toward said other edge, and a knob on the shaft end which extends through said disc, said key and said knob being normally in contact with said plate and said disc respectively.

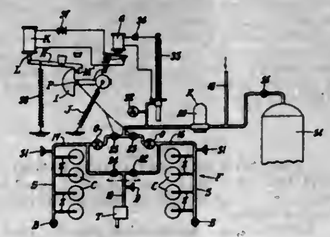
2,469,431
INSOLUBILIZATION OF WATER-SOLUBLE HYDROXYL-CONTAINING POLYMERIC MATERIALS
Aubrey E. Broderick, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application September 27, 1945, Serial No. 618,989
8 Claims. (Cl. 260—15)

1. Process for preparing a substantially water-insoluble, oil-impermeable product from a water-soluble cellulose ether, which comprises preparing an aqueous solution of (1) a water-soluble hydroxyl-containing cellulose ether, (2) an amide selected from the group consisting of carbamide, thiocarbamide and the triamide of cyanuric acid, and (3) formaldehyde, in the proportion of between 1 part and 24 parts of the cellulose ether to a total of around 5 parts of said amide and formaldehyde, the ratio of formaldehyde to said amide being within the range between 0.7 part and 3 parts of formaldehyde to 1 part of said amide, all parts by weight, adjusting the pH of the resultant solution to between 7.5 and 9.0, heating the solution within the range between 50° C. and 100° C. for from fifteen minutes to one hour, thereafter cooling it to a temperature of 20°–30° C., adjusting the pH of the solution to be-



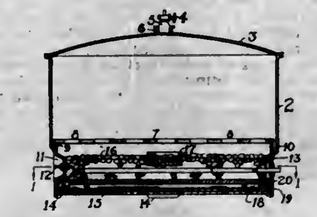
tween 4.0 and 6.75, drying the solution to remove water, and heating the dry product at between 90° C. and 200° C. for a period sufficient to render it substantially insoluble in water.

2,469,432
SUPERSPEED ELEVATED RAILWAY
Walter Cecil Cox, Englewood, Colo.
Application July 24, 1944, Serial No. 546,340
2 Claims. (Cl. 104—135)



1. An elevated railway comprising: a plurality of aligned pairs of supporting posts; a pair of spaced-apart, horizontal beams supported in parallel relation by said posts; a continuous series of spaced-apart rollers extending above and aligned along each beam with their axes at right angles to the axis of said beams; a tubular, stream-lined car positioned between said beams; a horizontally extending runner member projecting from each side of said car, each runner member resting upon one of a series of rollers, said runner members being sufficiently long to cover a plurality of said rollers and being positioned in a horizontal plane substantially bisecting the vertical height of said car so that substantially one-half the car will be suspended below the plane of said rollers; a traction rail extending parallel to said beams below said car; and driving means engaging said rail to propel said car therealong.

2,469,433
METHOD OF SEQUENTIALLY DEPOSITING REACTIVE SOLUTIONS TO FORM AN INSECTICIDE
Alfred Dinsley, La Canada, Calif.
Application September 4, 1945, Serial No. 614,425
1 Claim. (Cl. 167—20)



The method of applying an insecticide on vegetation which comprises sequentially depositing on said vegetation two aqueous solutions, one of sodium sulphite and the other of sodium sulphide, one of said solutions carrying an acid capable of decomposing the two solutions when admixed and one of said solutions carrying substantially 3% by weight of gelatine solution, said decomposing acid causing the composition to form a deposit of sulphur on the vegetation that is treated and the gelatine solution causing the admixed sulphite and sulphide solutions to spread evenly.

2,469,434
APPARATUS AND METHOD FOR FILLING GAS STORAGE CYLINDERS
Odd A. Hansen and George H. Smith, Kenmore, N. Y., assignors to The Linde Air Products Company, a corporation of Ohio
Application February 1, 1943, Serial No. 474,368
10 Claims. (Cl. 62—1)

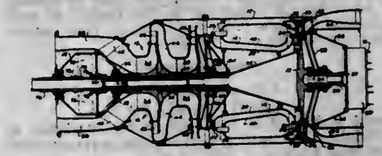
2. Apparatus for charging gas storage cylinders with oxygen in the gas phase, comprising, in combination, a liquid oxygen supply tank, a liquid oxygen pump and vaporizer connected to said supply tank, means connecting said liquid oxygen pump and vaporizer to said manifold, an adjustable regulator disposed in the connecting means between said pump, vaporizer and said manifold for closing said connection when a gas storage container connected to said manifold reaches a predetermined gas pressure, and a gaseous oxygen accumulator disposed in the connecting means between said regulator and said liquid oxygen pump for preventing an excessive rise of pressure when said regulator automatically operates to stop the flow of vaporized oxygen to said manifold.

2,469,435
REGENERABLE DESICCATOR
Abraham Adler Hirsch, New Orleans, La.
Application January 17, 1944, Serial No. 518,567
7 Claims. (Cl. 34—80)

1. A regenerable desiccator comprising a suitable vessel with a well-fitting cover thereon, a shelf for supporting objects in the dry environment provided therein, a desiccant bed located beneath said shelf, an electrical heating element under said bed for regenerating it in situ, a heat distribution plate between said bed and said element thereby supporting said bed, a cooling coil within said bed, and heat insulating material between said heating element and the bottom of said vessel, the inner wall of the vessel being provided with a groove of sufficient cross-section to retain condensate drained from said wall during regeneration of said desiccant bed.

2,469,436
CANOPY CONSTRUCTION
Carl C. King, Massapequa, N. Y., assignor to Republic Aviation Corporation, Farmingdale, N. Y., a corporation of Delaware
Application November 21, 1944, Serial No. 564,488
13 Claims. (Cl. 244—121)

1. In the canopy of an aircraft, the combination with a transparent body, of a skirt-plate bearing against the outer surface of said body and forming an unbroken continuation thereof, a bead upon the inner surface of the body at and adjoining and in transverse alignment with its edge, a supporting plate fixed to said skirt-plate and bent to be positioned under the outer edges of the bead and canopy and to bear against the inner surface of said bead, a clamping plate spaced from the skirt-plate and provided with a portion overlying that part of the supporting plate bearing against the inner surface of said bead, an angularly disposed flange at the inner extremity of the clamping plate extending over and bearing against the inner edge of the bead, and means for securing said clamping plate to said skirt-plate below the outer edges of the bead and the canopy.



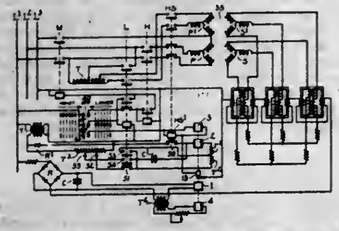
2,469,437
QUINONE-RESORCINOL TANNING AGENT AND PROCESS
Joseph S. Kirk, Newtown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1946, Serial No. 664,428
6 Claims. (Cl. 8—94.33)

4. In a process for the tanning of skins the step comprising subjecting a skin to the action of a polymeric compound prepared by a process comprising effecting reaction of quinone with resorcinol in the presence of a solvent and an acidic polymerization catalyst, the reaction being continued until exothermic reaction is completed, the reactants then being refluxed for at least one-half hour and the polymer recovered, said polymer being a solid having at least ten six-carbon (C_6) rings, some of the six-carbon rings containing two oxygen atoms in para relation and substantially all the remaining six-carbon rings containing two oxygen atoms in meta relation, the ratio of the first-mentioned rings to the second being 1.5:1 to 2.5:1, said polymer being further characterized as water-soluble, amorphous, precipitated by acid, and able to precipitate gelatin.

2,469,438
QUINONE-RESORCINOL TANNING AGENT AND PROCESS
Joseph S. Kirk, Newtown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1946, Serial No. 664,430
6 Claims. (Cl. 8—94.33)

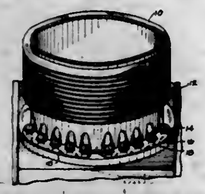
3. A tanning compound comprising a reduction product of a polymer which is prepared by a process in which quinone and resorcinol are reacted in the presence of a solvent and an acidic polymerization catalyst, the reaction being continued until exothermic reaction is completed, the reactants then being refluxed for at least one-half hour, said polymer being a solid having at least ten six-carbon (C_6) rings, some of the six-carbon rings containing two oxygen atoms in para relation and substantially all the remaining six-carbon rings containing two oxygen atoms in meta relation, the ratio of the first-mentioned rings to the second being 0.6:1 to 4:1, said polymer being further characterized as water-soluble, amorphous, precipitated by acid, and able to precipitate gelatin.

2,469,439
GAS TURBINE
Wilton G. Lundquist, Hohokus, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application November 24, 1944, Serial No. 565,019
1 Claim. (Cl. 60—41)



A gas turbine power plant for aircraft, said power plant comprising an air compressor having an annular intake duct, a turbine rotor adapted to be driven by the turbine motive fluid and drivably connected to said compressor, a speed reduction transmission unit for an aircraft propeller shaft, said transmission unit having a drive shaft adapted to be drivably connected with either end of said turbine rotor, a housing for said transmission unit, an auxiliary drive unit providing a drive for auxiliary power plant equipment, said auxiliary unit having a drive shaft also adapted to be drivably connected with either end of said turbine rotor, a housing for said auxiliary drive unit, means providing a mounting surface surrounded by the inner wall of said annular duct for supporting either of said housings with its drive shaft drivably connected to the adjacent rotor end, and means providing a similar mounting surface adjacent the other end of the turbine rotor for supporting the other of said housings with its drive shaft drivably connected to the adjacent end of said rotor.

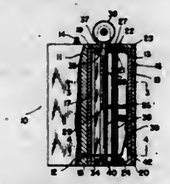
2,469,440
DYNAMOELECTRIC MACHINE CONTROLLER
Eric Pell, Shorewood, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application December 28, 1945, Serial No. 637,658
8 Claims. (Cl. 318—195)



8. In combination, a multi speed alternating current motor for load hoisting and lowering, means to effect establishment selectively of hoisting and lowering connections and of low speed and high speed connections for said motor, and a load relay for control of said means, said relay having electroresponsive operating means rendering it responsive in both hoisting and lowering under given conditions of motor current and also having means to block its operation under certain of said given conditions but so functioning for temporary periods only and said relay addi-

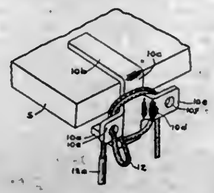
tionally having means to block its release under predetermined conditions but for transient periods only, the first mentioned blocking means being effective only upon establishment of high speed connections and having a magnetic pull characteristic substantially matching that of said

operating means under normal accelerating conditions and the second mentioned blocking means being responsive as a function of rate of change of an electrical condition in the circuit of said motor to operate only under given load conditions in lowering.



2,469,441
LOCKING PLATE
Joseph S. Pitisci, Miami Springs, Fla., assignor to Wright Aeronautical Corporation, a corporation of New York
Application March 6, 1945, Serial No. 581,224
5 Claims. (Cl. 151—54)

2. The method of securing, against rotation, a plurality of fixedly-spaced pre-tightened polygonal nuts or the like by means of a plate having a plurality of holes with a spacing similar to that of said nuts, each of said holes having a periphery geometrically dissimilar from that of said nuts such that said plate cannot be fitted over said nuts without deforming the periphery of said holes; said method comprising the steps of placing said plate over said pre-tightened nuts with said holes disposed in alinement with said nuts, and then deforming the periphery geometrically of each of said holes at, at least, one corner of one of said nuts by forcing said plate over said nuts.

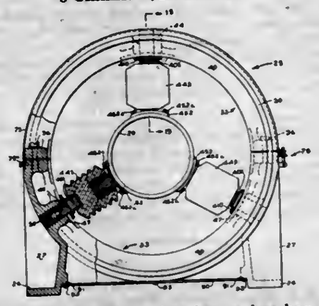


2,469,442
CIGARETTE LIGHTER
Samuel Rein, Hempstead, and Seymour Tesler, New York, N. Y.
Application May 23, 1946, Serial No. 671,783
2 Claims. (Cl. 67—7.1)

2. In combination with a cigarette lighter housing having an opening through the top and having an igniter wheel mounted over said opening, said housing having a partition therein dividing the interior into two compartments, one of said compartments being positioned under said opening and having the lower end thereof open, a frame insertible into said one compartment and having an upright screw rotatably mounted therein, a carriage threadably mounted on said screw, a tubular housing mounted adjacent and parallel with said screw and having a longitudinal slot through the wall thereof, said carriage having an extension extending through said slot into said tubular housing and being adapted to have a rod of flint mounted in said tubular housing and supported on said extension, said tubular housing being so positioned in said frame that when said frame registers in said one compartment said tubular housing lies in alignment with said opening, means for releasably locking said

frame in said compartment, one wall of said compartment having a recess cut thereinto, a spring having one end mounted on the opposite wall of said frame and being deformed normally to urge the other end thereof into said recess, that portion of said spring intermediate said ends thereof extending past and adjacent said screw in the path of said carriage whereby movement of said carriage in one direction releases said spring to permit said other end thereof to enter said recess as aforesaid and movement of said carriage in the opposite direction causes said carriage to withdraw said other end of said spring out of said recess.

2,469,443
ANCHOR LINE OR STRINGER HOLDER
Lambert Reiter, Minneapolis, Minn.
Application May 11, 1945, Serial No. 593,297
3 Claims. (Cl. 114—218)

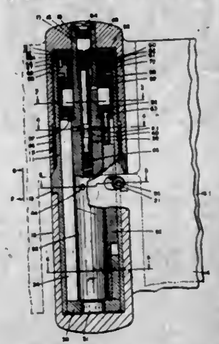


1. A device for holding an anchor line or fish stringer on a boat comprising a member having parallel sides connected at one end by a bight portion, a clamping screw threaded in one of the sides of said member adapted to clamp a boat seat or side engaged by the other side of said member with said bight portion extending vertically, and a holding portion rigid with the bight portion of said member extending horizontally transversely thereof and having its central portion in the same plane as said bight portion and having its end portions offset from the plane of said bight portion whereby an anchor line or stringer may be wound about said holding portion above said bight portion and held in place thereby.

2,469,444
MAGNETIC SOUND RECORDING AND REPRODUCING TRANSDUCER
Henry E. Roys, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application April 30, 1945, Serial No. 591,071
1 Claim. (Cl. 179—100.2)

A transducer unit for magnetic-wire records said unit comprising a cup-shape receptacle constituted of non-magnetic material and provided with a slot across which said record is adapted to travel, a core constituted of a ribbon of magnetic material mounted within said cup and bent in the form of a loop with the terminals of the ribbon bent outwardly and seated in said slot with the ends thereof adjacent to the path of said record, a non-magnetic element mounted within said slot between said terminals for maintaining said terminals in spaced relation, and a coil wound upon the loop portion of said ribbon within said receptacle.

2,469,445
BUS BAR HOUSING
William M. Scott, Jr., Bryn Mawr, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 25, 1944, Serial No. 528,051
8 Claims. (Cl. 174—99)

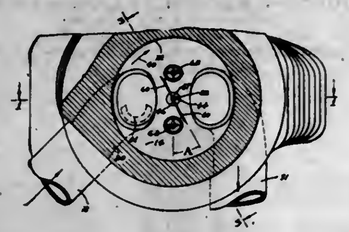


8. In combination, a bus bar, a bus bar housing comprising a continuous integral tubular bus bar enclosure; a pair of metallic supporting members, each forming only a part of a complete ring and being joined together to form a ring and having flanges for supporting said enclosure, means for supporting said bus bar along the axis of said enclosure; said last mentioned means comprising a plurality of insulator supporting members angularly spaced from each other and supported on said ring; insulators supported thereby, each of said insulators engaging said bus bar and spacing it from the ring, each insulator having a universally pivotal mounting at the end engaging the bus bar and an arcuately shaped member at the other end curved on an arc having the pivoting point of said universally pivotal mounting as a center; said universally pivotal mounting comprising a socket member facing said bus bar, and a frustrum-conical member secured to said bus bar and pivoted in said socket.

2,469,446
MIXED ESTERS OF FATTY ACIDS
Frank A. Strauss, New Brighton, Staten Island, N. Y., assignor to E. F. Drew & Co., Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 8, 1944, Serial No. 548,626
5 Claims. (Cl. 260—410.6)

1. A composition of matter consisting of the substantially neutral mixed esters of a fully esterified polyalkylene glycol taken from the class consisting of ethylene and propylene glycols with a mixture of fatty acids consisting essentially of caprylic and capric acids, the relative proportions of caprylic to capric acid being 62–97% of caprylic to 32–3% of capric, the remainder of said acids being lauric and caproic in total amount not over 10%.

2,469,447
ADJUSTING MEANS FOR CARTRIDGE TYPE DOOR CONTROL HINGES
Alfred J. Swanson, Hollywood, Calif.
Application December 7, 1946, Serial No. 714,704
8 Claims. (Cl. 16—54)



1. A hinge mechanism comprising a pair of leaves adapted for attachment to a closure and to a closure mounting frame; a cartridge having a cylindrical housing and a concentric shaft extension protruding from the upper end of said cartridge housing and containing hydraulic checking means adapted to control the relative rotary movement of said shaft extension and said cartridge housing; a hollow upper part-casing extending from the edge of one leaf, adapted to fit over and turn on the upper portion of said cartridge housing, and to non-rotatably engage said shaft extension; a hollow lower part-casing extending from the edge of the other leaf, adapted to fit over the lower portion of said cartridge housing; and gear means on said cartridge housing cooperating with gear means on said lower part-casing adapted for adjusting and holding the relative angular positions of said cartridge housing and said lower part-casing.

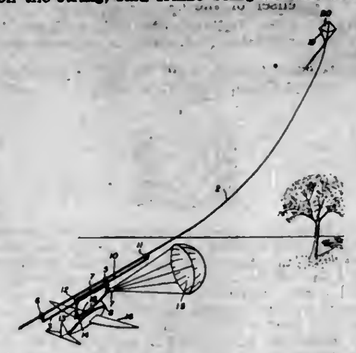
2,469,448
INTERNAL-COMBUSTION ENGINE
Everett M. Barber, Wappingers Falls, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application June 21, 1945, Serial No. 600,755
4 Claims. (Cl. 123—32)

1. In the operation of an internal combustion engine having a power cylinder with a cylinder

head and a piston providing a substantially hemispherical combustion space, the method which comprises introducing air into said cylinder in a manner to produce a high velocity air swirl therein about the longitudinal axis of said cylinder, compressing said air within said combustion space while maintaining the said high velocity air swirl and also inducing an additional swirl of the compressed air in planes at substantially right angles to the first mentioned air swirl, thereby resulting in a spiral movement of said compressed air about the hemispherical combustion space toward the latter part of the compression stroke of said piston, simultaneously injecting into the spirally swirling compressed air within said combustion space at least two substantially equally spaced jets of fuel, said jets being directed from a locus of injection at substantially the top center of said combustion space radially

across the upper portion of the spirally swirling air, promptly spark igniting each of said jets at points located in the upper portion of said combustion space adjacent said locus of injection and substantially removed from the periphery of said cylinder and slightly on the air downstream side of each jet, thereby igniting each jet approximately as soon as localized combustible fuel vapor-air mixture is formed from the first increment of injected fuel from each jet to establish a plurality of flame fronts moving at high velocity counter to the respective localized swirling mixtures, and continuing the injection of fuel by said plurality of jets immediately in advance of said flame fronts in their direction of movement, thereby progressively forming a plurality of localized combustible fuel vapor-air mixtures which are ignited by the said flame fronts and burned substantially as rapidly as formed.

2,469,449



ARTICLE CARRIER FOR KITE STRINGS

Thurman L. Baskin, Jr., Zion, Ill.

Application March 7, 1947, Serial No. 733,164

2 Claims. (Cl. 244—155)

1. An article carrier for use on a kite string to be slid up the string by wind acting against the article, said carrier comprising a rod-like carriage frame having a pair of front and rear end suspension hooks thereon adapted to slidably engage said string said frame having a pair of guide eyes formed thereon intermediate said hooks, a drop rod pivoted at one end to said frame to swing upwardly and downwardly thereon and adapted for the attachment of the article thereto to slide off the rod when the same swings downwardly, and a member on said frame for engaging and latching said rod in upswung position, said member being slidable in said guide eyes to engage and latch said rod and adapted for engagement with an abutment in the line of said string by sliding of said frame upwardly on the string, said frame being slidable relative

to said member to cause the member to disengage and unlatch said rod.

2,469,450

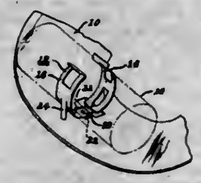
PROCESS FOR INHIBITING FOAMING IN STEAM BOILERS

Paul G. Bird and Arthur L. Jacoby, Western Springs, Ill., assignors to National Aluminate Corporation, Chicago, Ill., a corporation of Delaware

No Drawing. Application September 19, 1942, Serial No. 459,012

4 Claims. (Cl. 252—321)

1. The method of generating steam which comprises boiling, under superatmospheric pressure conditions, water containing an amount of total dissolved solids, tending to produce foaming and priming, and a quantity of an N,N'-disubstituted diamide of an organic dibasic acid which is a condensation product of about two moles of an amine selected from the group consisting of primary and secondary aliphatic amines with about one mole of an organic aliphatic dibasic acid having 6 to 10 carbon atoms, the total number of carbon atoms in said condensation product being at least 34 and said quantity being sufficient to substantially inhibit said foaming and priming.



2,469,451

CONDENSER BRACKET

Paul B. Burrus, Dayton, Ohio, assignor, by mesne assignments, to Worthington Pump and Machinery Corporation

Application July 10, 1947, Serial No. 759,971

3 Claims. (Cl. 248—361)

1. Mounting means for a condenser or the like, comprising in combination, a stamped sheet metal base member having a substantially T-shaped slot and having a pair of apertures spaced above and below said slot, and a stamped sheet metal strap member having opposed jaws adapted to grip a condenser or the like, said opposed jaws being joined by an offset portion adapted to be inserted through the upper portion of said T-shaped slot and slidable into the lower portion of said slot, said offset portion including projecting means for gripping the underside of said base member when said offset portion is moved into the lower portion of said slot, said strap member also having a pair of tongues projecting from opposite sides of said jaws and extending into said apertures for holding said strap member in place on said base.

2,469,452

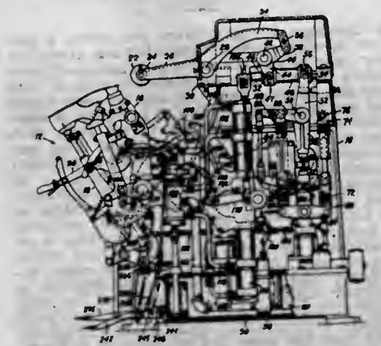
PRODUCTION OF VISCOUS AQUEOUS ALKALINE SOLUTIONS OF VEGETABLE GLOBULINS

Walter Anderson Caldwell, West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application March 22, 1946, Serial No. 656,533. In Great Britain March 23, 1945

6 Claims. (Cl. 106—154)

1. A process for the manufacture of viscous solutions that exhibit relatively low variability in viscosity between separate batches and relatively low surface gelation propensity comprising vegetable globulins dissolved in dilute aqueous solutions of alkali metal hydroxide suitable for use in the manufacture of filamentary products by extrusion from an orifice into a coagulating bath after maturation sufficient to obtain a spinnable viscosity which comprises including in an unmatured solution of vegetable globulins dissolved in an aqueous solution of alkali metal hydroxide which with time would develop surface gelation, between about 0.5 and 1% of a sulfite ion containing material from the group consisting of alkali metal sulfites and alkali metal bisulfites and permitting the resulting aqueous alkaline solution to attain a desired viscosity.



2,469,453

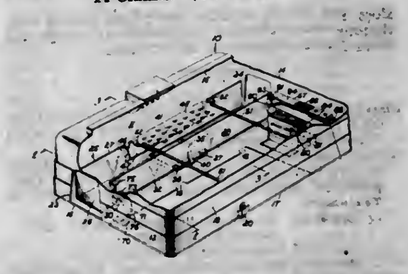
MACHINE FOR OPERATING ON SHOES

George H. Collins, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application February 11, 1948, Serial No. 7,611

18 Claims. (Cl. 12—34)

3. In a machine for operating on work pieces, a work support, a tool, means mounting said work support for movement relatively to said tool, means mounting said tool for movement relatively to said work support, power-operated means for thus moving said work support and said tool, a control member movable by the operator along two angularly related paths, means operated in response to movement of the control member along one path for controlling said power-operated means to move the work support, and means operated in response to movement of the control member along another path for controlling said power-operated means to move the tool.



2,469,454

ANIMAL TRAP

Chester W. Crumrine, Irondequoit Township, Monroe County, N. Y., assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y., a corporation of New York

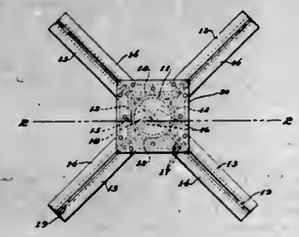
Application March 26, 1946, Serial No. 657,129

14 Claims. (Cl. 43—99)

13. An animal trap comprising a casing and means defining a continuous animal passageway therethrough, means movable upon actuation of the trap to clamp an animal body in said passage defining means, said passage defining means and said last-mentioned means comprising spaced opposed electrodes of an electrocuting circuit, means mounting said passage defining means for pivotal movement about a longitudinal axis adjacent one side of said passageway, an animal disposal zone at said side of said passageway, and means for quickly rotating said passage defining means about said axis to throw the animal body to said disposal zone.

2,469,455

COLUMN FRAME



John Stanley Donahue, Brookline, Mass., and George E. Strehan, Leonia, N. J.; said Strehan assignor to said Donahue

Application June 13, 1946, Serial No. 676,480

3 Claims. (Cl. 189—42)

2. A structural frame of the character described, comprising a column having a hollow casing and a plastic core, the top of the casing having two pairs of diametrically opposed slots, a plurality of frame members having intermediate web portions engaging and surrounding the casing, at least some of said members having integral, outwardly extending arms on opposite sides of their respective web portions, the contiguous arms of adjacent members being disposed in spaced parallel relation, a pair of connecting plates passing through the column core and through said slots and extending between said contiguous arms, the plates being welded to the casing, said connecting plates having comple-

mental slots so that they interfit at their intersection at the center of the column, and said plates being welded to the casing at said casing

slots, and means securing the plates to said contiguous arms, thereby to provide an integrated head-frame at the top of the column.

2,469,456

PROCESS FOR PRODUCING AN ANTIGEN FOR USE IN THE DIAGNOSIS OF MALARIA AND PRODUCT THEREOF

Anna Dean Dulaney, Memphis, Tenn., assignor to The University of Tennessee Research Corporation, Knoxville, Tenn., a corporation of Tennessee

No Drawing. Application September 17, 1945, Serial No. 616,959

5 Claims. (Cl. 167—78)

1. The process of preparing an antigen for complement fixation tests for malaria from parasitized animal blood which consists in laking the blood cells, grinding the parasite mass in M/10 phosphate buffer solution of pH 7.8–8.0, allowing the mixture to stand for approximately one hour with frequent agitation and separating the antigen.

2,469,457

PROCESS FOR PRODUCING AN ANTIGEN FOR USE IN THE DIAGNOSIS OF MALARIA AND PRODUCT THEREOF

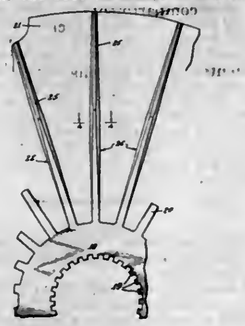
Anna Dean Dulaney, Memphis, Tenn., assignor to The University of Tennessee Research Corporation, Knoxville, Tenn., a corporation of Tennessee

No Drawing. Original application September 17, 1945, Serial No. 616,959. Divided and this application December 10, 1948, Serial No. 64,696

5 Claims. (Cl. 167—78)

5. An antigen for complement fixation tests for malaria consisting of the extract in N/10 barbiturate buffer solution of pH 8.5 of the parasites from the blood of an animal infected with *Plasmodium knowlesi*.

2,469,458



BLADE FORM FOR SUPERCHARGER IMPELLERS

Norman A. Dunnells, Manchester, and Robert E. Gorton, East Hartford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application September 24, 1945, Serial No. 618,300

5 Claims. (Cl. 230—134)

1. A supercharger impeller having blades formed with a substantially uniform thickness at their open edges and with a root thickness which is variable as a function of the blade height in that the root thickness is less at portions of lesser height and greater at portions of greater height.

2,469,459

GAS BLAST CIRCUIT BREAKER

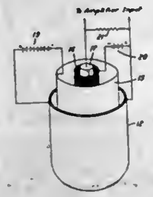
Ernst Eichenberger, Wettingen, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a joint-stock company

Application May 13, 1947, Serial No. 747,703

In Switzerland April 23, 1946

3 Claims. (Cl. 200—148)

1. Gas blast circuit breaker comprising a pair of arc blowing chambers mounted one above the other, each of said chambers including partitions dividing the chamber longitudinally into at least three side-by-side compartments through which blast gas is adapted to flow, a plurality of electrodes in each compartment spaced from each other in the direction of flow of the blast gas, correspondingly positioned electrodes in adjacent compartments being connected electrically in pairs to form successive climbing points of attachment for the center and two outer portions of the arc loop, switch contacts disposed adjacent the bottom open end of the lower chamber, a set of auxiliary electrodes connected to said switch contacts, said auxiliary electrodes extending respectively into the two outer compartments of the lower chamber to catch and hold the roots of the arc loop formed upon opening of said switch contacts, a gas exhaust outlet leading to atmosphere from the upper end of the outer two compartments of the lower chamber, a second set of auxiliary electrodes connected to conductive grids located respectively at the upper ends of the outer two compartments of the lower chamber and which extend into the bottom open ends of the two outer compartments of the upper chamber and a gas passageway placing the center compartment of the lower chamber in communication with the bottom open ends of the three compartments of the upper chamber.



2,469,460

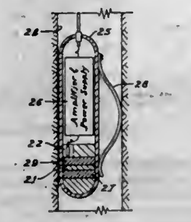
RADIOACTIVITY MEASUREMENT

Robert E. Fearon, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application April 12, 1945, Serial No. 588,022

9 Claims. (Cl. 250—83.6)

1. A method of indicating the energies associated with gamma ray quanta which comprises absorbing a plurality of said quanta in a dense gaseous atmosphere, whereby equal numbers of positive ions and free electrons are formed, separating said electrons from said ions, producing only from said separated electrons a plurality of electrical signals each proportional in amplitude to the number of said electrons freed in the absorption of one of said quanta, said positive ions being prevented from producing corresponding signals, and exposing said signals for observation.



2,469,461

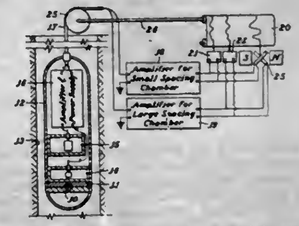
GAMMA-RAY LOGGING

William L. Russell, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application January 4, 1946, Serial No. 636,996

8 Claims. (Cl. 250—83.3)

1. The method of gamma ray well logging comprising the steps of passing through a well a source and a detector of gamma rays, said source and detector being substantially in contact with each other, maintaining said source and detector substantially in contact with the formations exposed by said well, and indicating the response of said detector as a function of depth in said well.



2,469,462

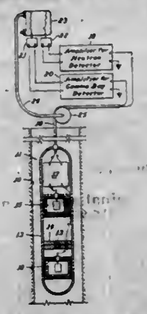
NEUTRON WELL LOGGING

William L. Russell, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application January 18, 1946, Serial No. 641,920

6 Claims. (Cl. 250—83.3)

1. The method of well logging which comprises the steps of irradiating the formations of a well with fast neutrons from a concentrated source thereof, measuring at a plurality of distances from said source the gamma rays of capture of said neutrons after they have been slowed down by passage through said formations, one of said distances being that at which changes in formation hydrogen content produce substantially no change in slow neutron concentration, and indicating as a function of depth in said well the magnitudes of the measurements at said distances.



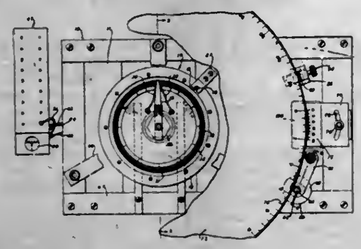
2,469,463

NEUTRON LOGGING OF WELLS

William L. Russell, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

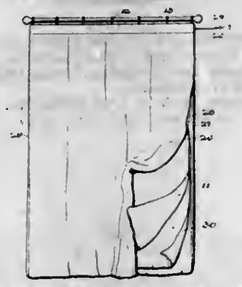
Application January 18, 1946, Serial No. 641,921

3 Claims. (Cl. 250—83.6)



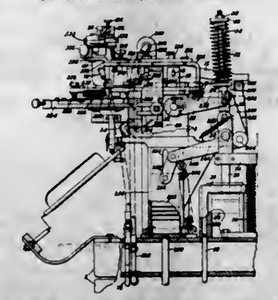
1. Apparatus for logging wells comprising a source of neutrons and two detectors of gamma rays spaced therefrom and adapted to be passed through a well, one of said detectors being surrounded by a shield containing boron and spaced from said source at a distance where variations in the hydrogen content of the formations of said well produce substantially no change in slow neutron density, the other of said detectors being lined with a substance having a large capture cross section for slow neutrons and in which captures are accompanied by the emission of ionizing radiations, and means for indicating as functions of depth in said well the responses of said detectors.

2,469,464
SASH HOLDER
Alexander F. Gratkowski, Scranton, Pa.
Application June 14, 1948, Serial No. 32,774
4 Claims. (Cl. 292—75)



1. A roller unit for cooperation between a pair of adjacent relatively slidable surfaces, comprising a resilient roller, a metal shaft carrying the roller, a yoke, bearings on the yoke for said shaft and a pin extending from said yoke, a cylindrical casing, a centrally perforated cap screw at one end of said casing, an internally threaded collar having a flange plate at one end with a central substantially square opening and countersunk screw holes for mounting the unit flush in one of said pair of adjacent relatively slidable surfaces, said casing being threaded into said collar and having slots in its threaded portion for the ends of said shaft to guide the roller through said opening, and a coil spring around said pin, pressed between said yoke and said cap screw, the perforation in said cap screw serving as a guide for the outer end of said pin.

2,469,465
APPARATUS FOR TESTING ADJUSTABLE RESISTANCES
James O. Hamilton, Dundalk, and Leon J. Rozankowski, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 20, 1945, Serial No. 606,216
8 Claims. (Cl. 175—183)



1. A fixture for testing potentiometers, which comprises a support, a plurality of contactors positioned on the support, a bracket having a notch formed therein and mounted in a predetermined position with respect to the support for receiving in said notch an element secured to a base of a potentiometer, and a chuck having a socket formed therein for receiving a second element secured to the base of the potentiometer, said chuck being mounted for sliding movement over such a point on the support that the bracket and the chuck hold the potentiometer on the support in a position in which a plurality of terminal posts projecting from the base of the potentiometer are in contact with the contactors.

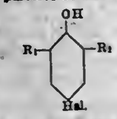
2,469,466
HEATER
Levic Pierce Herrington, Hamden, Conn., assignor, by mesne assignments, to Electric Heat Devices, Inc., Pittsburgh, Pa., a corporation of Pennsylvania
Application January 15, 1948, Serial No. 2,478
3 Claims. (Cl. 219—46)

1. In a window drape, an electrical heating element comprising a noninflammable flexible sheet and resistance type heating elements supported by said sheet, a flexible reflecting element mounted behind said heating element, a covering encasing said sheet and said reflecting element and window drape hanging means supporting the window drape assembly from above and adjacent to the window.

2,469,467
MACHINE FOR SHAPING UPPERS OVER LASTS
Bernhardt Jorgensen, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 2, 1947, Serial No. 719,866
31 Claims. (Cl. 12—10.1)

5. In a machine for shaping uppers over lasts, grippers for gripping the margin of an upper on a last at the opposite sides of the last respectively, holddowns associated respectively with said different grippers for engaging an insole on the last, fluid-operated mechanisms initially supported directly by said holddowns for moving the grippers heightwise of the last to pull the upper each by a purchase on the bottom of the shoe through the holddown associated therewith, overlaying means movable to lay the margin of the upper inwardly over the insole at the opposite sides of the last upon release of the upper by the grippers, supports for said holddowns connected to them

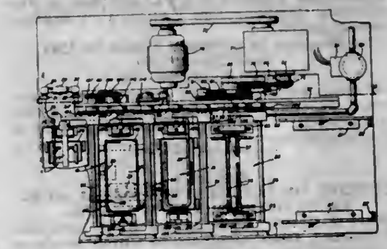
independently of said fluid-operated mechanisms, and means for automatically moving the holddowns heightwise of the last away from the insole by engagement with said holddown supports immediately upon the release of the upper by the grippers.



2,469,468
ELECTRIC HEATING AND DRYING DEVICE FOR FOOTWEAR
Frank M. Judd, Bellingham, Wash.
Application May 2, 1947, Serial No. 745,536
1 Claim. (Cl. 219—19)

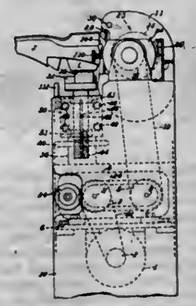
A heating and drying device for foot wear comprising, an electric coil, an asbestos cloth enclosing the electric coil and insulating the convolutions thereof from one another, a cloth covering said asbestos cloth, a rheostat connected to the coil, an elongated water repellant jacket removably enclosing the aforesaid elements and having an elongated opening in one side thereof with its opposite ends extending inwardly toward the opposite side of the jacket, a zipper fastener closing said opening in the jacket, and an electric circuit connected to the coil.

2,469,469
OXIDATION INHIBITORS
Herman D. Kluge, Wappingers Falls, and Edwin C. Knowles, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application June 18, 1946, Serial No. 677,520
4 Claims. (Cl. 252—54)



1. A lubricant comprising a mineral lubricating oil normally subject to oxidation having incorporated therein about 0.01–3.0% by weight of a tri-substituted phenol of the formula

in which R_1 is a tertiary alkyl radical, Hal. is a halogen atom, and R_2 is a tertiary alkyl radical.



2,469,470
PLATING MACHINE
Nelson H. Mageoch, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 1, 1944, Serial No. 561,405
2 Claims. (Cl. 204—198)

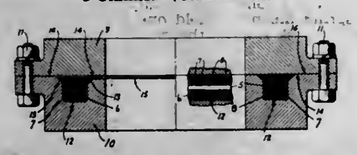
1. A machine for successively electroplating groups of articles variable in number, the machine comprising an electroplating bath, like holders each formed to receive and hold a variable number of the articles from one to a given maximum number of the articles, a loading position to successively receive the holders with their articles to be plated, an electroplating bath disposed at a position spaced from the loading position, transfer elements actuable to transfer the holders from the loading position to the bath, where the articles will be positioned in the bath, and from the bath to another position spaced therefrom, mechanism operable to actuate the transfer elements to transfer the holders at given intervals of time whereby the articles held thereby will be positioned in the bath a known length of time plating circuit for directing a plating current through the articles and the bath, resistance units including electrical resistances of

known values and corresponding in number to the said maximum number of articles capable of being held by each of the said holders, means operable in synchronism with the mechanism to alternately include the resistance units in the plating circuit for the articles, of alternate holders, moved into the bath, and separate means for each resistance unit actuable, prior to its unit being included in the plating circuit, to preset its unit to include, of its resistances, a number equal to the number of articles to be positioned in the bath by its holder when the preset unit is included in the plating circuit.

2,469,471
MACHINE FOR REMOVING SHOES FROM LASTS
William D. McKeon, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 11, 1947, Serial No. 779,396
8 Claims. (Cl. 12—15.1)

4. A machine for removing a shoe from a last having, in combination, a support for said last,

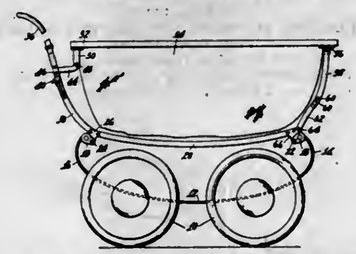
a resilient member adapted frictionally to engage the rear portion of a shoe upper on said last, means including an eccentrically mounted tool rotatable to move said member into and out of operative engagement with said shoe, and means for holding said last support from being displaced by the pressure of said member during said engagement.



2,469,472
CATION EXCHANGE MATERIALS
Frederick C. Nachod, Haddonfield, N. J., and William Wood, Philadelphia, Pa., assignors to The Permutit Company, New York, N. Y., a corporation of Delaware
No Drawing. Application March 15, 1944, Serial No. 526,650
1 Claim. (Cl. 260—79)

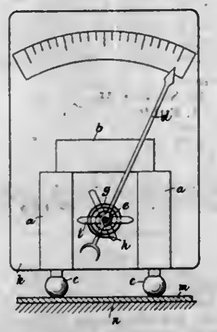
A solid water insoluble organic cation exchange material comprising a sulfonated copolymer of indene with an equimolecular amount of cyclopentadiene.

2,469,473
METHOD OF LUBRICATING METAL SURFACES DURING COLD WORKING
Gilbert H. Orozco, Euclid, and John A. Henricks, Cleveland, Ohio, assignors to Gilron Products Company, Cleveland, Ohio, a partnership composed of Gilbert H. Orozco and Roland Whitbeck
No Drawing. Application August 2, 1943, Serial No. 497,117
4 Claims. (Cl. 205—21)



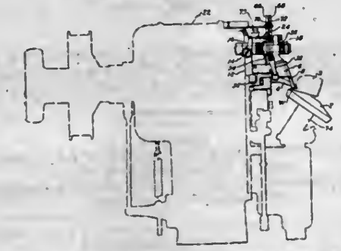
1. In the cold working of metals, the improvement comprising: stepwise lubrication of the working surface of the tool by simultaneously supplying between the work and tool dry organic low melting point lubricating-film-forming and water liberating material and a plurality of dry inorganic hydrated glass forming materials having melting points below 1000° C. and selected to provide, stepwise, a range of melting water liberating and glass fusion points all below the welding point of the metal and tool.

2,469,474
GASKET
Daniel D. Perry, Bainbridge, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application November 8, 1944, Serial No. 562,511
5 Claims. (Cl. 174—35)



1. An electrically conductive gasket comprising an elongated core including a strip of metal and a covering of yieldable rubber-like material closely surrounding said strip, a metallic wire round in cross-section wound on said covering in the form of an open spiral, the turns of said wire being spaced from each other and partially embedded in the surface of said covering, and a thread of fibrous material wound on said covering in the form of an open spiral and directly contacting said covering, the turns of said thread being wholly disposed between the turns of said wire in non-lapping relation.

2,469,475
FOLDING CARRIAGE
John Reese and William C. Troendle, Gardner, Mass., assignors to Thayer Company, Gardner, Mass., a corporation of Massachusetts
Application June 6, 1947, Serial No. 752,882
2 Claims. (Cl. 280—36)



1. In a folding carriage having a body frame, wheels and longitudinal supporting spring strips, a pivoted shackle at each end of each spring strip, a cross rod mounted on the shackles at each end of the carriage, longitudinal bars mounted on the cross rods, a pusher handle pivotally mounted on the bars at one end of the carriage, a supporting folding linkage between the handle and carriage body frame, latch means to releasably hold the handle extended, a folding linkage at the other end of the carriage and supporting the same, and a releasable latch for the last named folding linkage.

2,469,476
MAGNETIC TESTING APPARATUS
John Carrington Sellars, Manchester, England, assignor to East Lancashire Chemical Company Limited, Manchester, England, a British company
Application January 13, 1948, Serial No. 1,917
2 Claims. (Cl. 175—183)

1. An instrument for measuring thicknesses of layers of non magnetic materials, and so forth, comprising a substantially U-shaped magnet having limbs consisting of separate soft iron bars and an adjustable bar magnet bridge between them, the ends of the limbs of the magnet being substantially spherical to act as test prongs, a non-magnetic base on which the magnet is mounted, a magnetic rotor pivotally mounted equidistantly between the limbs of the U-shaped magnet, a pointer secured to the magnetic rotor and spring means for restraining the motion thereof.

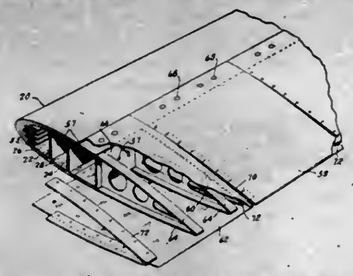
2,469,477
STITCH SEPARATING MACHINE
William Selwyn Robson, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application August 29, 1947, Serial No. 771,311
In Great Britain October 11, 1946
2 Claims. (Cl. 12—41)

2. In a shoe machine, the combination with a stitch separating tool, a holder in which said tool is mounted, a carrier, means mounting the holder on the carrier constructed and arranged to permit free relative movement of the carrier and the holder about a first axis, and means mounting the carrier for movement about a second axis, of an electrical heating unit mounted on said holder, said unit having a first end grounded, a first terminal mounted on the carrier, a second terminal secured in a fixed position, a fine, flexible, nonresilient wire constructed and arranged to conduct electricity from said first terminal to a second end of said heating unit, and a relatively heavy resilient conductor constructed and arranged to conduct electricity from said second terminal to said first terminal.

2,469,478
SKI BINDING
Otto Severin Ruud, Oslo, Norway
Application May 26, 1948, Serial No. 672,805
In Norway March 19, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 19, 1962
3 Claims. (Cl. 280—11.35)

1. In a ski binding the combination of toe irons secured to the upper side of the ski, spikes protruding from the horizontal part of said irons and adapted for introduction into holes in the lower side of the boot sole, a cap-like member having a cylindrical depression provided with a cut-away portion rotatably secured on the outer side of the respective toe iron, a bent spring wire having a medial loop arranged around said cylindrical depression of each cap-like member and having portions which are passed out through the cut-away portion thereof, one of said portions being passed to the inner side of the iron and thereafter forwardly in position above the edge portion of the sole, and the other portion extended along the outer side of the iron, said last mentioned portion having such a length that the free end thereof protrudes in front of the iron and terminates in a loop acting as a grip and means for releasably locking the last mentioned portions of the spring wire in depressed position.

2,469,479
ELECTRIC SOLDERING IRON
Albert R. Shay, Mantua, Ohio
Application May 10, 1946, Serial No. 668,709
4 Claims. (Cl. 219—28)



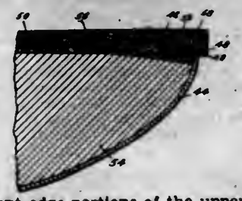
1. A soldering iron comprising a tip piece, a hollow sleeve attached thereto, a handle provided with a central bore, means for detachably attaching said sleeve to said handle, a carbon electrode axially arranged within said sleeve, and applied against said tip piece, an electrode holder and means to firmly hold said electrode on said holder, said holder extending through said sleeve and said handle, a guide sleeve open at one end and closed at the other end within the central bore of said handle, the closed end being provided with a slot through which the electrode holder passes, a disk closing the open end of the guide sleeve provided with a slot, through which the electrode holder passes, said electrode holder having thus a supported portion within the guide sleeve and a freely projecting portion within the hollow sleeve carrying the tip piece, a spring means to hold one end of said spring on the disk closing the guide sleeve, means for attaching the other end of said spring on the supported portion of the electrode holder, a terminal post on said electrode holder and means to supply said terminal post with electric current.

2,469,480
ROTOR BLADE
Igor I. Sikorsky, Bridgeport, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application October 13, 1943, Serial No. 506,058
12 Claims. (Cl. 244—134)

1. A rotor blade for a helicopter comprising a hollow metal leading edge and strength member having a center of gravity lying ahead of a point equidistant from the foremost and rearmost points of said member, means secured at one end of said member for supporting the same on a drive shaft, means secured to the other end for closing the same and forming a blade tip, and

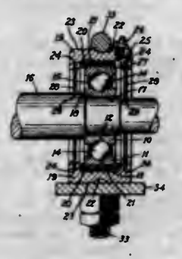
a series of detachable trailing edge portions secured to said member, said trailing edge portions being substantially in contact with each other

at their leading edges and spaced apart at their trailing edges, whereby said blade may flex in a fore-and-aft direction.



2,469,481
GARMENT HANGER
Oscar H. Snyder, San Francisco, Calif.
Application July 3, 1947, Serial No. 758,740
5 Claims. (Cl. 211—118)

5. A garment hanger including a supporting member having side edges, a pair of spaced side pieces mounted on the member and extending on opposite sides of the supporting member and each having upright front and back edges, and clamping members carried by said front and back edges of said side pieces, said side pieces each decreasing in width from top to bottom to provide inwardly offset edge portions, each carrying two of said clamps, the upright edges of said side pieces being provided with notches and the clamping members being provided with notches coacting with the first mentioned notches.

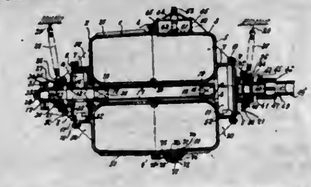


2,469,482
MANUFACTURE OF TURN SHOES
Karl A. Stritter, Nahant, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 15, 1946, Serial No. 710,064
2 Claims. (Cl. 12—142)

1. That method of making shoes which comprises providing a prefitted upper, fastening to the bottom margin of the upper an inner strip and an outer strip, turning the upper inside out, thereafter fastening to the bottom margin of the upper a flexible insole of less than last bottom area, turning the shoe so made right side out, turning the inner strip upon itself and arranging it to cover its own edge portion and

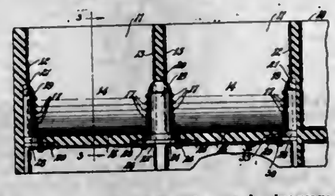
the adjacent edge portions of the upper, the insole, and the outer strip, securing said inner strip to the insole, and securing a sole to said outer strip.

2,469,483
MOUNTING FOR ANTIFRICTION BEARINGS
Basil P. Strong, Atwater, Ohio
Application January 26, 1948, Serial No. 4,405
6 Claims. (Cl. 308—184)



1. A mounting including inner and outer bearing rings with interposed anti-friction bearing members, a pair of substantially semi-circular housing members embracing said outer bearing ring, said housing members having circumferentially extending channels therein, flat, flexible strips located in said channels, a shaft mounted through the inner bearing ring, and means clamping said housing members together upon the outer bearing ring, said housing members having annular grooves therein on opposite sides of said channel, and end rings fitting around the shaft and extending into said grooves forming a chamber enclosing the bearing rings.

2,469,484
VIBRATOR GRINDING MILL
Gunnar Thiman, Stockholm, Sweden, assignor to Stavsborgs Aktiebolag, Stockholm, Sweden, a corporation of Sweden
Application April 19, 1945, Serial No. 589,211
In Sweden January 16, 1945
3 Claims. (Cl. 241—175)

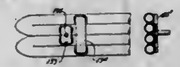


1. A vibrator grinding mill comprising in combination a cylindrical and annular container having a central channel, bearing members at each end of the container for rotatably supporting the container for rotation about its axis, means for elastically suspending the bearing members, a vibrator secured to the container at each end thereof for subjecting the container to vibration, a driving shaft connecting the vibrators through the central channel of the container,

and means for rotatably supporting the shaft in the container, the shaft at one end of the container extending through the bearing member at that end and at the free end thereof being pro-

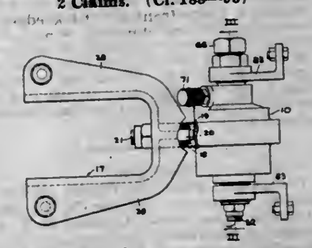
vided with means for driving the same, and the container at the other end extending through the bearing member at that end and at the free end being provided with means for the driving of the same.

2,469,485
BILL COMPARTMENT
Galen K. Weaver, Alliance, Ohio, assignor to The McCaskey Register Company, Alliance, Ohio, a corporation of Ohio
Application November 9, 1945, Serial No. 627,626
6 Claims. (Cl. 206—73)



1. A bill compartment for cash drawers and the like comprising two opposed straight sided walls and two opposed walls curved toward each other at their lower ends and merging into a bottom wall so as to define a compartment of substantially U-shape and of suitable dimensions to receive bills folded into substantially U-shape, and projections upon the vertical central portions of the two opposed straight sided walls located so as to engage over opposite edges of the central portions of the folded bills.

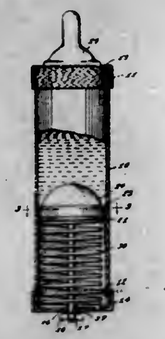
2,469,486
GARMENT OF THE BIFURCATED NETHER TYPE
Nora B. Witter, Binghamton, N. Y.
Application October 15, 1946, Serial No. 703,380
2 Claims. (Cl. 2—234)



1. A bifurcated nether garment made of woven material comprising a back portion, a first front portion and a second front portion, said portions in assembly including a connecting crotch and a waistband, the first of the front portions having an edge extending from the waistband to the crotch, said edge including an upper end portion, a lower end portion and a long vertical intermediate portion, complementary end edge portions of the second front portion being attached to the upper and lower end portions respectively of said first front portion to define therebetween a fly opening one edge of which is said long vertical intermediate portion, and a triangular flap on said second front portion with its base extending between the upper and lower end edge portions and its apex overlapping said first front portion, the lower side of said flap being shorter than the upper side thereof and being attached along substantially its whole length to said first front portion.

2,469,487
TUBE SECURING MEANS FOR LOCOMOTIVE AND OTHER BOILERS
William E. Woodard, deceased, late of Forest Hills, N. Y., by Phebe H. Woodard, executrix, Forest Hills, N. Y., and Arthur H. Filander, Baltimore, Md.; said Filander assignor to Lima-Hamilton Corporation, a corporation of Virginia, and said Phebe H. Woodard assignor to Phebe H. Woodard
Application August 25, 1942, Serial No. 456,010
5 Claims. (Cl. 122—6)

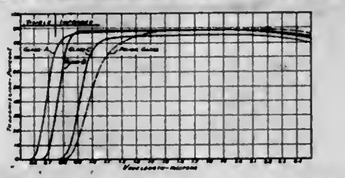
3. Positioning means for water tubes or the like, comprising, in combination with a plurality of elements of a tube coil of sinuous configuration, a pair of straps spaced apart longitudinally of said elements lying on one face of a group of elements crosswise thereof, one of said straps being fixedly secured to a pair of non-adjacent elements, said non-adjacent elements being slidable relative to other elements of said group, and the other being fixedly secured to a pair of elements between said non-adjacent elements, and at least the first mentioned strap being extended to overlie all four of them although being fixed to only two of them, so that relative movement of said two pairs of said group may occur with differences in thermal expansion.



2,469,488
FLUTTER DAMPENER
Robert J. Woods, Grand Island, N. Y., assignor to Bell Aircraft Corporation, Wheatfield, N. Y.
Application October 23, 1945, Serial No. 624,038
2 Claims. (Cl. 188—93)

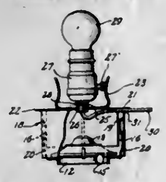
1. A flutter dampener for attachment to relatively oscillating parts comprising a housing having a spherically-shaped periphery, a shaft mounted within the housing for oscillation relative thereto, a first bracket securing one of said parts to said shaft, a second bracket secured to the other of said parts and pivotally movable

relative to said housing in a plane substantially parallel to the axis of said shaft to permit initial alignment of said brackets with said parts, a radially movable key pin non-rotatively carried by said second bracket and movable toward the spherically-shaped periphery of said housing, and means for locking said pin to said housing.



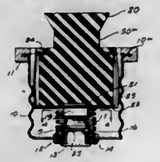
2,469,489
BABY'S NURSING BOTTLE
Grant Allen and Roger Dahl, Fairview, Mont.
Application March 4, 1947, Serial No. 732,160
1 Claim. (Cl. 215—11)

In a baby's nursing bottle, comprising a tubular member having a detachable nipple at one end and a detachable cap at the other end having an aperture therein, a follower slidable in the tubular member, a spring disposed between the cap and the follower and biasing the latter toward the nipple, and a rod extending inwardly to the follower through the aperture in the cap and externally of the latter having a nut to retain the rod slidably associated with the cap, the features including a pair of disks having apertures therein and forming the rear portion of said follower, a shoulder upon the inner end of said rod and a reduced portion with a threaded end projecting beyond the shoulder through the apertures in the disks, a resilient hollow dome member forming the forward portion of the follower and having a hollow cylindrical peripheral portion engaging the internal wall of said tubular member, a nut screwed upon the inner threaded end of said rod to confine said disks between the nut and the shoulder on the rod, and an inwardly directed flange upon the outer or rear end of the hollow cylindrical peripheral portion clamped between said disks.



2,469,490
INFRARED TRANSMITTING GLASS
William H. Armistead, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application November 6, 1944, Serial No. 562,224
2 Claims. (Cl. 167—65)

1. An infrared-transmitting glass opaque to wave lengths shorter than about .6 micron and transparent to wave lengths longer than about 1 micron in a 3 mm. thickness, consisting essentially of a reduced silicate glass containing colloidally dispersed antimony selenide, the antimony computed as Sb_2O_3 being from about 1.5% to 3% and the selenium computed as Se being



from about 1% to 3% on an oxide basis as calculated from the batch.

2,469,491
ADAPTER FOR CONVERTING KEROSENE LAMPS INTO ELECTRIC LAMPS
James N. Bailey, Mobile, Ala.
Application December 12, 1947, Serial No. 791,362
2 Claims. (Cl. 240—37)

2. A device for converting a kerosene lamp into an electric lamp in which the kerosene lamp is provided with the usual kerosene well and a burner mounted thereon having a wick dipping in the kerosene in the well, and chimney-holding spring fingers projecting upwardly therefrom to take the neck of the chimney, comprising a double-walled structure in which the walls are spaced apart in concentric relation, a top over said walls having a central opening, and a light socket supported in said latter opening to receive an electric light bulb, said walls adapted to frictionally engage over the spring fingers and rest on the well around the burner to preclude the latter from view.

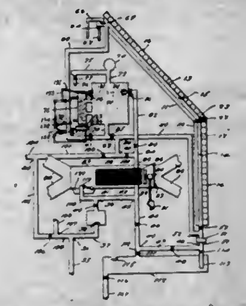
2,469,492
SCREW-IN CIRCUIT BREAKER
Roy Ball, East Orange, N. J.
Application June 11, 1948, Serial No. 32,403
1 Claim. (Cl. 200—113)

A resettable circuit breaker for use in a conventional fuse block having a threaded socket and a center contact comprising a screw threaded metallic shell threadable into the fuse block socket, a rim of electrically insulating material secured to the open end of said shell, a center contact extending through the base of said shell, means electrically insulating said center contact from said shell, a bimetallic element secured to said center contact within said shell and including three parallel, indented prongs, a plug insertable into said shell and including a cylindrical body of insulating material and a knob on one end of said body, a metallic plug base overlying the opposite end of said body and including spring fingers disposed around the cylindrical side wall of said body to contact said shell when said plug is inserted into said shell, a metal peg secured to said metallic base and received between the prongs of said bimetallic element in spaced relationship to said center contact, said peg having an annular groove receiving the indentations of said prongs to releasably secure said body in said shell, and a compression spring disposed between said metallic plug base and the base of said shell and insulated from the latter to force said plug outwardly of said shell when said bimetallic element is expanded by heat of current overload passing therethrough.

2,469,493
SYNTHETIC DETERGENT COMPOSITION
George E. Barker, Pleasant Hills, Del., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 2, 1947, Serial No. 758,717
5 Claims. (Cl. 252—161)

1. A detergent composition comprising a mixture consisting of from 5 to 95% by weight of a sulfonate of alkyl substituted aromatic hydrocarbon selected from the class consisting of benzene and naphthalene, and wherein the alkyl group has from 9 to 16 carbon atoms; and from 95 to 5% of polyoxyethylene ester of organic acid material selected from the class consisting of rosin and tall oil, said ester containing an average of from 12 to 30 oxyethylene groups per carboxyl group.

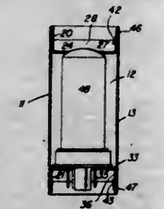
2,469,494
CLOTHES TREE
George Bushko, Eynon, Pa.
Application May 15, 1945, Serial No. 593,841
2 Claims. (Cl. 211—171)



1. A clothes tree comprising a hollow bole including separable sections movable into interfitting relation with respect to each other, a ground-stake housed within the lower end of said bole, withdrawable retaining means for holding said ground-stake in [illegible]e within said bole, there being a plurality of slots in one of said sections and spaced from each other, a plurality of spaced garment supporting fingers mounted for extensile and contractile movement within said one section, said fingers being arranged so that a finger is complemental to each of said slots, and means in one of said sections operatively connected to said supporting fingers for causing contractile movement of the latter upon actuation of said one section out of interfitting relation with the other of said sections and for causing extensile movement of the fingers upon actuation of said one section into inter-fitting relation with the other of said sections.

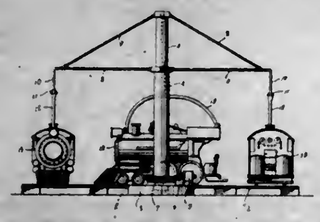
2,469,495
CONNECTOR
Everett S. Child, Barrington, R. I., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application March 20, 1946, Serial No. 655,789
2 Claims. (Cl. 287—76)

1. A locking connection comprising two like parts, each of said parts having a plurality of locking projections spaced from each other on a circle at intervals sufficient to permit alternate projections on one part to slide axially between the corresponding projections on the other part, said projections on one part having hooks adapted to engage the corresponding hooks on the projections on the other part, an aligning and guiding member on each part adapted to align and guide the locking projections on one part with and into the spaces between the locking projections on the other part, and said aligning and guiding member extending beyond the ends of said locking projections and positioned within the circle of said locking projections.



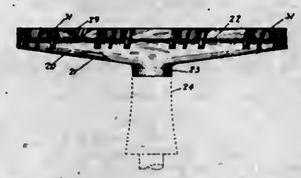
2,469,496
CONDITION CONTROL SYSTEM
Bjorn O. Christenson, De Pere, Wis.
Application August 30, 1944, Serial No. 551,962
2 Claims. (Cl. 237—1)

1. In a heating system for a building having a fluid source, heating tanks for said fluid positioned exteriorly of the building, heat exchange means in contact with said tanks for heating the tanks by solar radiation, pumping means for urging the fluid through said tanks, valved connections between the fluid source and the pumping means, a radiator, a conduit system for circulat-



ing heated fluid through said radiator and returning it to the tanks, thermostatically controlled means for passing a current of air over said radiator and means for conveying the heated air through the interior of the building, an auxiliary heating system, means for circulating fluid through the auxiliary system and valves in said conduit system for draining and bypassing the heating tanks whereby said fluid is circulated only through the auxiliary heating system.

2,469,497
FOLDING BOX
James F. Conway, Orange, N. J., assignor, by mesne assignments, to National Folding Box Company, Incorporated, a corporation of Connecticut
Application August 25, 1945, Serial No. 612,597
1 Claim. (Cl. 229—6)

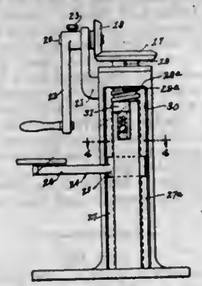


A one piece radio carton comprising, enclosing side walls, and end structures for closing the ends of the carton, said end structures comprising, a connecting flap hingedly connected to one of the side walls; an end panel hingedly connected along one of its edges to said connecting flap; flaps hingedly connected along the other edges of said end panel; a lock tab integral with said end panel, said lock tab being cut out from at least one of said last named flaps; and a lock flap for each lock tab, said lock flap being connected to a side wall and foldable back upon the side wall to which it is hinged for engaging the respective lock tab in carton closed position and means for maintaining said lock flap in folded back position against said side wall of the end panel.

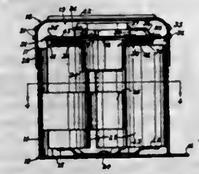
2,469,498
CARROUSEL
Joseph H. Decker and Mary E. Decker, Long Beach, Calif.
Application February 1, 1946, Serial No. 644,747
1 Claim. (Cl. 272—43)

A toy carousel, comprising a low flat stationary platform, a central vertical upstanding rotatable mast mounted upon the platform, motor means to rotate the mast, horizontal radial booms having their inner ends secured to the mast for rotation with it, and including outer integral depending vertical extensions having flattened lower ends provided with horizontally spaced apertures, the booms being disposed a substantial distance above the platform and below the top of the mast, upwardly converging diagonal braces connected with the top of the mast and with the booms near their outer ends, substantially inverted U-shaped vertical bails for connection with the lower ends of the depending extensions and having their lower ends disposed at the same elevation above the platform, the bails being arranged at right angles to the radial booms, the bails having top horizontally spaced pairs of apertured lugs to receive the lower flattened ends of the depending extensions between them, pairs of bolts engaging within the apertures of the lugs and flattened ends for detachably rigidly securing them together, and wheeled cars mounted upon the platform for movement in a circular path and connected at their tops and near their front and rear ends with the lower ends of the bails.

2,469,499
GAS BURNER
James P. Dresen, Denver, Colo., assignor to The Rocky Mountain Gas Equipment Company, Denver, Colo., a corporation of Colorado
Application September 7, 1945, Serial No. 614,873
2 Claims. (Cl. 158—104)



1. A gas burner comprising, an elongated hollow body forming a gas manifold, one wall having a single opening for the admission of a combustible gaseous mixture, the opposite wall having a plurality of spaced aligned circular openings, each opening being surrounded by a short cylindrical wall, the inner surfaces of said cylindrical walls being provided with an inwardly extending shoulder for the support of a perforated nozzle, the outer surfaces of the latter walls having each a plurality of short helical vanes for imparting a rotary motion to the secondary air.



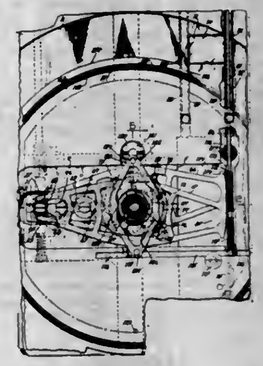
2,469,500
MECHANICAL MOVEMENT
John D. Dry, Bridgeport, Conn.
Application February 13, 1946, Serial No. 647,370
2 Claims. (Cl. 254—85)

2. A lifting jack for vertically and horizontally moving an object and comprising a base, a feed screw vertically journalled in said base, a housing surrounding said feed screw and secured to said base, said housing being provided with a plurality of longitudinal slots, a transverse slot interconnecting the longitudinal slots, a support threadedly engaged with said feed screw for movement therealong, said support extending outwardly through said slots, and a stop element secured to said feed screw adjacent a wall of said transverse slot whereby when the support is

caused to move vertically through either of the longitudinal slots, it will be caused to swing laterally to transfer from one to the other of said longitudinal slots.

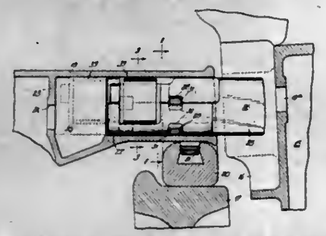
2,469,501
PORTABLE FIRE ALARM
Theodore Gogniat, Pittsburgh, Pa.
Application October 7, 1947, Serial No. 778,482
5 Claims. (Cl. 177—311)

1. In a portable, self-contained electric fire alarm, the combination with a plurality of battery cells, an electric alarm and a thermostatic circuit closer for said alarm; of a container mounting said cells in a substantially annular arrangement, and comprising a common ground for said batteries and alarm, a substantially circular member, means mounting said member on said container across one end of said arrangement, said member including portions respectively mounting said alarm and said closer axially of said arrangement, said member including a contact ring operatively connecting all of said cells, and separate leads operatively connecting opposite ends of said closer to said contact ring and to said alarm respectively.



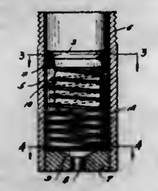
2,469,502
COMBINATION LENGTH BAR
Karl Erik Evert Hallin, Eskilstuna, Sweden, assignor to Aktiebolaget C. E. Johansson, Eskilstuna, Sweden, a company of Sweden
Application June 21, 1946, Serial No. 678,469
In Sweden June 25, 1945
4 Claims. (Cl. 33—168)

3. A combination length bar comprising a bolt, an end sleeve having a bore adapted to receive said bolt, a conical screw at one end of said bolt, a split nut screwed onto said conical screw, said nut having an external diameter adapted to pass into the bore in said sleeve, a projection on the external diameter of said nut, a number of gauge blocks having plane and parallel measuring surfaces and provided with through holes perpendicular to said measuring surfaces and adapted to fit said bolt and with notches in said holes providing clearance for said projection on said nut whereby said gauge blocks may be pushed over said nut onto said bolt, and a groove in the bore



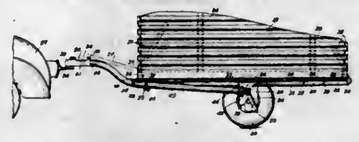
of said sleeve adapted to receive said projection on said nut, whereby said bolt with said nut thereon may be inserted in said sleeve and be locked thereto by turning movement of said bolt relatively to said sleeve expanding said nut and pressing the same against said sleeve.

2,469,503
INTERMITTENT STRIP FEED MECHANISM
Albert S. Howell, Culver, Ind., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application July 22, 1947, Serial No. 762,748
33 Claims. (Cl. 88—18.4)



1. In an intermittent strip feed mechanism, the combination of toothed strip feed means, a lever mounted for pivotal movement and connected with said feed means for effecting reciprocatory strip feed and return movement of said feed means with oscillation of said lever, means for oscillating said lever, and the pivotal mounting of said lever comprising a first bearing means establishing a pivotal axis spaced transversely from the reciprocatory path of said feed means and operative on said lever longitudinally of said reciprocatory path to correspondingly pivotally confine said lever and to permit relative movement between said lever and said pivotal axis radially of said lever and transversely of said reciprocatory path and a second bearing means operative on said lever radially of said lever and transversely of said reciprocatory path to correspondingly confine said lever and to permit pivotal movement of said lever on said pivotal axis and operative in cooperation with said first bearing means to determine the character of reciprocation of the feed means connected portion of said lever.

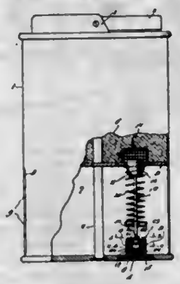
2,469,504
BRAKE BEAM SUPPORTING MEANS FOR RAILROAD CARS
Malcolm S. Johnson and Gilbert F. Oakley, Chicago, Ill., assignors to Illinois Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application June 14, 1946, Serial No. 32,793
12 Claims. (Cl. 188—212)



1. In a brake beam assembly for railroad cars involving a truck side frame provided on its inner side with a brake beam guide-way; a brake beam provided with a longitudinally chambered end section terminating adjacent the side frame guide-way; a brake beam extension member movably mounted in the chamber of said brake beam end section and having an end adapted to engage and be supported by said side frame guide-way; resilient means arranged on said extension member and adapted to frictionally engage the side walls of said chamber to maintain proper angularity of the brake beam when in brake released position; and means whereby said extension member is locked in its extended position.

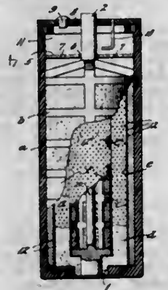
2,469,505
BLEED VALVE
Leonard O. Keefer, Spokane, Wash., assignor to Keefer Industries, Spokane, Wash.
Application February 22, 1945, Serial No. 579,191
1 Claim. (Cl. 137—34.2)

A bleeder valve for a pipe line comprising a cylindrical casing having an open upper end externally threaded for connection with the pipe line with the casing mounted vertically in depending relation thereto, a closure for the lower end of said casing said closure having a centrally located drain port and a seat about the inner end of the port, a valve member in said casing shiftable vertically therein and having a body of elastic material spaced from the inner wall of the casing, a head at the upper end of said body, having marginal portions projecting radially therefrom and spaced from the walls of the body, a helical spring in said casing resting upon said closure and having its upper portion surrounding the body and its upper end bearing against the under face of the projecting marginal portion of said head and yieldably holding the valve number in a normally raised position out of engagement with the head, and a flexible concavo-convexed cup formed of elastic material carried by and extending upwardly from said head with its marginal portions free from the head and normally spaced from the inner wall of the casing, said cup having its concaved face presented upwardly for contact by liquid entering the casing through its open upper end whereby liquid under pressure in the upper portion of the casing may spread marginal portions of the cup into engagement with the inner wall of the casing and force the valve member downwardly in opposition to action of the spring and hold the lower end of the body against the closure and the seat and close the drain port.



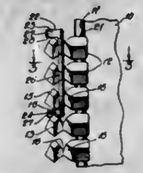
2,469,506
FOLDING WHEEL TRAILER
Kingdon Kerr, Los Angeles, and Malte Swensson, West Los Angeles, Calif.
Application February 23, 1946, Serial No. 649,523
6 Claims. (Cl. 280—33.4)

3. In a trailer, a rigid frame comprising a chassis, a pair of mounting wheels on opposite sides of said chassis, a member carrying each wheel and pivotally mounted on each side of the chassis for movement between a chassis-supporting position and a folded position against the underside of the chassis, a hitch bar, spaced means on the underside of the chassis for guiding the hitch bar between a projected position in which one end extends forward of the chassis and a retracted position wherein said hitch bar resides substantially entirely beneath the chassis and a link universally pivoted to the free end of each wheel-carrying member and having universal pivotal connection with the hitch bar whereby movement of said hitch bar from projected to retracted position will move the wheels from chassis-supporting to folded position and whereby projection from retracted position of the hitch bar will move the wheels back to chassis-supporting position.



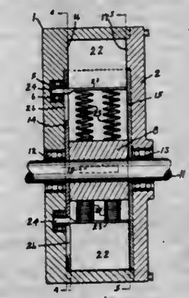
2,469,507
CIGARETTE LIGHTER
Louis W. Kolter, Sr., Knoxville, and William G. Kolter, Oak Ridge, Tenn.
Application January 8, 1946, Serial No. 639,825
1 Claim. (Cl. 67—7.1)

In a cigarette lighter including a case having a side wall, a bottom end wall, a top end wall, a flint holder, striker, and snuffer mounted on said top end wall, and a transverse partition in said case spaced from and substantially parallel to said end walls dividing the interior of said case into a wick compartment and a fuel tank, an apertured cup on said partition extending into said tank, a valve in said cup normally closing said aperture, an internal sleeve on said bottom wall having a longitudinally-extending bore and a pair of opposed longitudinally-extending grooves therein, an internally screw threaded annular member slidably mounted in the bore of said sleeve and having on its inner end an annular flange overlying the inner end of said sleeve, a pin extending transversely through said annular member with its ends guided in said grooves to restrain said annular member against rotation in said sleeve while providing freedom of relative longitudinal movement between said annular member and said sleeve, a screw plug threaded into said annular member and having a head overlying said bottom end wall around said sleeve bore, a valve rod secured at one end to said valve and having a longitudinally-extending slot near its opposite end, a pin extending transversely through said annular member



and the slot in said valve rod to provide a lost motion connection between said annular member and said valve rod, a collar secured on said valve rod, and a compression spring surrounding said valve rod between said collar and said transverse partition to resiliently urge said valve into closing relationship with said cup aperture, said valve being moved to open position by threading said screw plug out of said annular member to provide space between the bottom end wall of said case and the head of said plug and then forcing said screw plug, said annular member and said valve rod inwardly against the force of said spring.

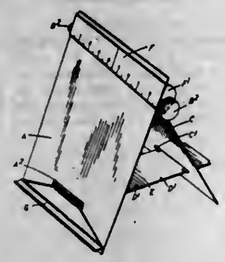
2,469,508
ELECTRICAL ACCUMULATOR WITH TUBULAR ELECTRODES
Moises Malki, Boris Matzkin, and Aron Luis Goldman, Buenos Aires, Argentina
Application February 27, 1946, Serial No. 650,723
In Argentina October 2, 1945
5 Claims. (Cl. 136—6)



4. An electrical accumulator comprising a tubular insulating casing having top and bottom closures, an external terminal plate on the bottom of the casing, a first open ended arcuate electrode disposed within the casing and fitting snugly against the side walls thereof, the upper end of the electrode being spaced from the top of the casing and forming an air chamber in communication with the interior of the electrode, a second terminal integral with the first electrode and passing through the top of the casing, a second electrode disposed within and equally spaced from said first electrode and integral with said terminal plate, a permeable insulating sheet material lodged against the operating faces of said electrodes, and an immobile electrolyte filling the annular space between said electrodes.

2,469,509
REMOVABLE TOP STOP
Davis Marinsky, Bronx, N. Y.; Louis H. Morin executor of said Davis Marinsky, deceased, assignor of one-half to said Louis H. Morin
Application May 2, 1945, Serial No. 591,514
20 Claims. (Cl. 24—205.11)

1. A top stop for the stringer of separable fasteners, said stringer comprising a tape having scoops spaced longitudinally of one edge portion thereof, said scoops having coupling ends beyond the tape edge, said coupling ends having reduced neck portions, and said stop comprising a yoke fitting on the neck portions of a predetermined number of end scoops of said stringer.

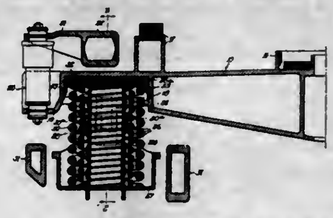


2,469,510
ROTARY VANE ENGINE
Werner W. Martinmaas, Jr., Orient, S. Dak.
Application October 7, 1946, Serial No. 701,787
2 Claims. (Cl. 103—136)

1. The combination in a rotary engine of the expansible chamber type with a cylinder having an inlet port and an exhaust port, a pair of annular ballbearing races mounted in the inner face of a head of the cylinder and spaced to form an annular runway, of a shaft eccentric to and journaled in the cylinder and a rotor having

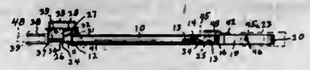
slots and carried by the shaft, a series of radially reciprocable vanes carried in the slots of the rotor, springs tending to project the vanes and means for limiting the projection of the vanes, and a laterally projecting lug on each vane traveling through and guided in said runway.

2,469,511
BOOKRESTS AND THE LIKE
Eugene Murphy, Vancouver, British Columbia, Canada
Application August 3, 1945, Serial No. 608,645
In Great Britain September 18, 1944
4 Claims. (Cl. 120—28)



1. A copyholder comprising a front plate having rearwardly projecting bearing means near its upper end, a transverse slot between said bearing means, a rear plate, a slot in the lower portion of said rear plate, a horizontal pivot pin mounted in said bearing means and connecting said front and rear plates, a feed roller mounted on said pivot pin and projecting through the slot in said front plate, a detachable transverse and reversible paper holder with rearwardly projecting slotted attaching members near its ends, each adapted to slip over either end of said horizontal pivot pin and retain said paper holder against the forwardly projecting portion of said feed roller when positioned in front of said front plate and support said paper holder in a position spaced from said front plate when positioned in the rear thereof, and a tie plate pivoted to the front plate adjacent to the lower end thereof and extending rearwardly therefrom to engage the rear plate and lock the front and rear plates in angular relationship, said plates being adapted to fold into a substantially flat and closely packed relationship in which position the free end of the tie plate extends through the slot in said rear plate upwardly to a point between said rear plate and said transverse paper holder, when said paper holder is positioned behind said front plate.

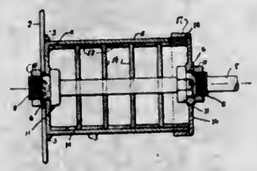
2,469,512
SILICEOUS MAGNESIUM-CONTAINING PURIFYING MEDIUM AND PROCESS OF PRODUCING IT
John J. Naugle, New York, N. Y.
No Drawing. Application January 18, 1947, Serial No. 722,963
10 Claims. (Cl. 252—457)



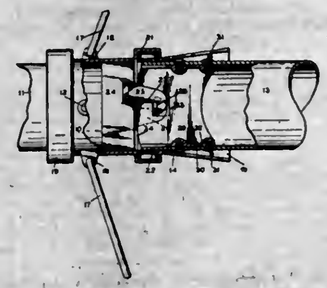
1. The method which comprises: adding a sufficient quantity of an inorganic magnesium compound-containing material to the silica and metallic oxide and salt-containing waste products resulting from the manufacture of Portland cement clinker to obtain from about a 70–30 to about a 30–70 mixture; and thereafter calcining said mixture at a temperature of from about 600 to about 800 degrees C. for from about 5 to about 30 minutes.

2,469,513
RAILWAY CAR TRUCK
Karl F. Nystrom, Nashotah, and Vernon L. Green, Milwaukee, Wis.
Application July 13, 1945, Serial No. 604,774
7 Claims. (Cl. 105—197)

1. In a railway car truck, the combination of a truck frame involving side members united by a pair of spaced transom members having vertical slots and equalizer members, the intermediate portions of the equalizer members being arranged to provide vertically disposed passages; a bolster arranged between the transom members with its ends extending between the frame side members and the equalizer members and provided on its lower face with spring receiving vertical pockets; a spring holding container arranged within the vertical passage of the equalizer member in spaced relation beneath each bolster pocket and provided at opposite sides with vertically disposed slots; and removable keys disposed transversely through the container slots and the vertical slots of the transom members whereby the containers are removably suspended in place.



2,469,514
COMBINATION TELESCOPING TRACTOR AND HORSE-DRAWN HITCH
Edward M. O'Donnell, Galva, Iowa
Application March 14, 1946, Serial No. 654,450
5 Claims. (Cl. 278—33)



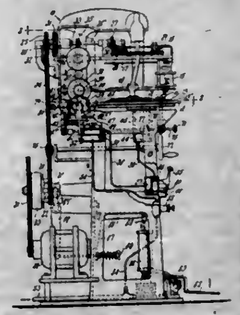
4. A combination telescoping tractor hitch comprising a female tube, means for attaching a drawn vehicle to said tube, a male rod received in said female tube, means for engaging the rod with said tube when said rod is thrust into said tube, including a shouldered member attached to the end of said tube, a spring urged lever member including a shoulder engaging member attached to the rod, said rod including means for attachment to a tractor.

2,469,515
LUBRICATING AND PACKING SHAFT
Edward J. O'Rourke, Ozone Park, N. Y.
Application September 25, 1945, Serial No. 618,476
3 Claims. (Cl. 308—36.1)

3. In a waterproof connection for ends of crankshafts and the like protruding from housings, the combination, which comprises a cylindrical casing open at one end and having a centrally disposed shaft-receiving opening in the other, said end having a centrally disposed shaft-receiving opening positioned against and welded to the housing, a shaft having collars integral therewith positioned in the casing with bearing surfaces adjacent the collars, a closure on the open end of the casing having a centrally disposed shaft-receiving opening aligned with the shaft-receiving opening of the closed end of the casing, said shaft-receiving openings of the casing and closure providing journals for the bearing surfaces adjacent the collars of the shaft, lock nuts threaded on the shaft at the ends of said bearing surfaces, a plurality of spaced lubricant separating washers in said casing, and spacing sleeves separating said washers.

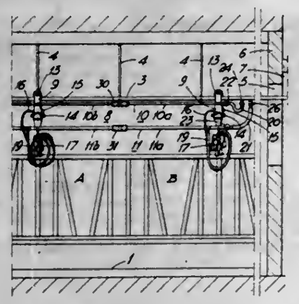
2,469,516
FLEXIBLE LOCKING COUPLING
Emil S. Pearson, Portland, Oreg.
Application June 14, 1946, Serial No. 32,769
8 Claims. (Cl. 285—176)

1. In a pipe coupling, a pair of coupling members adapted to be arranged in telescoping position, a latch hook located near the axis of one of said members and extending parallel to the axis of said latter mentioned member, means for rigidly mounting said latch hook in said latter mentioned member, and a latch plate mounted in the other coupling member, an opening in said latch plate to enable said latch hook to extend through said opening when said coupling members are in locked position.



2,469,517
SEWING-MACHINE LOOP TAKER
Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois
Application March 8, 1948, Serial No. 13,684
3 Claims. (Cl. 112—228)

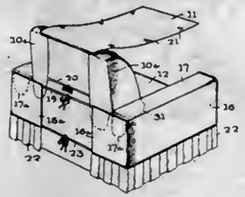
1. The combination with a hook member and the gib ring thereof, of means for detachably connecting the gib ring to the hook member comprising connecting bolts projected through registered openings formed in the gib ring and hook member and having corresponding end portions provided with transverse openings, a flexed resilient plate positioned against the bottom of the hook member and having oppositely disposed



openings formed therein for the projection therethrough of the end portions of said connecting bolts, and an elongated resilient wire member arranged in abutting relation with respect to said plate and having angled end portions adapted to be projected through the transverse openings of said connecting bolts.

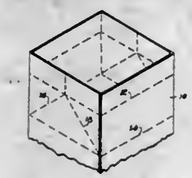
2,469,518
SOLE CUTTING MACHINE
Herbert R. Polleys, New Haven, Conn., assignor to Wellman Company, Medford, Mass., a corporation of Maine
Application July 2, 1947, Serial No. 758,529
8 Claims. (Cl. 12—25)

5. In a sole cutting machine having a knife, means for driving said knife in a horizontal circuit around the edge of the sole to be cut, a fixed abutment encompassed by the circuit of the knife, a vertically movable table for supporting the stock from which the soles are to be cut, a piston in a cylinder for moving said table vertically in the path of travel of said knife and to clamp said stock against said abutment, and a valve for controlling the admission and exhaust of fluid under pressure to and from said cylinder for operating said piston towards and away from said abutment, the improvement comprising a cam geared to said knife drive and adapted to operate said valve in timed relation to the movement of said knife, surfaces on said cam adapted to operate in series upon said valve to admit fluid under pressure to said cylinder to elevate and carry said stock into the path of travel of said knife at a certain position of said knife on its circuit, and to exhaust said fluid immediately after the knife has travelled a complete circuit around the edge of the sole, and thereby release said stock from its clamped position and move it out of the path of travel of said knife, and means for disconnecting and connecting said cam from said knife drive to permit independent movement of said knife and cam, and thereby change the position of said knife when said stock is carried into the path of travel of said knife.



2,469,519
MACHINE MILKING PLANT
Eric Georg Redin and Karl Erik Olander, Norrkoping, Sweden, assignors to Aktiebolaget Mamms, Norrkoping, Sweden, a company of Sweden
Application March 5, 1948, Serial No. 13,177
In Sweden March 10, 1947
6 Claims. (Cl. 31—58)

1. A machine milking plant for a cow barn having a stationary milk conduit extending from a milk chamber into said barn, and a stationary vacuum conduit extending from a machine room into said barn, comprising a track rail extending along one row of stalls at least in said barn, a carriage structure movably mounted upon said truck rail, a plurality of teat cup units on said carriage structure, the number of said units being commensurate to and said units being spaced at appropriate distances from one another for simultaneous milking of a predetermined number of cows while the carriage structure occupies a predetermined working position, a substantially horizontal milk conduit on said carriage structure common to said teat cup units, said teat cup units having milk tubes connected to said milk conduit on said carriage structure, a connecting device at one end at least of said milk conduit on said carriage structure for connecting said milk conduit to said stationary milk conduit, a substantially horizontal vacuum conduit on said carriage structure common to said teat cup units, said teat cup units having vacuum tubes connected to said vacuum conduit on said carriage structure, and a connecting device at one end at least of said vacuum conduit on said carriage structure for connecting said vacuum conduit to said stationary vacuum conduit.

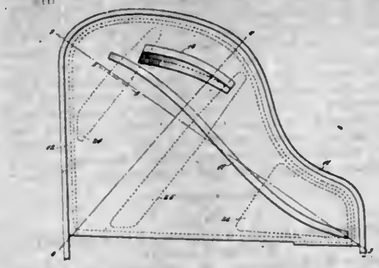


2,469,520
FURNITURE SLIP COVER
Richard W. Roberts, Jr., Richmond, Va., assignor to Crawford Manufacturing Co., Inc., Richmond, Va., a corporation of Virginia
Application January 2, 1946, Serial No. 638,678
6 Claims. (Cl. 155—182)

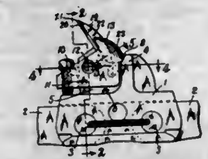
5. In a one-piece slip cover for a flat back chair, a front panel for covering the front of the chair back, side extensions from said front panel for covering the sides of the chair back and having free edges adapted to fold on the rear of the chair back, a rear panel narrower than said front panel and having only its upper edge attached to said front panel along a meeting line corresponding to the top of the chair back, cords attached to said front panel extending longitudinally upwardly thereof and terminating at the junctions of said meeting line with the side edges of said rear panel so said cords are spaced inwardly from the side edges of said front panel and the side extensions thereof, whereby excess material of said front panel between said cords and said side extensions can be tucked under

said cords when the cover is applied to a chair having a back of less width than the width of said front panel, and fastening means along the unattached side edges of said rear panel for securing said rear panel to the rear of the chair back and for holding said cords under tension to firmly retain the excess material of said front panel tucked under said cords.

2,469,521
COLORING PACKAGE FOR OLEOMARGARINE
Howard A. Rohdin, Glen Ridge, N. J.
Application June 5, 1947, Serial No. 752,772
2 Claims. (Cl. 99—148)



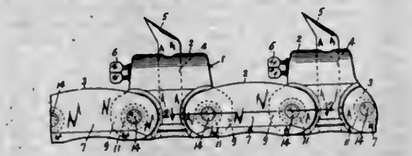
1. An oleomargarine package comprising a wrapper snugly fitting a body of oleomargarine, a closure for said wrapper of the type comprising at least one triangular ear formed of the wrapper material, said ear being open to the interior of said package, a rupturable capsule of coloring matter in said ear and a heat seal partially closing off the opening between said ear and the space occupied by said oleomargarine, said partially closed opening providing a channel for the passage of coloring matter from the ear to the oleomargarine when the capsule is broken, said channel being restricted to retain the capsule in the ear.



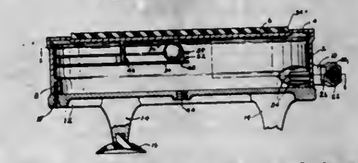
2,469,522
PIANO SOUNDBOARD
Joseph Sauerland, West New York, N. J., assignor to Hardman, Peck & Company, New York, N. Y., a corporation of New York
Application February 7, 1945, Serial No. 576,518
9 Claims. (Cl. 84—192)

1. A piano sound board of superposed plies of wood of substantially uniform thickness arched

convexly upwardly from a marginal border and a string supporting bridge on the convex upper surface of the board, the concave undersurface of said board being free and unobstructed.

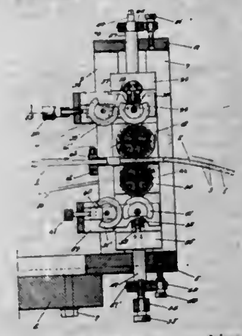


2,469,523
CUTTER CHAIN
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application July 26, 1944, Serial No. 546,653
9 Claims. (Cl. 262—33)



1. In a cutter chain, a chain block having a lateral lug, said lug being cut away at its sides to provide a narrow central lug portion, said narrow portion having a rearwardly facing surface against which a cutter bit is adapted to seat, said narrow portion being transversely slotted, and the slot being elongated in a direction lengthwise of the block, and a bit clamp straddling the narrow portion of the block lug and having spaced parallel side portions and a pivot element secured to the parallel side portions and passing through said elongated slot, said slot permitting adjusting movement of the clamp during clamping of the bit.

2,469,524
CUTTER CHAIN
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application December 28, 1944, Serial No. 570,116
4 Claims. (Cl. 74—252)



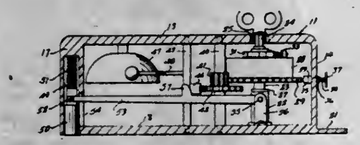
4. In a chain, in a strap link connection for connecting together a plurality of bit-carrying links each having two bores therein whose walls are adapted to constitute bearings, a strap link having pin portions adapted to enter the adjacent bores in a pair of adjacent bit-carrying links but of smaller diameter than said bores, and bearing sleeves of greater length than said pin portions and of such external diameter as to fit said bores in the bit-carrying links, said pin portions having at least a slight drive fit in the bores in said bearing sleeves.

2,469,525
DENTAL CEMENT APPARATUS
Frank J. Skrob, Okanogan, Wash.
Application July 15, 1946, Serial No. 683,689
6 Claims. (Cl. 259—72)

1. The combination with a closed drum, of water injections means located tangentially of the drum for creating a whirling mass of water in the drum and including spaced jet tubes one within the other, a bell jar on the top of the drum, means forming a communicating passage between the jar and the outer tube whereby the force of water passing through the tubes will exhaust air from the bell, and means responsive to the movement of water swirling within the drum for vibrating the top of the drum.

2,469,526
CUTTING AND PRINTING MACHINE
John E. Sloat, Columbia, Conn., assignor to Insulation Products Company, Willimantic, Conn., a partnership
Application January 30, 1945, Serial No. 575,328
4 Claims. (Cl. 101—226)

1. In a cutting machine the combination comprising a frame, a pair of drums rotatably mounted on said frame on parallel axes, a plurality of axially extending knives radially slidable on one of said drums, means for causing sliding movement of said knives on said drum as it rotates, knife cooperating abutment members on the other of said drums, said means for causing sliding movement of said knives comprising relatively fixed cam members and co-



operating cam followers mounted on the knives, and means for adjusting the relatively fixed cam members with respect to the knife drum to vary the amount of sliding movement of the knives on the drum.

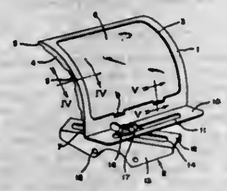
2,469,527
SAW FILING STAND
Robert J. Stiffiemire, Dickinson, Ala.
Application July 9, 1947, Serial No. 759,748
3 Claims. (Cl. 76—78)

2. A saw filing stand comprising an anchor member having a pointed extremity adapted to be inserted in the ground, a U-shaped member, means removably securing said U-shaped member to said anchor member, a pair of movable jaws integrally formed with the legs of said U-shaped member and having opposed longitudinal slots, means received in said U-shaped member normally urging said jaws to spread position, a bolt slidably received in said slots and including a threaded portion, a nut receivably engaged on the threaded portion of said bolt, and hand gripping means pivoted on said nut for rotating said nut and moving said bolt longitudinally in said slots.

2,469,528
BURGLAR ALARM FOR WINDOWS AND DOORS
Arthur R. Suma, Sr., Chicago, Ill.
Application February 27, 1948, Serial No. 11,404
2 Claims. (Cl. 116—91)

2. In a burglar alarm for a window or the like having a sash or the like movable to open position relative to another sash or the like; a housing adapted to be fixedly mounted on one of the sashes, a clockworks within said housing having an escapement wheel, an escapement pivoted to alternately engage and disengage from said escapement wheel, a stop lever pivoted in said housing and arranged to engage said escapement in one position of said lever to render said clockworks inoperative and to disengage from said escapement in another position of said lever and permit said clockworks to operate, an audible signal operatively connected to said clockworks, a plunger mounted for endwise movement in said housing and in position to be engaged and displaced by a portion of the other sash or the like when the sashes are brought into closed relation, means operatively connecting said plunger and said stop lever, spring means normally pressing said plunger outwardly of said housing whereby said stop lever is disengaged from said escapement so that operation of said audible signal by said clockworks is permitted, said plunger being arranged to be displaced inwardly of said housing against the tension of said spring means so as to move said stop lever into engagement with said escapement and render said clockworks inoperative whenever said plunger is engaged and displaced by said portion of the other sash or the like as the sashes are brought into closed relation, said audible alarm comprising a sounder and a hammer mounted on said escapement.

2,469,529
PROCESS OF RECLAIMING VULCANIZED RUBBER SCRAP
Lyndon B. Tewksbury, Jr., Potsdam, N. Y., and Louis H. Howland, Waterbury, Conn., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 5, 1946, Serial No. 674,628
9 Claims. (Cl. 260—720)

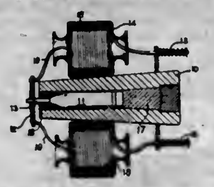


1. A process for reclaiming scrap containing vulcanized rubber selected from the group consisting of natural rubber, polymers of butadiene-1,3, and copolymers of butadienes-1,3 with compounds which contain a $CH_2{=}C<$ group and are copolymerizable with butadienes-1,3, which comprises heating the scrap in the presence of a small amount of a bis(alkoxy aryl) disulfide in which the alkoxy groups contain from 1 to 4 carbon atoms for a time sufficient to materially soften the scrap.

2,469,530
SHIPPING AND DISPLAY CONTAINER FOR JEWELRY
William J. Thompson, Edgewood, R. I., assignor to C. & M. Manufacturing Co., a corporation of Rhode Island
Application November 27, 1948, Serial No. 62,345
4 Claims. (Cl. 206—75)

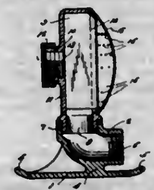
4. A shipping and display container having a rim with an upstanding ornamental outer wall and a depending vertical inner wall of less height than the outer wall, said outer and inner walls having sides and ends, a frame secured to the sides of the inner wall and having narrow sides contiguous the inner wall sides and narrow ends, said frame ends being adjacent to and spaced from the contiguous inner wall ends, and an article support element seating over the frame sides and engaging the inner wall sides and seating over the frame ends and beneath the inner wall ends, the thickness of said support element being less than the space between the frame end and the contiguous wall end spaced therefrom, said inner wall sides having projecting parts extending over and in spaced relation to the frame sides to receive the support element therebetween, said inner wall ends having tabs extending downwardly therefrom and said support element having slots adjacent its ends for lockingly seating over said tabs.

2,469,531
SHIELD DEVICE
Anthony Toth and George Toth, Detroit, Mich.
Application September 14, 1945, Serial No. 616,294
2 Claims. (Cl. 82—34)



1. A protective shield of the character described comprising an arcuate frame having an opening therethrough, a sheet of transparent material supported by said arcuate frame and enclosing said opening, a reinforcing angle extending from the curved side of said arcuate frame, a base reinforcing angle forming an integral part of the frame extending from the bottom portion of said arcuate frame and including a slot extending along the length of the reinforcing angle, a projection forming a part of the vertical leg of the base reinforcing angle extending radially of the arcuate frame and serving as a stop for the sheet of transparent material, a supporting angle having a slot extending along the length of its upper leg, and a single pivotal means for clamping the reinforcing angle and the supporting angle together through said slots, said sheet of transparent material being slidably retained by the arcuate frame, and the upper edge of the frame being open for slidably receiving the sheet of transparent material.

2,469,532
WRIST WATCH STRAP
Lyman A. Truckenmiller, Sonora, Calif., assignor of sixty per cent to Douglas Pincock, Santa Barbara, Calif.
Application August 3, 1945, Serial No. 608,665
3 Claims. (Cl. 224—4)

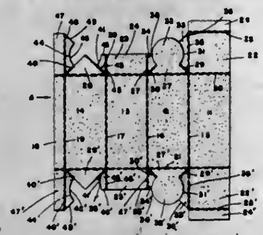


2. A wristband for a watch or the like comprising a pair of resilient, oppositely disposed, curved straps each having means at its inner end for pivotal attachment to a watch or the like and being long enough to overlap each other at their outer end portions when in position encircling a wrist, one of the straps having adjacent its outer end a slot capable of passing the overlapping portion of the other strap, and the overlapping portions of both straps presenting serpentine-like registering curved portions frictionally engageable against each other.

2,469,533
PROJECTION OF TWISTED WIRES
Hubert E. Wellcome, Pleasantville, N. Y.
Application November 23, 1945, Serial No. 630,529
5 Claims. (Cl. 89—1)

1. Apparatus for laying twisted wire by towing behind a projectile comprising a projectile, means causing rotating flight of said projectile, a pair of wires coiled for withdrawal in a direction axial of the convolutions of the wire, and means connecting the wires to the projectile for twisting upon rotation of said projectile during flight.

2,469,534
LAWN SPRINKLER
Henry E. Wessels, Spokane, Wash., assignor to Glenn L. Fish, Spokane, Wash.
Application June 21, 1945, Serial No. 600,735
1 Claim. (Cl. 299—141)



In a sprinkler for a hose, a nozzle comprising casing open at its front and having a rear wall and upper and lower side walls, a plate closing the open front of said casing and formed with a multiplicity of perforations constituting water outlets for forming a spray of water discharged through the said perforations, an externally threaded neck extending outwardly from the lower side wall, an externally threaded neck extending outwardly from the rear wall, said necks being of the same dimensions whereby either may be screwed into a coupling for detachably connecting the nozzle with a hose, and an internally threaded cap of dimensions adapting it to be removably screwed upon either neck.

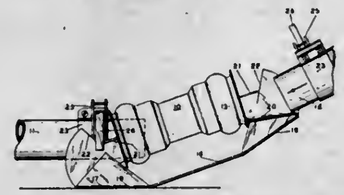
2,469,535
CONTAINER
Marshall I. Williamson, New Haven, Conn., assignor, by mesne assignments, to National Folding Box Company, Incorporated, a corporation of Connecticut
Application October 26, 1944, Serial No. 560,292
4 Claims. (Cl. 229—37)

1. A container for powdered material having a tubular body portion and a sift-proof end closure for said body portion including an inner end panel hingedly connected to a side wall of the container, said inner end panel being equal in size to the end area of the container; an end sealing flap and two lateral sealing flaps hingedly connected to said end panel along its end and side

edges, respectively said sealing flaps forming a continuous seal around said end panel; an outer end panel hingedly connected to the opposite side wall, said outer end panel being shorter than said inner end panel, said end flap of the inner end panel being adhesively secured to the inner surface of said outer end panel adjacent the hinge line of said outer end panel; lateral flaps hingedly connected to the side edges of said outer end panel; second closure panels hingedly connected to the remaining two side walls of the container, said second closure panels being adhesively se-

cured to said lateral sealing flaps and hingedly connected to the adjacent lateral flaps of the outer end panel and the lateral sealing flaps of the inner end panel along diagonal fold lines, said diagonal fold lines extending from the two corners which are adjacent to the conjoined wall panels and terminating at a cut line short of the center of the end area, one of said second closure panels having a central end sealing tab circumscribed by said cut line, said sealing tab being adhesively secured to said inner and outer end panels at the center portion of the end closure.

2,469,536
METHOD OF MAKING SHOPPING BAGS
Franklin P. Winesett, Camas, Wash., assignor to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada
Application March 4, 1946, Serial No. 651,837
4 Claims. (Cl. 93—35)

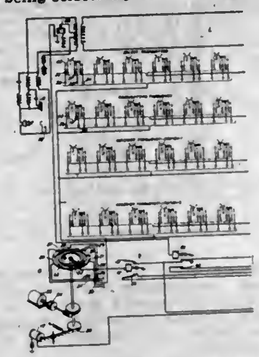


1. The improvement in the method of making handled shopping bags which consists in making slits at spaced intervals near one edge of the web so as to form tabs, folding said marginal web portion and tabs back over the main body of the web, lifting said tabs on said folded marginal portion so that the underside of said tabs will then be exposed, applying adhesive to the underside of said lifted tabs, inserting the ends of handle loops between said lifted tabs and the exposed spaces on the main body of the web under said tabs, pressing said tabs and therewith said underlying handle loop ends firmly down against said exposed spaces on the main body of the web, cutting the web transversely into bag sections of equal size with each section including a pair of said attached handle loops, forming each of said severed sections into a bag tube by making a seam along said transverse web cut, and forming a bag bottom in said bag tube at the opposite end from said handles.

2,469,537
HUMIDOSTATIC ELEMENT
Henry Wohrer, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a corporation of Wisconsin
Application January 12, 1945, Serial No. 572,538
2 Claims. (Cl. 117—127)

1. A hygrometric element comprising a flexible supporting strip of ferrous metal alloy having a negligible coefficient of thermal expansion; and a thin layer adherent to one face of said flexible strip insoluble in water and composed primarily of glycerin and gelatin in the proportion of two drops of glycerin to ten grams of gelatin, said layer being characterized, over a temperature range of the order of 50 Fahrenheit degrees, by a lineal expansion which is proportional to and closely follows the relative humidity of air in contact therewith.

2,469,538
PIPE COUPLING
Dorris S. Young, Wilsonville, Oreg.
Application April 26, 1947, Serial No. 744,201
5 Claims. (Cl. 285—1)

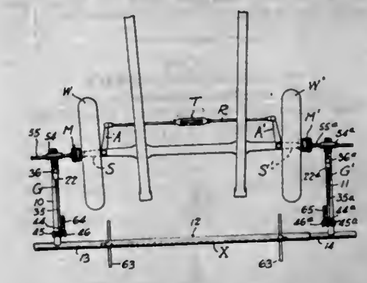


1. In a pipe coupling of the character described, a coupler having a main tubular body portion, a sled-like base mounting for said main tubular body portion adapted to support said tubular body portion at a spaced distance above the surface of the ground, said base having a horizontal central section and upwardly inclined end sections, a trough-like guideway extending from the lower part of each end of said main tubular body portion, the outer ends of said guideways joining the outer ends of said upwardly inclined end sections of said sled-like base respectively, whereby the weight of a pipe in one of said guideways would exert a tendency to cause said coupling to tip upwardly and rest on the inclined end base section beneath that guideway, and facilitate the insertion of a pipe in the other guideway and end of said tubular body portion.

2,469,539
RADIO CONTROL SYSTEM
Henry H. Abbott, Yonkers, and Henry M. Bascom, New York, N. Y., and Preston B. Fairlamb, Butler, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 649,582
5 Claims. (Cl. 250—6)

1. In a station selecting system, in combination, a master station, a telegraph line extending therefrom, a plurality of radio stations along said line, each station comprising a radio transmitter and a radio receiver, each of said transmitters being adapted to be adjusted to transmit on any one of a predetermined number of different radio

frequencies and each receiver being adapted to be adjusted to respond to any one of a predetermined plurality of different received frequencies, a common communication channel extending from the master station to all of said radio stations, telegraph selector apparatus in said telegraph line individual to the several radio stations, said telegraph selector apparatus adapted to respond to two successive and different codes initially, and start-stop permutation code transmitting apparatus adapted to transmit two successive and different codes initially, said code transmitting apparatus being selectively controlled at the master



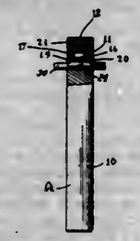
station and associated with the telegraph line for controlling said selector apparatus in different manners to selectively adjust any desired one of the radio transmitters to transmit on a desired one of said transmitter frequencies and to connect the input circuit thereof to said communication channel to the exclusion of any other transmitter, to disconnect any connected transmitter, to selectively condition a desired one of said receivers to resopnd to any desired one of said predetermined frequencies, to connect the output circuit thereof to the communication channel, and to selectively disconnect any connected receiver therefrom.

2,469,540
PAPER FILE
Warren A. Anderson, St. Charles, Ill.
Application February 9, 1948, Serial No. 7,209
4 Claims. (Cl. 129—21)

3. A paper file comprising a base, a hollow spindle mounted thereon, a piercing member within said spindle and having a puncturing end normally projecting therefrom, means for limiting said projection, a seat member within and adjustable along said spindle toward and away from the piercing member, means for maintaining said seat member in an adjusted position, and spring means in said spindle between said piercing and seat members.

2,469,541
GAUGING INSTRUMENT FOR VEHICLE WHEELS
Walter Bagge and George F. Bagge, Los Angeles, Calif.
Application July 6, 1946, Serial No. 681,680
8 Claims. (Cl. 33—203.17)

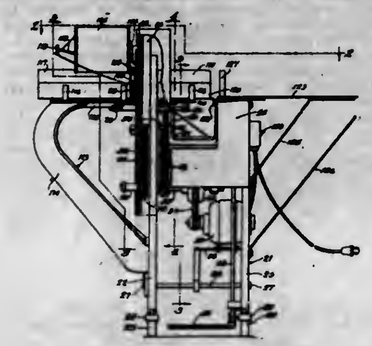
1. A gaging instrument of the class described comprising: a support having spaced arms provided with posts; means adapted to suspend said posts about axes co-axially related to the axes of the steering spindles of an axle and with the longitudinal axes of the posts in intersecting relation to the spindles' axes for turning movement of the support relative to the spindles upon steering movements of the latter; two indicating devices, each having two coacting parts; means mounting one part of each indicating device on each arm of the support for turning movement with the latter; and means mounting the other part of each indicating device on each of said posts for relative movement with respect to said one of the parts of the respective device when steering movement of the spindles is effected.



2,469,542
CONNECTOR
Stephen P. Becker, Poughkeepsie, N. Y.
Application July 28, 1945, Serial No. 607,518
1 Claim. (Cl. 24—81)

In a connector for wires, the combination of an elongated body member principally U-shaped in cross section, at least two pairs of longitudinally disposed laterally extending guide projections, a jaw member having a pair of grooves complementary to one of the pairs of guide means for limiting the jaw member to movement on the body member, with the jaw member telescoping with the body member, a head member supported

on the body member and a head member supported on the jaw member in complementary opposition to one another at distant ends of the associated supporting members, both of said heads being on the same side of the longitudinal axis of the telescoping members, a groove in the face of each member arranged transversely to said longitudinal axis and in complimentary opposition to one another, a screw arranged along the longitudinal axis of the members having a head portion in contact with one member and a body portion in threaded engagement with the other member to move the members relative to one another and a separator head located transversely to the axis and in complimentary relation between the other two heads, said separator head having hooked side extremities fitted to cooperate in complementary manner with the other pair of guide projections on the body member.



2,469,543
COUNTERBORING DEVICE
Tom M. Bondhus, Monticello, Minn.
Application May 4, 1945, Serial No. 591,913
6 Claims. (Cl. 77—58)

1. A counter-boring tool comprising a shank, a pair of opposed notches in opposite sides of said shank, a sleeve engageable about said shank and including projection means engageable into said opposed notches, an aperture through said shank between said notches and communicating therewith, a cutter blade in said aperture and projecting at opposite sides of the shank, said projection means engaging said cutter blade on opposite sides of said shank.

2,469,544
TYING MACHINE FOR ELONGATED PACKAGES
Benjamin H. Bunn, Chicago, Ill., assignor to B. H. Bunn Company, Chicago, Ill., a corporation of Illinois
Original application December 10, 1941, Serial No. 422,317. Divided and this application March 7, 1945, Serial No. 581,483
12 Claims. (Cl. 100—31)

1. A machine for wrapping with twine elongated packages, said machine comprising a frame, a wrapping ring support on said frame, a plurality of rollers carried by said support, a wrapping ring mounted to rotate on said rollers, means mounted on one side of the wrapping ring for storing a supply of twine, a twine arm projecting in the axial direction from the other side of the wrapping ring and adapted to carry a reach of twine from the twine supply around a package in the machine, a package support carried by the frame and projecting laterally beyond the wrapping ring, the package support projecting through the ring and terminating adjacent a plane defined by the reach of the twine arm during a rotation of the wrapping ring, a second package support carried by said frame at substantially the same level as said first mentioned package support, said package

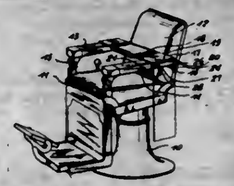
supports spaced to permit the passage of the twine during the wrapping operation, and tension control means mounted between the twine supply means and the end of the twine arm to control the tension of twine during a package wrapping operation.

2,469,545
SELF-ENERGIZING ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application September 24, 1945, Serial No. 618,114
3 Claims. (Cl. 204—248)

1. A self-energizing electrolytic water correction device for use in water boilers, comprising a pair of opposed apertured side plates having integral projections forming transversely aligned inner saddles and having bolt holes lying on either side of said saddles, intermediate saddle blocks positioned in abutting relationship and in transverse alignment with said saddles, said blocks having bolt-receiving end grooves, said side plates and saddle blocks being formed of electro-positive metal, bars of electro-negative metal positioned between said opposed and aligned saddles and saddle blocks, bolts passing through said bolt holes and end grooves, and means coacting with said bolts for tightly clamping said bars between said saddles and saddle blocks, said saddles and saddle blocks having clamping surfaces conforming to the contour of said bars and in extended surface engagement with opposed intermediate portions thereof but with less than full peripheral contact to provide for tight clamping action to prevent displacement of said bar while exposing the ends of said bar to electrolytic attack.

2,469,546
METHOD OF FORMING PROTEIN COMPOSITIONS
John E. Calhoun, Bainbridge, and Thomas M. Busse, Unadilla, N. Y., assignors to The Borden Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application January 7, 1947, Serial No. 720,686
18 Claims. (Cl. 106—146)

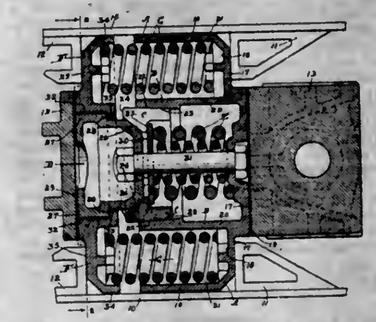
1. In a process for producing protein compositions which are substantially free from bubbles, the steps comprising dispersing a protein material in a liquid which is a non-solvent for the protein, reducing the pressure above the liquid dispersion sufficiently to substantially deaerate the dispersion, and thereafter adding a solubilizing agent for said protein and dissolving said protein material.



11. In a process for producing casein compositions which are substantially free from bubbles, the steps comprising dispersing a comminuted casein material in water, applying a vacuum of about 25 inches of mercury to the dispersion, agitating for about 30 minutes, adding a solubilizing agent for said casein comprising caustic soda, and gradually heating to 170° F. with mild agitation to dissolve said casein material.

2,469,547
DIVAN MOVER
Frank H. Carter, Taft, Calif.
Application July 30, 1945, Serial No. 607,834
8 Claims. (Cl. 211—27)

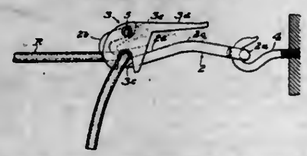
1. In a divan rack, a platform, an upstanding rigid frame secured to one side edge of said platform, a cooperating sub-frame hinged to the opposite side edge of said platform and adapted to swing down into a position adapted to be inserted under the base of said divan when the seat and back members of said divan are extended in bed forming position on said base, said platform and frame being adapted to turn about said hinge connection and swing said rigid frame down over said seat and back members and cooperating with said hinged member to clasp the extended members of the divan therebetween, means for fastening said rigid and sub-frame members together in said clasped position and means secured to said sub-frame and engaging the front side of said base to support the weight of the base when said platform and rigid frame are turned upwardly into vertical position.



2,469,548
CHILD'S SEAT FOR BARBER CHAIRS
Emmett L. Connelly, El Monte, Calif.
Application March 8, 1946, Serial No. 653,036
3 Claims. (Cl. 155—131)

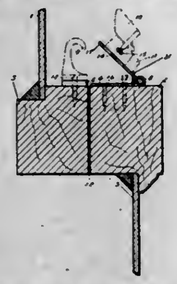
1. A child's seat for barbers' chairs comprising a board adapted to bridge the arms of a barber's chair, and a bracket hingedly secured to said board, said bracket consisting of a rod extending along one end edge of the board having its ends bent downwardly and then inwardly, one of said ends terminating in a downwardly bent bifurcated

portion receivable over the bolt that pivotally attaches one arm of the chair to its back and the other inwardly bent end terminating in an eye through which a fastener may be driven into the underside of the arm of the chair.



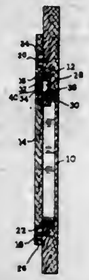
2,469,549
SHOCK ABSORBING MECHANISM FOR DRAFT RIGGINGS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application October 11, 1947, Serial No. 779,355
9 Claims. (Cl. 213—24)

1. In a shock absorbing mechanism for railway draft riggings having inner and outer stops and a lengthwise movable yoke, the combination with a follower; of a spring cage, said follower and cage being enclosed within the yoke, said follower and cage being relatively movable toward and away from each other lengthwise of the mechanism; spring means within the cage opposing relative movement toward each other of the follower and cage; a friction casing movable in unison with said cage; friction shoes slidingly telescoped within the casing; spring means within the casing yieldingly opposing movement of the shoes inwardly of the casing; a block in wedging engagement with the shoes, said block being movable with respect to said follower in direction lengthwise of the mechanism, said yoke, when moved lengthwise in one direction, engaging the follower and block to move the same toward the cage and friction casing to compress said first named spring means and force the shoes inwardly of the casing against the resistance of said second named spring means, said yoke, when moved in a reverse direction, engaging and mov-



ing the spring cage and casing toward said follower to compress said first and second named spring means against said follower and shoes, respectively, said shoes engaging the follower and being held against relative movement with respect to the same during this action.

2,469,550
TAKE-UP CLAMP
James F. Fair, New Kensington, Pa.
Application January 25, 1946, Serial No. 643,220
4 Claims. (Cl. 24—134)

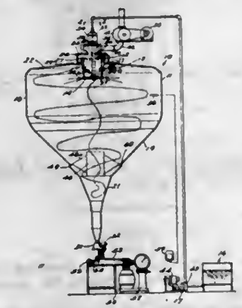


1. A take-up and self-locking clamping device for a horizontally extending rope comprising two clamping members, a pivot uniting the first clamping member to the second clamping member at a point located adjacent to a terminal end of said second member, the second clamping member having a clamping edge extending toward said end and spaced from said pivot, the space interval between said clamping edge and the pivot decreasing as said edge in its extent approaches said pivot, the first clamping member comprising a bifurcated structure having two notches opening transversely thereof, the bottoms of the notches being located at a greater radial distance from said pivot than said terminal end of the second clamping member, the first clamping member being movable between a position in which the notches extend in rope-receiving position above said pivot slideably to receive a rope to be drawn taut, and a position in which said notches extend downwardly from said pivot to embrace said clamping edge and securely wedge the body of the rope in said notches against said clamping edge, said downwardly extending notches having a rope-engaging edge positioned to react to horizontal tension applied to the engaged rope for increasing the wedging action against said clamping edge in accordance with the magnitude of such tension.

2,469,551
SAFETY WINDOW LOCK ADAPTER
William E. Frietsche, New Hyde Park, N. Y.
Application February 25, 1947, Serial No. 730,807
2 Claims. (Cl. 292—240)

1. A safety window lock adapter comprising a base plate adapted to be secured to one of a pair of relatively movable sashes in place of the cam member base of a window lock, a supporting plate hinged to said base plate being of such a width that it protrudes over the front edge of the sash to which said base plate is secured and having recesses in its thus protruding portion, a bar adapted to be interposed between the hook member of a window lock and the other one of said pair of sashes and having a recessed edge portion into which fits the protruding portion of said supporting plate, and resilient means for spacing apart said base plate from said supporting plate, the latter being adapted for having the cam member of a window lock secured thereto, the thickness of said bar being equal to that of said base plate and said supporting plate together, all substantially as set forth.

2,469,552
DUAL CROSS COMMUNION SET
Delphus Goudreau, Northbridge, Mass.
Application June 12, 1948, Serial No. 41,021
2 Claims. (Cl. 206—19)

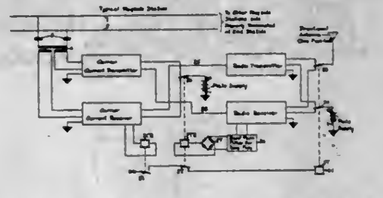


2. A dual cross communion set comprising a relatively large base cross and a relatively small top cross, the latter being adapted to be detachably secured in flatwise condition to the face of the former or selectively supported in upright condition thereon at a right angle thereto, each cross comprising a trunk and a cross arm, a recess in the cross arm of the base cross, said recess opening outwardly at the face thereof and having an undercut portion, there being a recess in the rear face of the trunk of the top cross and a spring clip secured therein, said clip having a central portion extending outwardly thereof and a spring arm terminating the clip, said spring arm being entered in the base cross recess and engageable with the material thereof in the undercut to yieldingly and detachably hold the crosses together, and a fastener holding the spring clip to the trunk of the top cross and extending into the cross arm thereof.

2,469,553
SPRAY DRIER APPARATUS
Joseph M. Hall, Chicago, Ill., assignor to Drying & Concentrating Company, a corporation of Delaware
Application June 14, 1943, Serial No. 490,739
8 Claims. (Cl. 159—4)

1. In a dehydrating system, a dehydrating chamber, a heating zone in the upper portion of said chamber, means for heating said zone, means for circulating and recirculating a drying medium in said chamber through said zone, said means comprising a tubular guide member arranged

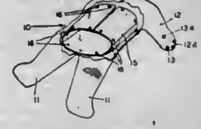
axially of said chamber in the upper portion thereof within said zone, angularly arranged baffles on the exterior of said member for causing the medium moving down across the same to move downwardly within said chamber in an outer spiral, a rotating spray head immediately below said member for spraying said product into the downwardly moving drying medium, fan blades



carried by said head for causing said downwardly flowing medium to reverse and flow in an inner spiral upwardly through said member over the top thereof and then downwardly externally thereof through said heating zone, and means for exhausting vapor extracted from said product and for reducing the atmospheric pressure within said chamber.

2,469,554
THE PROCESS OF PREPARING THE LACTONE OF 2 METHYL 3 HYDROXY 4 CARBOXY 5 HYDROXYMETHYL PYRIDINE
Dorothea Heyl, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application May 27, 1944, Serial No. 537,732
1 Claim. (Cl. 260—295)

The process that comprises reacting a mineral acid salt of 2-methyl-3-hydroxy-4:5-dihydroxymethyl-pyridine with potassium permanganate in aqueous solution and recovering the lactone of 2-methyl-3-hydroxy-4-carboxy-5-hydroxymethyl-pyridine.

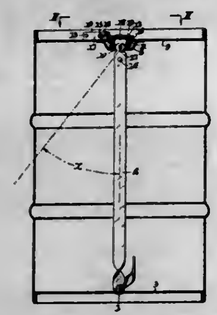


2,469,555
SELECTIVE RADIO COMMUNICATION SYSTEM FOR A PLURALITY OF STATIONS
Forest B. Hitchcock, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application June 19, 1945, Serial No. 600,359
16 Claims. (Cl. 250—6)

5. In a system of communication between a plurality of mobile units traveling through a communication area, a plurality of wayside stations distributed through said communication area, radio transmitting and receiving equipment at each wayside station having a directional antenna for directing its field of radiation and response toward the next adjacent station in one direction but not the other, and each station having an effective range extending to at least the next adjacent station in said one direction, a plurality of mobile units each provided with radio transmitting and receiving equipment of limited range corresponding to said wayside stations whereby each mobile unit is always within range of at least one wayside station regardless of its position in the area, and a wayside communication channel connecting said wayside stations for repeating any message received by the radio receiving equipment at any given way-

side station from a mobile unit within its range to cause the radio transmitting equipment at the remaining wayside stations to retransmit such message for communication to the mobile units within range of the respective wayside stations, whereby each mobile unit can communicate with every other mobile unit in the area regardless of its limited range.

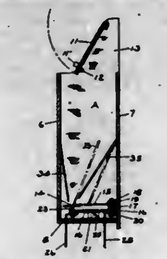
2,469,556
CHILDREN'S SLEEPING GARMENT
Ilamae W. Jacobson, St. Louis Park, Minn.
Application August 7, 1947, Serial No. 766,979
6 Claims. (Cl. 2—83)



1. A child's sleeping suit comprising a body-enclosing portion, individual limb-enclosing portions for all four limbs having their inner ends connected to said body portion, said individual limb-enclosing portions preventing the suit from twisting on the child's body to eliminate danger of strangulation and permit complete freedom of movement while fully covering the sleeping child at all times, a sheet of moisture-proof material interposed between the medial portion of the child and a portion of the suit adjacent thereto, and means for removably attaching said sheet at both the top and bottom thereof within the body portion of said suit to hold the same in the desired position and prevent bunching and wrinkling of said sheet while permitting removal of the same to facilitate cleaning both the suit and the moisture-proof sheet.

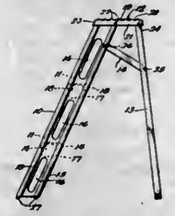
6. A child's sleeping suit comprising a body enclosing portion including arm enclosures and leg enclosures and having a relatively long body portion and low crotch, a liner of moisture-proof material adapted to surround only the medial portion of a child substantially from the waist to slightly below the crotch of the child and having completely open bottom and top end portions to permit substantially unrestricted ventilation for the medial portion of the child's body and to per-

mit substantially unconfined movement of the child's legs, and means for fastening down said liner to said suit to hold the same in protective position therein.



2,469,557
DRUM AGITATOR
Joseph H. Ingraham, Easton, Md., and William Albert Williams, Philadelphia, Pa., assignors to The American Pulley Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 13, 1947, Serial No. 728,290
3 Claims. (Cl. 259—109)

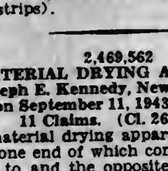
1. A drum having a fitting affixed to a head thereof, said fitting having a circular opening adjacent to a bung hole in said head, and a stirrer bar permanently incorporated in said drum and having an end portion journaled in said fitting at said circular opening, said stirrer bar having an upwardly converging tapered extremity with oppositely disposed notches beneath said tapered extremity forming upper and lower shoulders for engaging said fitting above and below said opening to confine the bar to limited axial movement, the distance between the outer limits of the opposite upper shoulders being greater than the diameter of said opening, and the distance between the outer limit of one upper shoulder and the inner limit of the opposite lower shoulder being less than the diameter of said opening, and the depth and configuration of the notches and the configuration of the tapered extremity being such that prior to assembly of the drum heads the bar can only be engaged centrally within said fitting by relative swinging movement of the bar through an angle with respect to said fitting which is larger than the relative angular movement permitted between the bar and fitting after assembly of the drum and the head carrying said fitting.



2,469,558
SIGNALING DEVICE FOR MAILBOXES
Louie C. Jaskala, San Francisco, Calif.
Application December 15, 1945, Serial No. 635,269
1 Claim. (Cl. 200—57)

In combination with a mail box and the bottom thereof, an electric light circuit closer mounted therein and embodying in its construction an electric insulation plate spaced above and in proximity to the bottom of the mail box, means removably securing the insulation plate to the said bottom, a pair of metal screws provided through the front portion of the insulation plate straddle the center thereof, and an electric con-

ductor leading from each screw through the bottom of the mail box.



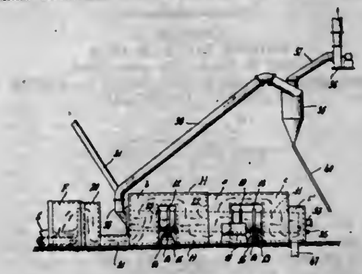
2,469,559
LADDER
Harold A. Johns, Chicago, Ill., assignor to Imagineering Corporation, Chicago, Ill., a corporation of Illinois
Application October 29, 1945, Serial No. 625,378
4 Claims. (Cl. 228—29)

1. A ladder comprising a pair of rails, step means connecting said rails, a back support, a top board having a web wider than said rails equipped with depending flanges, said flanges providing socket portions adapted to grip the forward top portions of said rails when brought thereagainst, means pivotally connecting the rear top portions of said rails to said flanges at an intermediate point on said board to permit said rails to swing within said flanges and bring the forward top portions thereof into engagement with said flanges and permitting said rails to swing rearwardly when the front portion of the board is raised, and means connecting the back support to the rear portion of said board.

2,469,560
INDICATOR PLUG
William B. Jutte, Philadelphia, Pa.
Application May 20, 1946, Serial No. 670,988
15 Claims. (Cl. 136—182)

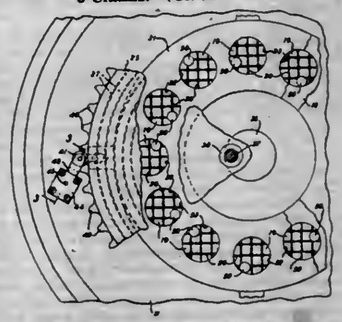
8. An indicator plug for electric storage batteries comprising a closure member having means for detachably engaging the top wall of a battery cell at an opening therein, and an indicator comprising a liquid-level-indicating float and a hydrometer movable vertically and independently within said closure member and arranged concentrically one within the other with their upper ends affording external indicia, visible all around the circumference of the top of said closure member, of the level and density of the liquid in the battery, said closure member having filling inlets surrounding said indicator but not obstructing its

visibility through which the battery may be filled and vented.



2,469,561
FORCE-LASTED SHOE
Jacob S. Kamborian, West Newton, Mass.
Application March 31, 1945, Serial No. 585,950
9 Claims. (Cl. 36—19.5)

4. A force-lasted shoe comprising an upper including, at the quarter, a lining ply and an outer ply, a sock lining secured to the upper at the vamp and to the lining ply only of the upper at the quarter, the outer ply of the upper being free from the sock lining at the quarter, a wrapper strip joined along one of its edges to the margin of the upper and to the edge of the sock lining at the vamp, a second wrapper strip secured to the margin of the outer ply only of the upper at the quarter by a row of stitches extending longitudinally of said second strip substantially midway between the edges thereof so as to define two flaps each having a free edge, an end stiffener disposed between the plies of the upper at the quarter, a portion at least of one flap of the second wrapper strip underlying the sock lining, a platform secured to the sock lining and to the under surface of the last-named wrapper flap, the secured edges of the vamp and sock lining resting upon said platform, the first wrapper strip which is secured to the vamp and the second flap of that wrapper strip which is secured to the quarter extending down about the side edges of the platform and being lasted in and secured to the under surface of the platform, and an outsole secured to said platform (and concealing the lasted in portions of the wrapper strips).



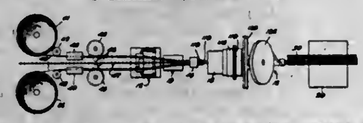
2,469,562
MATERIAL DRYING APPARATUS
Joseph E. Kennedy, New York, N. Y.
Application September 11, 1943, Serial No. 501,939
11 Claims. (Cl. 263—32)

5. In material drying apparatus, an elongated cylinder, one end of which constitutes the material inlet to and the opposite end the material outlet from the cylinder, rotatable supporting means for the cylinder spaced inwardly from the opposite ends of the cylinder adapted to support the cylinder to rotate about its axis, a furnace, a housing comprising chambers enclosing the portions of the cylinder between and at the outer sides of the supporting means and portions above the cylinder relative to the supporting means connecting the chambers at the outer sides of the supporting means in communication with the chamber between the supporting means, with the material inlet end of the cylinder opening to the exterior and the cylinder outlet opening to the interior of the housing, the housing chamber at the inlet end of the cylinder having an inlet for heated gases to the lower portion thereof, means connecting said inlet to the housing in communication with and for the flow of the hot gases of combustion from the furnace into the housing, a baffle extended downwardly from the top of the

chamber between the cylinder supporting means to cause the gases in said chamber to flow downwardly and then upwardly transversely of the cylinder in said chamber, means connected in communication with the material inlet end of the cylinder adapted for connection of means for feeding material therethrough into the cylinder, and suction means connected to said latter means in communication with the material inlet of the cylinder operative for inducing the flow of the hot gases of combustion from the furnaces into the inlet of and through the housing and from the housing into the material outlet end of and through the cylinder.

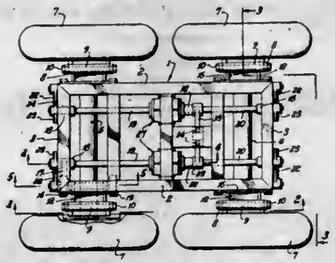
2,469,563
LAPPING MACHINE
Robert K. Kinard, Allentown, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 4, 1947, Serial No. 739,437
3 Claims. (Cl. 51—120)

1. An apparatus for simultaneously lapping opposite faces of thin articles comprising a plurality of lapping members disposed in circular arrangement at spaced positions with respect to



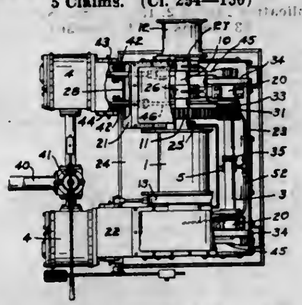
each other and having upper surfaces to receive articles to be lapped, means surrounding the lapping members to form retaining pockets above the upper surfaces of their respective lapping members of like depths less than the final thickness to which the articles are to be lapped, a lapping element positioned above the lapping members and having an under surface to engage all the articles simultaneously, and means to move the lapping element about an axis in a path the diameter of which is substantially equal the diameter of each of the upper surfaces of the lapping members.

2,469,564
ENGINE ROCKER ARM
James M. Leake, Monroe, Mich.
Application August 3, 1945, Serial No. 608,710
6 Claims. (Cl. 74—519)



1. An engine rocker arm; comprising an arm member provided with spaced, vertical side walls; a hub member intermediate the ends of said arm member and protruding on each side thereof; and a metal member adjacent said hub member and extending therefrom in contact with said side walls thereby providing a substantially closed chamber between said spaced side walls, an oil passageway extending from said chamber to said hub and an oil passageway extending from said chamber to the lower side of said rocker arm.

2,469,565
APPARATUS FOR FORMING METAL TAPE INTO TUBULAR CONDUCTORS
Alexander Logan, Dundalk, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 23, 1943, Serial No. 511,496
3 Claims. (Cl. 113—33)



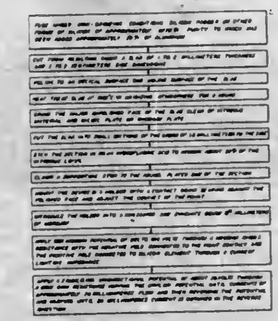
1. In an article forming apparatus, means for advancing continuously a cable core along a predetermined path, means for advancing a pair of conductive tapes continuously along opposite sides of the predetermined path, means for forming into concavo-convex sections said pair of conductive tapes as the tapes are advanced by the tape advancing means, a support reciprocable along a line parallel to the predetermined path, a cam-follower secured to the support, a cam for actuating the cam follower to reciprocate the support, a pair of convex dies slidably secured to the support, a pair of concave dies secured to the support and slidable directly transversely to the line of reciprocation of the support for cooperating with the convex dies to crimp the tapes therebetween, means associated with the cam for moving the convex and the concave dies into operative engagement with each other to crimp the tapes therebetween when the support is moved in the direction the tapes are advanced, means for separating the convex and the concave dies while the support is moved in the direction of movement of the tapes, means for guiding the crimped portions of the tape into association with the cable core, and means for serving tapes around the crimped portions of the first-mentioned tapes after the latter have been guided into association with the cable core.

2,469,566
SPRING SUSPENSION FOR VEHICLE TRUCKS
John J. Low, Los Angeles, Calif.
Application June 18, 1945, Serial No. 600,102
11 Claims. (Cl. 280—104.5)

1. In a torsion-spring suspension for vehicles: the combination of a frame; a plurality of axles with wheels at the side of the frame spaced from each other in a fore-and-aft direction; suspension means connecting the axles to the frame for up and down movement of the frame relative to the wheels; torsion mechanism connected at a point to said frame and including a plurality of torsion spring sections; with inherently flexible means connecting the spring sections to the suspension means to maintain torque in the spring sections for resisting a downward movement of the frame relative to the axles, said means being so constructed and arranged as to leave said spring elements free of restraint when free of torque.

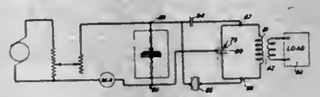
2,469,567
STEAM CARGO HOIST
William C. Markey, Seattle, Wash.
Application November 8, 1944, Serial No. 562,459
5 Claims. (Cl. 254—150)

5. A relatively noiseless steam cargo hoist, comprising: a drum shaft and a drum and driven gear thereon; a hollow main frame including an oil sump, of U-shape in plan, formed with bearings in the opposite legs for said shaft, whereby to support the drum between the legs and the



driven gear within the hollow of one leg and dipping within the oil sump; a drive shaft carrying eccentrics and a driving gear, and journaled within the hollow end of the U to mesh the driving and driven gears; two reciprocating steam engines mounted externally and in prolongation of the respective legs; and driving connections, including glanded piston and valve rods extending within the respective legs, and connecting rods and eccentric rods extending through the hollow legs to operative connections with the drive shaft; an oil pump mounted within and receiving oil from the oil sump, and driven from the drive shaft; and oil conduit means extending from said oil pump, within the hollow frame, to selected points therein requiring lubrication.

2,469,568
PIANO ACTION
Benjamin F. Miessner, Morristown, N. J.
Application December 7, 1944, Serial No. 566,979
9 Claims. (Cl. 84—240)



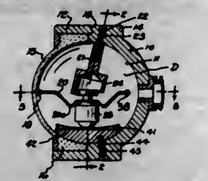
1. In a musical instrument of the piano type, a vibrator, a hammer movably mounted in striking relation to said vibrator, a movably mounted operating key, actuating means operated by said key effective on said hammer to cause the latter to strike said vibrator, a rebound suppressing weight associated with said hammer and movable relatively thereto, and a spring co-operating with said weight to reduce the velocity of the return movement of the hammer from the vibrator, and to neutralize rebound of said hammer relatively to said actuating means upon the return of the hammer thereto subsequently to its impact against said vibrator.

2,469,569
POINT CONTACT NEGATIVE RESISTANCE DEVICES
Russell S. Ohl, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 2, 1945, Serial No. 580,677
13 Claims. (Cl. 250—36)

6. The method of producing a negative resistance element which comprises subjecting a plate of highly pure silicon to a temperature of the order of 1000° centigrade under oxidizing conditions for a period of several hours and removing the resulting outer layer from one of the surfaces of the plate to a depth of the order of 600 Angstrom units to produce a device exhibiting at said surface a resistance which varies in an inverse manner to that of the electromotive force applied between the reduced face and a point contact bearing thereon.

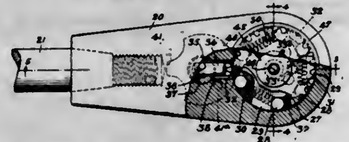
12. A negative resistance device comprising a body of P-type highly pure silicon having separated surface portions, a metallic layer of high conductivity intimately joined to one of said surface portions, a layer of vitreous material including silicon and silicon dioxide intimately joined to another of said surface portions, and a pointed fine metallic contactor in pressure contact with said vitreous material, said vitreous material having submicroscopic holes in the portion intermediate said contactor and said body.

2,469,570
ADJUSTABLE ACTUATING MEMBER
Willard E. Parish, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 776,731
1 Claim. (Cl. 287—52.08)



A shaft, an actuating member carried thereon, a screw rotatably mounted in the actuating member, said shaft being formed with a plurality of circumferentially spaced apart teeth, said screw being cooperable with said teeth upon rotation to effect relative rotation between the shaft and the actuating member, a second screw having threaded engagement with said first screw and being cooperable therewith and with said actuating member to clamp said first screw against rotation.

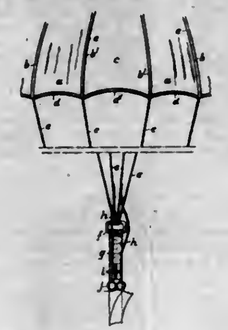
2,469,571
FLIGHT POSITION INDICATOR FOR AIRCRAFT
Oliver V. Phillips, Denver, Colo.
Application November 2, 1945, Serial No. 626,390
7 Claims. (Cl. 33—206)



1. An aircraft instrument including, a housing having a chamber therein defined in part by a transparent cover member, a support within said chamber, an assembly suspended from the support for universal movement within the housing, an indicating bar visible through the transparent cover member secured to the upper portion of the assembly, a weighted element confined by the lower portion of the assembly and mov-

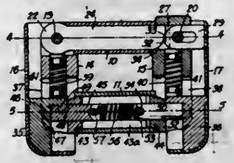
able longitudinally thereof, a concavo-convex supporting surface within the lower portion of the chamber and having the weighted element of the assembly riding thereon, the radius of the curvature of said concavo-convex supporting surface being greater than the distance between the center point of said surface and the point of suspension between the assembly and its support,

whereby the weighted element and assembly and the indicator bar attached thereto travel through a greater number of degrees than the degree of actual inclination of the instrument when the same is tilted from true vertical during flight of the aircraft in which the instrument is mounted, thereby resulting in an amplified movement of the indicator bar.



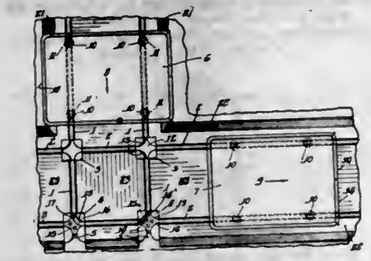
2,469,572
REVERSIBLE FRICTION CLUTCH WRENCH
Lawrence E. Pratt, Riverdale, Ill.
Application December 13, 1943, Serial No. 514,069
22 Claims. (Cl. 74—157)

1. A reversible friction sealed-chamber wrench comprising a handle and head in the form of a sealed chamber, the latter having a transverse opening therethrough, a relatively rotatable member having a sprocket fitting within the opening and a shank projecting laterally therefrom to carry a nut socket, locking rollers between the circular or ring-like wall of said opening and the seats for the rollers in the sprocket, roller reversing means in the chamber, means in a side opening in the chamber to engage and control the said reversing means and rollers for reversal operation of the wrench, a non-metallic dirt-excluding washer in the opening around said shank, means for excluding the entrance of dirt to said side opening, and a dirt-excluding cap closing the mouth of said opening over the sprocket, whereby a sealed chamber is formed around the rollers and seats and all dirt is excluded therefrom.



2,469,573
PARACHUTE
John Raymond Cuthbert Quilter, Woking, England
Application May 8, 1946, Serial No. 668,287
In Great Britain May 3, 1945
3 Claims. (Cl. 244—152)

1. A parachute including a canopy composed of substantially equal triangular gores, seams connecting said gores together at their edges, and a continuous band forming the peripheral zone of said canopy, the number of said gores being one less than the number required to cover the area of said canopy so as to leave in the canopy when deployed a gap of substantially triangular shape between two of said gores, means for supporting



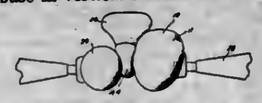
a parachutist, shroud lines connecting the peripheral zone of said canopy to said supporting means, and selective means for increasing the tension in either of said gore-edge seams adjacent to the gap, said selective means being operable by the parachutist.

2,469,574
DETACHABLE CONNECTOR FOR TENSILE MEMBERS
John Raymond Cuthbert Quilter, Woking, England
Application March 13, 1947, Serial No. 734,302
In Great Britain March 21, 1946
4 Claims. (Cl. 294—83)

4. A detachable connector for tensile members, adapted for manual disconnection while under tension, comprising two normally parallel members over which the adjacent ends of the tensile members are looped, two side-pieces in which the extremities of said parallel members are engaged, two spring-controlled grips mounted on said side-pieces, said grips being adapted for sliding longitudinally of the respective side-pieces and subsequent closing movement towards one another, a pivot mounted in one of said side-pieces, one of said normally parallel members having one extremity carried by said pivot, the opposite extremity of said one normally parallel member being engageable in a recess in the other of said side-pieces, and means for locking said side-pieces together, the sliding movement of said grips first releasing said locking means, and the closing movement of said grips then disengaging said one normally parallel member from said recess for swinging movement about said pivot to free the respective tensile member.

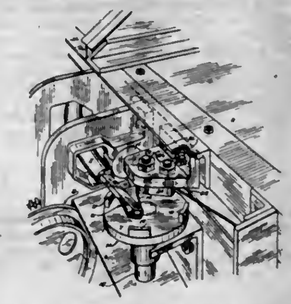
2,469,575
TRAMWAY
Hurley D. Ralston, Oak Park, and Reuben A. Pearson, Aurora, Ill., assignors to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application April 19, 1944, Serial No. 531,710
2 Claims. (Cl. 246—465)

1. In a system of traffic channeling, the combination with a plurality of coordinately arranged trackway sections, each comprised of equally spaced channels, junction plates located at intersection points between sections, said plates having a central recess conforming in depth to that of said channels and filleted to provide arcuate juncture between the adjacent vertical wall surfaces of transversely related rail sections, and means for achieving variously predetermined traffic routes in said system comprising removable switching frog elements insertable into any one of said plates according to intended routing, said frog elements constituting a routing curvature located in an outermost junction plate when establishing a turn in a traffic routing system.



2,469,576
HAIR CURLER
Saidee M. Ritter, Los Angeles, Calif., assignor of one-third to Ethel N. Haynor and two-thirds to Archie E. Coppleman, both of Los Angeles, Calif.
Application February 10, 1947, Serial No. 727,526
1 Claim. (Cl. 132—38)

A hair curler, as described, comprising in combination a pair of substantially flat, net-like elements adapted to be arranged in overlapping position, and means for clamping said elements together with a lock of hair therebetween, said elements including a common wire frame adapted to be bent to permit positioning in overlapping arrangement.

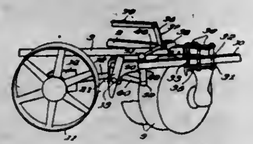


2,469,577
TRUSS CONSTRUCTION
Jose Rodrigues, Fall River, Mass.
Application March 12, 1945, Serial No. 582,263
5 Claims. (Cl. 128—96)

1. A truss comprising a rigid base including two aligned parts locked to each other at their inner ends and relatively adjustable to provide an extended or contracted length for the base, a rupture pad rigidly mounted on one base part and a balance pad rigidly mounted on the other base part, an abdominal plate pivotally mounted on said base in vertical intermediate relation to

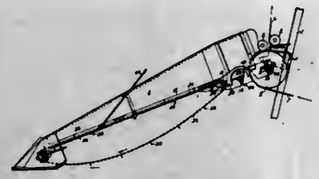
the spaced pads, said base parts each having a strap end securing buckle, and a flexible belt of non-stretchable material having its ends detachably connected to said buckles.

2,469,578
BALER WIRE CUTTING AND HOLDING MEANS
Martin Ronning, St. Louis Park, and Kenneth M. Keith, Minneapolis, Minn., assignors, by mesne assignments, to Minneapolis-Moline Company, Hopkins, Minn., a corporation of Minnesota
Application November 1, 1946, Serial No. 707,210
9 Claims. (Cl. 100—20)



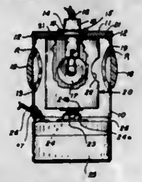
7. For a hay baler of the character described having mechanism operative to position an end portion of a length of wire around the bale and mechanism for forming a tie where the wire meets around the bale, means for severing the tie from the remaining length of the wire and for gripping the end thereof while another bale is formed, comprising a rotary disk positioned adjacent the tying mechanism, said disk having a series of cutting and holding lugs, a member stationarily supported adjacent the path of the lugs, and said stationary member having portions adapted first to cooperate with one of the lugs to grip a portion of the wire and then to cut the wire between the gripped portion and the tie, and said gripping and cutting portions of the stationary member being positioned inside the path of the lugs whereby the gripped portion of the wire will be released as each tie is completed and will move clear of the next lug as the disk rotates.

2,469,579
LIFT MECHANISM FOR DISK PLOWS
Arthur A. Scarlett and Howell N. James, Hamilton, Ontario, Canada, assignors to International Harvester Company of Canada, Limited, Hamilton, Ontario, Canada
Application October 8, 1945, Serial No. 621,094
2 Claims. (Cl. 97—101)



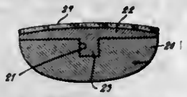
1. In an agricultural implement, a supporting frame including a tool-carrying beam, a furrow

wheel at the forward end of the beam, a wheeled truck mounted at the rear end of the beam for adjustment with respect thereto about a vertical axis, a land-wheel carried by the truck, lift means deriving power from the land-wheel for raising and lowering the beam and truck with respect thereto including a crank axle supporting the land wheel and pivoted on the truck for swinging movement on a horizontal axis, a rock arm pivoted on the frame on a horizontal axis, a ball at the end of said crank-axle and said rock arm, means operatively connecting said rock arm to



said furrow wheel for lifting the frame with respect thereto, and power transmitting means accommodating adjustment of the truck with respect to the frame connecting said crank axle with said rock arm comprising a generally vertically extending thrust link, and a socket at each end of said link adapted to receive said balls and form joints therewith, said link being arranged to transmit motion from the crank-axle to the rock-arm, whereby said frame will be lifted with respect to said furrow wheel simultaneously with lifting of said truck with respect to the land wheel.

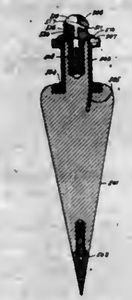
2,469,580
ROTARY BALER
Charles J. Scranton, La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 8, 1944, Serial No. 525,482
4 Claims. (Cl. 100—1)



1. In a machine embodying apparatus for baling fibrous material delivered thereto, a frame structure operatively mounting means for compressively pulling fibrous material into said machine comprising a roll having one or more bands travelling over the compressing portion of the roll, a material pick-up and elevating conveyor supported on parts carried by said frame structure and with the discharge end thereof positioned in spaced opposed relation to and below the compressing portion of said roll and with the pick-up end thereof positioned in proximate relation to the ground, a rotatable device also supported on parts carried by said frame structure and positioned thereby between the discharge end of said conveyor and said roll and below the compressing portion of the latter, said device including elements providing pockets adapted to receive foreign material gravitating from the fibrous material passing from the discharge end of said conveyor to the compressing portion of said roll, and means for operating said device to move said pockets successively to foreign material receiving and discharging positions.

2,469,581
REAR BLINKER LAMP FOR AUTOMOBILES
Paul Richard Slosar, Bridgeport, Conn.
Application April 16, 1947, Serial No. 741,777
3 Claims. (Cl. 177—329)

1. In a blinker lamp for a vehicle, an outer fixed cup-shaped casing having a removable top and an aperture in the side thereof, a lamp depending from the top of said casing, a cylindrical shield surrounding said lamp, and having a side aperture in alignment with said lamp and the aperture of said casing, and a motor having a vertical shaft for supporting and continuously rotating said shield to produce a continual blinking action, said casing having an intermediate inturned rib located to engage the upper end of the motor to lock said motor and said shield securely as a unit in said outer casing.



2,469,582
MUSICAL STRINGED INSTRUMENT
Emerson Strong, Hempstead, N. Y., assignor to The Fred Gretsch Manufacturing Company, Brooklyn, N. Y., a corporation of New York
Application August 31, 1945, Serial No. 613,908
4 Claims. (Cl. 84—293)

3. A neck for a musical instrument comprising an elongated base element having a centrally disposed longitudinal groove, a fingerboard of substantially T configuration adapted for union with said base element, and a longitudinal tongue on said finger board constituting the vertical part of said T configuration arranged and constructed for sealed disposition in said groove.

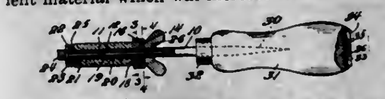
2,469,583
ADJUSTABLE PLUMB BOB
Lew Suverkrop, Bakersfield, Calif.
Application July 30, 1945, Serial No. 607,877
6 Claims. (Cl. 33—217)

1. A plumb bob comprising in combination, a body having a central axis arranged to be suspended during use in a vertical position, a flanged reel mounted on the upper end of said body for rotation around said central axis of said body, and a head mounted above the upper flange of said reel and disposed inward from the periphery of said upper flange, said head including slot means constructed and arranged freely to receive a string from the periphery of the upper flange of said reel and dispose said string in a tortuous path to restrain movement thereof relative to said head and also position said string so that it extends upward from said head in alignment with the vertical axis of said body, whereby the upper

flange of said reel may readily be manually engaged to rotate the reel in opposite directions to raise or lower said plumb bob when suspended from said string.

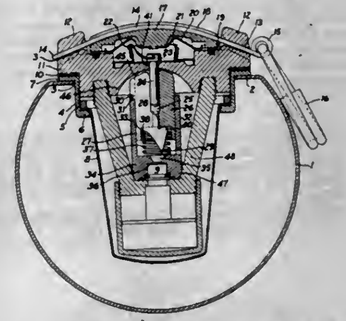
2,469,584
DIELECTRIC COMPOSITION AND METHOD OF MAKING SAME
Eugene Wainer, Niagara Falls, and Allen N. Salomon, Malone, N. Y., assignors, by mesne assignments, to National Lead Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 11, 1945, Serial No. 615,701
16 Claims. (Cl. 106—39)

1. The ceramic dielectric consisting of an alkaline earth metal titanate and from 0.05% to 1% by weight of manganese dioxide.



2,469,585
BITUMINOUS MIX
Bertrand H. Walt, New Rochelle, N. Y.
Application March 29, 1944, Serial No. 528,631
3 Claims. (Cl. 259—148)

1. Those steps in the method of preparing a bituminous paving mixture which comprise heating a bituminous material to a temperature at which it is fluid, incorporating said hot fluid material with an aggregate in a quantity at least sufficient completely to coat the particles of said aggregate with a thin film of said material, mixing said aggregate and said material together while preventing substantial loss into the circumambient air of volatile constituents from said bitumen and resultant reduction in the penetration thereof by maintaining a protecting blanket of steam at substantially atmospheric pressure over the top of said mixture substantially throughout the mixing operation.

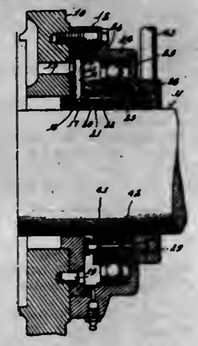


2,469,586
TOOL FOR CLEANING CONCAVE CYLINDRICAL SURFACES
Raymond C. Wallace, Pawtucket, R. I.
Application March 3, 1948, Serial No. 12,765
4 Claims. (Cl. 51—184.1)

1. A tool for cleaning a concave cylindrical surface comprising a threaded shank, a cylindrical member having an external abrading surface and an axial bore tightly engaging said shank, said member being formed of elastic resilient material which will increase its outer diam-

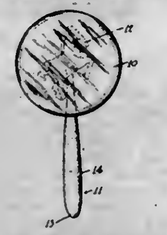
eter as its axial dimension is reduced, and a member having an engaging surface slidably and non-rotatably mounted on said shank to compress said member axially and radially while restricting the diametrical expansion at its engaged end to prevent rotation of the same upon the shank.

2,469,587
IMPACT FUSE
Otto Wittel, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 20, 1945, Serial No. 578,842
6 Claims. (Cl. 102—81.6)



1. An impact fuse for bombs comprising a body portion containing explosive material, a primer, an apertured plunger telescopically mounted in a holder for the primer, a key carried between the plunger and holder, said key including a pointed end forming a firing pin, a cam on the key adapted to engage and be restrained from movement by the holder, an arming pin extending into the aperture in the plunger and engaging the key, a spring engaging the key and holder, said spring being adapted to move the key inside of the holder when said arming pin is removed whereby the shock of the bomb coming to rest may cause the plunger to telescope into the holder moving the key to strike the primer.

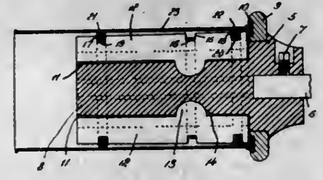
2,469,588
SEAL
George R. Aschauer, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a corporation of Wisconsin
Application March 16, 1946, Serial No. 654,897
12 Claims. (Cl. 285—97.1)



1. An annular seal for supplying fluid to a rotating member comprising rotating and stationary components, the rotating component being constituted by a ring connected to the member for rotation therewith and having an annular sealing face and a passage leading from the face

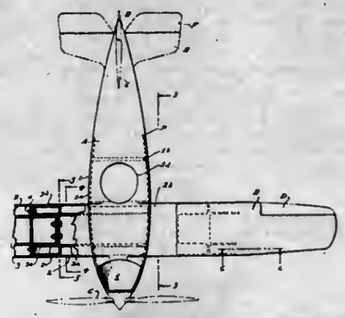
to the member, means for clamping the ring against the member, and the stationary component comprising ring means having an annular channel in opposite relation to the face, a sealing ring slidable in the channel and spring

actuated to bear against the face and having a passage communicating with the first named passage, means for maintaining registration of the passages, and a conduit providing communication between the last named passage and a fluid source.



2,469,589
CONFECTION WITH SUPPORT THEREFOR
Jack Barricini, Searsdale, N. Y., assignor, by mesne assignments, to The Toy Pop Corporation, New York, N. Y., a corporation of Delaware
Application September 20, 1948, Serial No. 50,180
7 Claims. (Cl. 99—138)

1. As a new article of manufacture, a confection comprising an eatable member and a support therefor, said support comprising a body of polyethylene and having an ornamental figure at one end portion thereof formed of polyethylene integral with the body of the support and imbedded and secured in the eatable member.

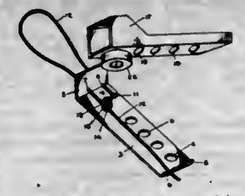


2,469,590
BOBBIN HOLDER
Edgar R. Blount, Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application June 26, 1945, Serial No. 600,591
8 Claims. (Cl. 242—46.2)

1. A bobbin holder comprising a head adapted to be secured to a rotatable shaft and an elongated body member extending axially therefrom and having a plurality of circumferentially spaced longitudinal slots, a radially extending arm in each of said slots and capable of a slight longitudinal rocking movement therein, resilient means, associated with both the outer and inner extremities of said arms, arranged to rock said

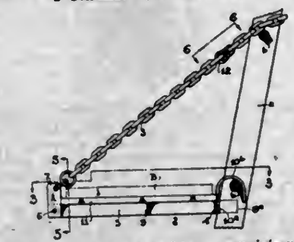
arms so that their ends farthest removed from said head are depressed, and means adapted to cooperate with a bobbin being placed on the holder for rocking said arms so that their aforesaid ends are protracted into gripping contact with the bobbin.

2,469,591
AIRPLANE CONSTRUCTION
Allen J. Buttler, Los Angeles, Calif.
Application March 28, 1945, Serial No. 585,211
6 Claims. (Cl. 244—124)



1. In an airplane, a wing comprising an inner unit and an outer unit, the latter abutting against the former, said units having spaced spars between and substantially parallel to the entering and trailing edges of the units, one of the units having intermediate its spars and intermediate its upper and lower skin surfaces a cut-out portion, the other unit having a middle portion, between the spars, extending laterally beyond the portions located between the spars and the entering and trailing edges, said middle portion extending into the cut-out portion of the former unit.

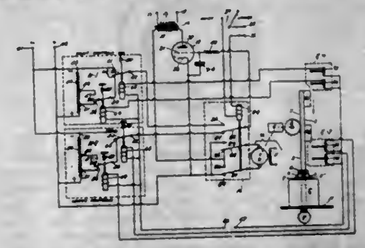
2,469,592
LOCKING DEVICE
John Walter Byer, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
Application February 6, 1948, Serial No. 6,791
5 Claims. (Cl. 70—65)



1. A lock ailing comprising a plate having an opening therein, a rope having one end fixed to said plate, means for securing the other end of said rope to said plate, and a cover having an

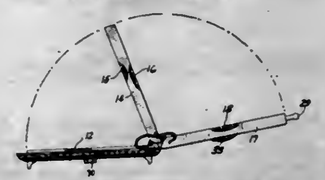
opening therein removably mounted on said plate, said openings in said plate and said cover being

adapted to receive a lock for locking the plate and cover assembly.



2,469,593
LADDER JACK
Ernest L. Coble, East Cleveland, Ohio, assignor to The Star Welding & Manufacturing Company, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 3, 1948, Serial No. 407
3 Claims. (Cl. 248—238)

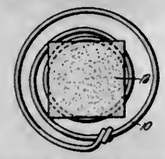
1. A ladder jack for a ladder comprising a frame having a base member adapted to engage the ladder rails and extending beyond the opposite outer sides thereof, converging side members connected at their inner ends to said base member intermediate the ends thereof and connected together at their outer ends, a supplemental side member connected to the outer side of each of said converging side members intermediate its opposite ends and the adjacent outer end of said base member and provided with an extension extending outwardly of said base member and adapted to be disposed in overlapping relation to the outer side of the adjacent ladder rail, rung engaging members secured to the outer side of said base member inwardly of the ladder rails and extending upwardly and outwardly from said base member for engagement with a ladder rung and arranged to co-operate with said base member to support the latter in engagement with the ladder rails, and chains connected at their inner ends to the outer ends of said converging side members, the outer end portion of each chain being adapted to be wrapped around one of the ladder rails in engagement with a rung above the rung engaged by said rung engaging members.



2,469,594
HOIST-LOWER CONTROL
George L. Danforth, Danvers, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application July 26, 1947, Serial No. 763,919
6 Claims. (Cl. 318—282)

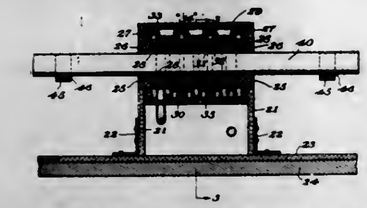
5. In a submarine listening apparatus carried and supported at the end of a shaft adapted to be extended through the hull of a vessel into the water, said shaft having limiting positions for retraction into the vessel and extension into the water, electric motor means, a gaseous conduction tube having a grid bias control element, means supplying power to said motor through said gaseous conduction tube; a source of negative bias potential for said grid, a potential divider connected between said source and the cathode of said tube; a plurality of taps on said potential divider, of which a first tap provides a first bias potential for conditioning said tube for full motor speed, a second tap provides a second bias

potential for conditioning said tube for reduced motor speed, and a third tap provides a third bias potential for substantially cutting off said tube; a pair of switch means controlling the connection of said taps to said grid, and normally connecting said first tap to said grid; and switch control means mounted on said shaft and disposed to operate one of said switch means to connect said second tap to said grid in place of said first tap when said shaft approaches the vicinity of a limit position, and to operate the other switch means to connect said third tap to said grid in place of the second tap when said shaft is in said limit position.



2,469,595
COOKING APPARATUS
Allen T. Foster, Chicago, Ill.
Application February 27, 1948, Serial No. 11,539
6 Claims. (Cl. 99—374)

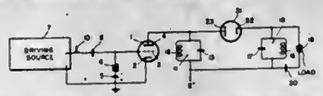
1. A cooking utensil comprising a horizontal base platen, an upper platen and an intermediate platen disposed in superposed horizontal relation on the base platen when in closed relation, means pivotally connecting the platens each to another along one side of the utensil to enable swinging movement of the upper and intermediate platens on horizontal axes to and from the respective closed positions, said upper platen being swingable manually from the horizontal closed position to a first open substantially upright position and from the latter position to approximately a horizontal second open position, and means for supporting the upper platen in said first open position against gravitational movement therefrom and for entraining said intermediate platen for swing-



ing movement from the closed position thereof to an open position upon manual movement of said upper platen from said first open position to the second open position thereof.

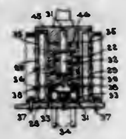
2,469,596
SPRING
Percy Glenn Groom, Hamilton, Ontario, Canada
Application August 1, 1947, Serial No. 765,425
2 Claims. (Cl. 5—254)

1. A compression spring comprising a spring wire structure consisting of a single length of wire formed to provide a pair of spirally wound ends, a plurality of normally, widely spaced helical coils centrally between said ends, said helical coils being of equal diameters, and other helical coils between said central coils and ends being of gradually increasing diameters; in combination with a core of sponge rubber having a cross sectional area at its central portion as great as the area surrounded by the central portion of the spirally wound spring structure and having said central helical coils embracing the core to compress it on a helical line.



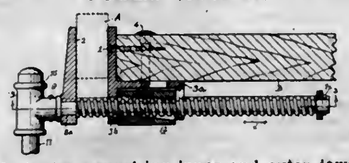
2,469,597
METHOD OF AND APPARATUS FOR HEATING, SIZING, OR FORMING QUARTZ TUBES AND PROFILES
Gustav Gulgas, Livingston, N. J.
Application February 1, 1946, Serial No. 644,704
14 Claims. (Cl. 49—7)

1. Apparatus for heating, forming or sizing quartz tubes or the like, comprising a heating unit, said heating unit comprising a heating shell to be heated by electrical induction, said heating shell having a side opening, a high frequency coil surrounding the heating shell and having a side opening disposed adjacent to the first named side opening, the quartz tube to be heated being passed laterally through the side openings into the heating shell.



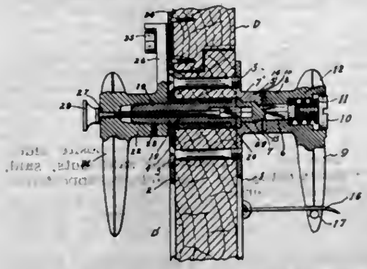
2,469,598
HARMONIC CLASS C AMPLIFIER
Albert S. Harris, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application April 25, 1947, Serial No. 744,003
12 Claims. (Cl. 250—36)

1. In a high efficiency amplifier circuit, a first and a second tank circuit, means for impressing pulses at a predetermined frequency on said first tank circuit for exciting it, and switching means automatically operable at the frequency



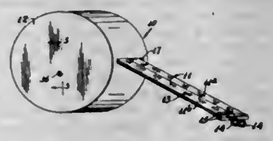
of said pulses for conductively connecting said two tank circuits and for delivering power from said first to said second tank circuit.

2,469,599
APPARATUS FOR MOLDING BUILDING BLOCKS
Albert Henry Hawes, Birmingham, England, assignor, by mesne assignments to Kwikform Limited, Birmingham, England, a British company
Application January 9, 1946, Serial No. 639,952
In Great Britain January 17, 1945
8 Claims. (Cl. 25—41)



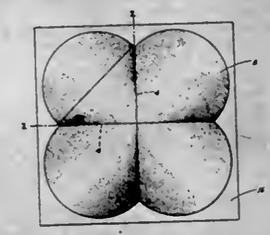
1. Apparatus for moulding building blocks of the type comprising a pair of wall members connected together so as to provide a cavity therebetween by means of transverse block portions, said apparatus, comprising a mould including a stationary base and side walls, and movable tamping member, a core projecting from said stationary base and extending completely between an opposed pair of mould walls, said core being adapted to form between the wall members of the block a similarly extending cavity, a movable base formed in two parts disposed each at opposite sides of said core, pallet members on each of said movable base parts extending correspondingly to said core completely between the said opposed mould walls, said core having transverse vertical slots extending downwardly from its upper edge, said slots being adapted to receive said transverse block portions, bridge pieces connecting said pallet members at opposite sides of the core extending through said slots, said bridge pieces being adapted each to support one of the said transverse block portions, and means for raising said movable base and pallet members thereon to bring the moulded block clear of the mould walls leaving the latter and the core stationary.

2,469,600
VISE WITH QUICK POSITIONING JAWS
Sidney W. Jordan, Cleveland, Ohio
Application August 17, 1945, Serial No. 610,927
2 Claims. (Cl. 81—36)



2. A vise comprising inner and outer jaws, a base for supporting said inner jaw and for slidably supporting said outer jaw and provided with inner and outer abutments, a feed screw rotatably carried by said outer jaw, a hollow movable member surrounding said feed screw, the upper side of the interior wall of said movable member adjacent its inner end and the lower side of said interior wall adjacent its outer end being concentric to a common axis and provided with screw threads arranged to engage and disengage the threads on said screw and the upper side of the interior wall of said hollow member adjacent its outer end and the lower side of said interior wall adjacent its inner end being concentric to a common axis which bisects the axis of said threaded sides of said interior wall, said upper inner and outer sides of said interior wall forming between them a transversely disposed trunnion engaging the threads of said feed screw to support said hollow member thereon, the screw threads of said screw when rotated in either direction being arranged to move said trunnion longitudinally thereof, and a projecting element carried by said hollow member adjacent one of said abutments, the turning of said screw in the work clamping direction serving first to move said hollow member longitudinally and into engagement with the other of said abutments, and then to rock said hollow member in a direction to engage its threaded portions with the threads on said screw, the turning of the screw in the work unclamping direction serving first to move said hollow member longitudinally to effect engagement of said element with the adjacent abutment and then to rock said hollow member in an opposite direction so as to disengage its threaded portions from the threads on said screw.

2,469,601
DOOR LATCH
Gustav A. Lee, Spokane, Wash.
Application July 2, 1945, Serial No. 602,715
2 Claims. (Cl. 292—202)

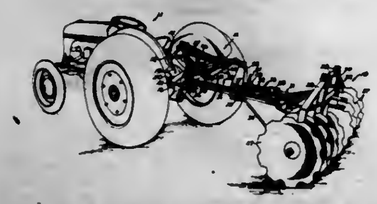


1. In a latch lock for a door including an inner rotatable latch operating handle and an outer rotatable latch operating handle, the combination with an inner attaching plate having a cylindrical sleeve thereon adapted to extend into the door, and terminate adjacent to the outside surface of the door, an outer attaching plate having an inwardly facing recess aligned with the sleeve and spaced therefrom, of a tubular spindle journalled in the sleeve and having an exterior flange bearing on the end of said sleeve, said spindle being secured to the inner operating handle, a shank having a flange seated in the recess of the outer plate and extending out through said plate rotatable with the outer operating unit, a push and pull key slidably mounted in the spindle and having a connector carried thereby, the spindle and shank having seats in their adjoining end portions for the connector whereby they may be secured thereby to rotate together.

2,469,602
MOVING PICTURE TOY
Ethel M. Leigh, Lyndhurst, N. J.
Application November 9, 1945, Serial No. 627,703
3 Claims. (Cl. 46—1)

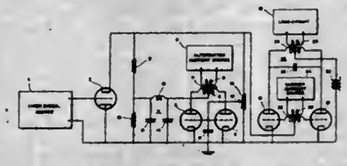
1. A tape toy comprising a plurality of separate non-adhering tapes mounted upon a single core within a case and being superimposedly wound around said core mounted within said case, said core being rotatably mounted in the case, such mounting including a spring for the purpose of automatically retracting said tapes, said tapes having complementary designs thereon, and at least one of said tapes being transparent and at least one of said tapes having a pull member mounted on the end of the tape, whereby the tape may be retractably pulled from the case.

2,469,603
BUILDING CONSTRUCTION
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application February 15, 1943, Serial No. 475,885
4 Claims. (Cl. 72—1)



4. A building structure including a roof, such roof comprising a plurality of sections, each section being curved about a horizontal axis and each having a like constant radius, the inner ends of the sections being interfitted with each other about a common center point with the horizontal axes of the sections all intersecting at such center point, a side wall for each roof section each such side wall being curved about a vertical axis and which vertical axis intersects the horizontal axis of the adjacent roof section, the radius of curvature of said side wall section being the same as that of the adjacent roof section, and each of said side wall sections being interfitted with the outer end of the adjacent roof section.

2,469,604
SKI RETAINER
Harold R. Lynn, Montreal, Quebec, Canada
Application April 5, 1946, Serial No. 659,932
1 Claim. (Cl. 280—11.37)

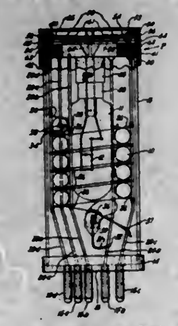


In ski retainers, the combination of a pair of skis, with running surfaces facing each other, a rigid separator block removeably located between the central portion of said skis, said separator block having a one-piece resilient covering over the top, bottom and sides thereof, strap retaining members projecting from one side of the said covered block, straps secured at their centers to the other side of said covered block and encircling said skis and having their ends removeably secured to said strap retaining members, resilient end separator blocks each removeably located between said skis at one end thereof, said resilient blocks being less in thickness than said rigid separator block and tapered toward the ends of said skis, elastic extension portions integral with and extending from one side of each of said resilient blocks, a button protruding from the other side of each of said resilient blocks, the said elastic extension portions being stretched around said skis and removeably secured to said button by means of a button hole in each of said extension portions, the said skis being thereby bent longitudinally and retained with the running surfaces thereof held more widely separated at the center than at the ends, a strap secured to one side of said rigid separator block and adapted to encircle a pair of ski-poles, and an identification plate secured to the other side of said rigid separator block.

2,469,605
CONNECTING AND OPERATING MECHANISM FOR TRACTOR DRAWN DEVICES
Augusta P. McKay, Cedartown, Ga., assignor to Rome Plow Company, Cedartown, Ga., a corporation of Georgia
Application June 7, 1944, Serial No. 539,126
16 Claims. (Cl. 55—81)

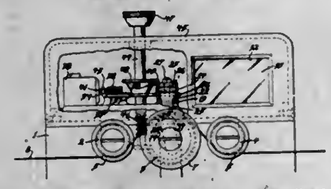
1. In a mechanism for attaching an implement or the like to a tractor having a pair of power operated links trailing side by side from its rear end and pivoted on the tractor at their forward ends to swing up and down about a horizontal axis, the combination of a draft member having a slide mounted thereon for fore and aft sliding motion, a standard, means hingedly connecting the lower end portion of said standard to the front end portion of said draft member for tilting motion of the standard in a direction generally fore and aft of such member while affording lateral swinging motion of the draft member relative to the standard, an operating connection between the upper end portion of said standard and said slide, a drawbar located above said draft member extending generally transversely of the same and arranged for free movement toward and away from the draft member in a generally vertical direction, said drawbar being displaced rearwardly of the standard and having means on its ends for detachably securing the same to the trailing end portions of the links on the tractor, means including a compression member rigidly connecting the drawbar to the standard and means extending laterally from the lower end portion of said standard for connecting the same to the intermediate portions of said links.

2,469,606
VIDEO SIGNAL LEVEL CONTROL
Louis F. Mayle, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application October 25, 1945, Serial No. 624,340
5 Claims. (Cl. 332—38)



1. A video signal level control system comprising, a video signal vacuum tube amplifier having input and output circuits, a source of video signals coupled to the input circuit of said video signal amplifier, a source of alternating current, a grid controlled vacuum tube alternating current rectifier having an input circuit coupled to said alternating current source and an output circuit coupled to the output circuit of said video signal amplifier for supplying unidirectional space current thereto, a coupling between the output circuit of said video signal amplifier and the control grid circuit of said rectifier to control the magnitude of the unidirectional current supplied to said video signal amplifier in accordance with variations of the level of said video signals, and a utilization circuit coupled to the output circuit of said video signal amplifier.

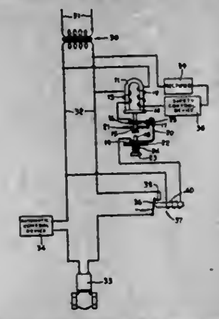
2,469,607
ELECTRIC LAMP UNIT
Edward B. Noel, Cleveland Heights, and Paul B. Davis, East Cleveland, Ohio, assignors to General Electric Company, a corporation of New York
Application September 20, 1943, Serial No. 503,068
16 Claims. (Cl. 240—1.3)



1. In a lighting unit, the combination of a supporting structure comprising a base with contact terminals and having at one end an opening for passage of a lamp bulb, and a discharge tube lamp bent into a hollow configuration and supported from said supporting structure with the axis of said configuration extending inward from the base, and having its electrodes electrically connected to contact terminals of the base, of a lamp socket normally extending inward through the said opening of said supporting structure, but separable from the latter outward through said opening, and a lamp bulb mounted in said socket and normally extending inward in the midst of the tube configuration, but withdrawable therefrom outward through said opening with said socket, and means for automatically connecting

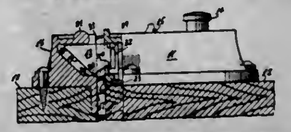
the lamp socket to contact terminals of said base other than the terminals connected to said dis-

charge tube when the socket is within said opening.



2,469,608
DEVICE FOR INSPECTING FEED PERFORATED STRIPS
Charles E. Phillimore, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application July 29, 1946, Serial No. 686,967
4 Claims. (Cl. 73—157)

1. In a device of the character described, the combination with guide means for longitudinally guiding a marginally feed perforated strip comprising a guide roller about which said strip is trained for guiding said strip in a curved path past a detecting station with the feed perforated portion of said strip overhanging an end of said roller, of a deflecting member engageable with the internal curved face of said strip outwardly beyond said roller end and operative to deflect a damaged feed perforation portion of said strip outwardly of the external curved face of said strip as said damaged portion passes said detecting station, and a detecting member arranged in overlying relation with the external curved face of said strip and engageable with said damaged portion as said damaged portion passes said detecting station and mounted for movement longitudinally of said strip responsive to said engagement to detect said damaged portion.

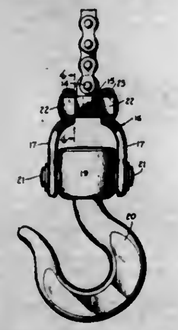


2,469,609
ELECTROMAGNETIC SWITCHING SYSTEM
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application January 1, 1944, Serial No. 516,733
5 Claims. (Cl. 175—320)

1. In a system for controlling the energization of a load by A. C. from a source thereof: an electromagnetic device comprising a core member and a cooperating armature member; a source of D. C. for energizing said electromagnetic device; a rectifier, energized by A. C. from said source thereof, for providing said source of D. C.; means for controlling the energization of said electromagnetic device; said electromagnetic device being so designed that while energized it is capable of retaining the armature member in attracted position when the armature member is first brought to that position but is incapable of attracting the armature member from its unattracted or released position, the armature member being biased to said unattracted position; one of said members of the electromagnetic device being of material whose remanence in relation to the armature-member bias is such as to effect reten-

tion of the armature member in attracted position when the electromagnetic device is deenergized; demagnetizing means normally continuously applying a demagnetizing force to said one of the members in an amount only sufficient to effect release of the armature member when the electromagnetic device is deenergized, said demagnetizing means being energized by A. C. from said source thereof so that in the event of failure of that source the armature member is then retained in attracted position despite the coexisting deenergization of said rectifier; and switching means, actuated by movement of the armature member, for controlling the energization of said load.

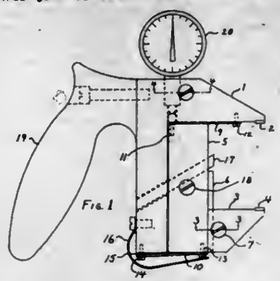
2,469,610
NONDETRUDABLE SAFETY LOCK
Rafael Rocha, Vanport City, Oreg.
Application May 14, 1947, Serial No. 748,041
9 Claims. (Cl. 292—2)



1. A latch for a door or the like, comprising a spring pressed bolt having a flat side and a smooth inclined striking face extending rearwardly from said flat side, wherein a single smooth and counterinclined surface slopes directly from the whole rear boundary of the inclined striking face thereof to terminate inside of the latch housing when the bolt is fully projected therefrom to its main locking position, and wherein the inclined striking face of the bolt and the counterinclined surface thereof are each of a width similar to the width of the opposite or flat side of the bolt respectively.

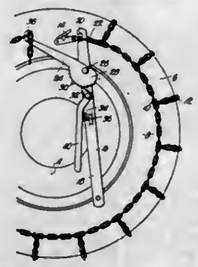
2,469,611
PATTERN MATERIALS
Kenneth E. Rose, Columbus, Ohio, assignor, by mesne assignments, to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
No Drawing. Application March 23, 1946, Serial No. 656,777
3 Claims. (Cl. 22—164)

2. A pattern material consisting essentially of a mixture of hydrogenated castor oil and chlorinated naphthalene, said mixture containing about 60% to about 80% of chlorinated naphthalene which has a chlorine content of about 49% to about 61%.



2,469,612
LOAD HOOK CONNECTION
Charles S. Schroeder, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application August 25, 1944, Serial No. 551,127
2 Claims. (Cl. 59—86)

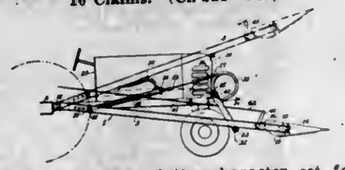
1. In a combination of the class described, a sprocket roller load chain of the type having links that are pivoted to one another about parallel pivots so that said chain is substantially flexible in one plane only, a hook block, a clevis having a base and a pair of arms rigidly fixed thereto, said base being pivoted to the last of said links on a pivot axis parallel to said parallel pivots whereby said clevis is flexible relatively to said chain in only said one plane, and means pivotally mounting said hook block on the arms of said clevis on an axis at right angles to said parallel pivots.



2,469,613
SNAP GAUGE
Leonard Saul Subber, Upper Darby, Pa.
Application June 3, 1944, Serial No. 538,668
13 Claims. (Cl. 33—147)

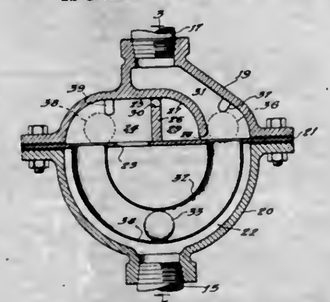
5. A measuring device comprising a frame member, a fixed upper work-engaging jaw carried by said frame member, a lower work-engaging jaw, means movably mounting said lower jaw upon said frame member so as to permit said lower jaw to move substantially vertically to-and-fro relative to said upper jaw, said mounting means including a generally vertical member disposed adjacent said frame member, a pair of leaf springs connecting the top and bottom respectively of said vertical member to said frame member, said leaf springs being connected at one end to generally diagonally-related points on said vertical member and extending generally z-wise therefrom and being connected at the other ends to laterally-spaced points on said frame member, and including means connecting said lower jaw to said vertical member, and a

work-backstop carried by said vertical member and extending into an oversize hole in said frame member, said work-backstop thereby serving to limit the movement of said vertical member relative to said frame member.



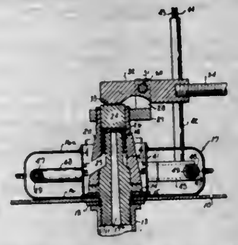
2,469,614
TIRE CHAIN TONG
George H. Sweeney, Los Angeles, Calif.
Application December 10, 1945, Serial No. 633,936
1 Claim. (Cl. 254—78)

A tire chain tool of the character described comprising a relatively long, flat bar having a handle at one end and a notch formed in one edge adjacent to the other end thereof, said notch being relatively narrow at its mouth and extended longitudinally of the bar between the longitudinal edges thereof to present an undercut portion on the bar at each end of the notch; an arm pivotally connected at its one end to the bar at a point spaced inwardly from the notch; a hook formed on the other end of the arm having the mouth thereof in opposed relation with the mouth of said notch; an arcuate face provided with ratchet teeth therein on one longitudinal edge of the arm, said face being concentric with the pivotal connection joining the bar and said arm; an L-shaped dog pivotally mounted on the bar at the zone of juncture of the legs of said L-shaped dog; a coil spring yieldably holding the free end of one of said legs against the arcuate face on the arm, said ratchet teeth being formed to allow rotation of the arm about the pivotal connection in one direction and to preclude rotation in the other direction, when the dog is in engagement therewith, the other leg of said dog being formed to present



a finger engaging portion projecting laterally from the bar; a laterally projecting ear on the bar between said handle thereof and the point of connection between the dog and the bar, said ear having an opening therein for receiving one end of said spring; and a perforated projection on said other leg of the dog for receiving the opposite end of the spring through said perforation.

2,469,615
TRACTOR SHOVEL ATTACHMENT
William E. Templeton, Mansfield, Ohio
Application February 18, 1946, Serial No. 648,364
10 Claims. (Cl. 214—140)

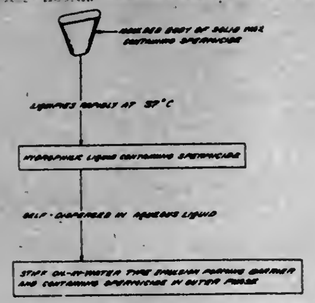


1. An apparatus of the character set forth having in combination a frame consisting of a pair of brackets adapted to be mounted on the rear axle of a tractor and a pair of frame members pivotally connected at their inner ends to said brackets, respectively, a material moving element pivotally supported at and between the front ends of said frame members, means for releasably holding said element in material engaging position on said frame members, and elevating means for said frame members consisting of a pair of devices pivotally mounted on the tractor at a low level adjacent to the front end thereof and means between each device and the adjacent frame member for operating the device about its pivot to raise said frame member, said brackets being reversibly connected to the tractor axle to selectively support said frame members at a higher or lower level to change the angle of said material moving element.

2,469,616
AIR ELIMINATOR
Edwin B. Tidd, Mount Prospect, Ill., assignor to Bell & Gossett Company, Morton Grove, Ill., a corporation of Illinois
Application June 28, 1945, Serial No. 602,096
12 Claims. (Cl. 237—56)

6. Apparatus for facilitating separation of air from the water in a closed, boiler and expansion tank equipped, hot water heating system and for preventing flow and counterflow of water between the boiler and tank comprising a housing having an air trapping chamber and a water conduit each adapted to communicate with the boiler and tank and arranged in parallel, and valve means in the conduit biased to a position preventing simultaneous flow and counterflow therethrough and adapted to be opened in response to pressure moving from the boiler or tank to provide flow in one direction only through the conduit.

2,469,617
VALVE FOR WATERING TROUGHS
William R. Tippett, near Greensboro, N. C., assignor of one-half to R. B. Dunn, Greensboro, N. C.
Application April 16, 1945, Serial No. 588,662
1 Claim. (Cl. 137—104)



In a watering trough having an inlet opening, an inlet valve adapted to be mounted in said opening, said inlet valve comprising a central member provided with a threaded lower portion having a shoulder adjacent thereto and adapted to penetrate said opening in the trough, an annular housing having a bottom portion extending beneath the shoulder portion and in close proximity to the inlet portion and adapted to rest on the bottom of the trough, the lower end of the central member having an inlet pipe threadably secured thereto to secure the central member in position over the opening and to secure the annular housing in position around the valve, said central member having a passageway extending therethrough, a shell secured to the central member and surrounding the upper end of the central member and providing an annular space between the interior of the shell and the upper end of the central member, a cap slidably mounted in the upper end of the shell and surrounding the upper end of the central member, the shell having an opening in one side thereof communicating the annular space between the shell and the upper end of the central member, an L-shaped member threadably secured on the upper end of the shell and having a vertically extending portion provided with a slot, a pin mounted in the vertically extending portion of the L-shaped member and traversing said slot, a lever pivotally mounted intermediate its ends on said pin, one end of the lever slidably engaging the upper end of said cap and a float member mounted on the other end of the lever.

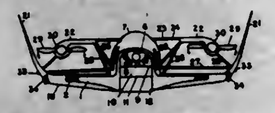
2,469,618
VAGINAL SUPPOSITORY
William C. Ward and Albert B. Scott, Norwich, N. Y., assignors to Eaton Laboratories, Inc., Norwich, N. Y., a corporation of New York
Application September 21, 1945, Serial No. 617,722
7 Claims. (Cl. 167—64)

1. A vaginal suppository comprising a base

whose main component consists of a chemical

compound designated by the following diagrammatic formula and equations:

$$R_2\text{—}(OH)_2$$
$$O(CH_2CH_2O)_nH$$



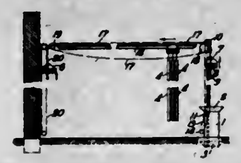
R_1=a saturated cyclic inner ether containing 6 C atoms

R_2=radical of a fatty acid containing x C atoms
x=14, 16 or 18
n=2, 3, 4 or 5

$$n:x<1:4$$

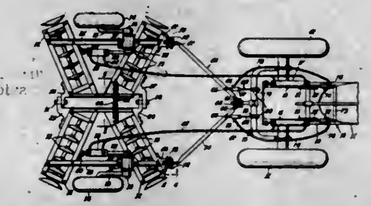
and a small proportion of a spermicidal agent dissolved in the base.

2,469,619
AIRCRAFT WHOSE LIFT IS INCREASED BY POWER MEANS
Douglas K. Warner, Sarasota, Fla.
Application November 17, 1943, Serial No. 510,843
13 Claims. (Cl. 244—15)



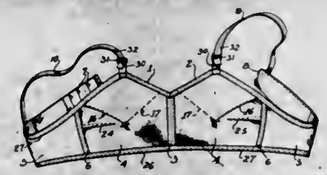
1. In an airplane having oppositely positioned propellers mounted each side of and above the fuselage thereof, a laterally projecting wing positioned immediately below the propeller sweeps, said wing having intermediate portions curved adjacent and conforming to said propeller sweeps, and substantially vertical upwardly directed extremities forming in combination therewith duplicate tail fin surface extended to full height of propellers.

2,469,620
EMBOSSING DIE
Harry E. Wimpfheimer, New York, N. Y.
Application September 16, 1944, Serial No. 554,529
1 Claim. (Cl. 101—28)



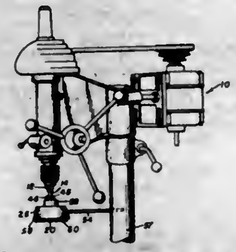
A die for embossing paper with a textile design, comprising a base sheet of woven textile material carrying the design to be transferred to paper, a primary coat of thin copper united to the textile material and reproducing the design thereof, a thin coat of nickel deposited on the copper and reproducing the design of the base textile sheet, and a final coat of thin steel deposited on the nickel and reproducing the design of the base textile sheet and providing the final embossing surface for pressure transferring the design of the base textile sheet to the paper to be embossed.

2,469,621
APPARATUS FOR STRIPPING AND DRYING ARTIFICIAL SAUSAGE SKINS
Julius Wolff, Amstenrade, Netherlands; vested in the Attorney General of the United States
Application December 2, 1941, Serial No. 421,394
In Germany May 3, 1937
5 Claims. (Cl. 91—55)



1. In combination with an impregnating device for tubular sausage skins and the like, a plurality of elongated vertically disposed mandrels in said device, each mandrel adapted to have a skin sleeved thereover, suspension means engageable with the upper ends of said sleeved skins for simultaneously stripping the latter axially from said mandrels in suspended positions, and means cooperating with said first means for moving said suspended skins laterally of their stripping axes.

2,469,622
TRACTOR-DRAWN IMPLEMENT TURN RESPONSIVE LIFTING AND ADJUSTING MECHANISM
Russel D. Acton, Chicago, Ill.
Application December 22, 1945, Serial No. 636,793
22 Claims. (Cl. 55—73)



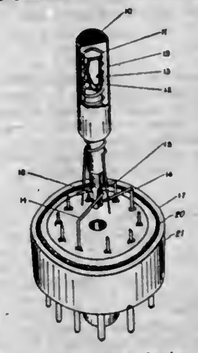
1. In combination with a tractor having a pair of power-actuated lifting arms thereon and control levers for operating said arms, an implement connected to said tractor, said implement having a pair of frames for carrying earth-working implements, said frames being pivotally connected to each other on a longitudinal axis, adjustable supporting means for the outer ends of said frames, actuating means connected to said adjustable supporting means and to said power actuated lifting arms, and means constructed and arranged to move said power actuated lifting arms for actuating said actuating means upon pivoting movement of said tractor with respect to said implement, whereby said frames will be lifted in the direction of operation of said tractor.

2,469,623
BRASSIÈRE
Anne Alt, Compton, Calif.
Application March 24, 1945, Serial No. 584,601
5 Claims. (Cl. 2—42)

1. In a brassière, a pair of pocket portions formed of fabric, the lower half of each pocket portion having its warp and weft threads running transversely of and vertically relative to the lower edge of said pocket portion, and the top half of said pocket portion divided into equal halves with the halves superimposed so that they completely overlap to place the fabric on a bias, and thereby permit stretch in this portion of the pocket.

2,469,624
PROTECTIVE GUARD FOR ROTARY MACHINE TOOLS
Harry A. Arnhart, Tulsa, Okla.
Application July 7, 1947, Serial No. 759,401
4 Claims. (Cl. 51—269)

1. An attachment for machine tools having a rotary driving member; comprising a driven shaft, a grinding head removably secured to said shaft for rotation thereby, said driven shaft having a stop for limiting movement of said grinding head in one direction, spacer means between said grinding head and said stop, a guard loosely embracing said grinding head, a bearing carried by said guard embracing said stop and bearing upon said spacer means, an adjustable stop collar carried by said driven shaft engaging said bearing to limit movement of said guard relative to said grinding head, and means for holding said guard against rotation.

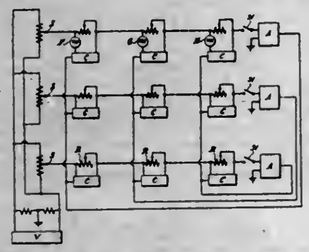


2,469,625
METHOD OF RENDERING HYDROPHILIC SUBSTANCE WATER REPELLENT
Arthur J. Barry, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application December 10, 1943, Serial No. 513,745
2 Claims. (Cl. 117—121)

2. The method which comprises applying to the surface of a water-wettable solid material a liquid comprising an organo-silicon compound having the general formula:

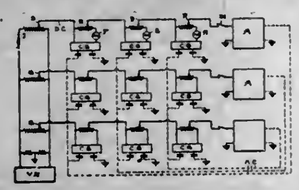
wherein each R represents a hydrocarbon radical and at least one R is an alkyl radical containing at least 8 carbon atoms, R' represents a monovalent hydrocarbon radical, X is a halogen, and n and n' are whole numbers having a sum not greater than 3, n being a number from 1 to 3 and n' being a number from 0 to 2, heating the treated solid material to a temperature at which a hydrogen halide is evolved, and thereafter washing the treated surface of the solid material with an organic solvent for the organosilicon compound, to remove the unadsorbed excess of said compound.

2,469,626
HIGH VACUUM GETTER
John R. Beers, Briarcliff Manor, N. Y., assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y., a corporation of Delaware
Application June 20, 1946, Serial No. 678,120
8 Claims. (Cl. 250—27.5)



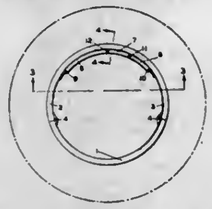
1. An electron discharge device comprising a refractory insulating member having at least two surface portions in heat exchange relationship, electrical heating means adjacent to one said surface portion of said member for heating the other surface to a given temperature, and heat responsive gas absorbing means non-volatile at said temperature adjacent to said other surface portion.

2,469,627
CALCULATING MACHINE FOR SOLVING SIMULTANEOUS EQUATIONS
John R. Bowman, Pittsburgh, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application March 19, 1943, Serial No. 479,790
2 Claims. (Cl. 235—61)



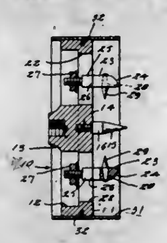
1. An electronic calculating device for determining the roots of a system of simultaneous linear algebraic equations with n variables where n is any positive integer greater than unity, comprising in combination n electronic amplifiers, n D.-C. voltage sources adjustable to produce a voltage respectively proportional to the constant terms in the system of equations, and n_2 electrically regulatable current sources each sup-

plying direct current to one of n resistors adjustable to be respectively proportional to the coefficients of the system of equations, an electrical network involving the aforsesaid elements in such a way that one of said adjusted voltage sources and n adjusted resistors corresponding



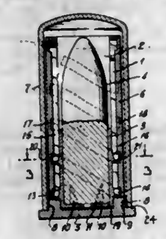
to one equation and the input to one amplifier are in series and so that the current sources for said n series-connected resistors are respectively connected to and regulated by a different one of said amplifiers, and current-responsive means in at least one of said current-supply circuits.

2,469,628
CALCULATING MACHINE
John R. Bowman and Ralph T. Steinback, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application April 27, 1945, Serial No. 590,698
3 Claims. (Cl. 235—61)



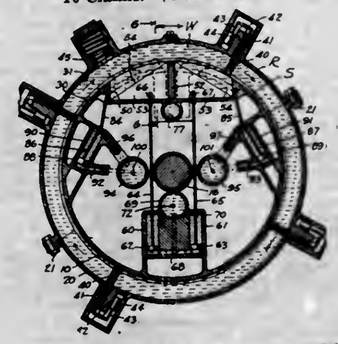
1. An electronic computing device for determining the roots of a system of simultaneous linear algebraic equations with n variables where n is any positive integer greater than unity comprising in combination n electronic amplifiers capable of supplying a large A.-C. for a small D.-C. input, n D.-C. voltage sources each adjustable to produce a voltage proportional to the respective constant terms of the system of equations, and n^2 rectifiers each respectively supplying D. C. to the entirety of one of n^2 potentiometers whose adjustable portions are respectively made proportional to the coefficients of the system of equations, an electrical network involving the aforesaid elements in such a way so that one of said adjusted voltage sources and n adjusted potentiometer portions all corresponding to one equation and one amplifier input are in series and so that the rectifiers supplying current to each of said n series-connected potentiometer portions are respectively fed from the output of a different one of said amplifiers, and current-responsive devices in at least one of said rectifier circuits for indicating the desired roots of the equations.

2,469,629
DEMOUNTABLE RIM FOR TIRES
Howard B. Boyer, Eugene, Oreg., assignor of one-third to William R. Goss, Eugene, Oreg.
Application October 29, 1946, Serial No. 706,389
4 Claims. (Cl. 301—32)



4. A demountable tire rim comprising a relatively long rim section, a pair of shorter rim sections, having ends hingedly connected to the respective ends of the long section and their remaining ends provided for abutting engagement to align the short sections with the long section to form a circular rim when expanded, the total length of the short rim sections exceeding the length of the long rim section, a linkage connected with the short rim sections for releasably holding the rim sections in expanded relation, said linkage comprising three inwardly swinging links operative to releasably lock the sections in continuous circular arrangement.

2,469,630
FACEPLATE FOR WOOD LATHES
Gideon Braun, Columbus, Nebr.
Application August 16, 1944, Serial No. 549,758
1 Claim. (Cl. 142—52)

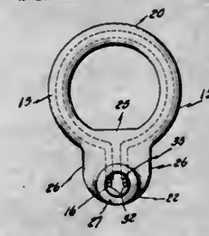


In a lathe, a face plate, having a plurality of radially disposed slots, said plate being provided with a hub construction having means for attachment to a drive shaft, said hub projecting in one direction, a center point on the plate projecting in the opposite direction from the hub construction, a plurality of slide fingers, each of said fingers having one end slidably disposed in a corresponding slot, said ends of the fingers being provided with threaded extensions extending through the slots and beyond the face plate at its side opposite from the major portion of the fingers, said fingers being provided with shoulders thereon for engaging one side of the plate, nuts on the threaded extensions adapted to be fed against the opposite side of the plate to secure the fingers in fixed adjusted position with respect to the slots, said fingers being adjustable in the slots by loosening and tightening of said nuts.

2,469,631
LIPSTICK HOLDER WITH FOUR-PIN CUP
Harry Broder, New York, N. Y.; William Felstiner, Leonard Broder, and Joseph F. Berlinger executors of said Harry Broder, deceased
Application November 17, 1945, Serial No. 629,291
4 Claims. (Cl. 206—56)

1. A lipstick holder including, in combination, a cartridge carrier having three laterally projecting pins, two located on one side but at relatively different levels and the other at the diametrically opposite side and at a level corresponding to that of one of the opposite pins, an inner shell member presenting a bore to accommodate said carrier and formed with two longitudinal guide slots for the carrier pins, and an outer shell member formed with two helical grooves of equal pitch and disposed 180° apart to receive and make a close fit with the carrier pins, said shell members being relatively rotatable, in one direction to project the lipstick cartridge outwardly from the bore for use and in the opposite direction to retract the lipstick cartridge into the bore.

2,469,632
HYDRAULIC BRAKING MECHANISM
Ralph E. Cornwell, La Canada, Calif.
Application August 13, 1946, Serial No. 690,137
10 Claims. (Cl. 188—90)



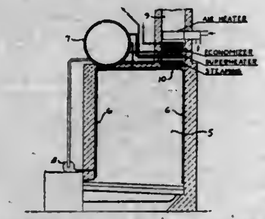
1. Hydraulic braking mechanism comprising: a stator; an annular rotor receiving the stator and co-acting therewith to define therebetween an annular working chamber containing a liquid; vanes mounted in the rotor for movement radially, and yieldingly urged into the working chamber for circulation of the liquid in the latter by the vanes, when the rotor is rotating; a valve mounted in the stator for movement from a non-operating position to an operating position in the working chamber, so as to oppose the circulation of liquid in the latter by the vanes; said valve having cam surfaces extending circumferentially of the stator and on which said vanes ride past the valve; the stator having a bypass through which a restricted circulation of the liquid in the working chamber can be effected around the valve when in an operating position, so as to produce a braking action upon the rotor; and means by which the valve can be moved to operating and non-operating positions.

2,469,633
APPARATUS FOR FORMING RETREADING STRIPS FOR TIRES
William G. Corson, Barberton, Ohio
Application February 26, 1945, Serial No. 579,827
2 Claims. (Cl. 154—9)

1. In an apparatus for forming retreading strips for tires a mill having a frame and mechanism therein for forming rubber stock into a sheet of rubber, a shaft mounted in said frame sheet-forming mechanism, mountings carried by said shaft and shiftable along the same to adjusted positions in spaced relation to each other, levers pivoted to said mountings and having inner end portions extending under the rollers and outer portions projecting outwardly from the mountings, plates mounted vertically at inner ends of said levers, brackets extending horizontally across said plates and pivoted thereto and having end portions bent to form arms projecting from the plates away from the levers, said plates being formed with arcuate slots concentric with the pivots for the brackets, bolts passing through the brackets and the slots and releasably holding the brackets in angularly adjusted positions, clamping strips at sides of said arms, knives extending vertically between the arms and strips and sharpened at their upper ends and secured in set positions when the clamping strips are tightened, and springs urging outer ends of the arms downwardly and holding the knives in a cutting position.

2,469,634
ELECTRIC HEATING UNIT
Charles B. Curtiss, Bay City, Mich., assignor to Valley Welding & Boiler Co., Bay City, Mich.
Application April 17, 1947, Serial No. 742,133
2 Claims. (Cl. 201—64)

1. An electrical heating unit, comprising a loop-shaped annular sheath formed of cast alloy, an



insulated electric heating element embedded in said annular sheath, a laterally projecting, hollow housing formed integral with said annular sheath having a cast in bushing to absorb heat while casting and to permit a threaded bore in the housing, the terminal ends of said electric heating element being received in said housing, a tubular support having one end received in said threaded bore, electrical conductors extending through said tubular support and electrically connected to the terminal ends of said heating element within said housing, and insulating material packed in said housing and tubular support, said insulating material comprising magnesium oxide.

2,469,635

STEAM BOILER OR THE LIKE HAVING EXTENDED HEAT TRANSFER SURFACES

David Dalin, Ronninge, and Gustav V. Hagby, Osterialje, Sweden, assignors to A/B Svenska Maskinverken, Sodertalje, Sweden, a corporation of Sweden

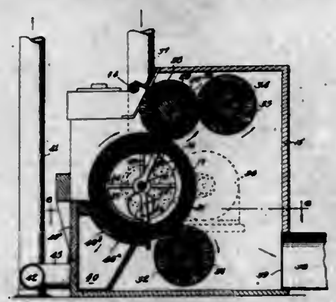
Application October 6, 1948, Serial No. 53,004
In Sweden January 3, 1948
13 Claims. (Cl. 122—1)

1. A steam boiler having a flue gas passage, boiler fluid conducting tubes within the gas passage and a heat exchanger within the passage and including said tubes characterized by the provision of: heat transfer elements joined to said tubes and collectively forming a heat absorbing screen extending across the entire flue gas passage, said elements being made of high conductivity material and having a substantially uniform cross section throughout their length of between 3 and 50 square millimeters and of a shape wherein the major transverse dimension does not exceed three times the minor transverse dimension, all of said elements being substantially parallel to one another and crosswise to the gas flow through the flue gas passage, and each element being of such length that the heat conductance path afforded thereby to the wall of the tube to which it is joined is not less than ten times the square root of the cross sectional area of the element nor longer than that at which the efficiency of its conductivity as determined by the formula

$$\eta_s=\frac{1}{nl}\times\frac{e^{2nl}-1}{e^{2nl}+1}\text{ where }n=\sqrt{\frac{\alpha\times F}{\lambda\times f}}$$

and where

α=the surface conductance (alpha value) of the gases flowing over the elements
λ=the conductance of the elements
e=base natural logarithm (=2.718)
F=circumference of element in M
f=cross sectional area of element in M^2
l=length of conductance path in M



is less than seventy-five percent of theoretically complete heat transfer, for situations where the temperature to which the elements are subjected is 600° C. or over and less than sixty percent of theoretically complete heat transfer for temperatures under 600° C., the distribution of said heat transfer elements being substantially uniform across the entire flue gas passage, and the combined surface area of the elements being three to sixteen times as great as the projected area of that length of the tubes on which elements are mounted so that said elements constitute the primary heat exchange surfaces of the heat exchanger in contact with the flue gases.

2,469,636

APPARATUS FOR TREATING SKINS

George Dempsey, Gloversville, N. Y.

Application April 11, 1946, Serial No. 661,190
11 Claims. (Cl. 69—29)

1. In apparatus for use in the treatment of tanned skins, a casing, a power-driven hollow rotary brush mounted therein with the brush tufts supported by an annular support perforated intermediate the tufts, said annular support having one end closed to control static pressure, a power-driven second brush mounted in the casing for cooperation with the hollow rotary brush with its axis in a horizontal plane spaced above and rearwardly of the vertical axis of the hollow brush, said casing having a relatively large opening in the front wall thereof exposing adjacent portions of the front and top sides of the hollow brush and a portion of the front side of the second upper brush, said brushes being mounted in parallel relation for individual rotation in opposite directions with their axes so spaced as to provide a zone within which the tuft ends of the brushes contact opposite sides of a skin with the skin supported by the hollow brush prior to the action on the skin by both brushes and with the lower side of the skin contacting substantially 180° of the upper circumference of the lower hollow brush when held by the operator and the upper side of the skin contacted by the upper brush.

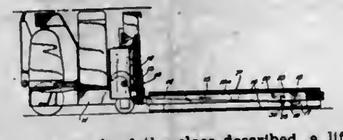
2,469,637

UMBRELLA FRAME

Wayne S. Evans and Louis G. Tartaglia, Philadelphia, Pa., assignors to S. W. Evans & Son, Philadelphia, Pa.

Application August 29, 1946, Serial No. 693,703
4 Claims. (Cl. 135—30)

1. In an umbrella frame, a notch or runner construction comprising an inner shell having a cylindrical portion and a radially slotted plane flange, an outer shell comprising a cylindrical portion in telescopic relation to the corresponding portion of said inner shell and also a plane flange having a cylindrical extension, said last-mentioned flange and its extension being provided with spaced slots in registry with the slots of said inner shell flange, the flanges of said shells



defining an annular space between them, and a ring within said space having cutouts aligned with said slots, the sides of said cutouts functioning as thrust bearings for a rib or stretcher extending through said slots into said annular space.

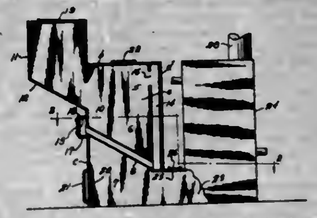
2,469,638

WHEEL LIFTING LINKAGE FOR PALLET TRUCKS

Herbert J. Framhein, Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application July 20, 1943, Serial No. 495,453
6 Claims. (Cl. 280—44)

1. In a truck of the class described, a lifting wheel link, means rotatably mounting said link on a part of said truck, a lifting wheel mounted on said link, tension means for pulling said link to rotate it on said mounting means in a downwardly extending arc from an upward position to a lowered position, an intermediate link pivoted to said lifting wheel link at one end and to said tension means at its other end and through which said tension means swings said lifting link downwardly, and a guide member mounted on a fixed point on said truck part for guiding said intermediate link and so located that when said lifting wheel link is in its upward position the pivot between said intermediate link and said tension means is vertically below the pivot between said intermediate link and said lifting wheel link.



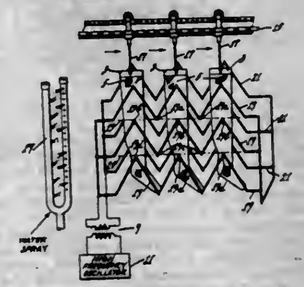
2,469,639

MAGAZINE DOWNDRAFT FURNACE

Ernest M. Franklin, Kingsport, Tenn.

Application November 23, 1945, Serial No. 630,248
4 Claims. (Cl. 110—29)

1. In a stove or furnace construction, a firebox having a grate therein, said grate including rearwardly and downwardly inclined grate bars consisting of open-ended tubular members having their forward upper ends opening through the front of the fire-box for the admission of outside air thereto, an ash pit below the grate and fire-box, means forming a combustion chamber rearwardly of the ash pit and communicating with the latter below the grate, means forming a down draft chamber rising from the fire-box and having an opening in the upper portion of the rear wall thereof, an air flue at the back of said downdraft chamber communicating at its upper end with the top of said downdraft chamber through said opening, said grate bars opening at their rear lower ends into the bottom of said air flue, said downdraft chamber having an opening in the front wall thereof for the inlet of



fuel directly above the grate, and a feed hopper for the fuel communicating at its bottom with said fuel inlet opening and adapted to feed the fuel onto the grate as the fuel is consumed on the latter.

2,469,640

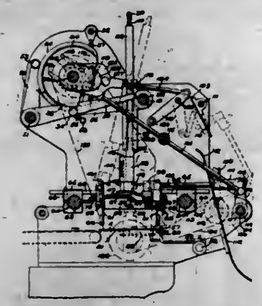
METHOD OF AND APPARATUS FOR FORMING STOCKINGS AND THE LIKE

Henderson C. Gillespie, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 1, 1945, Serial No. 597,024
5 Claims. (Cl. 223—76)

1. The method of pre-boarding stockings with the aid of an electroconductive closed flat form which comprises placing a stocking on and fully in contact with said form to provide uniform heat conduction from the form to the stocking, passing said stocking bearing form successively past a pair of operating stations, moistening said stocking at the first of said stations, uniformly heating said form inductively from opposite sides with high frequency current to a predetermined degree at the second one of said stations, and thereafter causing said heated form to impart heat uniformly to said stocking by conduction through said full contact with the form and thereby to expel the moisture therefrom and cause said stocking to shrink onto said form.

2,469,641



METHOD OF AND MACHINE FOR MAKING UNITARY SETUP COVERED BOXES

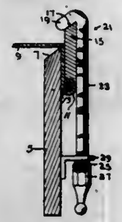
Harold J. Goss, Nashua, N. H., assignor to Central National Bank of Cleveland, Cleveland, Ohio

Application January 4, 1947, Serial No. 720,159
16 Claims. (Cl. 93—51)

1. Steps in the method of making a unitary covered box from a blank of suitable foldable

material cut and severed to provide rectangular bottom and cover areas and doubled front and rear panels having uncoated tabs extending from the ends of the inner panels in the plane thereof, and a rectangular intermediate area therebetween to form the back wall of the box with uncoated tabs extending from the respective ends of the intermediate area in the plane thereof and doubleable outer and inner panels extending from the ends of the bottom area having on their inner faces an adhesive coating, which comprises folding the intermediate area to a position at right angles to the body and cover areas and folding the tabs extending from the ends of the intermediate area along the ends of the bottom area and thereafter folding the adhesively coated end panels around the tabs extending from the intermediate area and also around the tabs extending from the ends of the doubled front and rear panels, thereby fixedly securing the tabs therebetween and providing smooth front, rear and end walls of double thickness.

10. In a machine for making unitary covered boxes having a stepped former, means for successively placing blanks upon said former, vertically movable means for clamping said blanks upon the former, means for folding the blank upon the former to produce a fully assembled box, means for raising the clamping means well above the former, means for swinging the clamping means laterally, and means for removing the assembled box from the former comprising vertically and laterally movable suction means for disengaging the box from the former and moving it laterally therefrom in a predetermined arcuate path, means for relatively moving the bottom and cover portions of the box toward closed position during said predetermined movement, means for arresting the box at the end of said predetermined path to insure complete closure of the box, and means operable thereupon to release the suction to disengage the box from the suction means.

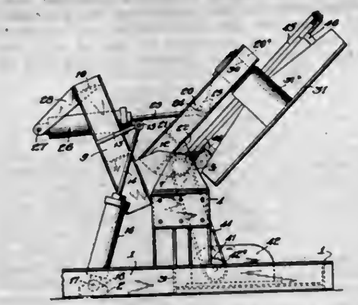


2,469,642
BLOWGUN
Edward A. Grewe, Milwaukee, Wis.
Application September 23, 1944, Serial No. 555,477
2 Claims. (Cl. 299—150)

1. A blow gun comprising a barrel having a bore therein, an enlarged chamber communicating with the bore, a valve seat in the chamber, a hollow conical nozzle ended stem loosely slidable in the barrel bore an annular groove in the stem adjacent to the nozzle head, transverse openings in said stem communicating with the chamber, inclined bleeds extending from the annular groove of the hollow stem and discharged about the conical nozzle, a valve extending from the hollow stem engageable with the chamber valve seat, a thumb lever pivoted to the discharge end of the barrel engaging the end of said hollow stem, and a tube extending from the aforesaid

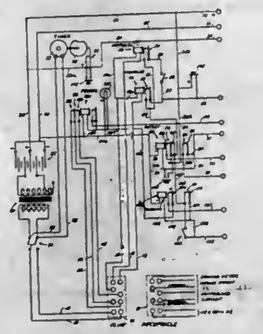
hollow stem encasing its conical nozzle end and bleeds thereof, whereby air leakage between the gun bore and stem is collected and discharged into the tube to co-mingle about the nozzle with the main air jet through said hollow stem by the developed ejector action of the main air volume.

2,469,643
BANJO HEAD TIGHTENER
Edward J. Handloser, Chesapeake, Ohio
Application December 2, 1946, Serial No. 713,588
2 Claims. (Cl. 84—269)



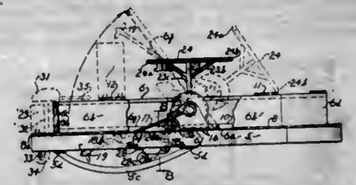
1. In a device of the character described including a vellum, a wall having an outwardly beveled edge engaging an intermediate portion of said vellum, and a ring surrounding the wall and resting against the terminal edge of said vellum and extending above said beveled wall edge and vellum; hook means engaging across the free edge of said ring and each including a substantially rigid part of a length equal to the width of the ring portion extending above the beveled wall edge and also including a resilient part reversely bent in a single plane substantially tangentially to the wall, and bracket means secured to said wall for holding said hook means.

2,469,644
WORK POSITIONER
John F. Harrison, Springfield, Ohio, assignor of one-fourth to Carl F. Greiner, Springfield, Ohio
Application June 5, 1945, Serial No. 597,675
6 Claims. (Cl. 29—288)



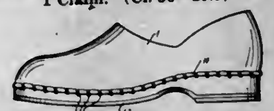
1. A work positioner comprising a base having a pair of spaced uprights carrying aligned bearings; a subframe carrying brackets at one end having hubs journaled in said bearings; a turntable freely rotatably journaled in said subframe at the end opposite the said bearings, said turntable carrying a worm ring gear; a worm journaled coaxially of said bearings and meshing with said ring gear; means for rotating said worm; and means interposed between and connecting

the subframe and base for pivoting and maintaining the subframe in tilted position thereon;



whereby the loading height of the turn-table above the base will be maintained at a minimum.

2,469,645
ELECTRIC DEMAND CONTROLLER
Howard W. Harper, Bridgeport, Conn.
Application March 4, 1944, Serial No. 525,064
28 Claims. (Cl. 171—97)

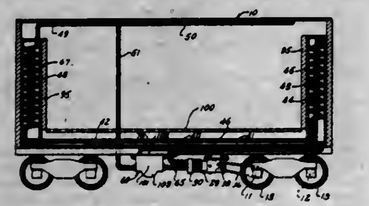


13. In a load regulating system, an automatic powered timing switch having a plurality of insulated contact points and a contactor adapted to connect selectively to said points and operating to periodically connect to the latter in rotation according to a predetermined timing; a powered metering switch and control circuits therefor controlled by the timing switch to automatically reset the metering switch to open-circuit position periodically in step with the cycle of the timing switch, said metering switch having a plurality of insulated contact points and a contactor adapted to connect selectively to said points and operating to engage the latter consecutively at a speed proportional to the rate of energy consumption in a circuit; and means connected with the contact points of the switches for altering the load of the circuit consuming said energy when a predetermined relationship is reached between the contactors of said switches.

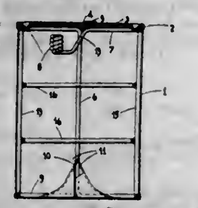
2,469,646
MANUALLY OPERATED ROWBOAT
William E. Hogrefe, Chicago, Ill.
Application September 4, 1947, Serial No. 772,169
1 Claim. (Cl. 115—24)

A boat of the kind described, comprising a basal float, there being a recess formed longitudinally through its rear end and extended substantially inward, a deck mounted upon the float and including raised sides and ends, a trap-door over the recess of the float, the same being hinged to the boat structure for opening and closing, a rower's bench hinged at one end to a side of the boat over the trap-door, a rowing mechanism mounted in the boat forwardly of the rower's bench, and upon the forward end of the trap-door, the same including a rotary propeller shaft operatively connected at its inner forward end with the rowing mechanism and extended angularly downward and rearwardly through the trap-door into the recess of the float, said shaft being journaled through bearings extended from the boat structures, and a rotary propeller keyed upon the rear lower end of the propeller shaft within the recess of the float.

2,469,647
SLIP LASTED PLATFORM SHOE
Leo B. Hollander, Sullivan, Mo.
Application September 28, 1946, Serial No. 700,033
1 Claim. (Cl. 36—19.5)



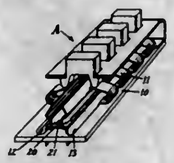
A shoe comprising an upper, an insole, means for joining the upper and the insole, and a midsole, said upper having a series of perforations extending around its lower marginal portion a sufficient distance inwardly to provide an extension covering the edge of the midsole, said insole having a downturned marginal portion with a series of perforations extending therearound and arranged in alignment with the perforations of the upper, and said means for joining the upper and the insole including a thong extending around the outside of the upper and having a plurality of inwardly directed loops passing through the respective aligned pairs of perforations, and a cord passing through the loops on the inside of the downturned marginal portion of the insole to lock said loops in place.



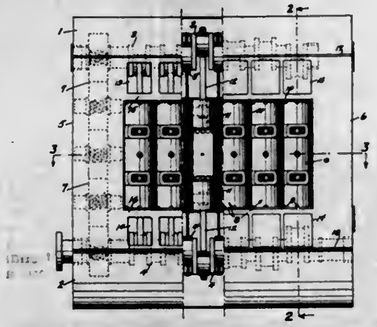
2,469,648
AUTOMATIC CONTROL FOR REFRIGERATORS
Samuel G. House, Abilene, Tex., assignor of one-half to Victor D. Payne, Jr., Abilene, Tex.
Application May 18, 1948, Serial No. 27,677
4 Claims. (Cl. 62—3)

1. A refrigerating unit for a refrigerator car comprising a compressor, means operatively con-

necting wheels of the car with the compressor so that the compressor will be actuated in accordance with the speed of the car, condensing coils connected with the compressor, expansion coils having restricted communication with the condensing coils, a return pipe leading from the expansion coils to the intake side of the compressor, a valve interpolated in the return pipe, a reciprocating means connected to the valve for operating the valve, a spring acting on the reciprocating means for retaining the valve in an open position and means acted on by the output of the compressor when the car is travelling beyond a predetermined speed for shifting the reciprocating means against the tension of the spring for closing the valve.



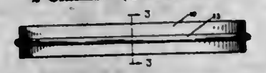
2,469,649
STIRRING DEVICE
William Wood Hunter and Ian McNab, Esquimalt, British Columbia, Canada
Application March 20, 1947, Serial No. 735,916
In Canada September 3, 1946
6 Claims. (Cl. 259—108)



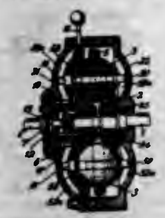
1. An agitator adapted to be rotatably mounted within a container and comprising a plurality of perpendicular rods, a plurality of rings, agitating means consisting of a perpendicular paddle in conjunction with a pair of downwardly-diverging vanes, said paddle and vanes being of equal height and each in width being substantially equal to the radius of any one of said plurality of rings, and means secured to the uppermost of said plurality of rings by means of which said agitator may be impelled.

2,469,650
MULTIPLE PUSH-BUTTON SWITCH
Siegfried Gordon Isserstedt, Toronto, Ontario, Canada
Application May 1, 1946, Serial No. 666,294
2 Claims. (Cl. 200—5)

1. A multiple interlocking push button switch comprising a base, a plurality of spring contacts mounted in a row on said base, a means of connecting each of said contacts to an external circuit, a plurality of push buttons in connection with said contacts and designed to depress them, a locking bar resiliently mounted in parallel spaced apart relation to said row of contacts on said base and having a deflecting surface and a locking shoulder, said locking bar being mounted with respect to said contacts so that as one of said contacts is depressed by one of said push buttons, said contact slidably engages said deflecting surface of said locking bar to lock said contact in a depressed position beneath said locking shoulder and to release any other depressed contact, a means of connecting said locking bar to an external circuit, said locking bar functioning as an electrical contact with any of said contacts disposed in a depressed position.



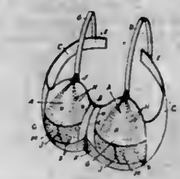
2,469,651
OPPOSED PISTON ENGINE CONSTRUCTION WITH REMOVABLE CYLINDERS
Carl A. Jacobson, Ardmore, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application November 15, 1945, Serial No. 628,820
6 Claims. (Cl. 123—51)



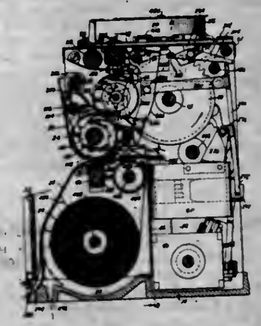
3. The combination in an engine comprising, a frame, upper and lower crankshafts normally mounted therein, opposed pistons connected to said crankshafts, cylinders in which said pistons operate with a common combustion chamber therefor, means whereby said cylinders are supported by said frame and are laterally removable therefrom while both the upper and lower crankshafts remain in their normal position, said frame including upper and lower horizontally extending portions constituting the inner halves of crankcases and end columns rigidly secured to said horizontal frame portions to provide a unitary rectangular shaped structure with the laterally removable cylinders disposed within the interior of said rectangle, at least one of said end columns being of hollow box-like formation in transverse section, and a gear train located in said hollow section for connecting the upper and lower crankshafts.

2,469,652
POOL BALL SPOTTING FRAME
Russell A. Jones, Akron, Ohio
Application March 12, 1948, Serial No. 14,534
2 Claims. (Cl. 273—22)

1. A one-piece frame of synthetic plastic for racking pool balls, comprising a wall member of generally triangular configuration, and an integral bead of uniform cross-section outwardly of said wall member, completely surrounding the same and located centrally of the width thereof, said bead being of a general order of width outwardly of the wall member to afford simultaneous contact with the wall member and the outer part of the bead by the finger ends of a user, whereby the wall member may be grasped simultaneously above and below the bead by a pair of fingers on each hand of the user.



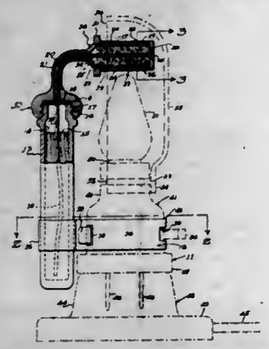
2,469,653
STEPLESS VARIABLE CHANGE-SPEED GEAR WITH ROLLER BODIES
Jean Kopp, Berne, Switzerland
Application January 14, 1946, Serial No. 641,039
In Switzerland February 1, 1945
5 Claims. (Cl. 74—200)



1. A steplessly variable change-speed gear, comprising in combination, a driving shaft, a driven shaft coaxially arranged to the driving shaft, two bodies respectively provided with a frictional surface shaped as a surface of revolution and fixed to said driving and driven shafts respectively, a plurality of ball-shaped roller bodies in frictional engagement with said surfaces of revolution, a rotatable ring against which all of said roller bodies abut, an axle for each roller body around which the respective roller bodies rotate, means for simultaneously rocking said axles for causing a stepless variation of the transmission ratio between said driving and driven shafts, and means providing contact pressure between said surfaces of revolution and said roller bodies, said ring taking up the radial components of said contact pressure.

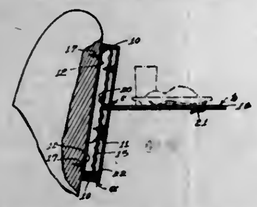
2,469,654
BRASSIÈRE
Gerda Kris, Bellevue Hill, Sydney, New South Wales, Australia
Application June 11, 1946, Serial No. 675,997
In Australia June 27, 1945
2 Claims. (Cl. 2—42)

1. A brassière having breast cups each including a peak, and a shoulder strap attached to and extending from the upper edge of each cup, each cup being provided with a plurality of rows of substantially pear-shaped endless stitchings, said rows of stitchings surrounding the peak of each cup and providing equal spaces between each other at the lower portion of each cup and remote from the respective points of attachment of said shoulder straps at said upper edges of said cups but extending from said lower portions toward said points of attachment with said spaces between said stitchings gradually reduced toward said upper edges and with respect to each other, said rows of stitchings meeting at the respective points of attachment and constituting a skeleton which prevents distortion of the cup and transfers the strain of wear evenly to said points of attachment from all sections of the cup area except the close vicinity of said peaks where the cup material is devoid of stitchings and retains its pliability.



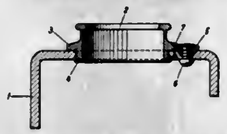
2,469,655
COUNTER ACTUATING AND RESETTING MECHANISM
Ward Leathers, Brooklyn, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 21, 1945, Serial No. 579,098
13 Claims. (Cl. 235—144)

1. In a recording apparatus of the character described, a resettable counter mechanism comprising a counter shaft mounted for rotation about an axis, a plurality of sleeves mounted on said shaft, means operatively connecting certain of said sleeves to the shaft for rotation in unison therewith, certain other sleeves being loosely disposed on the shaft, a plurality of Geneva-driven gear groups mounted on each sleeve for independent rotation relative thereto, there being a longitudinally extending groove formed in each of said sleeves exteriorly thereof, a spring carried by each Geneva-driven group and having one end thereof adapted to bear against the outside surface of its respective sleeve and move into the groove thereof during rotation of the sleeve in one direction for resetting purposes, means for rotating said counter shaft in one di-



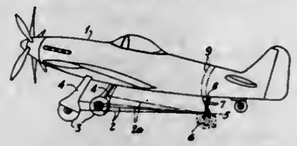
rection to effect resetting operations of certain of the gear groups, and additional means for manually rotating in unison such sleeves as are loosely disposed on said shaft to effect resetting operations of other gear groups.

2,469,656
VAPORIZER
Peter H. Lienert, Detroit, Mich.
Application April 19, 1946, Serial No. 663,268
5 Claims. (Cl. 219—45)



1. A vaporizer for attachment to an electric light fixture containing an electric light bulb comprising a vaporizing liquid container positioned alongside said electric light bulb, a mounting bracket extending transversely from said container and attachable to said fixture, a tubular vaporizing member connected to and communicating with said container and positioned transversely to said container above said light bulb, a liquid absorbing medium in said vaporizing member, and a wick feeding element extending from said liquid container to said vaporizing member into communication with said absorbing medium, said vaporizing member having a port therein for expulsion of vapor therefrom.

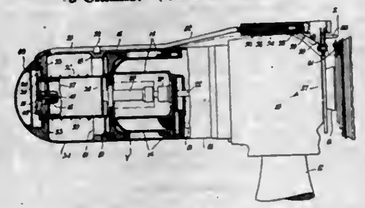
2,469,657
VERTICALLY ADJUSTABLE TRAY FOR AUTOMOBILES
John Wesley Linda and Jack M. Hill, Shafter, Calif.
Application September 15, 1947, Serial No. 774,000
4 Claims. (Cl. 311—22)



4. An adjustably supported tray comprising a frame, two long, transversely corrugated slide strips arranged uprightly in said frame in spaced parallel relation, said frame having a depending flange along the top thereof, a tray plate, a self-locking support fitting secured to each of two forward corners of the tray plate adjacent to a lateral and transverse edge thereof, the lateral edge of each fitting coinciding with the lateral edge of the tray plate, each fitting being provided with a cut-out in its lateral edge forming a lock finger disposed forwardly beyond the adjacent transverse edge of the tray plate, the said transverse edge of the tray plate being adapted to position against the corrugated faces of the slides with the slides engaged in the cut-outs, the lock fingers engaging the corrugations just above said fingers and the front edge of the plate resting on the corrugation just below said plate, and a pair of rubber blocks secured in the frame in the lower part thereof and adapted to be engaged by the said transverse edge of the tray plate to urge the tray plate upwardly after it has been disposed in closed position within the frame to effect engagement of the opposite transverse edge of the tray plate behind said depending flange.

2,469,658
MOUNTING MEANS FOR SPINNING RINGS
Hermann Mäder, Winterthur, Switzerland, assignor to Actiengesellschaft Joh. Jacob Rieter & Cie, Winterthur, Switzerland
Application August 18, 1947, Serial No. 769,154
In Germany September 1, 1942
4 Claims. (Cl. 57—122)

1. An arrangement for fastening traveler rings to a ring rail in ring spinning and ring twisting machines, said rings being provided with an outer flange for bearing against an outer face of the ring rail and also being provided with an extending neck, said rail having a bore into which said neck extends, said neck having a conical outer surface enlarging away from the flange, said conically shaped surface of the neck extending the entire extent of the wall of the opening in the ring rail, a pressure applying means acting transversely of the neck for forcing the conical of the ring neck against the wall of the rail opening to wedge the ring between said conical surface and the ring flange.

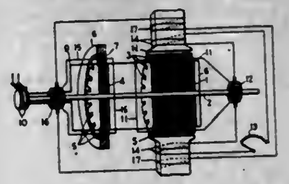


2,469,659
TETHERING DEVICE FOR AIRPLANES
James Martin, Higher Denham, near Uxbridge, England
Application July 21, 1945, Serial No. 606,357
In Great Britain August 7, 1944
5 Claims. (Cl. 244—115)

1. A device for anchoring an aeroplane comprising a single tethering member adapted to be anchored to an aeroplane landing or storage sur-

face, said means comprising a socket, a pin mounted in said socket, a cable having one end secured to said pin and the other end adapted to be secured to a forward part of an aeroplane to take the forward thrust, a second cable having one end secured to said pin and the other end adapted to be secured adjacent the tail end of the aeroplane, said tail anchoring cable being shorter than said other cable whereby the socket is necessarily positioned adjacent the tail end of the aeroplane, thereby preventing the tail from rising.

2,469,660
CONTROL OF VARIABLE PITCH AIRSCREWS FOR AIRCRAFT
James Martin, Higher Denham, near Uxbridge, England
Application September 16, 1947, Serial No. 774,381
In Great Britain October 2, 1946
5 Claims. (Cl. 170—160.32)



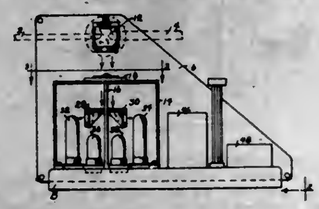
1. Supplemental mechanism for emergency feathering of the blades of a variable pitch airscrew of the type utilizing fluid pressure to normally actuate a blade-control piston in a fluid chamber mounted in the hub-cap of the airscrew, said supplemental mechanism comprising, in combination with said airscrew, of an extension on said hub-cap forming a housing, a cylinder mounted in said housing, a hollow piston slidably mounted in said cylinder and forming therewith an enclosed space, a self-contained pressure reservoir positioned in said space, means on said extension to release fluid from said reservoir into said space to actuate said hollow piston, and means actuated by the movement of said hollow piston to release fluid pressure acting upon the normal blade-control piston of the airscrew.

2,469,661
MOUNTING FOR FIELD COIL SUPPORTS
Thomas S. McElrath, Sophia, W. Va.
Application March 21, 1947, Serial No. 736,371
5 Claims. (Cl. 171—252)

1. Means for resiliently supporting a field coil on a frame comprising a supported projection on the field coil having fastening pins extending therefrom, a frame mounted supporting bar provided with housing portions projecting toward said supported projection and each provided with an opening disposed adjacent the supported projection for slidably receiving one of the fastening pins, said fastening pins having headed portions contained within the housing portions and sized to prevent the passage thereof through the housing openings.

2,469,662
DYNAMOELECTRIC MACHINE
Cecil William Haviland Minchin, Dursley, England, assignor to Mawdsley's Limited, Dursley, England, a company of Great Britain
Application December 3, 1946, Serial No. 713,804
In Great Britain March 29, 1946
6 Claims. (Cl. 322—59)

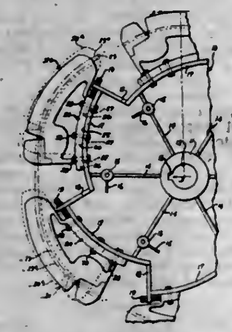
1. A self-excited alternating current dynamo electric machine comprising a main armature and field magnets, an alternating current winding and a direct current winding on the armature, a second armature fixed relatively to the main armature, a continuous unwound member of magnetic material arranged with a radial air gap in relation to said second armature, an alternating current winding on the second armature arranged for the same number of phases and poles as and connected in series with that on the main armature, a direct current winding on the second armature which is independent of that on the main armature, separate commutators connected each to its respective direct current winding, a set of brushes on each commutator, a winding on the field magnets connected to one set of brushes and a second winding on the field magnets connected to the other set of brushes.



2,469,663
PROCESS FOR PRODUCING METAL PHTHALOCYANINES AND THEIR DERIVATIVES
Frank H. Moser, Huntington, W. Va., assignor to The Standard Ultramarine Company, Huntington, W. Va., a corporation of West Virginia
No Drawing. Application September 20, 1946, Serial No. 698,404
8 Claims. (Cl. 260—314.5)

1. A method of producing copper phthalocyanine pigments which comprises heating to a temperature within the range of from about 150° C. to about 200° C. a mixture of powdered metallic copper, urea, a catalyst, an oxidizing agent, and a compound selected from the group consisting of orthodicarboxylic acids, the ammonium salts, amides, imides, and anhydrides of such acids and the amides of orthocyanocarboxylic acids; said oxidizing agent being utilized in an amount sufficient to provide at least 0.5 chemical equivalent thereof per mol of said compound.

2,469,664
CARBON ARC CONTROL
Charles J. Murch, Franklin, Maine
Application May 29, 1946, Serial No. 673,197
1 Claim. (Cl. 250—41.5)

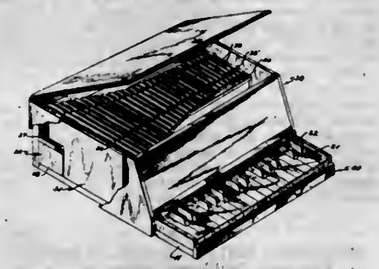


In a photo-electric arc control device, the combination, which comprises, a base, a vertically disposed plate extending upwardly from one side of the base, a rectangular-shaped frame having a pair of spaced openings in the upper horizontal surface and a vertical centrally disposed partition mounted on the base and positioned against the

face of the plate, spaced photo-electric cells mounted on the base and positioned in the frame on opposite sides of the partition, a pair of prisms positioned on the partition in the frame for receiving rays of light from the openings in the upper surface of the frame and bending the rays toward the photo-electric cells, a plate having a pair of spaced apertures therein mounted on the upper surface of the frame above the openings therein, a slide on the plate for adjusting the size of the apertures, a prism positioned on a medial

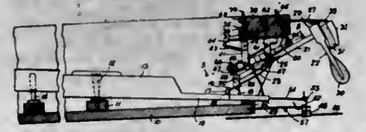
line above the apertures and mounted on the upper end of the vertically disposed plate, and a lens system mounted on the opposite face and at the upper end of the vertically disposed plate and also positioned on the medial line between the apertures and positioned to coact with the prism on the said medial line whereby rays of light passing through the lens system are bent downwardly by the prism passing through the apertures to the said pair of prisms.

2,469,665
RADIAL ADJUSTING SPROCKET
De Forest C. Patmore, Orillia, Ontario, Canada, assignor to E. Long Limited, Orillia, Ontario, Canada
Application January 17, 1948, Serial No. 2,873
7 Claims. (Cl. 74—230.18)



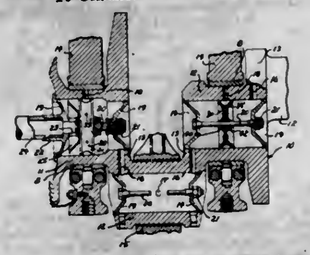
1. An adjustable sprocket wheel of the kind comprising a wheel having a plurality of inclined peripheral faces, and a plurality of tooth segments adjustably secured to each inclined face and adapted to be adjusted therealong to alter the effective pitch circumference of the wheel in which said inclined faces and the cooperating portions of said tooth segments are longitudinally arcuate whereby to maintain the tangents to the pitch lines at the adjacent ends of adjacent tooth segments substantially coincident over the whole range of adjustment of said tooth segments when said adjacent tooth segments are in corresponding positions of adjustment on their respective inclined surfaces.

2,469,666
ANTISKID CHAIN
Hermann Räs-Ammann, Thun, Switzerland; Ida Räs-Ammann, sole heiress of said Hermann Räs-Ammann, deceased
Application December 7, 1945, Serial No. 633,385
In Switzerland January 25, 1945
6 Claims. (Cl. 152—229)



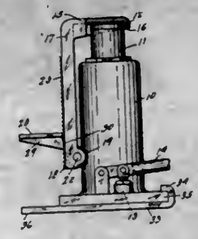
3. In an anti-skid device, a plate member having an outer tread surface, which is outwardly curved and gradually reinforced from the outer ends of said plate member toward the center of the latter, a hard metal body connected to said plate member at the center thereof, and a curved enlargement forming part of said plate member adjacent the center thereof and surrounding said body, said body being provided with a head projecting beyond said enlargement and being shaped to form a transition with respect to the outer surface of said enlargement.

2,469,667
PIANO
Harold Burroughs Rhodes, Los Angeles, Calif.
Application June 12, 1945, Serial No. 599,027
3 Claims. (Cl. 84—404)



1. A piano action comprising a generally horizontally disposed key pivotally mounted on a horizontal axis intermediate its ends and having an accessible forward end, means limiting the pivoting movement of said key in both directions, and a hammer pivotally mounted on a horizontal axis at the after end of said key and normally extending along and above said key toward the forward end thereof, said hammer including a foot portion adjacent its pivoting axis having an elongated lower edge convexly curved downwardly and forwardly and said key having a substantially plane upper surface at its after end with which said lower edge has point contact for the support of the hammer in rest position, said convex curve being approximately a portion of an ellipse, of which a focus is substantially at said hammer axis and whose major axis extends forwardly along the key when the hammer is in said rest position, the arrangement being such that when the key is depressed the point of contact between said edge and surface, while driving pressure is being applied, continuously moves by a rolling contact toward the vertical plane of said hammer axis with accelerating effect on the hammer until the upper limit of the after end of the key is reached and a throw is imparted to the hammer.

2,469,668
PIANO
Sidney C. Shill, Los Angeles, Calif.
Application May 15, 1946, Serial No. 670,693
10 Claims. (Cl. 84—236)



1. In a pianoforte, a horizontal action of the downstrike hammer type comprising: a key; a hammer; means pivotally mounting the hammer on the key for movement downwardly to strike a string; a spring urging the hammer upwardly to an extreme position; a jack; a spring urging the jack to an operative position wherein it will effect downward movement of the hammer in response to depression of the key; means for freeing the hammer from the jack when the hammer has reached a predetermined position in its downward movement; a repetition member; means pivotally mounting the repetition member above the hammer; means urging the repetition member in a direction wherein the member will tend to urge the hammer downwardly; means limiting movement of the repetition member by the urging means to a position wherein the repetition member will be prevented from urging the hammer downwardly when the key occupies its normal playing position; said repetition member being disposed to engage the hammer and impose the force of said urging means downwardly upon the hammer should the key be held partly depressed following playing of a note, so as to delay upward movement of the hammer until the jack has returned to its operating position, whereby to enable repetition of the note to be effected by fully depressing the key from said partly depressed position.

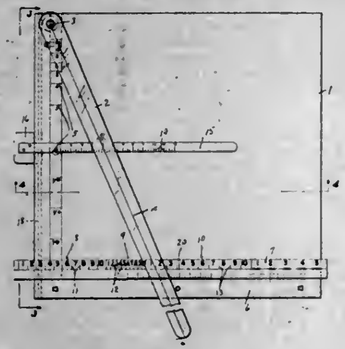
2,469,669
CRANKSHAFT BEARING LUBRICATION
Edwin F. Storey, Grosse Pointe Farms, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application June 21, 1944, Serial No. 541,319
10 Claims. (Cl. 184—6)

1. The combination with the hollow journal of a crankshaft having an oil feed thereto and a radial outlet passage therefrom, of a ring member within the hollow journal having a grooved rim sealed against the inner wall of the journal to form an annular manifold with which the radial outlet passage communicates, said rim having an oil inlet passage therethrough connecting the manifold with the interior of the journal remote from the inner wall thereof.

2,469,670
LOW LIFT ATTACHMENT FOR HYDRAULIC JACKS
Charles L. Thompson, Oakland, Calif.
Application March 11, 1946, Serial No. 653,623
2 Claims. (Cl. 254—133)

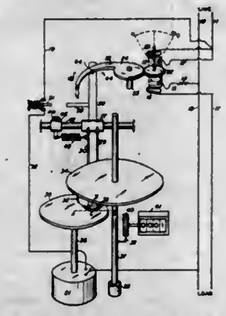
1. A low-lift attachment for hydraulic jacks having a cylinder and a plunger and a pivotal head for said plunger, comprising; a cap member to fit over and engage said pivotal head and having a drop member at one end extending down substantially to the foot of the jack when the plunger is retracted and having a bearing at its lower end for cooperation with the side of the cylinder; said drop member consisting of two spaced members forming a vertical slot therebetween and a rack formed on the front face of each member; said step having a tension member passing through said slot and terminating in a cross-member for cooperation with the back wall of said spaced members on the respective sides of the slot, and cooperative teeth formed on the rearward portion of said step for engagement with said rack; said tension member being cylindrical in cross-section and being formed angularly upward and backward to provide for removal, replacement, or adjustment of the step at will, said step having teeth formed only in spaced relation below the level of the top of the step whereby upward swing of the step about the tension member axis moves the teeth out of engagement with the rack, and turning of the step about the axis of the tension member frees the cross-member for removal through the slot.

2,469,671
METHOD OF STENCILING WITH SECTIONAL SCREENS
Walter T. Warde, San Francisco, Calif., assignor to Foster and Kleiser Company, San Francisco, Calif., a corporation of Nevada
Application July 30, 1945, Serial No. 607,702
3 Claims. (Cl. 101—129)



1. A method of printing a multiple sheet poster by the silk screen process in which the image to be printed is of a size extending over a plurality of the sheets of such poster that comprises the steps of arranging a plurality of screens respectively of a size to correspond with the portion of the image to be printed in edge to edge, coplanar relationship, spraying particles of a

blocking out medium onto said screens and across their adjoining edges in a pattern and density for defining the outline of parts of the image to be printed and the shade character-

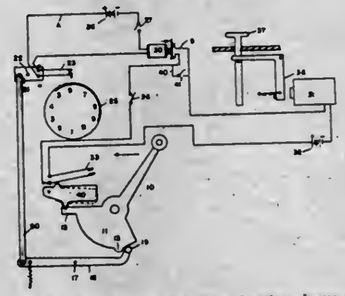


istics of the said parts, then making separate prints on sheets of paper from each of said screens by said process for final assembly and matching of such sheets to produce the poster.

2,469,672
CALCULATOR
William A. Wartinen, San Francisco, Calif.
Application June 1, 1946, Serial No. 673,806
1 Claim. (Cl. 235—61)

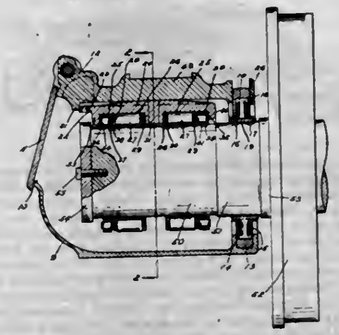
A calculator of the character described comprising a plate provided along one edge with spaced graduations in a straight row respectively identified by indicia indicating different letter sizes, an elongated scale member slidably supported on said plate in a position extending at right angles to said row adjacent one end of the said row for movement longitudinally of said member, said scale member having a plurality of groups of corresponding numbers thereon disposed in a single row extending longitudinally of said row, the numbers in each group being uniformly spaced apart but the numbers in different groups being differently spaced from each other, and graduation marks adjacent each of the said numbers in said groups, a scale strip supported on said plate in a position extending across said row at right angles thereto for movement transversely of its length and longitudinally of said row, graduations on said strip disposed in a row extending longitudinally thereof and symbols identifying said latter graduations, an arm pivotally secured to said plate at the end of said first mentioned row of graduations opposite said scale member and extending across both said scale member and said scale strip for reading graduations on either said scale member or said scale strip at points of intersection by said arm.

2,469,673
VARIABLE-RATE ELECTRIC METER
Paul G. Whitmore, Pine Bluff, Ark.
Application May 24, 1945, Serial No. 595,561
11 Claims. (Cl. 171—273)



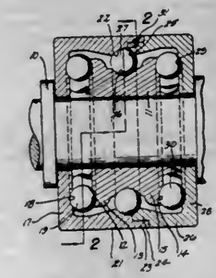
1. A variable-rate electric meter comprising a driving disk, means rotating said driving disk at constant speed, a rotatable driven disk mounted in spaced parallel relationship to said driving disk, reciprocably movable rotatable means connecting said disks, means guiding said rotatable means along a radius of said driving disk for causing rotation of said driven disk when said rotatable means is positioned between the midpoint and the periphery of said driving disk, elements constituting an electrical measuring device embodying a deflectable element, means including an eccentric cam controlled by said deflectable element for establishing the position of said rotatable means, and means for counting the revolutions of said driven disk.

2,469,674
TAPE RULE
Eugene J. Witchger, Saginaw, Mich., assignor to The Lufkin Rule Co., Saginaw, Mich.
Application September 4, 1945, Serial No. 614,197
8 Claims. (Cl. 242—84.9)



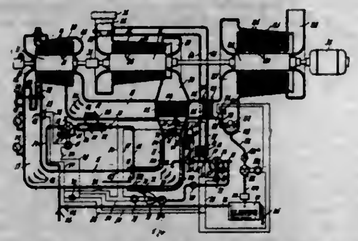
1. In a tape measure of the push-pull type having in combination, a casing having a tape entrance therein, a flexible tape rule extending into the casing and through said entrance, and being in its free state rod-like and of non-planar cross-section, means tending to draw the rule into the casing, a one-piece snubber clip mounted in said casing outside the coiled tape and formed with spaced-apart lips engageable with and covering the edges of the tape entrance and between which the tape travels as it is withdrawn or pushed into the casing, one of said lips forming an abutment which extends into the normal straight line of travel of the tape to change the natural course of the tape as it is withdrawn from the casing.

2,469,675
DECIMAL ROUNDING OFF MECHANISM
Carlos Wittenmyer, Mount Clemens, Mich.
Application April 20, 1944, Serial No. 531,865
7 Claims. (Cl. 235—61)



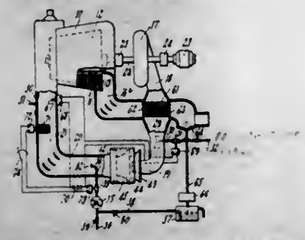
1. In a calculating machine having keys and accumulator wheels, a finger movable to contact a wheel, said wheel having a conformation permitting such contact only when in a predetermined position, means for causing such finger movement, means for actuating the key corresponding to said wheel, and means operably connecting the latter means to the finger moving means and adapted to cause actuation of the key when said finger contacts said wheel, said connecting means including means causing such key actuation with alternate finger-wheel contacts.

2,469,676
ANTIFRICTION BEARING
Charles H. Witthofft, Detroit, Mich., assignor of one-half to Joseph F. Gohn, Grosse Ile, Mich.
Application October 23, 1947, Serial No. 781,561
3 Claims. (Cl. 308—180)



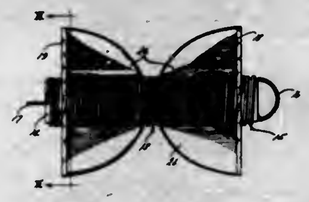
1. An anti-friction bearing of the class described, adapted for use on railroad cars embodying a journal box and an axle with one end of the axle projecting into said journal box, comprising: a wedge positioned in said journal box and having on its inner face a pair of spaced apart recesses, said wedge overlying the upper portion of the axle projected into said journal box; a pair of spaced apart retaining rings embracing said axle and longitudinally spaced on said axle; a plurality of circumferentially spaced roller bearings mounted between each of said retaining members and adapted for engaging the axle in response to radial thrust, said members and said rollers traveling around said axle upon rotation of said axle; and a pair of concentric rings positioned in each of said recesses at one side thereof; a plurality of rollers mounted between said concentric rings and rotatable on a radially directed axis, said retaining rings and said rollers being adapted for traveling around said axle upon rotation of same, said rollers between said concentric rings engaging one face of the first named retaining rings.

2,469,677
COMBINATION RADIAL AND THRUST BEARING
Charles H. Witthofft, Detroit, Mich., assignor of one-half to Joseph F. Gohn, Grosse Ile, Mich.
Application December 10, 1947, Serial No. 790,807
2 Claims. (Cl. 308—174)



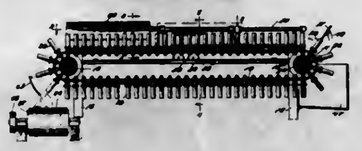
1. A bearing of the class described, comprising: a stationary housing embodying a pair of cup-shaped members faced toward each other and secured together at their open edges, each of said cup-shaped members having an annular groove formed on the inner face of its bottom and curvilinear in cross-section; a rotatable member mounted within said housing and adapted for rotation in unison with a shaft projected through said housing and provided on its opposite end faces with an annular groove curvilinear in cross-section co-operating with the groove in the opposed face of the cup-shaped member to provide a ball race; a plurality of balls in each of said races, each of said cup-shaped members having an annular groove formed on its inner face adjacent its edge and said rotatable member having an annular groove formed on its periphery adjacent its center in alignment with the grooves formed in the inner surfaces of said cup-shaped members adjacent their edges to provide a ball race; and a plurality of balls mounted in said race for resisting radial thrust delivered by said shaft.

2,469,678
COMBINATION STEAM AND GAS TURBINE
Edwin T. Wyman, Brookline, Mass.
Application December 18, 1943, Serial No. 514,808
3 Claims. (Cl. 60—42)



1. A power generating apparatus, comprising a turbine, an air compressor coupled with the turbine to be driven thereby, a combustion chamber in connection with the compressor to receive air therefrom, a conduit leading from the combustion chamber to the intake of the turbine and including a portion constituting a vaporizing chamber, a fuel burner in the combustion chamber, an automatic regulator for governing the fuel supply to said burner in a prescribed ratio to the quantity of air passing through the compressor, means for injecting water into the stream of gases flowing from the combustion chamber to the turbine, and regulating means for controlling the amount of water passing to said injection means, including a thermostat in said duct near the turbine, and means for heating the water by exhaust gas from the turbine.

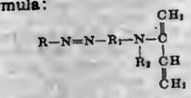
2,469,679
GAS TURBINE
Edwin T. Wyman, Brookline, Mass.
Application July 13, 1944, Serial No. 544,715
1 Claim. (Cl. 60—42)



An engine combination comprising a gas turbine, an air compressor adapted to be driven by the turbine when the latter is running, a chamber coupled with the turbine for providing a supply of hot propelling gases, means for injecting water into said chamber to be vaporized by the hot gases therein, a heat interchanger in the paths of exhaust fluid from the turbine and air delivered by the compressor arranged to condense steam carried by the exhaust gases and impart heat to the compressed air, a nozzle connected to receive the compressed air after passing through the condenser and arranged to discharge into said chamber, a fuel burner in the connection between the condenser and nozzle, a collector for water condensed by the condenser, and means for transferring water from the collector to the chamber.

2,469,680
ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application July 15, 1947, Serial No. 761,127
5 Claims. (Cl. 204—248)

1. An electrolytic water correction device especially adapted for positioning between adjacent pipes of a low water level boiler, comprising a cylindrical core of negative metal of the electromotive force series, a helical coil of positive metal of the electromotive force series fitted snugly around said core and having its ends bent inwardly across the ends of said core to secure the core therein, a pair of triangular support members of positive metal of the electromotive force series positioned on said core having central openings larger than the core but smaller than the outside diameter of said coil, said support members having recesses extending outwardly from said central openings of such depth as to permit threading of the support members onto the ends of said coil, and opposed fin members of positive metal of the electromotive force series projecting from said support members and longitudinally of the core for increasing the efficiency of the device, said support members being adapted to be positioned between adjacent pipes of a boiler with said fins insuring against the device falling between the pipes when the core is expended.



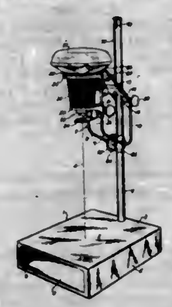
2,469,681
GLASS TUBE BOTTOMING MACHINE
George Coby, Attleboro, Mass., assignor of forty per cent to James V. Pugliese, Providence, R. I.
Application May 27, 1943, Serial No. 488,671
8 Claims. (Cl. 49—7)

1. In a machine for closing the end of a tubular glass body, means for moving the tube in a vertical position along a substantially straight path, units positioned adjacent to said path for providing a zone of heat into which the upper end of the tube travels for softening the end thereof sufficiently to cause the same to flow inwardly and close the end of the tube and means positioned below the tube and in line with the path of travel thereof for discharging air under pressure into the tube while moving to shape the closed end of the tube while in a moldable condition, said air pressure being the only means for shaping the softened end portion of the tube.

2,469,682
MONOAZO DYE COMPOUNDS CONTAINING A BUTADIENE-1,3 GROUPING
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application November 28, 1947, Serial No. 788,680
5 Claims. (Cl. 260—205)

1. The monoazo dye compounds having the general formula:

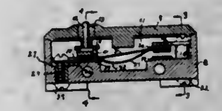
wherein R and R_1 each represent a monocyclic benzene nucleus and R_2 represents a member selected from the group consisting of a hydrogen atom, an alkyl group having from one to four, inclusive, carbon atoms, a hydroxyalkyl group having from two to three, inclusive, carbon atoms, and an alkoxyalkyl group having from three to four, inclusive, carbon atoms.



2,469,683
ANION ACTIVE RESINS AND PROCESSES OF PRODUCING SAME
James R. Dudley, Cos Cob, and Lennart A. Lundberg, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 15, 1945, Serial No. 616,644
13 Claims. (Cl. 260—2)

8. A water insoluble granular resinous material obtained by a process comprising a step of bringing together an alpha-chloro-beta, gamma-epoxy hydrocarbon and at least one alkylene polyamine in the ratio of at least 2 mols of said hydrocarbon per mol of polyamine, the number of mols of said hydrocarbon being not greater than 1 mol for each amino group of said polyamine, permitting the resulting condensation product to gel, curing the resulting gel by heating at 50° C. to about 125° C., and granulating the gel, said granular resinous material being of such low water solubility that water will not dissolve more than 1 part of resin in 1,000 parts of water when it is passed through a bed of resin after the first cycle comprising an activation, exhaustion and reactivation of the resin.

2,469,684
ANION ACTIVE RESINS AND PROCESSES OF PRODUCING THE SAME
James R. Dudley, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 16, 1946, Serial No. 655,005
8 Claims. (Cl. 260—2)



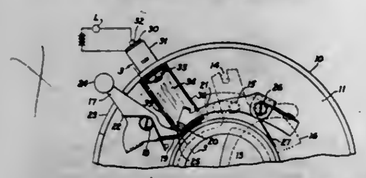
3. An insoluble granular resinous material obtained by a process comprising the steps of reacting an alkylene polyamine containing an unsubstituted primary amino group with an organic compound containing a plurality of ethylene oxide groups and no solubilizing substituents in molar proportions of from 2:1 to 3:1, ethylene oxide group containing compound to alkylene polyamine, permitting the resulting condensation product to gel, curing the resulting gel by heating, and granulating the cured gel, said material being so insoluble that no more than one part thereof will dissolve in 1,000 parts of water after a first cycle comprising an activation, exhaustion, and reactivation of the material.

2,469,685
FOCUSING APPARATUS FOR ENLARGERS
John H. Eagle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 26, 1948, Serial No. 17,227
8 Claims. (Cl. 88—24)

1. Enlarger focusing apparatus comprising a pair of spaced frames including parallel portions forming tracks, a bellows support carried at the tops of the tracks, a lens board slidable upon the tracks, a pair of parallel frame portions spaced from the tracks, a slide block at one end of said parallel portions, a post projecting vertically through the slide block, means for varying the frictional engagement between the slide block and vertical post, a flanged, spool-shaped member rotatably carried on the ends of the parallel frame portions spaced from the slide block and on the same side as the tracks whereby the weight of the tracks, lens board, and bellows support tends to thrust the spool-shaped member frictionally against the vertical post, the inner walls of the spool flanges being disposed at an angle to frictionally engage spaced walls of the vertical post to slide the spaced frames and slide block thereon by manually turning the spool when the frictional contact between the slide block and vertical post is sufficiently reduced.

2,469,686
GAUGING SWITCH
Malcolm W. Eaton, Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application May 6, 1946, Serial No. 667,547
5 Claims. (Cl. 200—67)

1. The combination in a switch of the precision type of a snap action leaf spring, a housing therefor and an operating plunger comprising a metallic pin reciprocably mounted on said housing and a head of insulating material mounted at one end thereof within the housing in substantially concentric relation thereto, said head having a substantially flat surface at right angles to the axis of said metallic pin on the side thereof opposite said pin, said spring having a pointed rigid projection terminating in a single



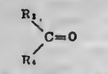
point intermediate the edges thereof fixed thereon and substantially axially aligned with said metallic pin and engageable with the flat surface of said insulating head for deflection of said spring under pressure applied to said pin.

2,469,687
CORN HARVESTER HUSKING ROLL WITH RESILIENT SECTION
Rector C. Fergason, La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 7, 1945, Serial No. 587,109
14 Claims. (Cl. 130—5)

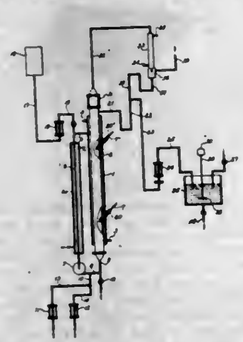
1. A corn harvester husking roll comprising a rotatably mounted shaft member, a pair of front and rear parts fixedly secured to said shaft member in axially spaced relation and presenting opposed end portions of reduced diameter, a tube surrounding said shaft member and having an internal diameter considerably greater than the external diameter of the portion of the shaft member enclosed thereby, means mounting said tube in spaced concentric relation with respect to said portion of the shaft member comprising annular plug members mounted on said shaft member for movement axially thereof and affording a radially rigid support for the opposite ends of said tube, said plug members and the opposed ends of said parts having portions thereof nonrotatably detachably engaged for relative axial movement so as to permit the ends of said tube to move longitudinally relative to said parts and shaft member as the tube flexes laterally relative to its longitudinal axis, said tube being formed of complementary rubber covered arcuate sections having outwardly flanged longitudinal edge portions disposed in abutting engagement, and externally accessible means detachably uniting said abutting edge portions of said sections.

2,469,688
AUTOMATIC SHUTTER WITH BUILT-IN SYNCHRONIZER
Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 19, 1944, Serial No. 568,824
8 Claims. (Cl. 95—11.5)

1. In a flashlight synchronizing device the combination of a between-the-lens photographic shutter of the automatic type comprising a casing housing an oscillatable blade ring for opening and closing the shutter when moved between its two positions; a blade ring operating mechanism in said casing including a master lever movable between a cocked position and an inoperative position, and adapted to be connected to one side of a lamp circuit to constitute a switch contact; a trigger for engaging and moving said lever from its inoperative position to its cocked position and then releasing it; a projection on said lever moving over a given path as the lever moves between its two positions; a stationary contact adapted to be connected to the other side of said circuit and located in said casing adjacent the master lever and embracing the path of movement of said projection; said projection movable to-and-from an operative position in which it is in wiping engagement with said second contact during movement of said lever; means normally moving said projection into said operative position, and means associated with said trigger to be moved thereby for moving said projection from, and holding it out of, said operative position when said lever is in its inoperative position and until it is moved to its cocked position, whereupon it is adapted to release said projection to allow it to return to its operative position during movement of the lever from its cocked position to its inoperative position.



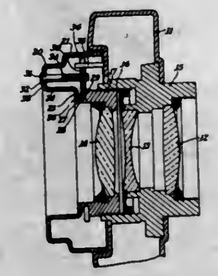
2,469,689
METHOD OF MAKING APERTURED METAL SHEETS
Donald C. Gresham, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 23, 1945, Serial No. 584,453
In Great Britain March 25, 1944
2 Claims. (Cl. 204—24)



1. The method of making an apertured sheet of composite copper and nickel layers, which comprises forming in the same zone on both sides of a relatively thick imperforate copper sheet, non-conductive colloid stencils covering both sides of said copper sheet where said aperture is required, depositing on the parts of both sides of said copper sheet not protected by said stencils, thin layers of nickel, then removing said stencils and making the copper sheet the anode in a copper plating bath and passing an electric current between said anode and a cathode until the copper at the parts of said copper sheet where the nickel is absent is removed to a greater width than the width of the aperture in the nickel foil.

2,469,690
CONTINUOUS PROCESS OF PRODUCING BETA LACTONES
Hugh J. Hagemeyer, Jr., and Delmer C. Cooper, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 6, 1946, Serial No. 660,286
6 Claims. (Cl. 260—344)

1. The process of producing beta lactones by condensing a ketene with a compound containing a carbonyl group and having the graphic formula:



wherein R_3 is a substituent selected from hydrogen, alkyl, aralkyl aryl and carbalkoxyl groups and R_4 is a substituent selected from alkyl, aralkyl and aryl groups as the sole functional group, which comprises maintaining a body of a solution of the ketene and carbonyl compound in the beta lactone, controlling the temperature of the body of solution within the range of −50° C. to +50° C., continuously withdrawing a portion of the solution from said body, continuously adding ketene, carbonyl compounds and a solution

of a condensation catalyst to the withdrawn portion, returning the part of the solution to which the ketene, carbonyl compound and catalyst solution were added to the body of solution, and continuously removing from the recycling solution a portion thereof corresponding in amount to the amount of the reactants and the catalyst solution introduced.

2,469,691
LENS-MOUNT FOCUSING CAP
Charles M. Lee, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 28, 1947, Serial No. 771,028
3 Claims. (Cl. 95—45)

1. In a focusing lens mount having axially aligned lens-carrying cells one of which is axially adjustable for focusing the mount, of a hollow cup-shaped focusing cap formed with a focusing scale and supported by said adjustable cell, a semi-annular pinch ring carried by said adjustable cell and positioned within said cap, an annular flange formed on said adjustable cell and positioned between said cap and said ring, means for connecting and drawing said cap and ring into tight frictional engagement with said flange to connect the latter to said cap for movement as a unit therewith during focusing, a lug formed from said mount, and a shoulder formed on the periphery of said ring and adapted to engage said lug to limit the movement of said adjustable cell.

2,469,692
PROCESSES OF REMOVING ANIONS FROM LIQUIDS
Lennart A. Lundberg, Stamford, and James R. Dudley, Cos Cob, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Original application September 15, 1945, Serial No. 616,644. Divided and this application September 15, 1945, Serial No. 616,645
8 Claims. (Cl. 210—24)

1. A process which comprises contacting a liquid medium containing anions with a water-insoluble granular resinous material obtained by a process comprising a step of bringing together an alpha-chloro-beta,gamma-epoxy hydrocarbon and at least one alkylene polyamine in the ratio of at least 2 mols of said hydrocarbon per mol of polyamine, the number of mols of said hydrocarbon being not greater than 1 mol for each amino group of said polyamine, permitting the resulting condensation product to gel, curing the resulting gel by heating at 50° C. to about 125° C., and granulating the gel, said granular resinous material being of such low water solubility that water will not dissolve more than 1 part of resin in 1,000 parts of water when it is passed through a bed of resin after the first cycle comprising an activation, exhaustion and reactivation of the resin, and separating said medium from said material.

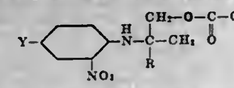
2,469,693
ANION ACTIVE RESINS PREPARED FROM ALKYLENE POLYAMINES AND HYDROXY-SUBSTITUTED ALIPHATIC POLYHALIDES
Lennart A. Lundberg, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 25, 1945, Serial No. 624,606
9 Claims. (Cl. 260—2)

3. An insoluble granular resinous material obtained by a process comprising the steps of bringing together at least one alkylene polyamine and glycerol dichlorohydrin, permitting the resulting condensation product to gel, curing the resulting gel by heating, and granulating the cured gel, said granular resinous material being of such low water solubility that water will not dissolve more than one part of resin in 1,000 parts of water when it is passed through a bed of resin after a first cycle comprising an activation, an exhaustion and a reactivation of the resin.

2,469,694
PROCESSES OF REMOVING ANIONS FROM LIQUIDS
Lennart A. Lundberg, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Original application October 25, 1945, Serial No. 624,608. Divided and this application October 25, 1945, Serial No. 624,607
6 Claims. (Cl. 210—24)

1. A process which comprises contacting a liquid medium containing anions with a water-in-

soluble granular resinous material obtained by a process comprising the steps of bringing together at least one alkylene polyamine and glycerol dichlorohydrin, permitting the resulting condensation product to gel, curing the resulting gel by heating, and granulating the cured gel, said granular resinous material being of such low water solubility that water will not dissolve more than one part of resin in 1,000 parts of water when it is passed through a bed of resin after a first cycle comprising an activation, an exhaustion and a reactivation of the resin, and separating said medium from said material.



2,469,695

NITROAMINOBENZENE ESTER COMPOUNDS

James G. McNally, Kingsport, Tenn., and Joseph B. Dickey, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application February 2, 1946, Serial No. 645,230
4 Claims. (Cl. 260—490)

1. A compound having the general formula:

wherein Y represents a member selected from the group consisting of a chlorine atom and an N-ethyl sulfoneamide group and R represents a member selected from the group consisting of a methylol group and a

group.

2,469,696

PROCESS FOR PREPARING WATER-SOLUBLE POLYACRYLAMIDE

Louis M. Minsk and William O. Kenyon, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application July 22, 1946, Serial No. 685,377
5 Claims. (Cl. 260—83)

1. A process for preparing a water-soluble polyacrylamide comprising adding polyacrylyl chloride dissolved in acetone to more than the stoichiometrically calculated quantity of liquid ammonia required to react with all the chloride atoms contained in the added polyacrylyl chloride to form the said water-soluble polyacrylamide and ammonium chloride, the said polyacrylyl chloride in acetone being added gradually to the liquid ammonia while stirring the reaction mass.

2,469,697

PREPARATION OF 2-CHLOROBENZOTHIAZOLE

Neil S. Moon, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester N. Y., a corporation of New Jersey

No Drawing. Application December 5, 1946, Serial No. 714,145
5 Claims. (Cl. 260—304)

1. A process for preparing a 2-chlorobenzothiazole comprising reacting, at a temperature of not more than 50° C., one molecular proportion of a 2-mercaptobenzothiazole with at least 6 molecular proportions of sulfuryl chloride (SO_2Cl_2).

2,469,698

KNOCKDOWN COOKING GRID

Roland J. Morgan, Oakland, Calif., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich., a corporation of Michigan

Application August 24, 1945, Serial No. 612,333
5 Claims. (Cl. 248—166)

1. A knockdown cooking grid comprising a plurality of like grid top sections, each comprising cross bars and a plurality of grid bars secured to the tops thereof in spaced parallel relation with the ends of the cross bars projecting beyond the outer grid bars of the sections, said grid bars having downturned eyes at the ends thereof, coupling and supporting rods removably disposed through the eyes of the grid bars with the sections arranged in edge to edge relation with the ends of cross bars of adjacent sections in abutting relation to space the end grid bars of adjacent sections, and leg members comprising laterally spaced legs and connecting cross bars therefor, the legs being provided with eyes receiving said coupling and supporting rods, said legs being spaced so that the leg members are of substantially the width of the grid sections permitting the stacking thereof with the grid sections when the structure is disassembled.

2,469,699

FISHHOOK REMOVER

John D. Mundy, Los Angeles, Calif.

Application November 13, 1945, Serial No. 628,000
1 Claim. (Cl. 43—29)

A hook remover comprising a shank and a ball secured to an end of the shank, said ball being provided with a hole therethrough having its axis in a plane of the longitudinal axis of the shank, said axis of the hole also being at an acute angle to a plane including the axis of the shank, said ball having a slot extending from the peripheral surface thereof to the hole and having the portion thereof at the periphery at an angle to the longitudinal axis of the hole, the hole and slot being so constructed and arranged that the ends of the slot meet the ends of the hole at the opposite ends of the hole.

2,469,700

TRANSPARENT PROTECTIVE GARMENT FOR INFANTS

Edwina S. Petrucelli, Kirkland, Wash.

Application March 7, 1947, Serial No. 732,974
2 Claims. (Cl. 2—69.5)

2. A protective garment for infants, comprising: a transparent envelope adapted to cover an infant's body, a bottom secured to said envelope, a plurality of ventilating openings in said bottom, a flap secured along its upper side and ends positioned to form a shield for said openings, closure means for the upper side of said envelope, a plurality of groups of ventilating openings angularly disposed on each side of said closure means,

protective flaps disposed to shield each of said groups of ventilating openings, said lower ventilating openings and said upper ventilating openings adapted to co-act and provide means for promoting convectional flow of air through the envelope; and puckering means for closing said envelope about an infant's neck.

2,469,701

PREPARATION OF ACRYLIC ACID

Bryan C. Redmon, Amherst, Mass., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application February 13, 1946, Serial No. 647,425
4 Claims. (Cl. 260—526)

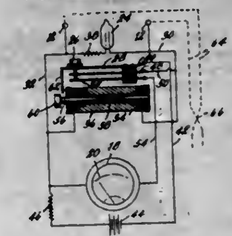
1. In the process of preparing acrylic acid by dehydration of hydracrylic acid, the steps which comprise adding the hydracrylic acid gradually to an acid dehydration catalyst maintained at dehydration temperatures of between about 130° to 190° C. under pressures below 100 mm. of Hg to form an aqueous solution of acrylic acid and distilling off the aqueous acrylic acid as formed, the rate of addition of hydracrylic acid being so regulated that the total volume of catalyst remains nearly constant.

2,469,702

PRODUCTION OF ALKYL HALIDES

Clare C. Schwegler and Frank M. Tennant, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application November 7, 1946, Serial No. 708,470
10 Claims. (Cl. 260—663)



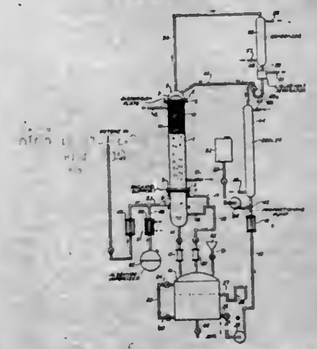
1. In a method for the production of an alkyl halide wherein an olefine and a hydrogen halide are passed into a mixture of a catalyst containing a metal halide of the class consisting of aluminum chloride, aluminum bromide, ferric chloride and ferric bromide, and a non-reactive organic liquid of boiling point at least as high as that of the alkyl halide thus formed while vaporizing the resultant alkyl halide from the mixture, the improvement which consists in curtailing foaming during the reaction by adding a minor amount of sulphur to the reaction mixture.

2,469,703

SHORT CIRCUIT DETECTOR

Leon L. Simkins, Kalamazoo, Mich., assignor to The Wigginton Company, Kalamazoo, Mich.

Application April 20, 1946, Serial No. 663,694
7 Claims. (Cl. 175—183)

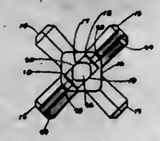


1. An electrical testing instrument comprising means for connecting said instrument across a circuit to be tested, visual indicating means electrically connected across said connecting means, an electromagnet connected across said connecting means, a meter, a power source, and manually operable normally open switch means for connecting said meter and said power source across said first mentioned connecting means, said electromagnet being arranged to render said switch means inoperative when said electromagnet is energized.

2,469,704

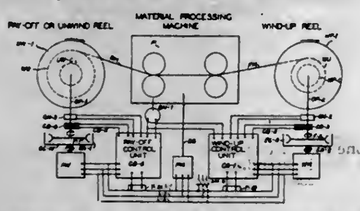
CONTINUOUS PROCESS OF PRODUCING BETA LACTONES AT REDUCED PRESSURE

Herbert G. Stone, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey



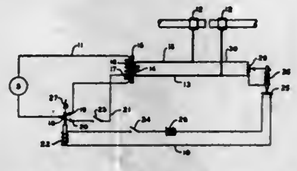
Application April 6, 1946, Serial No. 660,285
5 Claims. (Cl. 260—344)

5. The process of producing beta butyro lactone by condensing ketene with acetaldehyde, which comprises continuously passing a gaseous mixture of ketene and acetaldehyde at a reduced pressure within the range of 10–250 mm. countercurrently to a circulating stream of beta lactone containing a condensation catalyst, controlling the temperature of the beta lactone stream within the range of −50° C. to +50° C., collecting the beta butyro lactone product which is formed in the condensation reaction in solu-



tion in the beta lactone stream, adding condensation catalyst to the circulating beta lactone and removing from the recycling solution a portion thereof corresponding in amount to the amount of the reactants and catalyst introduced.

2,469,705
REPLACEMENT HANDLE
Louis J. Vesper, Los Angeles, Calif.
Application March 4, 1946, Serial No. 651,747
1 Claim. (Cl. 287—53)



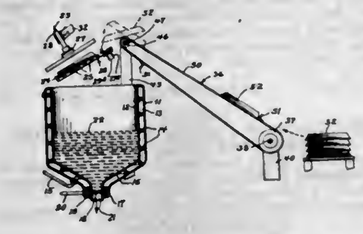
In a replacement handle for a valve stem, the combination of a central body portion having a lateral arm extending radially therefrom, the arm having a radially extending groove on its under side, a projection extending downwardly from the body portion, a recess defined within the body portion and projection and having parallel sides, a jaw slidably mounted within said recess between said parallel sides, said jaw having a V section provided with teeth for engaging a valve stem, and a threaded element at the inner end of the groove under the lateral arm adapted to advance the jaw within said recess.

2,469,706
ELECTRONIC TENSION CONTROL APPARATUS
Anthony Winther, Kenosha, Wis., assignor to Martin P. Winther, Waukegan, Ill., trustee
Application May 4, 1944, Serial No. 534,111
18 Claims. (Cl. 242—75)

1. Material reeling apparatus comprising a rotary reel for a winding of the material, means for maintaining a substantially constant linear velocity of the material, the winding having an increasing winding diameter as the reel rotates whereby the speed of the reel decreases, an A. C. overrunning motor for turning the reel, an electric slip coupling between the motor and the reel, an electric field in said slip coupling, said decreasing reel speed increasing slip in the coupling accompanied by an increase in driving torque applied by the motor through the coupling and accompanied by an increase in the motor current, and circuit control means responsive to said increase in motor current and responsive to incipient reduction in reel speed adapted to control the energization of said field so as to adjust the slip in said coupling so as to produce a torque delivered from the motor to the reel which will maintain substantially constant tension in said material as the winding diameter increases.

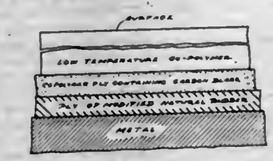
2,469,707
METHOD AND APPARATUS FOR FLASH WELDING
Fritz Albrecht, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application June 24, 1947, Serial No. 756,739
12 Claims. (Cl. 219—4)

1. In a flash welding machine including a variable current transformer connected to a power supply means, the combination with work piece holding means connected to receive current from the transformer to provide a welding arc, means to move said work holding means toward each other to establish said welding arc between the work pieces, of a low voltage responsive means connected across the work pieces and associated with the supply means to change the transformer connections to increase the current output of the transformer on a reduction in voltage at the work pieces.



2,469,708
SANDAL WITH PIVOTED-RING STRAP RECEIVERS
Verna Cook Alexander, Spartanburg, S. C.
Application October 29, 1946, Serial No. 706,466
3 Claims. (Cl. 36—11.5)

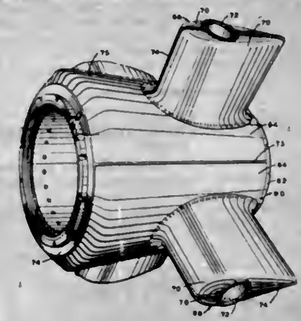
1. A sandal having a relatively thick sole and having a plurality of eyelet members pivotally mounted around the side edges of the sole intermediate the top and bottom edges thereof and at an elevation high enough to prevent depending eyelet members from touching the surface on which the sandal may rest and adapted to normally hang downwardly, some of said eyelets being adapted to receive a lace member which is adapted to be passed over the foot of the wearer and through some of said eyelets and then having its ends secured together for holding the sandal on the foot.



2,469,709
APPARATUS FOR MELTING CHOCOLATE AND OTHER CONFECTIONS
Handel Ashworth, Baldwin, and Percy W. Doblin, Brooklyn, N. Y.
Application August 22, 1946, Serial No. 692,164
7 Claims. (Cl. 219—47)

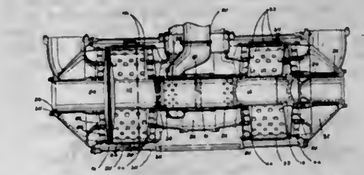
1. In apparatus for melting slabs of chocolate or the like, a vessel to receive the melted chocolate, a pair of spaced electrodes positioned above said vessel and inclined to the horizontal, means to retain each slab in position on the lower of said electrodes until it melts, means to supply radio

frequency energy to said electrodes, and conveyor means for elevating said slabs and sequentially delivering them between said electrodes.



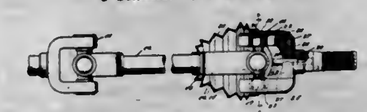
2,469,710
LAMINATING BY MEANS OF AN ISOOLEFIN-DIOLEFIN INTERPOLYMER TIE PLY
Francis P. Baldwin, Pluckemin, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 5, 1943, Serial No. 471,369
14 Claims. (Cl. 154—130)

9. The method of uniting a low temperature isoolefin-diolefin interpolymer prepared by reacting together a major proportion of isobutylene with a minor proportion of a low molecular weight, aliphatic, conjugated diolefin having 4 to 12, inclusive, carbon atoms per molecule in the presence of a Friedel-Crafts catalyst dissolved in an organic solvent which forms no complex therewith and is liquid at the reaction temperature, the reaction being conducted at a temperature between −40° C. and −160° C.; to another solid body comprising the steps of compounding into the polymer a quantity of carbon black within the range between 100 parts and 225 parts per 100 parts of polymer, holding it therein by mechanical interlocking and applying to projecting portions of the carbon black a modified rubber containing cement which wets the carbon black and is adherent thereto and to another body.



2,469,711
FAIRING ASSEMBLY FOR TURBINE BEARINGS
Charles A. Baresch, Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,870
11 Claims. (Cl. 308—15)

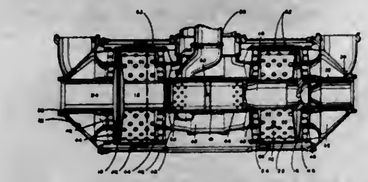
9. A fairing for a bearing mounting including a number of similar segments extending around the mounting and secured to each other on adjoining edges to form an enclosure for the mounting, a threaded ring on the trailing edges of



the fairing segments and a domed cap engaging said ring and closing the end of the fairing.

2,469,712
CONTROL FOR SPILL PORTS IN FREE-PISTON UNITS
Richard S. Buck, Glastonbury, and Walter A. Ledwith, Hartford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,874
12 Claims. (Cl. 230—56)

1. A free-piston unit including an engine cylinder and piston, a compressor cylinder and piston, said pistons being interconnected to move as a unit, said compressor cylinder having at least one row of circumferentially arranged ports, and a band extending circumferentially around said compressor cylinder and overlying the ports, and means for moving said band radially to close or open the ports.

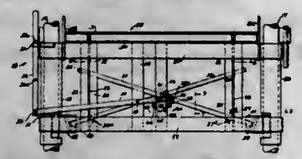


2,469,713
UNIVERSAL JOINT
Stephen L. C. Coleman, Fredericton, New Brunswick, Canada
Application August 2, 1945, Serial No. 608,441
In Great Britain August 4, 1943
3 Claims. (Cl. 64—23)

1. A universal joint comprising a connecting element having pairs of trunnions at right angles, a yoke having arms in which one pair of said

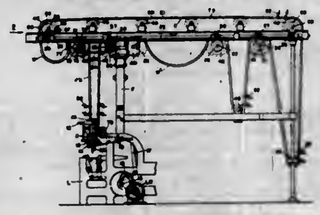
trunnions is journaled, a pair of roller bearings, one for each trunnion of the other pair of trunnions, a second yoke having a pair of arms and a longitudinal groove in each arm to receive a roller bearing of said trunnions, a control yoke engaging said second pair of trunnions and having a sliding engagement with said second yoke.

2,469,714
SPILL PORT CONTROL FOR FREE-PISTON UNITS
Kenneth C. Cooper, Portland, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,877
8 Claims. (Cl. 230—56)



1. A free-piston engine-and-compressor unit including a compressor piston and cylinder, said cylinder having at least one circumferential row of spill ports therein, a band extending circumferentially around said cylinder and being movable on said cylinder into a position to cover the ports, and a ring extending around the cylinder and overlying the band to form a channel in which the band may move, said ring having ports aligned with the ports in the cylinder, and said band having ports movable into and out of alignment with the ports in the cylinder and ring.

2,469,715
COBALT BASE ALLOY COMPOSITION
Hugh S. Cooper, Cleveland, Ohio
No Drawing. Application June 12, 1945, Serial No. 599,122
6 Claims. (Cl. 75—170)

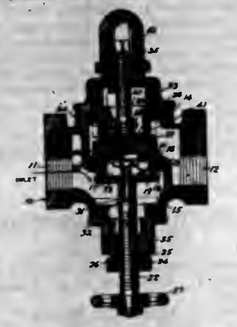


1. An alloy consisting of from 9 to 11% tungsten, 11 to 9% molybdenum, the total amount of tungsten and molybdenum approximating 20%, balance cobalt.

2,469,716
SCAFFOLD
Thomas G. Di Santi, Newark, N. J.
Application June 21, 1946, Serial No. 676,286
13 Claims. (Cl. 304—18)

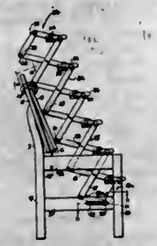
1. In a scaffold, in combination with a post, a sleeve slidable upon said post, a stationary inclined plane, a brake member for engaging said post, said brake member having a hole and an inclined slot, the slot slidably engaging the said inclined plane, a platform positioned above the brake member, an inclined rod in engagement at its upper end with the platform to support its weight and entering at its lower end the brake member hole to force the said brake member upwardly on the inclined plane and wedge against the post, and means for actuating the rod to move the brake downwardly on the inclined plane and release same from wedging engagement with the post.

2,469,717
CONTROL FOR AXMINSTER LOOM TUBE FRAME CONVEYER SYSTEMS
Raymond F. Dion, Leominster, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application December 18, 1947, Serial No. 792,565
19 Claims. (Cl. 139—7)



1. In an Axminster loom provided with a tube frame conveyor system having two tight sections movable independently of each other and joined by two slack sections and wherein both tight sections are required to move substantially the same distance during an extended period of weaving, means operated by the loom moving one of said tight sections said distance during the period of weaving, an electric motor operatively connected to the other tight section and having periods of running alternating with periods of stoppage, and electric means controlled by the other tight section causing the motor during the periods of running thereof to move the other tight section said distance during said period of weaving.

2,469,718
ALLOYS
Daniel Leonard Edlund and Theodore Loring Oberle, Mount Lebanon, Pa., and Jerome Strauss, New York, N. Y., assignors to Vanadium Corporation of America, New York, N. Y., a corporation of Delaware
No Drawing. Application January 13, 1945, Serial No. 572,640
14 Claims. (Cl. 75—171)



1. An alloy consisting essentially of 5 to 40% chromium, 1 to 40% of at least one tungsten-type metal of the group consisting of tungsten, molybdenum and uranium, 0.05 to 7% beryllium 0.25 to 7% boron, 0.01 to 3% carbon, an effective amount of cobalt and an effective amount of nickel, the sum of the cobalt and nickel constituting 25 to 65% of the alloy, the tungsten-type metals not exceeding 40% of the alloy.

2,469,719
PRESSURE REDUCING VALVE
Thomas B. Ford, Jr., Fair Haven, N. J.
Application August 27, 1947, Serial No. 770,813
13 Claims. (Cl. 277—65)

1. In a fluid pressure reducing valve of the balanced piston type, a body having an inlet opening and an outlet opening, a partition in the body separating said openings and having an aperture therethrough, a valve seat on the partition surrounding the aperture, a piston movable in the body under the difference in the fluid pressures at the inlet and outlet openings, axially of and toward and from the aperture to close and to open the valve, an adjusting screw limiting the movement of the piston in one direction, a yieldable cushion interposed between the piston and the adjusting screw and arranged to be compressed therebetween when the piston reaches the limit of its path of movement in said one direction, said cushion being of lesser thickness than the length of said screw and the length of said piston and accurately determining the pressure of the fluid discharged through the outlet opening, and means for guiding the piston in its movement including a rod projecting axially from the piston and a relatively fixed member secured to the body and having an opening therein receiving and guiding an end portion of the rod.

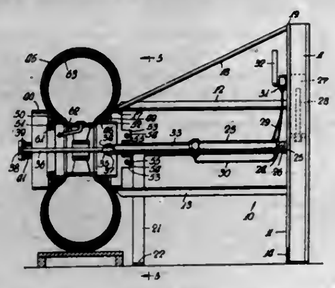
2,469,720
COMBINATION CHAIR AND LADDER
John Furlin, New York, N. Y.
Application December 6, 1947, Serial No. 790,091
5 Claims. (Cl. 155—42)

1. A combination chair and ladder comprising a back rest, a pair of front legs, a pair of rear legs, two side seat supports, a seat pivoted thereon movable between a horizontal position upon said supports and a raised position against said back rest, two braces each connecting a front and corresponding rear leg and disposed a predetermined distance below said seat supports, an extensible ladder supported by said braces, said ladder containing two extensible lateral supports and a plurality of steps operatively supported therebetween, said ladder being extensible from a collapsed condition below the said horizontal position of the seat to a predetermined raised position thereabove, and anchor means attached to the ladder and engageable with the chair for holding the ladder in said raised position, said braces containing substantially horizontally disposed slotted portions, said ladder containing at the bottom thereof a base cross bar the lateral terminal portions of which extend into and are slidably engageable with said slotted portions, whereby the ladder is slidably supported by said slotted portions.

2,469,721
ELECTRICAL CABLE COMPOSITION
Philip Tucker Gidley, Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 21, 1944, Serial No. 559,841
8 Claims. (Cl. 260—45.5)

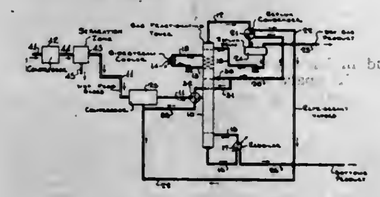
1. A vulcanized composition consisting predominantly of a homogeneous blend of a rubbery butadiene acrylic nitrile copolymer and a hard, tough, thermoplastic resin consisting of polymerized vinylidene chloride.

2,469,722
CORSET STAY
Jessie L. Gowen, Colfax, Wash.
Application June 3, 1946, Serial No. 674,071
2 Claims. (Cl. 2—257)



1. A garment stay of the character described comprising an elongated strip of stay material and means to secure the strip to a garment comprising a clip of substantially rigid material covering the end of the strip and being pivoted thereon, said clip being composed of opposed side portions joined along their side edges that face away from the strip, said side portions receiving the said end of the strip therebetween, and said side portions being extended beyond the strip at both side edges of the strip, thereby providing securing portions by which the clip may be attached to a garment.

2,469,723
FRAME MOUNTED AXIALLY COLLAPSING TYPE TIRE REMOVING APPARATUS
Wallace Greene, New York, N. Y.
Application May 9, 1945, Serial No. 592,733
3 Claims. (Cl. 157—1.2)



1. In an apparatus for breaking the beads of a tire from the flanges of a drum or the like upon

which the tire is mounted comprising in combination, an upright frame, ring supporting means extending horizontally from said frame, a ring for engaging the inner bead of said tire adjacent the drum flange, said ring being supported in spaced relation to said upright frame, a second and opposed ring for engaging the outer bead of said tire adjacent the drum flange, power driven means on said frame having an axially movable stem arranged to extend through said

rings and the hub of said drum, a removable cross member at the free end of said stem adapted to span said second ring whereby drawing of the rings toward each other by said power driven means will cause the beads of the tire to be simultaneously engaged between said rings, and removable stop means in back of said first mentioned ring for engaging said drum and limiting its movement, to effect breaking of the beads from opposed drum flanges.

2,469,724
HYDROCARBON FRACTIONATING
George W. Gross, Linden, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 27, 1946, Serial No. 718,851
1 Claim. (Cl. 183—114.6)

A process for separating a complex mixture of C_1 to C_5 hydrocarbons which comprises subjecting said mixture to a pressure sufficient to liquefy C_3 to C_5 hydrocarbons, removing the liquefied C_3 to C_5 hydrocarbons leaving a residual mixture of C_1 to C_4 hydrocarbons, subjecting the said mixture of C_1 to C_4 hydrocarbons to a pressure sufficient to substantially liquefy the mixture, passing said liquid mixture into a fractionating zone, operated at about 430 p. s. i., separating from said fractionating zone an overhead gaseous fraction comprising principally C_1 hydrocarbons at a temperature of about 105° F., two liquid side stream fractions comprising principally C_3 hydrocarbons, and a bottoms fraction comprising principally C_4 hydrocarbons, reducing the pressure on one of the said liquid side stream fractions to about 20 p. s. i., to effect substantial vaporization, cooling the overhead gaseous fraction by indirect heat exchange with a part of said vaporized side stream fraction, cooling the incoming feed stock to the fractionating zone with another part of the said vaporized side stream fraction, condensing a portion of the cooled overhead gases providing a gaseous product and a condensed liquid, removing from said cooled overhead fraction the gaseous product, recycling the condensed liquid as reflux into the fractionating zone at a temperature of about 50° F., compressing the vaporized side stream material after said heat exchange and recycling said compressed side stream product into said fractionating zone and cooling the second liquid side stream fraction to a temperature of about 90° F. and passing the cooled second liquid side stream to an upper part of the fractionating zone above the point at which the second liquid side stream was withdrawn.

2,469,725
SYNTHETIC LUBRICATION OIL PRODUCTION
Raymond L. Heinrich, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application March 7, 1947, Serial No. 733,182
3 Claims. (Cl. 260—683.15)

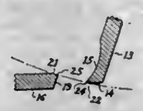
1. A method for producing an improved lubricating oil which includes the steps of subjecting a first mixture including alpha and beta olefins and alpha tertiary olefins to a separation treatment to obtain a second mixture of alpha mono-olefins and alpha tertiary olefins, subjecting the second mixture of alpha mono-olefins and alpha tertiary olefins to polymerization conditions in the presence of a polymerization catalyst to form a polymer in the lubricating oil boiling range, separating the polymer from the catalyst and recovering a product suitable for use as a lubricating oil.

2,469,726
DESULFURIZATION OF TRI-ISOBUTYLENE
William G. Hockberger, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 6, 1946, Serial No. 695,279
4 Claims. (Cl. 260—677)

1. A process for removing sulfur from tri-isobutylene comprising fractionating crude tri-isobutylene containing sulfur into three fractions and percolating the middle cut through 10–20 lbs. of 28–200 mesh silica gel per bbl. of tri-isobutylene, whereby the sulfur is substantially completely removed.

2,469,727
ELECTRODEPOSITION OF NICKEL
Raymond A. Hoffman, Euclid, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 30, 1944, Serial No. 528,778
6 Claims. (Cl. 204—49)

1. A nickel plating composition comprising a nickel compound selected from the group consisting of nickel sulfate, nickel chloride, and mixtures of nickel chloride and nickel sulfate, and $1/200$ to $1/50$ parts by weight of a sultone.

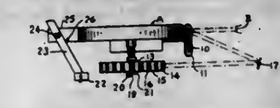


2,469,728
INCREASING ADHESIVITY OF ASPHALT TO MINERAL AGGREGATE CONSISTING OF MOLLUSK SHELLS
August Holmes, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 17, 1945, Serial No. 622,931
2 Claims. (Cl. 106—283)

1. In a process for preparing asphaltic road surfacing material employing an aggregate consisting of mollusk shells, the improvement which comprises pretreating said mollusk shells with a dilute solution of a strong mineral acid of 2% to 5% concentration and subsequently coating said pretreated aggregate with an asphalt.

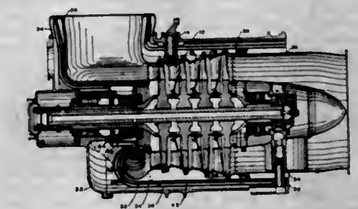
2,469,729
HEAT EXCHANGE METHOD FOR THE DROP-WISE CONDENSATION OF VAPORS
James B. Hunter, Upper Darby, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application December 28, 1945, Serial No. 637,768
2 Claims. (Cl. 257—28)

1. The method of effecting drop-wise condensation of vapors, which comprises contacting said vapors with a cooling surface coated with a thin film of a compound produced by wetting said surface with an alcohol and treating the wetted surface with an organo-silicon halide.



2,469,730
METHOD OF SHARPENING LAWN MOWER BLADES
Paul R. Hutchinson, Rochester, N. Y.
Application July 2, 1947, Serial No. 758,647
2 Claims. (Cl. 51—281)

1. The method of sharpening a lawn mower which consists of leaving a small gap between the stationary blade and rotating blades, abrading that face of each rotating blade which rotates toward the stationary blade with a downward motion in order to leave a burr extending in a direction away from the center of the radius of rotation of the blades, abrading the forward face of the stationary blade with an upward motion in order to leave a burr extending upward, and shearing the burrs by rotating the rotating blades.

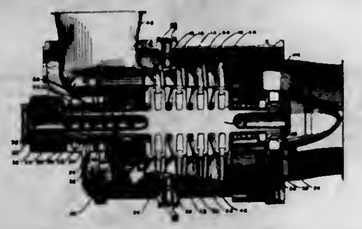


2,469,731
AUDIBLE REEL SIGNAL FOR MOTION-PICTURE PROJECTORS
James Gordon Jackson, Vancouver, British Columbia, Canada, assignor of one-half to James Nelson Trumpour, Port Alberni, British Columbia, Canada
Original application December 1, 1943, Serial No. 512,491. Divided and this application December 29, 1945, Serial No. 638,114
5 Claims. (Cl. 116—74)

1. An audible signal for reels of motion picture projectors comprising an oscillatory means operatively connected to the reel shaft and a sound producing means, said oscillatory means being designed continuously to oscillate with a maximum amplitude at a predetermined reel speed to operate the sound producing means, the latter being adjustably mounted and movable

between an operative position and an inoperative position out of the path of the oscillatory means, and movable means in connection with said projector movable when changing a reel for actuating said sound producing means into an operative position.

2,469,732
TURBINE COOLING
Andrew Kalitinsky, Eagleville, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,882
2 Claims. (Cl. 60—41)

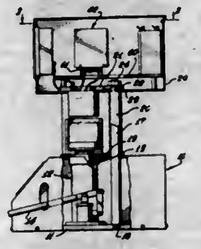


1. A turbine having a casing with a row of nozzles, a housing surrounding and supporting the casing, a rotor within the casing and supported by the housing, said rotor having a row of blades adjacent to the row of nozzles and a projecting shaft, an inlet duct delivering power fluid to the nozzles, a seal around said shaft to control leakage of power fluid along said shaft, and means for discharging gas from said seal into the space between the casing and housing, said space being separate from and out of communication with the power fluid path defined within the inlet duct and the casing, said space constituting an annular cooling chamber surrounding the casing.

2,469,733
CRACKING OIL WITH AEROGEL CATALYSTS
Kenneth K. Kearby, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application July 16, 1942, Serial No. 451,220, which is a division of application Serial No. 311,936, December 30, 1939. Divided and this application December 3, 1943, Serial No. 512,778
4 Claims. (Cl. 196—52)

1. Process for cracking petroleum oil to produce motor fuel having high anti-knock properties comprising intimately contacting the oil to be cracked while at a cracking temperature with a metal oxide catalyst in the form of an aerogel.

2,469,734
BEARING AND SEAL ASSEMBLY FOR TURBINES
Walter A. Ledwith, Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,888
10 Claims. (Cl. 308—36.1)

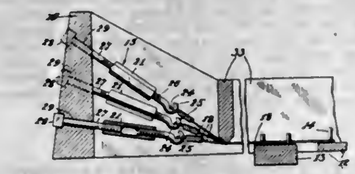


10. A bearing and seal assembly including a rotating shaft, a sleeve mounted on the shaft, means on said shaft for limiting the axial movement of the sleeve in one direction, said sleeve having a number of axially spaced outwardly extending radial sealing elements thereon, a second sleeve adapted to be mounted on said shaft in endwise engagement with the first sleeve, said second sleeve having a bearing surface, a continuous annular bearing around the bearing surface on said second sleeve, a stationary support for said bearing, said support having an integral substantially cylindrical extension with axially spaced inwardly extending radial sealing elements cooperating with the sealing elements on said first sleeve, said sleeve having interengaging face splines to prevent relative rotation, and one of said sleeves being splined to the shaft, said support being split for assembly over the sealing elements on the sleeve, and means for clamping said second sleeve axially against said first sleeve and said first sleeve against said means on said shaft.

2,469,735
POLISHING MACHINE
Edward C. Lindsay, Newton Falls, Ohio, and Eugene L. Anderson, Coraopolis, Pa., assignors to Standard Steel Spring Company, Coraopolis, Pa., a corporation of Pennsylvania
Application July 10, 1948, Serial No. 37,988
9 Claims. (Cl. 51—141)

1. In an abrasive belt polishing machine, a frame, a work roll having an abrasive belt passing around it and mounted on a shaft, a bearing supporting each end of the shaft, each bearing being independently and resiliently supported from the frame, whereby the work roll shaft can tilt in one plane out of its normal position so as to conform the work roll to the contour of a workpiece pressed against the abrasive belt.

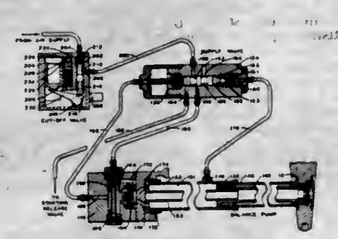
2,469,736
ELECTRONIC APPARATUS FOR DETERMINING MOISTURE CONTENT IN MATERIALS
Marvin L. McBrayer, Alhambra, Calif.
Application February 24, 1945, Serial No. 10,437
2 Claims. (Cl. 175—183)



1. In a moisture testing instrument for granular materials, the combination of: a base frame member, a power unit mounted on said base frame member, said power unit having a vertically movable plunger, a material cap carried by said plunger, an upper frame member positioned over said cup, tie rods connecting said base frame member and said upper frame member, an electrode holder carried by and extending downwardly from said upper frame member in alinement with said cup, and being adapted to slidably receive said cup with a close working fit, an insulation block carried by the lower end of said holder, electrode means on said block adapted to contact a sample of material in said cup when said plunger is elevated, an instrument housing carried by said upper frame member, a vacuum tube oscillator mounted within said housing, said oscillator including a vacuum tube, power supply means, a meter sensitive to power output, a power output circuit connected to said electrode means, and resistor means for influencing the sensitivity of the oscillator, a quick detachable unit inside said housing carrying a portion of said oscillator including said resistor means, the members of said oscillator carried by said quick detachable unit having quick-break circuit connections with the members of the oscillator mounted in said housing separate of said removable unit.

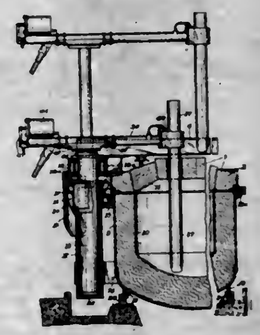
2,469,737
ADDITION AGENT FOR GASOLINE
John G. McNab, Cranford, and Harry W. Rudel, Roselle Park, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 14, 1946, Serial No. 716,432
11 Claims. (Cl. 44—69)

1. A composition consisting essentially of tetraethyl lead and a small but stabilizing amount of a polymerized alpha-beta unsaturated acid ester having a molecular weight of at least 2,000 to 30,000.



2,469,738
TUNING DEVICE FOR PIANOFORTES
John Meiszner, New York, N. Y.
Application May 16, 1946, Serial No. 670,074
1 Claim. (Cl. 84—205)

In a tuning device for pianofortes having a piano frame with a hitch pin for one end of a string, said string having a loop at its other end, a bridge for the string, an agraffe having a curved part on which the string passes, and an end wall transverse to the frame and spaced from the agraffe and having bores and square recesses at the ends of the bores, the combination of a plurality of turnbuckles disposed between the transverse wall and the agraffe, and each having one end secured to a rod passing through a bore of the wall, and having a square head engaging a square recess in the end wall and each turnbuckle having a hook to engage a loop, each hook of each turnbuckle being at right angles to the axis of the turnbuckle, and the connecting seat of each



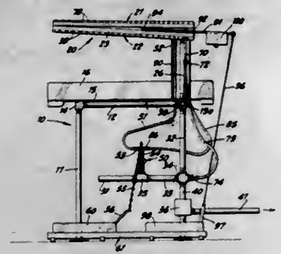
hook and loop being aligned with the axis of the turnbuckle, said hook and loop connection subjecting the string to tension without twisting or torsion of the string, the agraffe being spaced near the loop of the string held by the turnbuckle, and the space between the wall and agraffe being in free communication with the space below the wall and agraffe, whereby substantially the full length of the string between the agraffe and the bridge may be utilized for resonant vibrations, and the tensioning of the string is free from twisting or torsion of the string.

2,469,739
STARTING CONTROL FOR FREE-PISTON UNITS
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,894
6 Claims. (Cl. 230—56)

1. A free-piston unit having a cylinder, a piston reciprocating in the cylinder, a fluid pressure actuated starting system for the unit, and a cut-off valve for controlling the supply of fluid under pressure to said system, in combination with a stroke indicator operative during the operation of the unit for indicating the end positions of successive piston strokes, and means under the control of said indicator for operating the cut-off valve to close it during operation of the unit.

2,469,740
ARC FURNACE WITH LIFT AND SWING ASIDE ROOF
William E. Moore, Pittsburgh, Pa., assignor to Delaware Engineering Corporation, Pittsburgh, Pa., a corporation of Delaware
Application January 31, 1946, Serial No. 644,582
9 Claims. (Cl. 13—9)

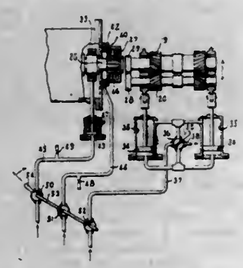
4. In an electric furnace having a roof, a support for said roof, a fluid pressure cylinder connected to said roof support for elevating said support to raise said roof, an electrode support carried by said roof support, and a ram mounted concentrically within said cylinder and connected to the electrode support for moving said electrode support independently of said roof support.



2,469,741
SOLUBLE CUTTING OIL BASE
Arnold J. Morway, Clark, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 11, 1947, Serial No. 754,086
3 Claims. (Cl. 260—98)

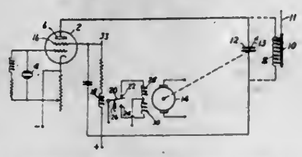
1. The method of producing a sulfurized cutting oil base which comprises treating a crude dark-colored aliphatic ester of hydrogenated rosin acids with 0.1 to 2.0% of a phosphorus chloride by weight, based on said ester, at a temperature of approximately the boiling point of said phosphorus chloride, for a period of time sufficient to substantially clarify said ester, and thereafter reacting said clarified ester with 8 to 15% flowers of sulfur at a temperature of 300° to 400° F. for a period of ½ to 2 hours.

2,469,742
EXPANSION SLEEVER
Ernest J. Newhouse, Los Angeles, Calif.
Application April 29, 1947, Serial No. 744,667
10 Claims. (Cl. 223—73)



1. An expansion sleever comprising a supporting stand, a pair of generally horizontally disposed heads arranged one above the other, the lower head being rigidly supported at one of its ends from said stand, and the upper head being movable toward and away therefrom, each of said heads having a heater compartment and a steamer compartment, means for raising said upper head away from said lower head, means for

continuously admitting steam to said heater compartments, and valve means controllable by the

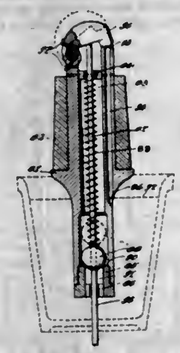


operator for admitting steam to said steamer compartment.

2,469,743
LOCOMOTIVE REVERSING GEARING
John S. Newton, Lansdowne, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 28, 1946, Serial No. 680,117
4 Claims. (Cl. 192—4)

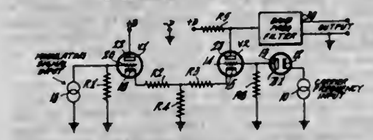
4. In combination, propulsion means; a prime mover including a uni-directional rotary driving member; reversing gearing for connecting said rotary driving member to the propulsion means; a casing structure for the prime mover and the gearing and provided with bearings therefor; said gearing including a driven gear carried by a pair of said bearings arranged so that the gear axis is parallel to the rotary driving member axis, a carrier journalled on the bearings of said pair in coaxial relation with the driven gear axis, a pair of continuously meshing pinions rotatably mounted on the carrier with their axes maintained continuously fixed in relation to the carrier and equally spaced radially from the driven gear axis and one of the pinions being larger than the other so that the larger one continuously meshes with the driven gear and the smaller one is continuously out of mesh therewith; said pinions having such diameters that their axes are each spaced from the driven gear axis a radial distance which is the same as that between the rotary driving member and driven gear axes, whereby the carrier may be positioned with either pinion in axial alignment with the rotary driving member; driven clutch members connected to the pinions; a driving clutch member connected to the rotary driving member and movable for connection with and disconnection from the driven clutch member of whichever pinion aligns with the rotary driving member; spaced abutments carried by the casing and engageable by abutments on the carrier to define aligning positions of the pinions with the turbine rotary member; the pinions having such relation to the gear and the rotary driving member that, for each direction of drive of the gearing, the driving torque is effective to exert engaging pressure on the engaged abutments; means for shifting the carrier from engagement with one casing abutment to engagement with the other casing abutment and vice versa; a brake for the rotary driving member; and means operative to apply the brake, to disconnect the driving clutch member from the driven clutch member of the aligned pinion, to shift the carrier to align the other pinion with the rotary driving member, to connect the driving clutch member with the driven clutch member of the latter pinion, and to release the brake in sequence.

2,469,744
TELEMETERING SYSTEM FOR TRANSMITTING INDICATIONS OF MOVEMENTS
Joseph Razek, Llanerch, Pa., assignor to Cochrane Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 22, 1945, Serial No. 617,962
10 Claims. (Cl. 318—28)



10. A telemetering system comprising a vacuum tube oscillator circuit having at least two resonant components, one of which is a high Q crystal in the grid circuit of said vacuum tube and the other of which is in an anode circuit of said vacuum tube and has a variable resonant frequency, the last mentioned component including a pair of impedances, means for independently varying one of said impedances, and means responsive to an operating characteristic of said oscillator circuit for varying the other of said impedances to maintain the operating characteristics of said oscillator circuit substantially constant in the region of resonance of said second resonant component at a lower frequency than that corresponding to maximum oscillations in the circuit, so that the value of the last mentioned impedance bears substantially continuously a predetermined relationship to the value of the first mentioned variable impedance.

2,469,745
STABILIZING AROMATIC AMINES
Anthony E. Robertson, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 21, 1946, Serial No. 678,355
11 Claims. (Cl. 260—578)

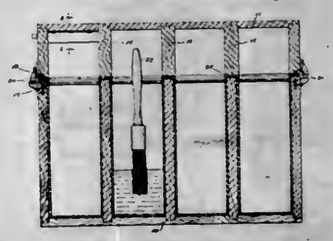


1. A composition of improved stability comprising an aromatic mono-amine containing dissolved therein a small but stabilizing amount of an aromatic biguanide.

2,469,746
FILLING DEVICE WITH RECEPTACLE OPERATED OUTLET VALVE
Jose Sanchis, Newark, N. J.
Application May 10, 1945, Serial No. 593,081
2 Claims. (Cl. 226—123)

1. A liquid dispensing device comprising, in combination with a closure member adapted to close a container, a tube extending through said closure member, said tube being formed with an air vent therein, said vent having an upper end portion projecting above said tube, an air vent cap pivotally mounted on said tube and spring urged into sealing engagement with said upper end portion, spiders located at both ends of said tube and firmly connected thereto, a valve seat located within said tube and firmly connected thereto, a rod slidably mounted in said spiders, the upper end of said rod being engageable with said air vent cap to swing same out of engagement with said end portion, the lower end of said rod projecting outward from said tube, a body firmly mounted on said rod, said body comprising a surface constituting a valve surface and adapted to engage said valve seat, and a coil spring mounted on said rod and urging said valve against said valve seat, whereby said rod is adapted upon being moved inwardly to open said valve and said air vent, and is further adapted upon the release of inward pressure to close said valve and permit said cap to seal said air vent.

2,469,747
AMPLITUDE MODULATOR
Eugene R. Shenk, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 9, 1947, Serial No. 759,891
5 Claims. (Cl. 332—38)

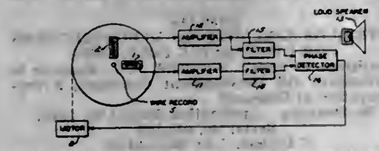


1. In a linear high percentage amplitude modulation system, a carrier amplifier tube, a modulator tube, a direct current potential source for both tubes including a common resistor between said source and both cathodes and a second resistor between the said source and the anode of the first tube, the arrangement being such as to cause potential variations on one cathode to appear on the other cathode, a source of oscillatory energy of carrier wave frequency coupled to the control grid of the first tube, a source of potentials representing signals coupled to the control grid of the second tube, and an output circuit coupled to said second resistor.

2,469,748
ESTERS OF AZELAIC ACID AS PLASTICIZERS FOR RUBBERLIKE POLYMERS
Winthrope C. Smith, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 22, 1945, Serial No. 612,123
7 Claims. (Cl. 260—31.8)

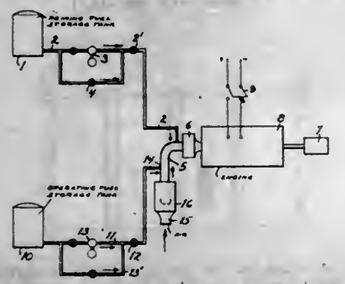
1. A composition of matter containing, a synthetic, solid, plastic, hydrocarbon interpolymer of a major proportion of isobutylene with a minor proportion of a conjugated diolefin having 4 to 8, inclusive, carbon atoms per molecule, the polymer being characterized by a low unsaturation below an iodine number of 50, a molecular weight above 15,000, and reactivity with sulfur to yield an elastic product, together with 5 to 60 weight percent of dibenzyl azelate.

2,469,749
PAINTER'S KIT
Caleb K. Spangler and Kenneth E. Sather, Havre, Mont.
Application April 12, 1948, Serial No. 20,524
7 Claims. (Cl. 206—15.1)



1. A brush kit for use by painters comprising an open topped container having a plurality of partitions therein dividing the space within the container into compartments; a hollow cover for said container having partitions matching the container partitions, vessels removably seated in said compartments and shaped to conform to the compartment walls, brush supports secured on said vessels, said cover having sealing means thereon engaging the top edges of the vessels adjacent to the walls, and means to secure the cover on the container.

2,469,750
MAGNETIC TRANSDUCER ADAPTED TO COMPENSATE FOR TWISTING OF RECORD WIRE
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application July 3, 1945, Serial No. 603,027
20 Claims. (Cl. 179—100.2)

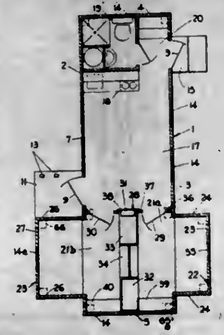


5. In a magnetic wire recording system, a wire of circular cross section and the wire being mag-

netizable in a direction transversely of the longitudinal axis of said wire, a first pick-up coil so positioned with respect to said wire that the currents induced therein by the field set up by said wire are normally at maximum level, a second pick-up coil so positioned with respect to said wire that the voltages induced therein by the field set up by said wire are normally at zero level, means for measuring the phase polarity

difference between the voltages induced in each of said coils, a motor for controlling the position of said first coil with respect to said wire, and means including circuit connections from said last means for driving said motor in a predetermined direction in accordance with the phase polarity difference of the voltages in said coils until the voltages in said second pick-up coil are zero.

2,469,751
COLD STARTING MOTOR FUEL
William J. Sweeney, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 1, 1943, Serial No. 500,754
2 Claims. (Cl. 44—52)

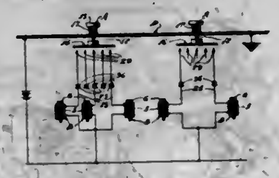


1. A priming fuel for starting gasoline engines at low temperatures comprising a liquid mixture of normally gaseous and low boiling paraffinic hydrocarbons, 10% to 25% having 3 carbon atoms, 15% to 45% having 4 carbon atoms, 30% to 40% having 5 carbon atoms, along with 10% to 25% of heavier gasoline constituents, said fuel exhibiting the following distillation curve:

10% evaporated between −30° and +30° F.
50% evaporated between 50° and 100° F.
90% evaporated between 100° and 170° F.

2,469,752
PORTABLE HOUSING UNIT
Joseph C. Thomas, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application August 4, 1945, Serial No. 606,856
1 Claim. (Cl. 20—2)

In a portable house unit embodying a plurality of closure walls and partitions defining a number of rooms at least two of which are separated by a fixed partition having an opening therein, a walled section inserted in a portion of each of the opposed closure walls defining the first of the aforementioned two rooms, said walled sections being disposed in telescopic relation to the interior of said room and when in retracted position substantially filling the same, and a movable partition mounted in the opening in the fixed partition for slidable movement from a position wholly

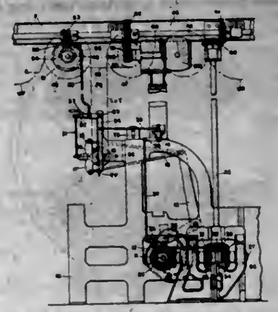


within the first of the two rooms for dividing the space therein defined by the fixed partition, the walled sections in their extended position and the closure walls and portions thereof into at least two separate adjoining rooms to another position wholly within the second of the two rooms enabling the first room to receive the retracted walled sections.

2,469,753
POWDERED SOAP PRODUCT
Joseph M. Tabor, East Islip, N. Y., Howard F. Seibert, Mason, Mich., and Paul R. Frohring, Bainbridge, Md., assignors to General Biochemicals, Inc., Chagrin Falls, Ohio, a corporation of Ohio
Application January 24, 1946, Serial No. 643,122
1 Claim. (Cl. 260—418)

The process of producing a dry powdered soap product directly from a saponifiable fatty material containing an unsaponifiable oil-soluble ingredient, said fatty material being selected from the class consisting of fats and fatty oils, which comprises: mixing said fatty material with an excess of aqueous saponifying agent in a closed saponification zone, agitating the saponification mixture, during the saponification maintaining in the saponification zone a pressure not greater than 355 mm. of mercury by exhausting therefrom gases and vapors evolved during the saponification, whereby the heat of saponification is utilized to boil off water entrapped in soap lumps formed during saponification at a temperature substantially below the normal boiling point of water and the lumps are thus disrupted and comminuted, continuing the agitation and maintenance of vacuum until the saponification mixture is substantially dewatered, extracting the dewatered mixture in the saponification zone with a solvent for the unsaponifiable ingredient which is a non-solvent for soap, decanting the solvent extract from the comminuted extracted soap, and removing residual solvent from the comminuted soap residue by vacuum distillation thereof with agitation in a current of dry steam, whereby a dry powdered soap product is produced.

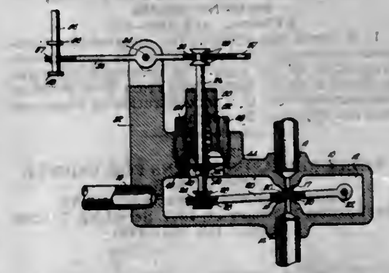
2,469,754
SETTING MECHANISM FOR CALCULATING MACHINES
John T. Tierney, Union, N. J.
Application December 14, 1943, Serial No. 514,221
3 Claims. (Cl. 171—97)



3. The combination with a plurality of electrically operated devices, a switch mechanism including electrical contact members each corresponding to at least one of said electrically operated devices, a series of setting elements, a switch part operable by each setting element for circuit-closing cooperation with at least two of said contact members, each said contact member comprising an electricity conducting rod and said rods being arranged in spaced parallel relation to each other, and each said switch part comprising a conducting bar reciprocable transversely of said rods in spaced relation thereto and having contact lugs each to contact with at least one of said rods.

2,469,755
SYNTHESIS OF HYDROCARBONS FROM CARBON MONOXIDE AND HYDROGEN WITH AN IRON TYPE CATALYST
Alexis Voorhies, Jr., Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 1, 1948, Serial No. 24,684
13 Claims. (Cl. 260—449.6)

11. An improved process of synthesizing valuable conversion products from CO and H_2 in the presence of iron catalysts which comprises contacting a gas containing CO and H_2 in synthesis proportions at synthesis conditions with an iron type catalyst prepared by incorporating into an iron oxide a promotional amount of an alkali metal promoter, fusing the promoted oxide, shock-chilling the molten mass and reducing the cooled material with a gas rich in hydrogen.

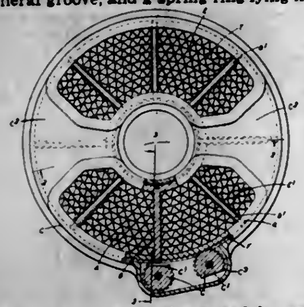


2,469,756
DRIVING MECHANISM FOR AXMINSTER TUBE FRAME SYSTEMS
Walter H. Wakefield, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application January 7, 1948, Serial No. 983
12 Claims. (Cl. 139—7)

1. In an Axminster loom provided with a tube frame conveyor system having two sections movable independently of each other, a pullover shaft effective when turning to move one of said sections, mechanism including a continuously rotating part effecting periodic turning of said pullover shaft, a second shaft rotatable to move the other section of the system, a motor rotating the second shaft, and gearing operatively interconnecting the rotating part of said mechanism and said second shaft preventing the motor from turning the second shaft at a rate of rotation which will exceed a given fixed ratio between

the rates of turning of said rotating part of said mechanism and said second shaft.

2,469,757
PILOT OR MASTER VALVE
Orla E. Watson, Kansas City, Mo.
Application December 4, 1944, Serial No. 566,580
3 Claims. (Cl. 137—144)

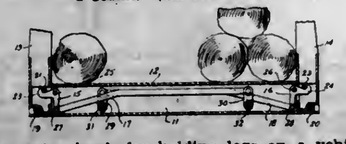


1. A master valve construction comprising a casing forming a fluid pressure chamber provided with inlet and outlet ports, a valve member operable into alternate opening and closing relation to said inlet and outlet ports, and control means for operating said valve member comprising spring-actuated diaphragm means provided with external control connections and exposed to the pressure in said chamber and acting to hold said valve member in position for normally closing said inlet port, said pressure chamber having an independent fluid pressure outlet.

2,469,758
HEAT EXCHANGER
John Forster Alcock, North Lancing, England, assignor to Harry Ralph Ricardo, London, England, a British subject
Application February 7, 1947, Serial No. 727,194
In Great Britain February 14, 1946
2 Claims. (Cl. 257—6)

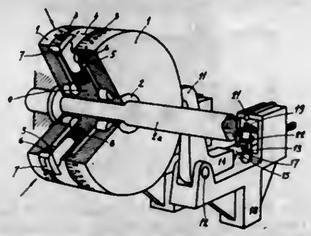
1. A regenerative heat exchanger of the moving matrix type comprising a toroidal casing of approximately circular cross-section, an annular rotor carrying matrix sections rotatable within the casing and conforming to the cross-section of the casing, a series of discs constituting par-

titions between the matrix sections and spaced apart circumferentially, each said disc having a peripheral groove, and a spring ring lying in each



said groove and constituting a seal for preventing circumferential fluid flow between said matrix sections.

2,469,759
COMPOSITIONS FOR INTRAVENOUS TREATMENT OF GENITO-URINARY INFECTIONS AND ESSENTIAL HYPERTENSION
Axentie T. Babienco, San Diego, Calif.
No Drawing. Application July 17, 1944, Serial No. 545,388
2 Claims. (Cl. 106—52)



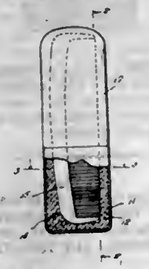
1. A liquid composition for intravenous injections containing ingredients in the approximate proportion of 30 grains of urotropin dissolved in about 5 cc. of water, and from 5 to 10 cc. of hydrochloric acid of a concentration of about one part per thousand by weight.

2,469,760
STAKE RELEASING MEANS FOR VEHICLE LOG BUNKS
William A. Berry, Essex Junction, Vt.
Application February 11, 1947, Serial No. 727,769
1 Claim. (Cl. 280—145)

In a log bunk for holding logs on a vehicle platform, at least two bolsters arranged in spaced relation and mounted on said platform, each of said bolsters embodying a pair of spaced, parallel channel beams supported on said platform, a stake interposed between said pair of beams adjacent the ends thereof and mounted for pivotal movement about a horizontal axis, a horizontally disposed pin carried by said stake, a latch positioned between said beams adjacent said stake and pivotally connected to said beams, there being a hook on one end of said latch for engaging said pin, a stud secured to the other end of said latch, a lever connected to said stud, and manually-operable means connected to said lever for actuating the latter, said last-named means comprising a link having one end pivotally connected to said lever, a horizontally disposed shaft arranged at right angles with respect to said link and having one end secured to the other end of the latter, and an actuating handle secured to the other end of said shaft.

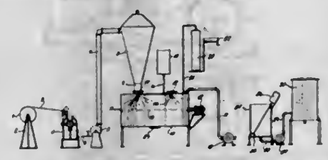
2,469,761
CAM CONTROLLED PULSE TRANSMITTER
Ernest Bodmer, Grand-Lancy-Geneve, Switzerland
Application June 18, 1945, Serial No. 600,115
In Switzerland August 21, 1944
2 Claims. (Cl. 200—33)

1. In a sequence switch, a pair of contacts, contact closing means normally in the open position and adapted to close said contacts, a cam disc have a peripheral cam surface, said contact closing means comprising cam engaging means engageable with said cam surface, a shaft, a hub fixedly carried on said shaft, and freely rotatably carrying said disc, and adjustable engaging means carried by said hub and engageable with said disc for adjustably determining the angular position of said disc on said hub, said adjustable engaging means comprising a bolt carrying a detent and being radially displaceably received within a radial bore of a shoulder of said hub and resilient means for normally urging said bolt radially outward, and said disc comprising an internal toothed rack adapted to lockingly receive said detent in a selected one of its teeth, said cam surface having a first short step dwell and a second step dwell successively more remote from the periphery of said disc, and said contact closing means comprising a contact carrying element and means actuatable by said cam engaging means and adapted to displace said element into contact closing position when said cam engaging means engages the first step dwell of said cam surface, and to release said element from contact closing position into starting position when said cam engaging means engages said second step dwell of said cam surface, the length of said first short step dwell corresponding to the desired length of closing of said contacts.



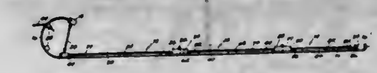
2,469,762
SELECTIVE INFORMATION TAB DEVICE
Wesley W. Cline, Charleston, W. Va.
Application October 12, 1945, Serial No. 621,948
4 Claims. (Cl. 281—15)

4. A selective information tab device comprising a pair of disk washers arranged in superimposed relation and spaced from each other, an upstanding pin passing through said washers and secured thereto, a series of tabs arranged in superimposed relation interposed between said washers, each of said tabs having a circumferential hollow rib, the respective ribs coacting with each other to hold said tabs together in a permanent manner, an end of each of said tabs being mounted for pivotal movement about said pin, the end of each of said tabs being provided with



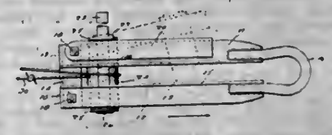
a quadrant-shaped cut-out portion, the cut-out portions of the respective tabs enclosing the pivotal mounting and forming a hollow space, and a cam finger carried by one of said washers and extending upwardly through said space for camming any one of the tabs to a position over all of the tabs upon pivotal movement of said one tab.

2,469,763
HAIR OIL APPLICATOR
Melvin E. Conwell, Camp McCoy, Wis.
Application January 29, 1946, Serial No. 644,052
2 Claims. (Cl. 132—12)



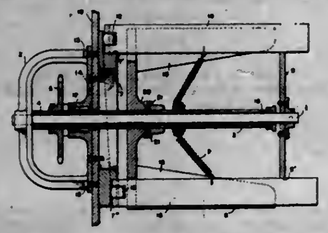
1. A hair oil applicator device comprising two abutting casing members having a common abutment, a cup-shaped cap internally positioned in said casing members with substantially equal portions on each side of said abutment and secured to one of said casing members, the cap having an elongated slot conforming generally with the cross-sectional contour of a comb and adapted to admit one end of a comb into the end of said casing member to which said cap is secured, a mass of oil-absorbent material secured within said casing member to which said cap is secured, said mass being recessed to accommodate said toothed portion in intimate contact therewith, and said other casing member adapted to slidably engage the outside of said cap.

2,469,764
MANUFACTURE OF HYDROXY ALKYL CELLULOSE
Donald Robert Erickson, Kalamazoo, Mich.
Application January 16, 1946, Serial No. 641,653
2 Claims. (Cl. 260—231)



2. In the process of producing hydroxy ethyl cellulose in which cellulose is reacted with sodium hydroxide and the resulting alkali cellulose is reacted with gaseous ethylene oxide, the steps of creating dry flocked cellulose fibers for reaction with the sodium hydroxide by flocking dry cellulose to a particle size which will pass a screen of approximately 50 to 80 mesh, and spraying aqueous sodium hydroxide solution on the dry flocked cellulose fibers in the ratio of about two parts by weight of solution to one part of weight of flocked cellulose fibers, and maintaining the fibers in flocked condition throughout the spraying and reaction to produce flocked alkali cellulose fibers by tossing and mixing the flocked fibers to present new surfaces to the spraying, and thereafter introducing gaseous ethylene oxide into the flocked alkali cellulose fibers, and maintaining the material in a substantial vacuum throughout the process of alkalizing and reacting it with the ethylene oxide.

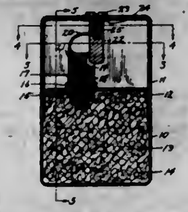
2,469,765
TOBOGGAN
Edwin B. Fish, Binghamton, N. Y.
Application April 19, 1947, Serial No. 742,659
5 Claims. (Cl. 280—18)



1. A folding toboggan comprising an upwardly curved forward end or nose and a rearwardly extending flat section having a smooth bottom, said rearwardly extending flat section in turn comprising a plurality of separate, longitudinally adjacent sections, and releasable cable means extending longitudinally of the toboggan engaging the longitudinally adjacent sections for rigidly holding said sections in extended position.

2,469,766
WIRE STRETCHER
Ernest G. Geisendorff, Bellville, Tex.
Application June 24, 1947, Serial No. 756,745
3 Claims. (Cl. 24—132)

1. A wire stretcher comprising a frame having a pair of substantially parallel, spaced apart, angle iron legs arranged with upstanding flanges at opposite sides of the intervening space, an angle iron end member secured transversely to said legs at corresponding ends thereof with one side of said end member directed away from said legs, said upstanding sides of said legs decreasing uniformly in width in a direction away from said transverse end member to facilitate the insertion of wire into said stretcher, a pull loop connecting the ends of said legs opposite said transverse end member, a hard wood abutment block secured in the angle of said transverse end member, an arm of angle shaped cross-section pivotally connected at one end to one of said frame legs adjacent said end member and having a longitudinally slotted side extending past said one frame leg to the side thereof opposite the corresponding upstanding sides of said legs, a roller shaft extending through said slotted side of said arm, and a roller on the end of said shaft extending across said frame legs to receive a loop of wire brought over said end member between said legs, and grip said wire between itself and said abutment block, said roller having a flattened side engageable with the adjacent surfaces of said legs to resist rotation of said roller and thereby facilitate gripping of said wire between said roller and said block.

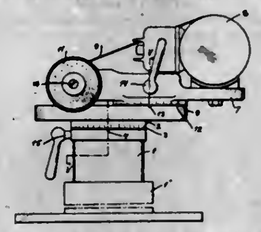


2,469,767
SELF-ADVANCING WINDING REEL
Rudolph Heilbach, Philadelphia, Pa., assignor to the United States of America, as represented by the Secretary of Agriculture
Application April 14, 1947, Serial No. 741,231
2 Claims. (Cl. 28—71.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A cantilever reel supported at one end only, comprising: a panel plate; a supporting stationary shaft fixedly mounted, adjacent one end thereof, by the plate and extending through said plate; a stationary cam disc attached to the shaft adjacent the other end of the latter, said disc providing a first cam surface; stationary means mounted by said panel plate providing a second and a third cam surface, the third cam surface being an annular surface transverse to the axis of the shaft; a rotating driven sleeve mounted about said shaft and extending through said panel; a first set of spaced longitudinally extending bars fixed in position on and mounted upon and rotating with said sleeve, a second set of spaced, longitudinally extending individually movable bars interdigitating with the first set, the latter bars each resting adjacent one end upon the first cam surface and adjacent the other end upon the second cam surface, an end of each bar being adjacent the third cam surface, the said second set of bars being thereby mounted for individual movement longitudinally to the axis of rotation of the first set by the action of the third cam surface and for individual movement radially toward and away from the said axis by the action of the first and second cam surfaces, said bars of the second set having portions which are projected radially at least once during each revolution of the first set of bars, outside the latter, and in which the first set of bars is supported adjacent one end only by a plate secured for rotation with the sleeve, spring means for pressing each of the second set of bars against all three cam surfaces, comprising a spring for each bar of the second set attached at one end to a bar of said set and at the other end to said sleeve.

2,469,768
LIGHTER
Fredrich Heydle, Youngstown, Ohio
Application April 24, 1946, Serial No. 664,591
2 Claims. (Cl. 67—7.1)

1. In a lighter including a body member comprising a fluid chamber, a threaded orifice in said body member communicating with said fluid chamber, a threaded fitting positioned in said threaded orifice, a wick positioned through said threaded fitting, said threaded fitting being removable to provide access to said chamber for refilling the same with lighter fluid, a combination guard and scraper member affixed to said threaded fitting at one side thereof and including flame shields and an upwardly extending portion curving over and crossing the said wick and spaced thereabove, a cap portion for said lighter

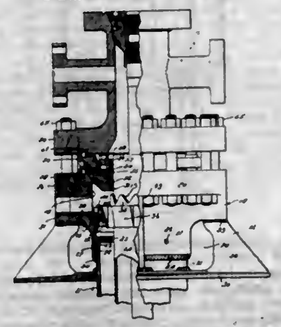


having a depending stone positioned therein for axial engagement with the outermost end of the said curved portion of the combination guard and scraper member when the cap portion is engaged on said body member.

2,469,769
COMBINED COMB AND NAIL FILE
Arthur M. Hillery, Leominster, Mass.
Application February 10, 1948, Serial No. 7,325
2 Claims. (Cl. 132—79)

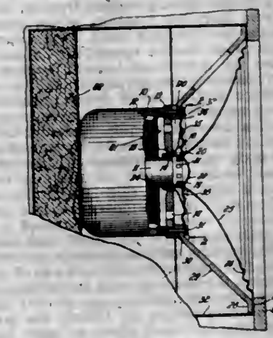
1. The combination with a comb having a longitudinal slot in the back thereof and a ridge on the comb back adjacent an end of the slot; of a file for housed reception in the slot and a pocket clip on the file, said pocket clip comprising an article receiving raised portion receiving the ridge in fully housed condition of the file and having a depression adapted to clip the combined comb and file to a pocket.

2,469,770
GRINDING MACHINE
Karl Wilhelm Josef Hjelmblad, Alsten, Sweden
Application February 14, 1945, Serial No. 577,739
In Sweden March 4, 1944
3 Claims. (Cl. 51—166)



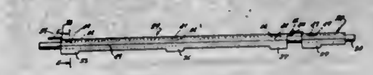
1. In a grinding machine, a vertical standard having an axial bore, an intermediate circular plate supported atop said standard and concentric therewith, a slide on said plate, said slide having an axially extending undercut groove at its lower face and which cooperates with a diametrally extending complementary rib on said plate for guiding said slide longitudinally of the groove axis, a pin having an enlarged head portion seated on the undercut portion of said groove and which extends axially through said plate into the bore in said standard to provide a journal about which said plate and slide may be rotated as a unit, locking means mounted in said standard and engaging said pin for effecting downward axial movement thereof to clamp said slide and plate to said standard in a selected position of displacement and angular position, respectively, a head stock for a grinding tool, means mounting said head stock on said slide for angular adjustment about a vertical axis, and graduated scale and index means carried by said plate and standard and also by said slide and head stock for indicating the respective angular relations therebetween.

2,469,771
FACIAL HYDROTHERAPEUTIC DEVICE
Thelma W. Jeppson, Los Angeles, Calif.
Application August 12, 1946, Serial No. 689,845
5 Claims. (Cl. 128—399)



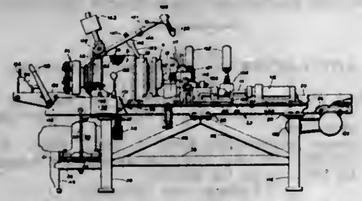
1. A hydrotherapeutic device comprising outer and inner walls sealed at their edges to enclose a chamber, the inner wall having spaced perforated areas, an inlet to the chamber opening intermediate said perforated areas against an imperforate wall portion, and at least one connection extending through the chamber for draining from the inner side of the inner wall.

2,469,772
CASING HEAD
Glenn D. Johnson, Compton, Calif., assignor to Baash-Ross Tool Company, Los Angeles, Calif., a corporation of California
Application December 22, 1943, Serial No. 515,223
4 Claims. (Cl. 166—14)



1. A casing head for use with inner and outer casings including, a body to be secured on the outer casing and having an internal seat, a support carried by the seat, and a shoulder located entirely with the body and having a part welded on the inner casing so the shoulder rests on the support, the shoulder and support having coengageable inclined surfaces positioned in cooperative engagement and also having channels formed in them whereby the shoulder and support can be positioned relative to each other so that the shoulder will pass through the support.

2,469,773
LOUD-SPEAKER DIAPHRAGM SUPPORT MEMBER
Hugh S. Knowles, River Forest, Ill., assignor to Jensen Manufacturing Company, a corporation of Nevada
Original application June 4, 1934, Serial No. 728,993. Divided and this application August 12, 1942, Serial No. 454,527
7 Claims. (Cl. 181—31)

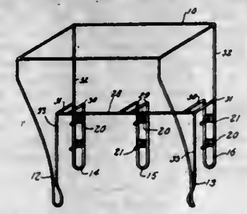


1. A member for holding the diaphragm assembly of a loud speaker in a centered position consisting of a single sheet of material having a substantially central opening to receive a diaphragm assembly and having distributed perforations therein of such size and number as to permit air to pass through them while preventing the passage of dust particles through them.

2,469,774
SECTIONAL SHIELD DEVICE
John Kosinski, New Hyde Park, N. Y.
Application July 24, 1947, Serial No. 763,268
3 Claims. (Cl. 211—119.18)

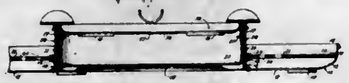
1. A sectional shield device comprising, a clothesline, a series of shields attachable to said clothesline, each of said shields comprising an elongated member having the cross-section of an inverted U and adapted to slidably engage the clothesline to form a shield, oppositely spaced spring clips in continuation of the lower edges of said shield for detachably clamping said shield upon said clothesline, and coupling means disposed at opposite ends of said shield.

2,469,775
APPARATUS FOR ROLLING FLANGES ON TUBES
Earle F. Lohmann, Overland, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application July 20, 1944, Serial No. 545,838
4 Claims. (Cl. 153—81)



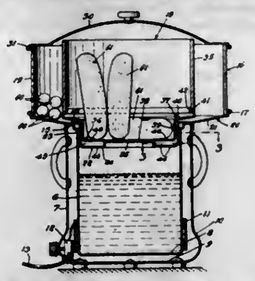
1. Apparatus for flanging a tubular body including a frame having means thereon for supporting said body for rotation, motor means on said frame for rotating said body supporting means, carriage means operatively disposed on said frame for movement toward or away from said body, power means on said frame for moving said carriage, a first set of flange forming rolls operatively mounted on said carriage in position to contact said body and radially expand the same for forming a flange thereon by movement axially into the body upon movement of said carriage toward said body, a second set of flange forming limit rolls, a support for said latter rolls carried on said frame for pivotal movement into and out of a position in which they are disposed in fixed relation with respect to said body and said first set of rolls, heating means pivotally mounted on said frame for movement into and out of a position adjacent the body to heat the latter, means operatively interconnecting said pivotal support and said heating means for timing the pivoting movement thereof such that as said heating means pivots into or out of its said position, said pivotal support will pivot respectively out of or into its said position, and means on said frame connected to said pivotal support for moving the same.

4. Tube flanging apparatus comprising means for supporting and rotating a tube, a carriage movable axially of the tube, a flaring roll mounted on the carriage with its axis inclined to the tube axis, said flaring roll having a substantially conical face which on one side thereof is engageable tangentially along the inner surface of the tube and on the opposite side thereof is inclined relative to the inner surface of the tube for flaring the latter upon axial movement of the carriage, a flange forming roll mounted on the carriage for rotation upon an axis substantially normal to the tube axis, and a backing roll rotatable on an axis substantially normal to the tube axis for cooperating with said flange forming roll to roll the flared portion of the tube therebetween.



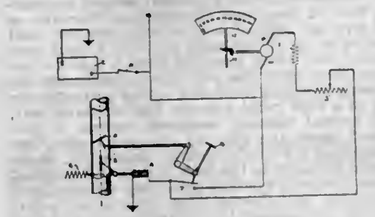
2,469,776
STOVE RACK
George A. McGee, Hartford, Conn.
Application March 14, 1947, Serial No. 734,600
6 Claims. (Cl. 211—90)

3. An attachment for a stove comprising a flexible frame comprising a horizontal open rectangle, front legs depending from said rectangle and adapted to abut the front side of a portion of the stove, rear legs depending from said rectangle and adapted to be positioned behind the said portion of the stove, means on said rear legs for removably engaging the rear of said



portion of the stove to secure the attachment in place on the stove.

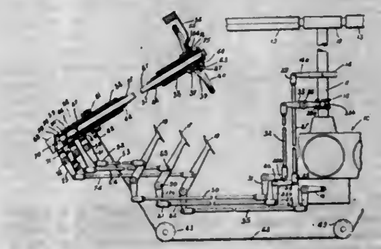
2,469,777
SERVING TRAY
John L. Mohun, Chicago, Ill.
Application September 9, 1946, Serial No. 695,649
5 Claims. (Cl. 65—5)



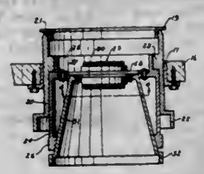
1. A serving tray comprising a tray having a centrally disposed arch, a cylindrical retaining means extending upwardly from the tray around the arch, a receiver in the retaining means resting on said arch, a glass rest around the receiver within the tray, a cover-plate extending over the receiver and downwardly into engagement with said rest, resilient means for spacing the rest from the bottom of the tray, and means for removably securing the cover-plate to the retaining means.

2,469,778
COMBINED FRANKFURTER AND ROLL WARMING AND CONDITIONING APPARATUS
Nazarene G. Morici, Chicago, Ill.
Application February 10, 1949, Serial No. 75,572
7 Claims. (Cl. 126—369)

1. In a combined frankfurter and roll warming and conditioning apparatus, an inner compartment including bottom and upright side walls and an open top, an outer compartment having an upper portion surrounding said inner compartment, said outer compartment also including bottom and upright side walls, and an open top having a removable domed closure therefor, the side walls of the inner and outer compartments being horizontally spaced, the bottom wall of said outer compartment including a centrally disposed depending portion, and said inner compartment having a centrally disposed depending portion fitting telescopically in the upper end of the centrally disposed depending portion of said outer compartment to form a steam chamber beneath said inner compartment, means for supplying steam to said steam chamber, means between the interfitting depending portions of said inner and outer compartments to permit relatively free passage of steam from said steam chamber into the upper part of said outer compartment, the bottom wall of said inner compartment having restricted vents therethrough, permitting passage of a relatively small supply of steam from said steam chamber into said inner compartment, and the upper margin of said inner compartment extending into close proximity to, but spaced from, the lower surface of said domed cover when the latter is in closed position on said outer compartment, to provide restricted communication between said inner and outer compartments at their upper ends.



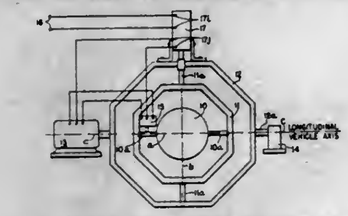
2,469,779
VEHICLE GOVERNOR
Robert F. Nowalk, Philadelphia, Pa.
Application May 23, 1945, Serial No. 597,143
2 Claims. (Cl. 180—82.1)



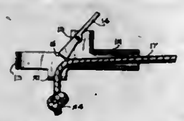
1. In a motor vehicle speed governor, a fuel inlet, an auxiliary throttle valve in said inlet, a spring tending to close said throttle valve, a solenoid connected with said auxiliary throttle valve to open it in opposition to the force of said spring tending to close it, a battery, an accelerator controlled switch, a generator driven by the speedometer shaft of the motor vehicle, a rheostat to select a predetermined speed, said generator being connected at one side to both the battery and the accelerator controlled switch and at its other side to the rheostat, and means to short circuit the generator and impress the full potential of the battery upon said solenoid to effect the opening of the auxiliary throttle valve when it is desired to increase the speed above the maximum speed set by said rheostat, and the release of said short circuiting means causing the speed to be that set by the rheostat.

2,469,780
INSTRUMENT FOR ROTARY WING AIRCRAFT
Joseph S. Pecker, Los Angeles, Calif.
Application January 18, 1946, Serial No. 641,959
2 Claims. (Cl. 170—135.73)

1. In apparatus of the character described, the combination with helicopter rotor and engine control levers of an indicator for each of said levers, means connecting each of said levers to its respective indicator so that movement of any control lever is reflected by corresponding movement of its indicator whereby the pilot can observe momentary values of engine and rotor conditions, and means associated with said indicators for indicating to the pilot the attainment of predetermined optimum values for the rotor and engine operative conditions at which the helicopter is most efficiently maintained in a condition of flight, the means which connects each of said levers to its respective indicator including cooperating cam and lever means, each lever being connected to one of said control levers and each cam being connected to the corresponding indicator.



2,469,781
LENS HOLDER FOR PROJECTOR ENLARGERS AND CAMERAS
Jerry M. Peters, Walker, Mo.
Application January 16, 1948, Serial No. 2,731
2 Claims. (Cl. 88—57)

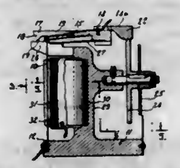


1. In an enlarging camera, support means including a horizontal internally threaded ring member, a sleeve member threadedly engaged in said ring member, means at the top of said sleeve member for attaching the lower portion of the camera thereto, said sleeve member being formed with an internal threaded rib, a barrel member threadedly engaged at its top portion with said rib, the bottom rim of said barrel member being below the bottom rim of the sleeve member, said barrel member being formed with an inwardly extending annular flange, a lens assembly secured to said flange, said lens assembly being of the type having a rotatable diaphragm-operating ring, a downwardly flaring skirt member secured to said ring, the bottom rim of said skirt member extending below the bottom rim of said barrel member, the barrel member rim being formed at its bottom surface with a plurality of spaced recesses, and an upstanding lug carried by the skirt member bottom rim selectively engageable with said recesses.

2,469,782
UNIVERSAL GYROSCOPE-SUSPENSION SYSTEM
Harry W. Fhair, Lyndhurst, N. J., assignor to Fairchild Camera and Instrument Corporation, a corporation of Delaware
Application November 5, 1945, Serial No. 626,595
6 Claims. (Cl. 74—5.47)

1. A system for universally supporting a gyroscope from a mobile vehicle comprising, a main gimbal ring support for said gyroscope having a first pivotal axis and a second pivotal axis normal thereto, an auxiliary gimbal ring supporting said first ring and having a pivotal axis normally coinciding with said first pivotal axis, power means for rotating said auxiliary gimbal ring about its pivotal axis, means responsive to rotation of said main gimbal ring about said first pivotal axis for controlling said power means to cause said auxiliary gimbal ring to position said main ring to maintain the rotation thereof about said first axis within predetermined limits, and means responsive to rotation of said auxiliary ring about said second pivotal axis through the normal to the plane of said main ring for reversing the sense of action of said controlling means.

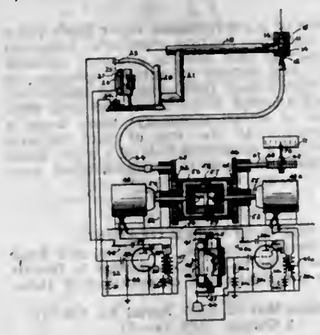
2,469,783
CLOTHESLINE CLAMPING DEVICE
Giuseppe Pipia and John Lee, New York, N. Y.
Application May 12, 1947, Serial No. 747,538
2 Claims. (Cl. 24—134)



2. A clothesline clamping device for a clothesline having a knot in the end thereof, comprising a one-piece body member having a tubular line guiding portion and a U-shaped end portion continuing from one end of said tubular portion for engagement with a supporting hook, said tubular portion being of a diameter to permit the knotted end of the line to be passed therethrough from the end opposed to said U-shaped end portion to depend from the other end thereof between the sides of said U-shaped end portion, a gripping lever pivotally mounted on the top of said tubular portion and spring pressed in a direction to clamp the line passing through said tubular portion against the inside face of the bottom wall of said tubular portion, and a pair of opposed ears depending from the sides of said U-shaped end portion adjacent the end of said tubular portion, said ears having their free bottom ends directed toward each other and formed with opposed arcuate cutouts forming a circular aperture of a diameter to permit the line to freely slide therethrough but of a diameter smaller than the knot to restrain sliding movement of the line to prevent complete disengagement of the line from said body member in the inoperative pivoted position of said gripping member, said ears having their ends spaced from each other forming slots extending from diametrically opposite sides of said circular aperture through which said line may be forced to free the knotted end of the line from said ears to be passed through said tubular portion and completely disengaged from said body member when desired.

2,469,784
RABBIT OR ANIMAL TOILET
William Quinn, New York, N. Y.
Application July 7, 1944, Serial No. 543,849
2 Claims. (Cl. 119—1)

1. A hygienic rabbit or animal toilet comprising a bottom waste container having a floor and an upstanding circular wall, and an animal housing receptacle having a circular animal concealing wall of the same approximate diameter as the circular wall of said waste container, said receptacle having an open top, said animal concealing wall being provided with a narrow entrance way near one side and progressively increasing in height from each side of said entrance way to a high point opposite said entrance way, said animal housing receptacle having a floor spaced above the floor of the waste container and provided with a discharge opening for waste located adjacent to the high point of said animal concealing wall, whereby an animal will be caused to rest on said floor of said housing receptacle with its head adjacent the entrance way and with its body discharge openings located adjacent the waste discharge opening of said housing receptacle floor, the animal housing receptacle being detachably mounted on the waste container and interlocked against accidental separation.



2,469,785
FREQUENCY CONTROLLED TRANSDUCER
Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York
Application January 29, 1944, Serial No. 520,196
13 Claims. (Cl. 178—44)

13. A device of the character described comprising a frame, a wire, a supporter upon said frame for one end of said wire, an anvil upon said frame, a lever having a connection for the other end of said wire, and having a knife edge closely adjacent thereto, said lever having an arm extending out beyond said support and

rotary means engaging said arm to vary the tension on said wire, a magnet supported from said frame with its pole faces parallel to and spaced from said wire to exert a magnetic field transverse to said wire, and a linear electrode parallel to said wire and spaced therefrom in a direction transverse to said field, and terminals leading from said electrode and from the ends of said wire.

2,469,786
ELECTRIC MOTOR CONTROL DEVICE
Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York
Application May 19, 1944, Serial No. 536,409
7 Claims. (Cl. 318—18)

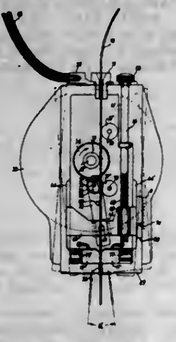
1. A device for controlling a quantity, comprising a quantity varying means, an oscillating system including a wire under tension connected to determine the frequency of oscillation and means actuated by the quantity to be controlled for varying the tension on said wire, a second oscillating system including a wire under tension connected to determine its frequency of oscillation, and a differential mechanism operable by the difference in frequency between said oscillating systems, connected to control the value of the quantity varying means in a direction to bring said first mentioned oscillating system to the same frequency as the second mentioned oscillating system.

2,469,787
PROCESS OF SOAKING HIDES WITH A SULFONATED PHENOL-FORMALDEHYDE CONDENSATION PRODUCT
Carl Riehs, Ludwigshafen-on-the-Rhine, Germany; vested in the Attorney General of the United States
No Drawing. Application March 13, 1942, Serial No. 434,625. In Germany April 2, 1941
1 Claim. (Cl. 8—94.18)

The process of soaking hides and skins in the nearly neutralized final product resulting from condensing under the addition of concentrated hydrochloric acid while refluxing in the ratio of two gram molecules of phenol to one gram molecule of formaldehyde, then condensing the product vacuum heated as long as free phenol is present, then sulphonating at 100° C. with concentrated sulphuric acid upon phenol in the ratio of one gram molecule of the former to one gram molecule of the latter.

2,469,788
POLYMERIZATION PRODUCTS AND PROCESS OF MAKING SAME
John B. Rust, West Orange, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application June 5, 1944, Serial No. 536,886
8 Claims. (Cl. 260—66)

3. The method of producing polymerization products which comprises polymerizing at a temperature of from 0° to —100° C. in the presence of a Friedel-Crafts catalyst a mixture of substantial amounts of both a polymerizable isoolefin selected from the group consisting of isobutylene, isoamylene, and isohexylene and an unsaturated ketone selected from the group consisting of isopropenyl methyl ketone, alpha-methylene -n-amyl methyl ketone, alpha-methylene isobutyl methyl ketone, ethyl isopropenyl ketone, methyl vinyl ketone, vinyl phenyl ketone, mesityl oxide, pherone, isophorone, benzalacetone, furfurylidine acetone, n-propenyl methyl ketone, the ratio of isoolefin to ketone being from 10:1 to 10:5 by weight.



2,469,789
SLIDABLE JAW WRENCH WITH TERMINAL ADJUSTING NUT
Joseph Rusek, New Orleans, La.
Application May 12, 1947, Serial No. 747,521
1 Claim. (Cl. 81—168)

A combination including a wrench and detachable tool faces therefor comprising, a substantially U-shaped head defining upper and lower opposed faces and a back face perpendicularly disposed between the inner ends thereof, an elongated tubular handle depending integrally from the lower face and opening therethrough, a relatively short guide tube secured in said tubular handle adjacent said lower face, an elongated ram disposed within said guide tube and movable inwardly and outwardly of said lower face, a portion of said ram being provided with screw threads thereabout, an elongated tubular nut rotatably carried within said handle and threadedly engaged about said ram, a ball bearing race formed between said nut and said enclosing handle, a knurled handle formed on said tubular nut and disposed beyond the lower extremity of said tubular handle, an elongated channel of T-shaped cross sectional configuration formed longitudinally of the back face of said wrench head, a square channel opening into said T-shaped channel through said back face adjacent the lower face, a substantially square socket formed upwardly into the upper face of said head, there being a ball receiving recess formed in the wall of said socket, a substantially rectangular tool piece provided with a working face along one side thereof, a square stud projecting from the piece opposite said working face, a snap ball lock on the upper end of the said ram,

an elongated tool piece provided with a working surface formed along one side thereof, a T-shaped extension formed on one end of said last named tool piece being inserted through the square channel in the back face of said head and slidably engaged in the T-shaped channel therein, a socket formed in said face of said last named tool piece opposite the working surface thereof and provided internally with a recess complementary with the ram snap lock, a threaded auxiliary handle socket formed downwardly from above the upper face of said wrench head, and a rectangular projection formed longitudinally of the back edge of said head providing a purchase member to be secured in a vise.

2,469,790
AUTOMATIC MACHINE FOR ELECTRIC ARC WELDING
Raoul Jean Schmerber, Uccle, Belgium, assignor to La Soudure Electrique Autogene, Societe Anonyme, Brussels, Belgium
Original application November 18, 1946, Serial No. 710,459. Divided and this application September 28, 1948, Serial No. 51,613. In Belgium November 22, 1945
3 Claims. (Cl. 314—39)

1. In an automatic arc welding machine in which the electrode advances continuously towards the work by means of a motor carried by a head through which the electrode passes and in which said head is carried by a carriage movable above the work to be welded, the combination of a spindle around which said head can swing, said spindle being parallel to the direction of displacement of said carriage, a gear mounted on the same axis as that of said spindle and operated by the motor which moves the electrode, a toothed wheel meshing with said gear and carried by said head, an eccentric pin on said toothed wheel, a pivoting lever connected to said eccentric pin and fulcrumed on a fixed point, a guide collar movable along said lever, a pivot for connecting said guide collar to the head, and means for varying the distance between this pivot and the fulcrum of the lever.

2,469,791
ATTACHMENT FOR WINDSHIELD WIPERS
Victor P. Schneider, Green Bay, Wis.
Application May 17, 1946, Serial No. 670,627
3 Claims. (Cl. 219—19)

1. In combination, a reciprocating windshield wiper blade of the squeegee type; a semi-cylindrical metal housing; semi-circular end blocks of di-electric heat resisting material attached to said housing; a plurality of mounting blocks of di-electric heat resisting material secured in spaced relation intermediate said end blocks; a diametrically aligned notch in each of said mounting blocks having a circular bottom with opposed convergingly projecting curved faces arranged and adapted to rockably engage the

metal frame of a conventional wiper blade when inserted therein; heating elements arranged longitudinally of said housing adjacent opposite inner walls and carried in suitable openings, in said end blocks and said mounting blocks arranged and adapted to be connected to a suitable source of electrical energy; there being a slotted opening at the top of said housing through which a connector unit of a wiper blade will protrude sufficiently to engage a wiper arm.

2,469,792
ENGINE STARTER GEARING
James E. Buxton, Frank T. Christian, and Rene E. Demure, Elmira, N. Y., assignors to Bendix Aviation Corporation, a corporation of Delaware
Application May 27, 1947, Serial No. 750,726
3 Claims. (Cl. 74—7)

1. In an engine starter drive, a power shaft, a pinion slidably journalled thereon for movement into and out of mesh with a gear of an engine to be started, a screw shaft, means connecting the screw shaft to rotate with the motor shaft, a control nut threaded on the screw shaft, a barrel member connecting the control nut and pinion, a hollow cylindrical inertia member, and means for connecting the inertia member to rotate with the barrel member while maintaining the inertia member eccentric thereto.

2,469,793
FIGURE-FREE MATERNITY SUSPENDER
Sally Ann Siegel, Chicago, Ill.
Application March 26, 1948, Serial No. 17,147
3 Claims. (Cl. 2—43)

1. A maternity supporter comprising an inelastic textile portion shaped to fit the buttocks and partially extending upwardly to support the back to give maximum comfort to the lumbar and sacro-iliac regions, continuous elastic webbing secured to and extending from the upper edge of the buttocks portion, over the shoulders and downwardly over the front of the wearer and

terminating in garter portions, a narrow abdominal strap secured to and extending laterally

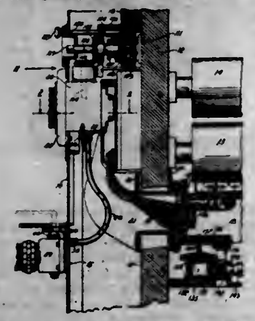
from opposed upper edges of said buttocks portion, the latter having side garter members.

2,469,794
BRAKE PRESSURE REGULATOR
George A. Sloan, Milwaukee, Wis.
Application July 27, 1945, Serial No. 607,354
12 Claims. (Cl. 138—31)

1. A pressure regulator for hydraulic brake systems, comprising, a body having a bore, a cylinder having a hollow plunger slidably cooperable with said body bore and also having a bore and a passage connecting said cylinder bore with the interior of said plunger, a piston slidably cooperable with said cylinder bore, a valve for controlling the opening and closing of said passage, and a pair of springs coacting with said cylinder and piston respectively for constantly urging said plunger and said piston in the same direction.

12. A pressure regulator for hydraulic brake systems, comprising, a body having a bore in open communication with the hydraulic brake system, a cylinder having a plunger slidable along said bore and a relief passage in said plunger, an adjustable cup coacting with said body, a spring interposed between said cup and said cylinder, a piston slidable in said cylinder, a valve carried by said plunger and normally closing said passage, and means for opening said valve when said piston has travelled a predetermined distance to permit escape of liquid from the system to the interior of said cylinder.

2,469,795
POLARIZING FILTER ATTACHMENT FOR CAMERAS
Byron P. Sproul, Royal Oak, Mich.
Application January 14, 1947, Serial No. 721,687
1 Claim. (Cl. 88—65)



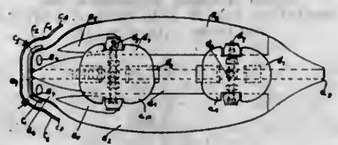
A polarizing filter attachment for cameras, comprising an annular Z-shaped frame including inner and outer circumferential flanges and an annular radial flange connecting the circumferential flanges, the outer surface of the outer circumferential flange being provided with a graduated scale thereon, a circular polarizing filter fixedly mounted within the outer circumferential flange adjacent said radial flange and in abutting engagement with the latter, an annular transparent ring fixedly mounted upon the outer surface of said inner circumferential flange adjacent said radial flange and in abutting engagement with the latter, said transparent ring being provided with an enclosed annular passage filled with a liquid having a bubble therein for coacting with said graduated scale to indicate the degree of polarity of said filter, said outer circumferential flange being provided with a circumferential recess in its inner surface thereof, an adapter for mounting said frame adjacent the lens of a camera, and means on said adapter in engagement with said recess for rotatably supporting said frame on said adapter, whereby rotation of said frame relative to said adapter until the bubble of said transparent ring coincides with the proper mark on the graduated scale causes a predetermined polarity of said filter to be obtained.

2,469,796
INKING MECHANISM FOR PRINTING MACHINES
Anton Stobb, Westfield, and Alexander J. Albrecht, West New York, N. J., assignors to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application January 16, 1945, Serial No. 573,038
17 Claims. (Cl. 101—350)

4. In an inking mechanism for a printing machine having an ink distributing cylinder, an ink rail extending along the ink distributing cylinder and having a cylinder engaging member adjustable tangentially in respect to the said cylinder, an ink pump in connection with the cylinder engaging member to supply ink thereto for application onto the cylinder, a bracket secured to the ink rail and the pump, means adapted to be operated from one side of the cylinder to adjust the cylinder engaging members transversely of the cylinder axis, a fluid receiving cylinder at each end of the ink rail, a piston in each cylinder adapted to be acted upon by fluid pressure, and a leaf spring connecting each piston with the rail whereby the rail and the pump will be raised in unison when fluid under pressure is directed into

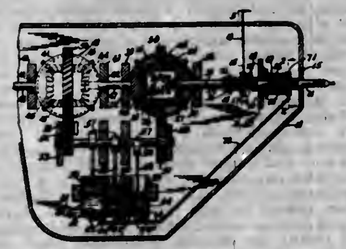
the cylinder and the cylinder engaging member will be resiliently pressed against the ink distributing cylinder, a rack at each end of the rail and a shaft extending between the racks and having gear teeth in mesh with teeth on the racks, to equalize the movement of each end of the rail.

6. In an inking mechanism for a printing machine, an ink pump having a plurality of groups



of pistons therein, a cylinder operatively associated with each piston, each cylinder having an inlet and an outlet port, an ink color selector having outlet ports in connection with the inlet ports of the cylinders of each group and a plurality of separate inlet ports each connected to a different source of ink, an additional inlet port in the ink color selector for connection with a source of cleaning fluid and means in the ink color selector to direct ink from any of the said sources, or cleaning fluid to any of the ink outlet ports thereof.

2,469,797
KNIFE SHARPENER
Willis F. Thompson, Portland, Maine, assignor to The Alden Speare's Sons Co., a corporation of Massachusetts
Application May 2, 1947, Serial No. 745,610
6 Claims. (Cl. 51—210)



1. A knife sharpener comprising a set of rollers one having a frusto-conical guide surface, an abrasive element rotated by the free rolling of the rollers back and forth over a supporting surface when actuated by the blade of the knife as it is reciprocated during its sharpening, said one of the rollers being so spaced from said abrasive element that its frusto-conical guide surface will have such angularity to the adjacent side surface of the abrasive element that the blade bearing against said surface of the abrasive element will occupy such determinate inclined position that one or the other of the bevelled surfaces of the blade leading to its cutting edge will engage the side surface of the abrasive element, a hub to said one of the rollers presenting an inclined peripheral surface adjacent to the frusto-conical guide surface and against which hub surface the blade when positioned as aforesaid has bearing and by which the engagement of the one bevelled surface of the blade with the abrasive element as aforesaid will be maintaind, the angle to the abrasive element at which the blade is supported by its bearing against the side of the roller being so co-ordinated with the inclined surface of the hub with respect to the abrasive surface that the angle of the hub at the point where the blade has bearing against the hub surface is greater than the angle of the supported blade with respect to the abrasive surface to prevent wedging and not greater than twice that of the supported blade to prevent the cutting edge of the blade contacting with the hub, and means for connecting said rollers, hub and abrasive element to rotate in unison.

2,469,798
ICE AND SNOW SKATE
Gottlieb Trächslin, Basel, Switzerland
Application November 26, 1944, Serial No. 565,531
In Switzerland December 3, 1943
5 Claims. (Cl. 280—11.13)

1. In a snow and ice skate having supporting surfaces on each side of a runner, an ice and snow gripping device in the form of a downwardly projecting member secured to the supporting surface at the front part of and across the skate, said gripping device having a substantially straight central portion merging into adjacent, inwardly bent side portions which end into extremities directed towards the rear of the skate.

2,469,799
AUTOMATIC TRANSMISSION FOR MOTOR VEHICLES
Charles Valle, Caracas, Venezuela
Application September 29, 1948, Serial No. 51,697
8 Claims. (Cl. 74—778)

1. A transmission, comprising a main casing for a lubricating fluid, a drive shaft rotatively

mounted through one end of said main casing, a stud shaft rotatively mounted within said main casing and having its front end in axial end alignment with said drive shaft, a shift collar slidably and non-rotatively mounted on the rear end of said stud shaft, a first differential unit having a unitary casing axially rotatively mounted within said main casing and axially aligned with said shift collar and including a pair of opposed front and rear gears rotatively mounted coaxially in said unitary casing and meshing with a pair of opposed side gears rotatively mounted on said unitary casing, a shift shaft fixedly connected coaxially with said shift collar and extending coaxially into the front end of said differential unit and having its rear end provided with coupling means for connecting with said front gear in a front position of said shift shaft and with said rear gear in a rear position of said shift shaft and being free from gear contact in a midway position of said shift shaft, a second differential unit having a second unitary casing axially rotatively mounted within said main casing and axially aligned with said first differential unit and including a pair of opposed front and rear gears rotatively mounted coaxially in said second unitary casing and meshing with a pair of opposed side gears rotatively mounted on said second unitary casing, a connecting shaft connecting the rear gear of said first differential unit with the front gear of said second differential unit, a driven shaft connected with the rear gear of said second differential unit, ring gears mounted upon the unitary casings of said differential units, a gear train connecting said ring gears for the ring gears to rotate in opposite directions, means for placing various loads upon said gear train for holding the unitary casings of said differential units to various degrees for controlling their speeds of rotation, and means for controlling said means for placing various loads or for freeing the unitary casings of said differentials during normal transmission of loads and gradually holding said unitary casings to graduated degrees during increased loads on said transmission.

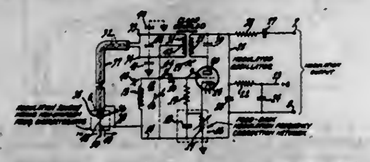
2,469,800
ELECTRIC HEATER
Oliver G. Vogel, Oak Park, Ill., assignor to Hotpoint Inc., a corporation of New York
Application November 27, 1945, Serial No. 631,126
5 Claims. (Cl. 201—67)

1. An electric heating unit comprising a sheathed heating element provided with a metallic sheath having a high nickel content and a resistance conductor housed in said sheath, a coating of chromium covering said sheath, and a metallic mass having a high copper content cast into intimate contact with said coating and embedding said sheath, said coating preventing interfacial porosity in the adjacent contacting surfaces of said mass.

2,469,801
ELECTRIC HEATER
Oliver G. Vogel, Oak Park, and Louis Ziffrin, Westchester, Ill., assignors to Hotpoint Inc., a corporation of New York
Application December 3, 1945, Serial No. 632,432
6 Claims. (Cl. 201—67)

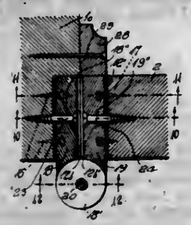
1. An electric heater of the sheathed type for application to a metallic element by brazing it thereto by a brazing substance comprising, a resistance conductor, a metallic sheath housing said conductor formed of a nickel-chromium-iron alloy having a major nickel component, a coating of chromium superimposed upon and bonded to the outer surface of said sheath and having a thickness sufficient to prevent intergranular penetration of the brazing substance in the liquid phase with respect to said sheath, and a coating of copper superimposed upon and bonded to said coating of chromium in order to accommodate ready bonding with the brazing substance.

2,469,802
COMBINED BOAT AND FILTER
Sweeney Voinovich, Bridgeville, Pa.
Application April 25, 1945, Serial No. 590,178
1 Claim. (Cl. 210—122)



A combined boat and filter for the determination of carbon, including an elongated narrow container having downwardly converging side walls merging into a flat bottom, thereby to be insertable directly into a combustion tube relatively small in diameter, said container being formed with a central outlet in its bottom, a perforated filter-supporting metal screen within the container, supported at all its edges by the side walls of the container and spaced substantially above the bottom of the container, the screen, when covered by a filter material, defining in cooperation with the bottom a vacuum chamber opening through the central opening, and a drain tube supporting the container, the wall of the central opening and the upper end of the drain tube being adapted for removable seating of the container upon the drain tube, the drain tube, when positioned in a supporting structure, constituting the sole support for the container.

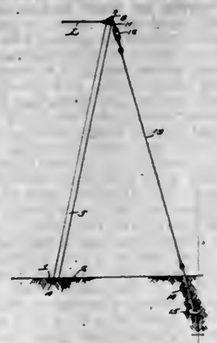
2,469,803
COMPENSATED, CONTROLLED-FEEDBACK, AMPLITUDE MODULATED OSCILLATOR
Paul Weathers, Haddon Heights, N. J., assignor to Herbert K. Neuber, Philadelphia, Pa.
Application August 22, 1947, Serial No. 770,969
1 Claim. (Cl. 332—38)



In a self-excited electronic-tube oscillator system, the combination of means for tuning said

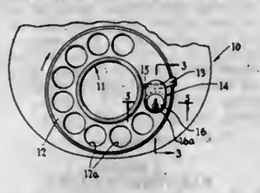
system to a predetermined constant frequency of oscillation, modulator means for differentially varying feed-back of energy at the oscillator frequency to modulate said system in a predetermined modulation frequency range, means for applying thereto a controlled negative modulation frequency feed-back for limiting the effect of variation of said oscillator frequency feed-back to control the percentage modulation in a predetermined portion of said modulation frequency

range, said last named means including an oscillator cathode circuit and an impedance network in said circuit, amplifier means for the modulated signal output of said system having an output impedance, and a negative modulation frequency feed-back connection from said last named impedance to said network for further controlling the percentage modulation of said system in a predetermined portion of said modulation frequency range.



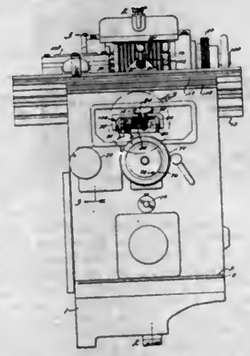
2,469,804
HINGE
Richard Eshleman Weaver, Ronks, Pa.
Application January 30, 1947, Serial No. 725,221
8 Claims. (Cl. 16—149)

1. In a hinge structure, a rail-like semi-cylindrical guiding liner disposed in each of two adjacent semi-cylindrical recesses with rail-like members thereon abutting face to face in diametrically opposite positions and a hinge comprising a pair of semi-cylindrical parts hingedly connected together and operative to slidably enter said rail-like guiding liners with the semi-cylindrical parts of said hinge abutting against the rail-like members of said semi-cylindrical liners.



2,469,805
CLOTHESLINE POST
Watkins Walter Wilkinson and Carl K. Smith, Corpus Christi, Tex.
Application October 10, 1945, Serial No. 621,536
3 Claims. (Cl. 189—31.5)

1. A clothesline post including a base, said base comprising a flat relatively elongated post-supporting portion and a ground-engaging lip depending from one edge thereof, the post-supporting portion being formed with spaced openings, fixedly connected pipes upstanding from the base, tongues on the lower ends of the pipes movably engaged in said openings, a cross-head bearing on the pipes, stems integral with

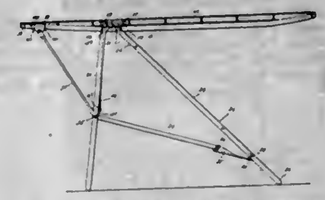


the cross-head snugly seated in the pipes, said cross-head constituting means for engagement by a clothesline, an anchoring stake having a screw blade, and guys detachably connected to the cross-head and converging to the anchoring means, each of said guys including an adjusting element.

2,469,806
DIAL TELEPHONE LOCK
Bernard Zion, New York, N. Y.
Application June 7, 1947, Serial No. 753,279
8 Claims. (Cl. 179—189)

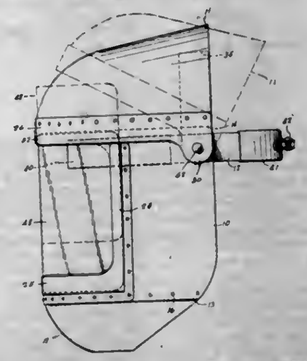
1. A locking mechanism for a telephone dial having a manually operated rotary mounted dial disc formed with circular spaced openings and a relatively stationary stop member normally located adjacent to and over the path of movement of one of said disc openings comprising a casing having a leading end, a ledge integrally formed to project from said leading end to provide a passage formed with a wall of said ledge at said leading end for confining said stop member in said passage when said mechanism is seated in an effective locking position on said member, a barrel movably mounted in said casing in spaced alignment with relation to said ledge, a swing arm having a free end extending to be positioned in and out of alignment with respect to the ledge and mounted to turn with an end of said barrel beyond said leading casing end, said arm when in alignment with respect to the ledge being in said effective locking position spaced from said ledge to provide a clearance slightly greater than the thickness of the dial disc with the dial disc releasably secured to the stop member against movement from the passage, said arm when out of alignment insertable into the dial disc opening, and a key locking means in the casing for turning the barrel with said arm in and out of said aligning position.

2,469,807
GEAR GRINDING MACHINE
Marvin R. Anderson, Grosse Pointe Park, Mich., assignor to Michigan Tool Company, Detroit, Mich., a corporation of Delaware
Application May 16, 1946, Serial No. 670,254
20 Claims. (Cl. 51—71)



1. In a gear grinding machine, a base, a grinding head mounted thereon, said head including a rotatable, formed grinding wheel of substantial axial length and driving means therefor; a carriage slidably mounted on said base, driving means to effect reciprocation of said carriage in a direction perpendicular to the axis of rotation of the grinding wheel, said carriage slidably supporting a second carriage, said second carriage reciprocating with said first named carriage and independently thereof in a direction parallel to the axis of rotation of the grinding wheel, means to effect said independent reciprocation of said second carriage, a spindle mounted on said second carriage, said spindle adapted to rotatably support a gear, and means operatively associated with said spindle to effect rotation of the gear during independent reciprocation of the second carriage, the combined reciprocation and rotation effecting the gear to roll as the same engages the grinding wheel while the reciprocation of the first carriage effects the entire flank width of each gear to contact the grinding wheel.

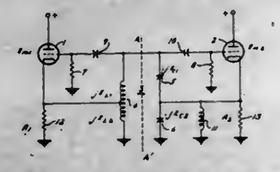
2,469,808
INDUCTION MOTOR ROTOR
Leonard E. Aske, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
Application September 28, 1946, Serial No. 700,141
14 Claims. (Cl. 172—120)



1. A rotor for induction motors comprising a flat annular ring formed of a tight spirally wound band of electrical steel ribbon enclosed inside, outside and on one face by an annular metal cup having flanges tightly enclosing inner and outer surfaces of the annular ring, the open face of the ring having a series of radial slots formed therein, and a non-magnetic electrical spider having a hub, rim and spokes connecting the hub and rim, the spokes tightly fitting within the radial slots.

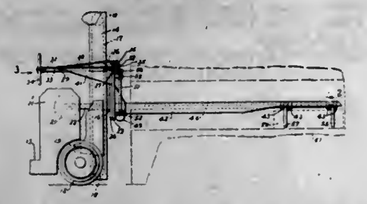
2,469,809
IRONING BOARD
Earl C. Booth and Frank Jones, Columbus, Ind., assignors to Noblitt-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application April 4, 1945, Serial No. 586,466
2 Claims. (Cl. 38—117)

1. In an ironing board, a top, a member supported from said top for sliding movement longitudinally thereof, a front leg and rear legs pivotally connected to said top on parallel axes and swingable between positions against said top and extended positions in which they are adapted to act as a support for said top, links connecting said slidable member with said rear legs, a latch pivotally mounted on said top in position to engage said slidable member and retain it in the position it occupies when the rear legs are extended and means acting between the front legs and the rear legs for limiting their separation, said latch having a hooked end and a finger spaced apart to receive said slidable member between them, the latch being so constructed and arranged that one end of said slidable member will engage said finger as the legs reach extended positions and will rotate said latch to cause the hooked end thereof to engage the other end of the sliding member.



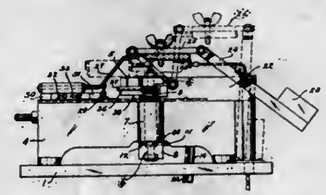
2,469,810
PROTECTING HELMET
Charles Evans Bowers, Moylan, Pa., assignor to Fibre Metal Products Company, Chester, Pa., a partnership
Application November 8, 1945, Serial No. 627,341
5 Claims. (Cl. 2—8)

1. A protecting helmet, comprising a face enclosing shield with a relatively large opening in the front thereof, a cover hinged to said shield, headgear upon which said shield and cover are



pivotally mounted, and a removable window normally closing the opening in the front of the shield, the upper edge of said window being held by the cover.

2,469,811
OSCILLATOR CIRCUITS
William E. Bradley, Springfield Township, Montgomery County, and Joseph C. Tellier, Penn Wynne, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 17, 1946, Serial No. 697,434
12 Claims. (Cl. 250—36)



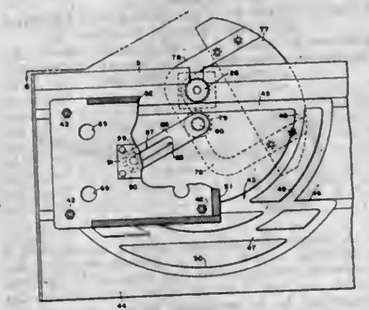
1. In a vacuum tube oscillator, a pair of vacuum tubes having at least triode elements, a tank circuit comprising a pair of conjugate reactive branches, a portion of each of said branches being connected in the cathode circuit of one of said tubes and cooperating with said tube to form a separate oscillator adapted to oscillate independently when said other tube is cut off, and means included in the cathode circuit of one of said tubes and operative when said tube is conductive to modify the frequency of oscillation of the oscillator circuit which includes said one tube.

2,469,812
ATTACHMENT FOR INDUSTRIAL TRUCKS
Jack Breslav, New Haven, Conn.
Application December 22, 1945, Serial No. 636,629
7 Claims. (Cl. 214—66)

1. An attachment for an industrial truck having an operator's position and a movable truck part operable by the operator and adapted to be raised and lowered, said attachment comprising, as a unit, the combination of a base plate adapted to be detachably secured to said movable truck part, an elongated supporting member secured to and extending forwardly from said base plate, article gripping means carried by said supporting member adjacent its remote end, a second supporting member extending rearwardly from said base plate to one side of said movable truck part, mechanism to actuate said gripping means to grip and to release an article, said mechanism mounted on said base plate and including a shaft extending rearwardly from said face plate, and means on the remote end of said shaft and located adjacent the operator's position to actuate said mechanism.

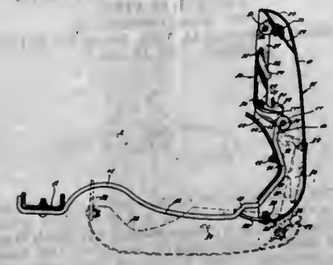
2,469,813
FOLDING MACHINE
Elmer D. Coston, St. Louis, Mo., assignor to Manufacturers Supplies Company, St. Louis, Mo., a corporation of Missouri
Application December 18, 1946, Serial No. 716,927
5 Claims. (Cl. 12—55)

1. In a folding machine, a work support, a pressure member having a lip shaped according to the contour of the fold to be made and having a gauge adjacent said lip for positioning the work piece to be folded with relation to said lip, means for moving said pressure member between a position whereat said lip is substantially aligned with and a position whereat said lip is elevated above said work support, a forming member having an edge shaped according to said lip and arranged to engage the work piece exteriorly of but adjacent to said lip, and means for translating said work support and forming member together with the work piece beneath and beyond said lip while the pressure member is in elevated position.



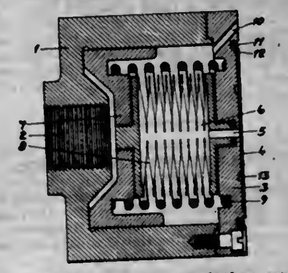
2,469,814
FUMIGATING APPARATUS
Kenneth Donald Crooks, Chicago, Ill.
Application November 20, 1946, Serial No. 711,133
5 Claims. (Cl. 21—108)

1. Fumigating apparatus comprising a tubular conduit constructed from a strip of flexible, substantially fluid-impervious material, the longitudinal edges of said strip being lapped and secured together by a row of narrow stitches extending longitudinally of said strip, said stitches providing a multiplicity of spaced minute orifices for escape of fumigating fluid at a multiplicity of spaced points along said conduit and from both sides thereof, said conduit being closed at at least one of its ends and having a coupling connection for supply of fumigating fluid under pressure.



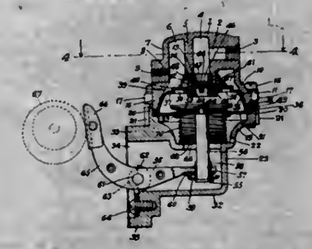
2,469,815
BOX WELDING MACHINE
Robert S. Cutright, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application September 13, 1946, Serial No. 696,919
3 Claims. (Cl. 113—59)

1. Welding apparatus and the like for producing a continuous contour weld about a work piece of non-circular periphery which embodies a plurality of cooperating parts, said apparatus comprising a frame; a stationary member mounted on the frame including a groove; a carriage; means on the carriage for releasably securing thereon the assembled work piece; a welding torch supported by the frame; means freely rotatably mounted on the carriage for registration with the groove in the stationary member; and drive means actuating the carriage, said drive



means cooperating with the rotatably mounted means and the groove in the stationary member for supporting and moving the carriage and the work piece mounted thereon along a predetermined path defined by the groove past the welding torch at a uniform distance and at a uniform speed.

2,469,816
BUMPER GUARD
Edward D. Dall, Detroit, Mich., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application January 15, 1945, Serial No. 572,781
9 Claims. (Cl. 293—64)

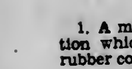


1. A bumper guard structure comprising a bracket attachable against the outer side of a bumper bar to extend transversely thereof, a guard body, a link pivoted at its upper end to the upper end of said body and having hinged connection at its lower end with said bracket for bodily swing of said body away from the bumper bar and downwardly into horizontal position, a latch connection between said link and said body for holding said body in vertical service position, said bracket at its lower end having a substantially horizontally disposed extension, a guide element on the lower end of said body receiving said extension to travel inwardly therealong for guiding said body into horizontal position below and inwardly of said bumper bar.

2,469,817
SUCTION CHUCK
Erik Otto Eriksson, Hornsjofors, Sweden
Application September 29, 1945, Serial No. 619,343
In Sweden September 22, 1944
1 Claim. (Cl. 279—3)

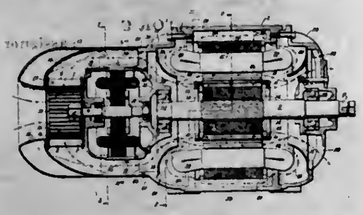
In a pneumatic chuck for lathes and other machine tools, the combination of a head, a portion of its outer surface formed to being able to contact or near contact the work to be fixed to the chuck, said surface being surrounded by a packing for tightening against said work, a cylindrical chamber within the chuck, a piston in said chamber, a combined inlet and outlet for fluid at one side of the piston, a suction bellows and a compression spring located between one end of the chamber and the last mentioned piston side, said spring tending to move the piston from the last mentioned end of the chamber and to stretch the bellows, said bellows having a port which ends in the surface above mentioned, an air compressor, the first mentioned combined inlet and outlet being located in the rotation centre of the head in order to facilitate the maintenance of the connection between the chamber and the air compressor during the rotation of the chuck.

2,469,818
DIAPHRAGM PUMP
Charles A. Erickson, Dearborn, Mich., assignor, by mesne assignments, to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application October 28, 1946, Serial No. 706,113
1 Claim. (Cl. 103—150)



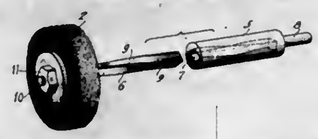
In combination in a liquid pump, a pair of housing members and means for securing them releasably together, one of said housing members shaped to fit within the other, inlet and outlet passages formed in one of said housing members, and an annular integral pressure dome formed within said housing member and positioned concentrically with a portion of said inlet passage, a unitary member including a central inlet, and a

plurality of outlet valve seats positioned about said inlet, said unitary member provided with a portion adapted to be gripped and held between said housing members, a ring-like valve member positioned adjacent to and adapted to be seated upon said outlet valve seats, said outlet valve member shaped of rigid material, and a spring biased to hold it seated, said outlet valve member being guided by a portion of the housing member within which said inlet passage is formed, and an inlet valve positioned to be seated to close said inlet, and a spring biased normally to hold said inlet valve closed.



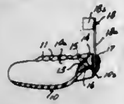
2,469,819
VULCANIZATION OF RUBBER COMPOSITIONS
Paul J. Flory, Kent, and Norman Rabjohn, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application January 16, 1948, Serial No. 641,652
5 Claims. (Cl. 260—768)

1. A method of vulcanizing a rubber composition which comprises reacting an unvulcanized rubber containing residual olefinic groupings with a compound having the structural formula



in which R' is a monovalent radical of the group consisting of hydrocarbon radicals, oxahydrocarbon radicals, thiahydrocarbon radicals, and the corresponding halo- and nitro-substituted radicals, R is a multivalent radical of the group consisting of hydrocarbon radicals, oxahydrocarbon radicals, thiahydrocarbon radicals, and the corresponding nitro- and halo-substituted radicals, the oxygen atoms being connected to a carbon atom in R and R', and x is a small whole number between 2 and 5 inclusive.

2,469,820
DYNAMOELECTRIC MACHINE
Harry B. Fuge, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application June 1, 1945, Serial No. 597,116
4 Claims. (Cl. 172—36)



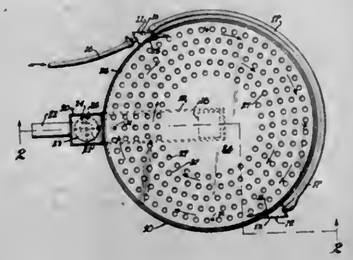
1. A dynamoelectric machine of the low-inertia type comprising a main motor having a casing housing a stator core and a rotor core, an auxiliary motor, a fan driven by said auxiliary motor, a member secured to the main motor, enclosing said auxiliary motor and providing an entrance orifice and a chamber for said fan, means including said fan chamber for guiding air from said fan into one end of said main motor casing, a bearing hub secured to said main motor casing, and a baffle ring which, together with said bearing hub, form an annular nozzle disposed within said casing for collecting said entering air at one velocity and discharging it at higher velocity within a confined annular zone against an end of each of said stator and rotor cores.

2,469,821
TOOLHOLDER AND ADAPTER CHUCK FOR MOTOR-DRIVEN TOOLS
Edward Russell Galbraith, East Orange, N. J.
Application March 22, 1947, Serial No. 736,607
2 Claims. (Cl. 279—99)

1. A tool holder-adapter chuck comprising a tool-holding shank and a socket member for cooperation therewith having a co-axial opening through one end and its other end formed for attachment to a rotatable chuck, said shank being of regular polygonal cross-section with its angles constituting portions of co-axial longitudinal helices of long pitch, and said socket having angles corresponding in shape to the angles of said shank and constituting guides therefor, whereby said shank is freely longitudinally slidably receivable into and removable from said socket while said socket member is stationary, and said angles of the shaft interlock with said angles of the socket to prevent separation of said shank from said socket member during rotation of the latter by a power-rotated chuck.

2,469,822
PROCESS FOR BONDING TEETH TO DENTAL PLATES
Walter Giese, Chicago, Ill.
Application August 31, 1946, Serial No. 694,341
3 Claims. (Cl. 18—55.1)

1. The method of securing a tooth in fixed position in the tooth space of a dental plate which comprises cutting a recess behind the tooth space in the plate, positioning a tooth in the tooth space, pressing a dab of wax in the recess and against the lingual face of the tooth to temporarily hold the tooth in position in the plate, covering the buccal face of the tooth and the adjoining buccal surface of the gingival portion of the plate with plastic plaster of Paris, inserting a heat-conducting fitting into the plaster in closely spaced relation to the tooth and plate, allowing the plaster to set, melting out the wax, pressing thermosetting plastic bonding material into the recess against the lingual face of the tooth, molding the bonding material to build up the recessed portion into conformity with the lingual gingival plate portion, covering the molded bonding material with plaster of Paris, allowing the plaster of Paris to set, and heating the heat-conducting fitting for setting the bonding material.



2,469,823
ALKYLATION OF THIOPHENE
Rowland C. Hansford, Woodbury, and Philip D. Caesar, Wenonah, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application November 29, 1944, Serial No. 565,788
8 Claims. (Cl. 260—329)

1. The process for obtaining alkyl thiophenes which comprises contacting one of the group thiophene and thiophene derivatives having at least one hydrogen atom of the thiophene nucleus replaceable, with an alkylating agent in the presence of boron trifluoride as the essential alkylating catalyst, the molal ratio of said alkylating agent to said thiophene and thiophene derivatives being greater than 0.25, the reaction temperature being at least about 20° C. and the reaction time being at least 1.5 hours at 25° C., said reaction temperature and time being interdependent and varying with the activity of the alkylating agent and the higher the reaction temperature the shorter the reaction time for any alkylating agent.

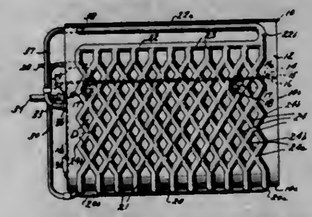
2,469,824
METHYLOL DITHIONAPHTHOATES
Albert F. Hardman, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application October 30, 1943, Serial No. 508,404
2 Claims. (Cl. 260—455)

1. A methylol dithionaphthoate.

2,469,825
AUTOMATIC PRINT WASHER
Samuel Hornstein, Chicago, Ill.
Application December 26, 1945, Serial No. 637,214
3 Claims. (Cl. 95—97)

1. Washing apparatus comprising a cylindrical tank, a hollow lug enclosing a wedge-shaped compartment on the periphery of the tank with its outer and inner sides meeting in an apex adjacent to the cylindrical wall of the tank, a water supply conduit opening into said chamber of the lug through the base of the wedge, a port leading from said chamber into the interior of the tank at the inner side of the wedge, and a deflector within the tank at said port disposed approximately parallel to said outer side of the lug.

2,469,826
INTERNALLY EXPANDING BRAKE FOR VEHICLES
John Samuel Irving, Birmingham, England
Application August 24, 1944, Serial No. 550,921
In Great Britain June 12, 1943
9 Claims. (Cl. 188—78)



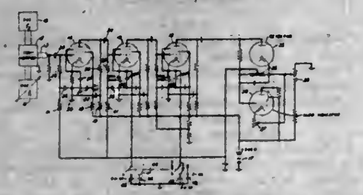
1. Shoe separating means for a brake of the type set forth comprising opposed staggered abutments in adjacent shoe ends, a post fixed to the back-plate of the brake and having opposed notches to receive the abutments for which it forms a stop in the "off" position of the shoes, a cranked two-armed lever fulcruming on one of said abutments, one arm of said lever extending substantially at right angles to the back-plate and engaging the other abutment, the second arm of the lever extending substantially parallel to the back-plate, and means for applying to the second arm a force directed substantially at right angles to the back-plate to rock the lever about its fulcrum.

2,469,827
COAGULATION OF EMULSION POLYMERS
Joseph P. Johnson, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application August 23, 1945, Serial No. 612,297
9 Claims. (Cl. 260—84.5)

1. A method of coagulating a synthetic latex of a rubbery, conjugated diolefine emulsion polymerizate which comprises adding to the latex a water soluble salt of a metal of the group consisting of lead, iron, calcium, magnesium, strontium, barium, aluminum and zinc in the presence of between 20 and 50 percent of a molecular equivalent, based on the metal salt, of a compound of the group consisting of ammonium hydroxide and the alkali metal hydroxides.

2,469,828
EVAPORATOR UNIT
Bernard C. Johnson, Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application June 15, 1946, Serial No. 676,939
8 Claims. (Cl. 62—126)

1. A heat exchanger comprising contiguous secured together U-shaped metal sheets forming the bottom and side walls of a chamber, at least one of said sheets being embossed to define a



longitudinal inlet manifold duct along the bottom, feeding ducts extending laterally from the manifold duct and thence upwardly into the lower ends of the side walls, oppositely sloping ducts extending upwardly from the upper ends of the feeding ducts and the oppositely sloping ducts extending from one of said feeding ducts each intersecting with a plurality of the other sloping ducts to form a grid-like pattern on the side walls, upstanding collecting ducts at the upper ends of the oppositely sloping ducts, and longitudinal outlet ducts at the upper ends of the collecting ducts, contiguous secured together L-shaped metal sheets mounted in said chamber to provide a shelf and a back wall and having a shelf duct and a back wall duct, means for introducing fluid into the shelf duct, a tube connecting said shelf duct and the inlet manifold duct, tubes connecting the longitudinal outlet ducts with the back wall duct, and an outlet tube for exhausting said back wall duct.

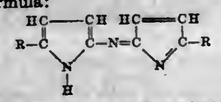
2,469,829

METHOD AND SYSTEM FOR MEASURING FREQUENCY

John P. Kinser, Ridgefield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 13, 1946, Serial No. 683,307
6 Claims. (Cl. 250—39)

1. A frequency measuring circuit having input terminals to which an electromotive force of unknown frequency may be applied, a source of known standard frequency oscillations connected to said terminals, said circuit including a converter to produce oscillations of the beat frequency between the impressed oscillations, a high pass network having a low-pass cut-off frequency in the region of 100 kilocycles, means for reducing the low-pass cut-off frequency of said network at will, and an indicator connected to said network to receive therefrom selected beat frequency oscillations.



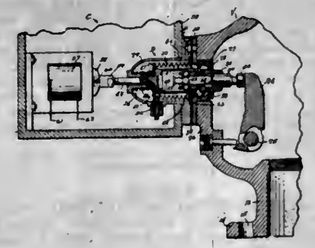
2,469,830

2-BIS(5-CYCLYLPYRROLE)AZAMETHINE DYES

Edward Bowes Knott, Harrow, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application May 17, 1947, Serial No. 748,839. In Great Britain May 31, 1946
19 Claims. (Cl. 260—313)

1. An azamethine dye selected from the group consisting of those represented by the following general formula:



wherein R represents a member selected from the group consisting of a monocylic aryl group of the benzene series, an aryl group of the naphthalene series, a 2-thienyl group, a 2-furyl group, a 2-thiazolyl group, a carbazyl group and a tetralinyl group, and the ammonium and quaternary ammonium salt forms of said dye.

2,469,831

DELUGE VALVE

Leroy M. Lewis, Rosemont, Pa.

Application February 7, 1945, Serial No. 576,663
3 Claims. (Cl. 169—19)

1. In a deluge valve, including a valve casing, a clapper pivotally mounted within said casing, a dog pivotally mounted within said casing and operatively associated with said clapper, a locking pin extending through an opening in the wall of said casing, and having its inner end in operative engagement with said dog, a ball engaging said locking pin to hold said dog in clapper closing position, spring means normally tending to release said ball, and a solenoid normally overcoming said spring means to maintain said ball in effective engagement with said locking pin.

2,469,832

AUTOMATIC SPRINKLER

Leroy M. Lewis, Rosemont, Pa.

Application November 23, 1946, Serial No. 711,979
1 Claim. (Cl. 169—38)

In an automatic sprinkler head assembly including a yoke member, a threaded plug carried by said yoke member at one end thereof and having a bore extending therethrough, said plug being adapted to be connected to a source of supply of water under pressure, a cover member for said bore, said cover member having a face remote from said bore and which face is formed with a curved depression, a screw stem threaded in the other end of said yoke, and a bridge member engaged by said stem; the improvement consisting of a fracturable glass bottle having a main body portion with a lower end curved to conform to said depression in which it is received and a reduced neck upstanding from said body portion, said neck having a bore communicating with the interior of said bottle, a cork within the bore in said neck and having an outer face spaced from the outer end of the bore in said neck, and a cap in the form of a flat metallic disc with its outer edge portion fused to the end of said neck to close the face thereon, said cap being engaged by said bridge member under pressure to maintain said cover member in position closing the bore in said plug.

2,469,833

COPOLYMERS OF BUTADIENE AND ALKYL ESTERS OF ALPHA, BETA DICHLOROACRYLIC ACID

Joy G. Lichty, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

No Drawing. Application September 10, 1943, Serial No. 501,849
3 Claims. (Cl. 260—93)

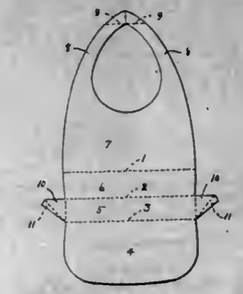
1. Copolymers resulting from reacting a mixture containing from 10 percent to 90 percent of an alkyl ester of alpha, beta dichloroacrylic acid and 90 percent to 10 percent of butadiene-1,3.

2,469,834

ELECTRIC CLOCK MOTOR AND SYSTEM

Henry Maerz, Brooklyn, N. Y., assignor to Self Winding Clock Company, Inc., Brooklyn, N. Y., a corporation of Delaware

Application September 12, 1946, Serial No. 696,591
4 Claims. (Cl. 172—275)



1. An intermittent motor comprising an electromagnetic stator and a rotor, the stator comprising two soft iron pole pieces having an arcuate cavity in opposing faces thereof, a magnetic core connected to each of said pole pieces, an energizing winding about each of said cores, said windings being connected so that the magnetic flux created by the energization of the windings is in series in the cores of both windings, the rotor of said motor comprising a magnetized core having a plurality of curved magnetic pole shoes at each end thereof angularly equidistant from each other, the toes of said pole shoes all pointing in the same peripheral direction the curvature of the faces of the pole pieces and the peripheries of the pole shoes being such that when adjacent to each other a substantially wedge shaped air gap will be formed, the pole shoes at the ends of the core being so disposed that each of the pole shoes at one end of the core is midway between consecutive pole shoes at the other end of the core, whereby when said core windings are intermittently energized by impulses alternately reversed in polarity, the rotor will revolve at each impulse one-half the arcuate distance between the pole shoes at one end of said magnetized core.

2,469,835

BIB

Florence H. McMartin, Duluth, Minn.

Application May 27, 1946, Serial No. 672,612
2 Claims. (Cl. 2—49)

1. A trough for a bib comprising three transverse spaced scores on said bib; substantially triangularly shaped tabs extending laterally from and intermediate of the two lowermost of said scores; said bib being folded upwardly on the uppermost one of said scores, back upon itself on the middle one of said scores, and outwardly on the lowermost one of said scores; and said tabs having one side extending substantially normal to said bib from the centermost one of said scores, a second side of said tabs extending upwardly at an angle from the lowermost one of said scores, and the third side of said tabs extending between the points where said normal and second sides abut said scores; said tabs being folded along said third side around the ends of the bib between the uppermost and center of said scores so that the faces of said tabs extend substantially normal to the adjacent face of said bib, and said tabs being secured to said bib along said second side whereby a trough is formed having angularly shaped ends and a double thickness front wall.

2,469,836

BETA-CYANO VINYL ACETIC ACID ESTERS

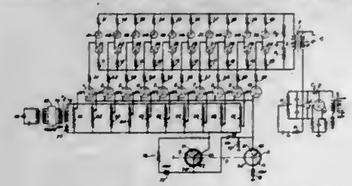
Charles R. Milone, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

No Drawing. Application May 19, 1942, Serial No. 443,646
3 Claims. (Cl. 260—465.4)

1. A compound having the structural formula

wherein R is an alkyl radical.

2,469,837

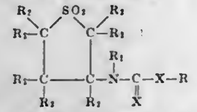


WAVE TRANSLATING SYSTEM

Milton E. Mohr, New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

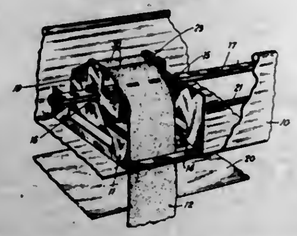
Application September 26, 1946, Serial No. 699,555
5 Claims. (Cl. 332—29)

1. Frequency modulating apparatus comprising an oscillator circuit having discrete frequency controlling impedances for connection in varying number in said circuit to vary the oscillator frequency abruptly in steps in accordance with the number of said impedances simultaneously in said circuit, a source of modulating signals,



means responsive to said signals for varying the number of said impedances simultaneously in said circuit in accordance with the magnitudes assumed by said signals at prescribed instants, and

control apparatus rendering said means responsive to said signals at only said instants regardless of magnitude changes in said signals at other times.

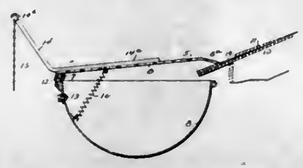


2,469,838
SULFOLANYL CARBAMATES
Rupert C. Morris, Berkeley, and Robert M. Horowitz, Los Angeles, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 28, 1946, Serial No. 706,094
18 Claims. (Cl. 260—77.5)

15. A compound of the formula:

wherein X is a member of the group consisting of oxygen and sulfur atoms, R is a hyrdocarbon radical containing from 1 to 20 carbon atoms, and R_1 and R_2 are members of the group consisting of hydrogen atoms, and hydrocarbon radicals.

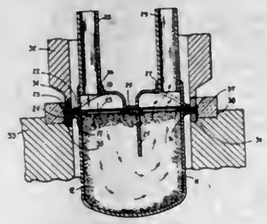
2,469,839
VENETIAN BLIND FITTING
Harry Nelson, New York, N. Y., assignor to Lorentsen Hardware Mf'g. Corp., New York, N. Y., a corporation of New York
Application July 5, 1947, Serial No. 759,055
8 Claims. (Cl. 160—177)



1. In a Venetian blind tape rocker of the type which is actuated by a noncircular tilt rod that pierces spaced portions of the rocker, the improvement which comprises: the spaced portions of the rocker being provided with wedge-shaped openings for receiving the rod, and the rocker being provided with means for crowding the rod into the wedge formations to thereby obviate angular lost motion between the rod and the rocker, said rod-crowding means being located between said spaced portions of the rocker.

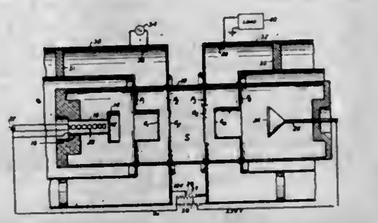
2,469,840
METAL FLASHING
Herbert P. Orth, Upper Darby, Pa.
Application May 9, 1946, Serial No. 668,489
1 Claim. (Cl. 108—26)

In flashing construction, a flashing cap element adapted for insertion in masonry walls, having a depending skirt with a continuous slot extending upward therein from the lower edge thereof, the inner wall of said skirt extending downwardly below said slot and having a protruding flange adjacent the edge thereof, and an independent counter-flashing strip inserted in said slot, a bead formed on said skirt above said flange, said bead serving to resiliently and frictionally retain the said strip in operative position and under tension, and said flange serving as a stop engageable by said strip.



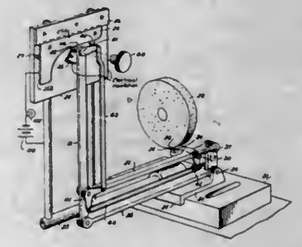
2,469,841
SCREEN FOR GUTTERS
John H. Ours, Arlington, Va.
Application May 12, 1947, Serial No. 747,438
3 Claims. (Cl. 108—30)

1. In combination a screen comprising a long and narrow web of reticulated material, means for hingedly connecting the outer edge of said web to a gutter, said web having its inner edge free and bendable and the innermost member of said web being of wavy formation and a rod rigidly affixed to said web along its outer edge, which rod constitutes an element of the means for hinging the web to the gutter, a crank arm connected to the screen and extending outwardly beyond the gutter, downward pull upon the crank arm swinging the screen upwardly and outwardly upon its hinge on the gutter edge.



2,469,842
DEHYDRATOR
Joseph Norman Paquin, Euclid, and Edward P. Bock, Cleveland Heights, Ohio, assignors to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application November 23, 1945, Serial No. 630,480
3 Claims. (Cl. 210—131)

1. A dehydrator comprising in combination a cup containing dehydrating material and having a flange around the rim of the cup, a head having inlet and outlet openings, a bridge extending diametrically of the head and lying along a plane substantially along the rim of said cup, and having flanges around the rim of the head conforming to the cup-flange, a screen, and a screen retainer, said retainer and screen having outlines conforming to the shape of the top of the cup, the retainer having a rim, a cross-piece, and a baffle formed integral with said cross piece and bent into a plane transverse to the plane of the retainer rim, said screen having said retainer



cross-piece joined thereto by fusion process with joining metal filling the screen through the thickness thereof along said retainer cross piece, fitting under the bridge of said head to close the screen to fluid passage over said retainer cross piece and under said bridge, said baffle extending downward into said dehydrating material and the flanges of said head and said cup being joined to secure said screen and retainer in position.

2,469,843
ELECTRON TRANSIT TIME TUBE
John R. Pierce, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 15, 1946, Serial No. 709,925
18 Claims. (Cl. 332—13)

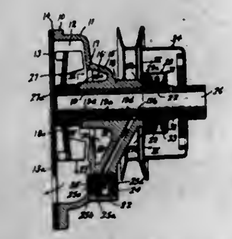
1. In high frequency translating apparatus of the type in which electron inertia effects play a controlling part, means for producing a substantially uniform electron stream, signal input means for imparting velocity variations to said stream in accordance with a periodic signal, and means for recovering energy from density variations of said stream resulting from said velocity variations, said signal input means including a region traversed by said electron stream and means for establishing a signal frequency electric field throughout said region and longitudinally thereof, the length of said region in the direction of traversal being such that traversal thereof by an electron occupies a period substantially equal to a whole number of periods of said signal.

2,469,844
FORMING MEANS FOR PROFILE GRINDING WHEELS
Charles Benjamin Albert Porter and Clifford Percy Seymour, Hillingdon, England, assignors to Harold Stuart Hallewell, Hayes, Middlesex, England
Application December 9, 1944, Serial No. 567,398
In Great Britain December 21, 1943
12 Claims. (Cl. 125—11)

1. Grinding wheel profiling apparatus including a frame capable of being mounted on a grinding machine, a holder for a plane template rigid with said frame, a pantograph linkage pivotally mounted on said frame, a template-follower member mounted on said linkage for rocking about an axis perpendicular to said template, a dressing-tool holder mounted on said linkage for rocking about an axis perpendicular to the plane of said template, a dressing tool mounted in said holder and having a radiused tip so set that the centre about which said radiused tip is formed is on the said rocking axis of the dressing-tool holder, the said template-follower member having a working tip which is geometrically similar in section to the section of the said tip of the dressing tool, and the ratio of the radii of the said two tips being equal to the mechanical advantage of the pantograph mechanism, coupling means between said template-follower member and said dressing-tool holder for constraining them to rock in unison, and an element rigid with said template-follower member and co-operating with the template to prevent displacements of the dressing tool such as to cause the shoulder of the dressing tool to be cut by the grinding wheel.

2,469,845
RUBBERY COPOLYMERS OF (TRIFLUOROMETHYL) VINYL AROMATIC COMPOUNDS
Mary W. Renoll, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 15, 1944, Serial No. 531,284
9 Claims. (Cl. 260—74)

5. A copolymer of from two to 50 percent by weight of the polymerizable monomers of a compound having the structural formula:



$$F_3C—R''—CH=CH_2$$

wherein R'' is a divalent aromatic hydrocarbon radical, and a compound of the structural formula:

wherein R and R' are radicals of the group consisting of hydrogen, chlorine and methyl.

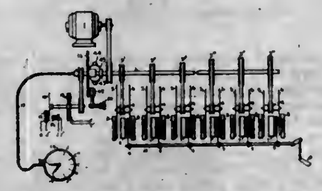
2,469,846
PUMP BEARING AND SEAL ASSEMBLY LUBRICATION
Jay M. Roth, Euclid, and William C. Mahler, Cleveland, Ohio, assignors to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application June 25, 1945, Serial No. 601,480
2 Claims. (Cl. 103—111)

1. A lubricated bearing assembly for pumps which comprises a pump housing having a pumping chamber with a peripheral outlet and a central inlet, a central hub portion projecting into said pumping chamber, a bearing sleeve in said hub portion, a pump shaft rotatably mounted in said bearing sleeve, a leg on said housing extending from the peripheral portion of said pumping chamber to the outer end of said hub, a hollow boss on said housing communicating with the pumping chamber, a filter plug in said hollow boss having a substantially vertical end face in said pumping chamber, said vertical end face being positioned for cleansing action by the flow of fluid in the pumping chamber, and said leg having a passage therethrough connecting said boss with the inner face of said bearing sleeve to conduct fluid from the pumping chamber through said filter plug to the pump shaft for lubricating the shaft.

2,469,847
PROCESS FOR PRODUCING FILAMENTARY REACTION PRODUCTS OF RUBBERY POLYMERS WITH SULFUR DIOXIDE
Gottfried Ernst Rumscheidt and Willem Leendert Johannes de Nie, Amsterdam, Netherlands, assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 14, 1947, Serial No. 760,924. In the Netherlands December 23, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 3, 1962
8 Claims. (Cl. 18—54)

1. In a process for producing filaments, the steps comprising forming a solution of a rubbery polymer of a compound selected from the group consisting of conjugated diolefins and chloroprene; adding to said solution a compound containing a hydroperoxide group; and thereafter extruding the resulting solution into a coagulating bath containing available sulfur dioxide, the extruded rubbery polymer there reacting with the sulfur dioxide to form an insoluble, filamentary reaction product.

2,469,848
PREPARATION OF FLUOROHYDROCARBONS
Leroy Frank Salisbury, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 21, 1945, Serial No. 584,034
7 Claims. (Cl. 260—653)



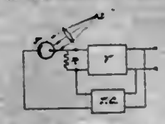
1. The process for obtaining a fluorohydrocarbon, which comprises passing a mixture of hydrogen fluoride and a hydrocarbon having a molecular weight of not more than 80 and the general formula RC≡CH, wherein R is of the group consisting of hydrogen atoms, monovalent saturated hydrocarbon radicals and monovalent hydrocarbon radicals containing an ethenic double bond as the sole unsaturation, over a discrete body as catalyst, said body comprising a mercury compound intimately associated with a solid, macromolecular, organic polymer which is substantially unaffected by said mercury compound and by anhydrous hydrogen fluoride, said mixture of hydrogen fluoride and hydrocarbon being passed in gaseous condition over said catalyst under substantially anhydrous conditions at a temperature between 0° C. and the temperature at which said organic polymer softens.

2,469,849
METHOD OF SPLICING BUTYL RUBBER
Frank F. Silver, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application January 19, 1946, Serial No. 642,385
9 Claims. (Cl. 154—14)

2. A method of splicing a tube of unvulcanized butyl rubber containing vulcanization agents incorporated therein which comprises joining the ends of the tube under pressure in the position of the desired splice, cooling the joint at a temperature below 50° F. by contact with a liquid at a temperature not higher than 32° F., inflating the tube to the desired size and shape in contact with a confining surface, and heating the joint to effect vulcanization.

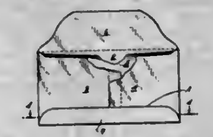
2,469,850
ELECTRIC MUSICAL INSTRUMENT
Emeric M. Spielman, New York, N. Y.
Application March 14, 1944, Serial No. 526,408
1 Claim. (Cl. 84—1.18)

An electric musical instrument for the performance of multivoiced music with orchestral effect comprising twenty four tone discs having transparent areas regularly arranged in concentric annular zones, the number of which increases from the innermost of the outermost zone according to the ratio 1:2 in the inner zones, in the ratio 1:2.1 in the outer zones, the said twenty four tone discs arranged in twelve groups of tone disc couples, the transparent area of one tone disc of each couple shaped to produce tone frequencies having a timbre poor in harmonics, the transparent areas of the other tone disc of the couple shaped to produce the same tone frequencies having a timbre rich in harmonics, a plurality of light bulbs and photo cells situated in combination with the tone disc couples to produce each note in a mixture of said two timbres, means to adjust the relation of harmonic poor and harmonic rich tone frequencies within the mixture, a key board, means to control the intensity of the light of each bulb according to the depth the coordinated key is depressed, a motor, means to rotate the twelve groups of tone disc couples with different speed increasing in the same ratio as the tone frequencies of twelve consecutive notes increase within an octave, means to control the speed of the motor, a speedometer indicating the pitch, current supply for the light bulbs, current supply for the photocells, an amplifier, a resistance shunting the input of said amplifier and a pedal to disconnect said shunt, two outlets one of which connected with the input, the other connected with the output of said amplifier, and a speaker.



2,469,851
TUBE COUPLING
Henry D. Stecher, Lakewood, Ohio, and Elmer F. Jackman, deceased, late of Lakewood, Ohio, by Helen E. Jackman, administratrix, Lansing, Mich.; said Stecher assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application January 18, 1946, Serial No. 642,018
3 Claims. (Cl. 285—167)

1. In combination a body having a bore therein, a tube received within said bore, an annular groove with a cylindrical outer wall in said body around the portion of said bore receiving said tube with an O-ring seal in said groove and a relatively stiff ring within said groove between said sealing ring and the side wall of said groove away from the interior of said body for protecting said sealing ring against extrusion through the clearance between the bore of said body and the outer surface of said tube.

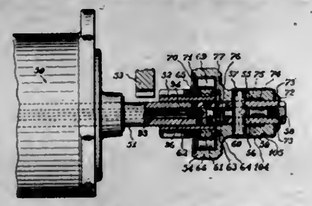


2,469,852
METHOD OF OPERATING PHOTOELECTRIC DEVICES
Maximiliaan Julius Otto Strutt and Aldert van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 16, 1946, Serial No. 684,091
In the Netherlands December 4, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 4, 1962
3 Claims. (Cl. 250—41.5)

1. The method of operating a photo-electric cell having a maximum permissible current production to obtain an improved signal-to-noise ratio comprising the steps of exciting said cell with a signal light having a variable intensity which varies beyond a predetermined intensity above which value said intensity ordinarily reacts on said photo-electric cell to produce a current therein greater than said predetermined maximum permissible current, amplifying the resultant output of the excited cell, and degenera-

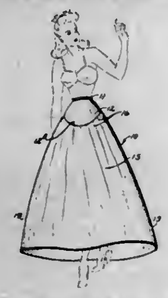
tively feeding back to said cell a portion of the amplified output of said cell to a degree limiting the current in said cell to said predetermined maximum permissible current.

2,469,853
MULTISECTION ENVELOPE AND BLANK FOR FORMING THE SAME
Thomas A. Terry, New York, N. Y., assignor to C. & M. Envelope Company, New York, N. Y., a corporation of New York
Application April 10, 1945, Serial No. 587,534
1 Claim. (Cl. 229—72)



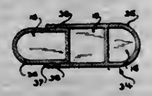
An envelope formed from a single unitary folded paper blank, said blank having a central portion to form the front of the envelope and having the same size as the finished envelope said front portion having a top wing to form the sealing flap of the envelope, and having a bottom wing of at least the same size as said front portion and arranged to be folded against said front portion to form a partition for dividing the envelope into two distinct compartments said front portion also having a pair of lateral wings each being shorter than the length of said front portion and arranged to be folded towards each other to form the back of the envelope, said bottom wing being initially folded along a line which is off-set below the lower edge of said front portion to form an overhang said overhang being refolded back on itself along the bottom edge of said front portion and sealed to said folded-over lateral wings to seal the bottom of the envelope and to provide a reinforcement therefor.

2,469,854
ENGINE STARTER GEARING
Bernhard Ulrich, Jr., and George W. Pontius, III, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 29, 1945, Serial No. 596,514
10 Claims. (Cl. 74—9)



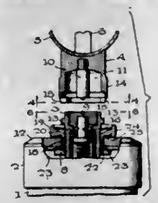
1. In an engine starter drive a power shaft, a pinion slidably journalled thereon for movement into and out of mesh with a gear of an engine to be started, means for actuating the pinion including a control member loosely mounted on the shaft, means for imparting rotary and longitudinal movement from the control member to the pinion, said control member having an inclined slot, a pin diametrically traversing the shaft and said slot to form an inclined connection between

the shaft and control member, a detent spring on the shaft adapted to engage the control member when in idle position and yieldingly oppose



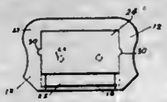
movement thereof, and unitary means for immobilizing the pin and the spring with respect to the shaft.

2,469,855
CRINOLINE SKIRT
Irwin Cohen, Brooklyn, N. Y.
Application January 4, 1946, Serial No. 638,933
4 Claims. (Cl. 2—221)



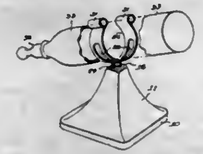
1. A skirt, comprising a waist band for engaging about the waist of a wearer, a skirt rear portion attached at its top edge to the bottom edge of the rear half of said waist band and depended therefrom, a skirt front portion having its top edge spaced from the bottom edge of the front half of said waist band and having its side edges secured to the adjacent lower side edge portions of said skirt rear portion, and a yoke set into the space between the top edge of said skirt front portion and the bottom edge of said waist band, said yoke having its edges secured to the top edge of said skirt front portion, to the bottom edge of the front half of said waist band and to the adjacent side edge portions of said rear skirt portion above the lower edge portions thereof which are secured to said skirt front portion.

2,469,856
MULTICHAMBER CONTAINER
Lawrence E. Robertson, East Weymouth, Mass.
Application September 28, 1945, Serial No. 619,201
1 Claim. (Cl. 220—20)



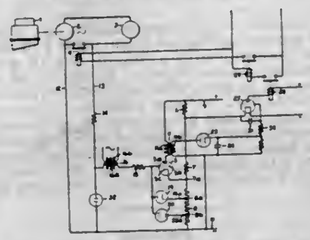
A container comprised of two elements, the horizontal and vertical cross-sectional areas of one element being smaller than the corresponding cross-sectional areas of the other element, the larger element having a plurality of chambers, one of which has an open side through which the smaller element can be completely inserted with either of two sides foremost, and coacting interlocking means on the two elements capable of securing them to each other whichever of the two sides of the smaller element enters foremost, the open sided chamber being substantially filled when said smaller chamber is completely inserted therein.

2,469,857
BATTERY HANDLE CONNECTOR
William N. Allyn, Skaneateles, N. Y., assignor to Welch Allyn, Inc., Auburn, N. Y., a corporation of New York
Application August 3, 1944, Serial No. 547,852
3 Claims. (Cl. 240—10.6)



1. A battery handle connector for detachably coupling a battery handle to diagnostic instruments and the like, comprising a connector member carried by the instrument, and a complementary connector member carried by the battery handle, said connector members being telescopically engageable one over the other and each including mechanical interlocking means mutually engageable pursuant to relative telescopic and angular movements of the connector members, a flexible resilient disc member mounted on one of the connector members and radially extending outwardly therefrom for yieldable abutting engagement with the other connector member upon coupling of the battery handle to the instrument, and means for supporting the disc member, said supporting means comprising a radially extended seat having a recess in which the disc member is received, said seat being axially adjustable on the connector member, and means for restraining said seat against movement relative to the battery handle when in adjusted position.

2,469,858
PENCIL SHARPENER
Walter J. Brooks, Baltimore, Md.
Application April 4, 1945, Serial No. 586,513
1 Claim. (Cl. 120—90)

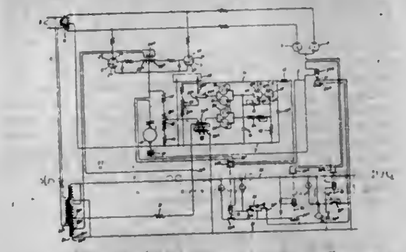


A blade holder comprising in combination, a holder frame having opposite surfaces diverging from one edge thereof, one of said surfaces being provided with a recess extending from said edge, there being notches provided on opposite sides of said recess, a side piece having projections for engagement with a blade and positioning projections, said side piece being located in said recess with said positioning projections engaged in said notches, said recess and said side piece having their engaging surfaces correspondingly arcuate, said frame being provided with openings adjacent said edge and said side piece terminating inwardly of said edge.

2,469,859
NURSING BOTTLE HOLDER
Ralph C. Charbeneau, Mount Clemens, Mich., assignor to Randolph E. Watson, Pamlico County, N. C.
Application October 13, 1945, Serial No. 622,193
2 Claims. (Cl. 248—105)

1. In a nursing bottle holder, a base having an upwardly extending portion with a tapered bore in the upper part thereof, a tapered plug disposed in and mating with said bore and having relatively movable gripping portions with a socket therein, a pivot member with a curved portion secured in said socket, a bottle carrier connected to said pivot member, said plug having a slot therein adjacent said socket whereby to provide a resilient gripping action upon said pivot member, and a pulling device on said base connected to said tapered plug and urging said plug downwardly into said tapered bore whereby to anchor said plug to said base and adjust the gripping action of said socket.

2,469,860
CONTROL DEVICE
William D. Cockrell, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 8, 1944, Serial No. 567,302
5 Claims. (Cl. 175—375)



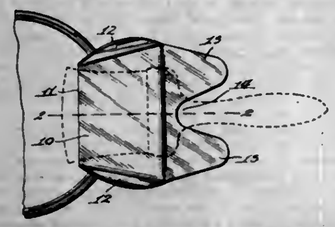
1. In combination, an electric valve having an anode, a cathode and a control grid, a voltage divider having terminals for connection to a source of direct voltage, connections from the anode and cathode of said valve to said voltage divider, means for supplying to the grid cathode circuit of said valve a direct signal voltage having a relatively wide range of values, means for superimposing on said signal voltage a periodically varying voltage of relatively low magnitude, thereby to cause a current having a periodically varying component to flow in said output circuit, means responsive to said periodically varying component to initiate a controlling operation, and means for rendering said valve unresponsive to said periodically varying voltage when the magnitude of said signal voltage is outside a relatively narrow range of values having a predetermined maximum value and a predetermined minimum value comprising a rectifier valve connected from said grid to a point of constant voltage on said divider to render said rectifier conducting in response to a grid voltage in excess of said maximum value and a reversely connected rectifier connected from said grid to a different point of constant voltage on said divider to render said reversely connected valve conducting in response to a grid voltage less than said minimum value.

2,469,861
CHEWING GUM BASE
Wallace P. Cohoe, New York, N. Y., assignor to American Chicle Company, Long Island City, N. Y., a corporation of New Jersey
No Drawing. Application March 2, 1946, Serial No. 651,631
6 Claims. (Cl. 99—135)

1. A permanent-chew, but digestible, chewing gum, substantially fat free and substantially insoluble in the mouth, comprising a prolamine base, dibasic calcium phosphate, lecithin, and glycerine-water solution sufficient to bring said dry materials into plastic form.

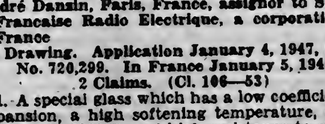
2,469,862
THYRATRON MOTOR CONTROL SYSTEM
Benjamin Cooper, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application February 6, 1948, Serial No. 6,690
3 Claims. (Cl. 318—271)

1. A control system for an electric motor having an armature and a field winding comprising a source of control voltage, a first electric valve having an anode, a cathode and a control grid and having its anode connected to the positive side of said source, and a first resistor connected between said cathode and the negative side of said source for producing across said resistor a variable speed reference voltage, a capacitor and a second resistor connected in series with each other, a connection from the junction point of said capacitor and second resistor to said grid one terminal of said second resistor being connected to said cathode and one terminal of said capacitor being connected to the negative side of said source, rectifier means for supplying a direct voltage to said armature comprising electric valve apparatus having an anode, a cathode and a control grid, means for producing a signal voltage proportional to the speed of said motor, means re-



sponsive to the difference of said signal voltage and said reference voltage across said first resistor for varying the phase relationship of the grid and anode voltages of said rectifier to control the voltage supplied to said armature, a source of adjustable standard voltage, and means for limiting said reference voltage to a value corresponding to the value of said standard voltage comprising an electric valve having a cathode connected to a point on said standard voltage source and an anode connected to the junction point of said second resistor and said capacitor.

2,469,863
STOCKING PROTECTOR
Josephine McKenna Conley, Cleveland, Ohio
Application August 25, 1947, Serial No. 770,358
1 Claim. (Cl. 36—2)



A stocking protector comprising a body of water-proof flexible material formed to provide elongated calf and ankle engaging portions, oppositely disposed transverse extensions of said body integral therewith, cooperating means on said transverse portions for securing the same together in overlapping relation about the leg of the wearer, said ankle engaging portion comprising a plurality of substantially parallel abutting sections secured together along their abutting edges and to the calf portion of said body diagonally of the abutting sections at their upper ends whereby to provide lateral and longitudinal reinforcement to said body, and to cause the same to conform to the leg of the wearer.

2,469,864
PAINTBRUSH HOLDER
Belle B. Craft and Lynn B. Craft, North Hollywood, Calif.
Application November 21, 1945, Serial No. 630,022
1 Claim. (Cl. 248—110)

A paint brush holder and drain pan comprising a plate, resilient means on the underside of said plate for clamping the rim of a container which means comprises a horizontally disposed hook with its opening rearwardly presented the rear portion of said plate being upwardly inclined with respect to the front portion and provided with a centrally disposed paint brush handle receiving notch and upwardly inclined flanges on the sides of the forward portion of said plate.

2,469,865
HAND TOOL
Clifford O. Crow, Columbia, Mo.
Application March 13, 1946, Serial No. 654,158
1 Claim. (Cl. 294—104)

In a pair of long shanked tongs, the combination of a fixed jaw comprising an extension of the tong's shank, a movable jaw mounted to turn on a pivot fixed in said shank, an arm forming an extension on said movable jaw, an operating lever pivoted for movement within said shank, first and second camming pins mounted in said operating lever between which said arm is passed, and means including a link extending along and in said shank connected to said operating lever to pivot the same and urge said camming pins against said arm whereby said movable jaw is moved toward and away from said fixed jaw.

2,469,866
HOLDER FOR FLATIRONS
Carl A. Crusell, Minneapolis, Minn.
Application April 9, 1948, Serial No. 19,961
3 Claims. (Cl. 248—117.2)

5. A holder for flatirons and the like comprising a mounting bracket adapted to be attached to an ironing board, a pair of spaced parallel guides fixed to said bracket, an elongated shank adapted to be removably received in said guides for longitudinal shiftable relation thereto, means for clamping said guides against said shank to hold said shank in adjusted extended position, and a handle receiving cradle fixed at the outer end of said shank for receiving the handle of a flatiron therein and supporting said iron therefrom.

2,469,867
GLASSES HAVING A LOW COEFFICIENT OF EXPANSION
André Dansin, Paris, France, assignor to Societe Francaise Radio Electrique, a corporation of France
No Drawing. Application January 4, 1947, Serial No. 720,299. In France January 5, 1946
2 Claims. (Cl. 106—53)

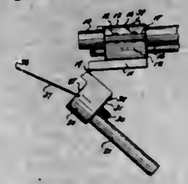
1. A special glass which has a low coefficient of expansion, a high softening temperature, equal, at least, to 600° C. and high resistance to chemical agents, which is easy to work, is particularly

suited for the manufacture of vacuum tubes, more especially radio-electric tubes, and which has good electrical qualities, said glass being characterised in that it is composed of the following elements:

	Per cent
SiO_2	52 to 55
Na_2O	0.4 to 0.9
Al_2O_3	4 to 6
B_2O_3	6 to 10
ZnO	2 to 4
PbO	10 to 16
BaO	8 to 12
CaO	3 to 8
MgO	0 to 3

the total percentage of all the three ingredients PbO, BaO and CaO being equal to at least 24%.

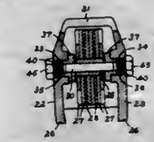
2,469,868
PRODUCTION OF HEAVY METAL NICOTINE SILICATES
Frederick E. Dearborn, Washington, D. C.
No Drawing. Original application November 7, 1945, Serial No. 627,270. Divided and this application May 16, 1947, Serial No. 748,644
4 Claims. (Cl. 260—270)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process comprising reacting a soluble nicotine-heavy metal salt, wherein the heavy metal is selected from the group consisting of copper, zinc, and mercury, with substantially pure sodium silicate in a substantially neutral aqueous medium at a temperature of about from 50° to 100° C. to form a nicotine-heavy metal silicate.

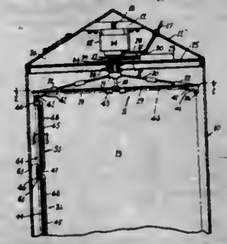
2,469,869
PRODUCTION OF WATER REPELLENT HEAVY METAL NICOTINE SILICATES
Frederick E. Dearborn, Washington, D. C.
No Drawing. Original application November 7, 1945, Serial No. 627,270. Divided and this application May 16, 1947, Serial No. 748,645
2 Claims. (Cl. 260—270)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of preparing a nicotine-heavy metal silicate having water-repellent properties comprising mixing a heavy metal silicate selected from the group consisting of copper silicate, zinc silicate, and mercuric silicate, with a solution of about from 1 to 5 percent by weight of a soluble alkali metal salt of a solid monocarboxylic acid containing at least 10 carbon atoms, and reacting the resulting mixture with a member selected from the group consisting of free nicotine and nicotine sulfate in a substantially neutral aqueous medium at a temperature of about from 50° to 100° C., to form a nicotine-heavy metal silicate having water-repellent properties.



2,469,870
CARTRIDGE FIRING ATTACHMENT FOR AIR RIFLES
Ralph Hilliard Dixon, Belleville, N. J.
Application March 12, 1948, Serial No. 14,488
9 Claims. (Cl. 42—1)

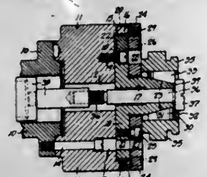
1. A cartridge firing attachment for an air rifle comprising a breech member having a cartridge bullet discharge barrel extending outwardly therefrom, means to support an explosive cartridge within said breech member in aligned relation to the bore of said barrel, and means to connect said breech member in attached relation to the barrel of an air rifle with the supported cartridge aligned with the bore of the latter,



whereby a shot air impelled through the air rifle barrel will strike and fire said cartridge.

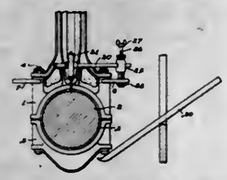
2,469,871
GRINDING WHEEL DRESSER
George Eaton, Urbana, Ohio, assignor to The Desmond-Stephan Mfg. Co., Urbana, Ohio, a partnership
Application June 13, 1946, Serial No. 676,367
12 Claims. (Cl. 125—37)

1. A tool for dressing grinding wheels comprising a head formed to provide a pair of spaced side walls, a bushing secured in each side wall, a pin rotatably journaled in said bushings, cutters rotatably mounted on said pin between the side walls, each said bushing having a flange portion and a shank portion with a central bore extending through said portions, the length of said shank portion being less than the thickness of the side wall, the outer portion of said bore being threaded and a headed screw threadedly received in said outer threaded portion.



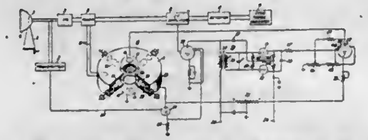
2,469,872
RAY-EMISSION APPARATUS
George G. Eliner, Long Island, N. Y.
Application November 30, 1944, Serial No. 565,967
1 Claim. (Cl. 250—52)

In ray-emission apparatus, in combination, a motor, a vertical shaft, means including said motor for rotating said shaft, a plurality of arms extending from said shaft in a generally horizontal direction, a socket on each of said arms mounted adjacent the end thereof remote from said shaft, a plurality of bactericidal ray-emitting lamps each adapted to be secured in a respective one of said sockets for rotation around said shaft,



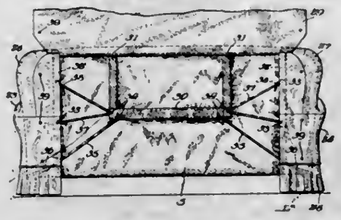
circuit means for energizing said lamps through said respective sockets, said sockets being arranged to support said lamps in substantially vertical position, auxiliary socket means and additional bactericidal ray-emitting lamps connectable by said auxiliary socket means in tandem with respective ones of the first-mentioned lamps, clamping means engaging said auxiliary socket means to hold each pair of tandem-connected lamps in fixed relative position, said sockets being arranged to support said lamps in substantially vertical position, and a plurality of second and third sockets mounted adjacent the first-mentioned sockets and adjacent said shaft, respectively, for supporting said lamps in substantially horizontal position alongside respective ones of said arms.

2,469,873
PRECISION EXPANDING ADAPTER
Frederick I. Ernest, Elkhart, Ind.
Application April 16, 1945, Serial No. 588,701
4 Claims. (Cl. 279—2)



2. A precision expanding adapter for mounting a work piece having a finished bore and a finished end face, comprising a body having an end surface, a rigid tapered spindle projecting from said body, means for locating said spindle in predetermined angular relation to said face and on a selected axis, an expansible unitary bushing having a tapered bore fitting on said spindle, and means for shifting said bushing on said spindle, said work piece encircling said spindle and bushing with its finished face in engagement with said body face.

2,469,874
GAUGE SUPPORT
John J. Fetsko, Jr., Neville Island, Pa.
Application January 7, 1944, Serial No. 517,303
5 Claims. (Cl. 248—226)



1. A support for a gage for testing bearings between a crank shaft and a conecting rod attached to it, comprising an extensible clamp formed of a pair of plates adjustably connected to each other at their inner ends for relative longitudinal movements and each having a hook at its outer end formed to engage a side of the connecting rod, a gripper borne by one of said plates outside of a plane passing through their said hooks and movable to engage the connecting rod for fixing the clamp rigidly thereon, a post attached to the clamp for vertical and angular adjustment with relation thereto, and a gage-supporting rod firmly attached to said post for longitudinal adjustment with relation thereto.

2,469,875
AUTOMATIC FREQUENCY CONTROL FOR PULSE TRANSMISSION SYSTEMS
George W. Fyler, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application January 26, 1944, Serial No. 519,709
5 Claims. (Cl. 343—13)

5. In combination, means to transmit oscillations in recurrent pulses, means to receive said oscillations both directly and after reflection from a remote body, an oscillator heterodyning with said received oscillations to produce a beat frequency, said oscillator comprising an electron discharge device having an anode and a cathode and being adapted to produce oscillations of frequency dependent upon the potential between said anode and cathode, means to produce a unidirectional potential between said anode and cathode dependent upon the frequency of said beat note produced only during reception of said directly received oscillations, and means to maintain said potential throughout the interval between said transmitted pulses and during reception of said oscillations after reflection.

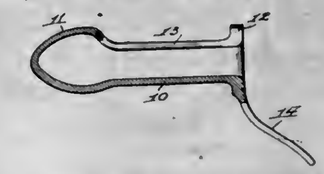
2,469,876
SLIP COVER
Estelle Gould, Chicago, Ill.
Application July 2, 1947, Serial No. 758,585
2 Claims. (Cl. 155—182)

1. A slip cover for an article of furniture, comprising a cover assembly including opposed article side and arm envelopes, opposed article back-end covering pieces and a front-back panel between and connected to the envelopes and pieces, the free end portions of said envelopes and pieces being extendable inwardly and over portions of the rear side of the back of the article of furniture and arranged in spaced relation, a substantially U-shaped yoke connected at certain of its ends to an intermediate portion of the upper and rearward end of said front-back panel and adapted to normally hang therefrom, means for adjustably connecting the opposite sides of said yoke to relatively opposed portions of the free end portions of the envelopes and pieces, longitudinally adjustable means connected to other portions of said yoke and detachably connectable to relatively opposed fixed portions of the article of furniture, a second panel connected at one end to the upper and rearward end of said front-back panel, the width of said second panel being sufficient to cover the space between said free end portions of the envelopes and pieces and said U-shaped yoke, and means for detachably connecting portions of said second panel to adjacent portions of the free end portions of the envelopes and pieces.

2,469,877
COMBINATION TOOL
Harry M. Haberman, New York, N. Y.
Application March 30, 1946, Serial No. 658,461
4 Claims. (Cl. 219—21)

1. A combination pair of pliers and soldering iron, comprising two hinged jaws, a first handle extending from one jaw, a thermal conducting member extending from the other jaw below the hinge thereof, an electrical heating element embracing at least part of said thermal conducting member, a body member holding said heating element therewithin, and a second handle extending from said body member and mating with said first handle, the portions of jaws above said hinge being relatively narrow and free from obstructions to the mechanical functioning thereof.

2,469,878
SWITCH CONTACT
Cyril H. Hannon and Alfred L. Jenny, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
Application June 23, 1945, Serial No. 601,334
5 Claims. (Cl. 200—166)



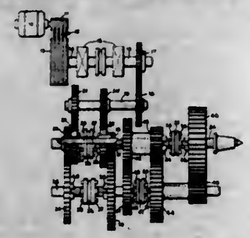
4. An oil immersed switch comprising cooperating switch contacts, each of said contacts consisting of a metal base of high electrical conductivity with a fused coating of tin thereon, said tin coating having a thickness of approximately 0.0002".

2,469,879
PREPARATION OF BORON COMPOUNDS
Dallas T. Hurd, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 22, 1945, Serial No. 623,858
11 Claims. (Cl. 23—204)

1. The method of preparing boron compounds which comprises effecting reaction at a temperature of from 200° to 400° C. between a boron halide and hydrogen while the said reactants are in contact with a mass containing an electropositive metal selected from the class consisting of the alkali metals, the alkaline-earth metals, magnesium, zinc and aluminum.

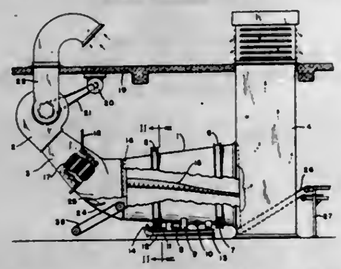
8. The method of preparing boron hydrides which comprises effecting reaction at a temperature of from 200° to 400° C. between a boron halide and hydrogen while the said reactants are intimately associated with a mass containing (1) an electropositive metal selected from the class consisting of the alkali metals, the alkaline-earth metals, magnesium, zinc and aluminum, and (2) an inorganic salt capable of forming with a halide of the metal of (1) a product which is liquid at the temperature of the reaction between the aforesaid boron halide and hydrogen, and separating the boron hydrides that are formed from the other products of the reaction.

2,469,880
PROCTOSCOPE
Maurice H. Kowan, Los Angeles, Calif.
Application August 5, 1947, Serial No. 766,152
1 Claim. (Cl. 128—5)



A proctoscope comprising a hollow cylindrical body, a pointed hollow bulbous member on the forward end of said body, a circumferential flange projecting laterally from the rear end of said body, there being a longitudinally disposed slot formed in said body and extending a short distance into the inner end portion of said bulbous member and through said flange, and a handle depending from said flange opposite from said slot and there being notches formed in said flange between said slot and handle and at right angles thereto to serve as fingerholds.

2,469,881
HEADSTOCK TRANSMISSION GEAR SHIFTING MECHANISM
Howard E. Laubach, Cincinnati, and Robert C. Johnson and Vincent J. Kramer, Norwood, Ohio, assignors to The Boye & Emmes Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio
Application June 28, 1947, Serial No. 757,848
11 Claims. (Cl. 74—334)

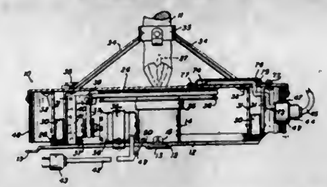


1. In a transmission gear shifting mechanism, a preselecting means comprising a dial, a cam drum, and a series of levers positioned by rotation of said drum and in operative connection with the shiftable clutch members of said transmis-

sion, and a shifting mechanism actuated by a shifter lever so as to operatively engage and have said series of levers to actuate said shiftable

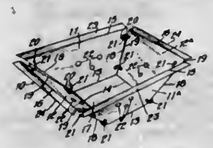
clutch members of said transmission to cause a change in the speed of said transmission from that at which it was initially operating to the one preselected by said preselecting means.

2,469,882
CONTINUOUS DRIER
Arthur A. Locke, Detroit, Mich.
Application March 24, 1945, Serial No. 584,638
7 Claims. (Cl. 34—136)



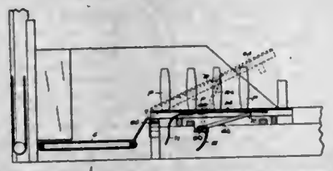
1. A continuous laundry dryer comprising a sleeve having open inlet and outlet ends, means for rotating the sleeve, the outlet end of the sleeve being larger in diameter than the inlet end and the peripheral wall of the sleeve being uniformly tapered from the inlet end to the outlet end, a duct communicating with the inlet end of the sleeve and an outlet duct communicating with the opposite end of the sleeve, said inlet duct at its point of communication with the inlet end of the sleeve being substantially equal in area to the area at the inlet end of the sleeve, means within the sleeve for picking up laundry and dropping it from an elevated position upon rotation of the sleeve, and forced air means directed from the inlet duct for advancing the laundry toward the outlet end of the sleeve.

2,469,883
PREPARATION OF METHYL SILICONE ELASTOMERS
James Marsden and George F. Roedel, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application June 11, 1945, Serial No. 598,913
4 Claims. (Cl. 260—46.5)



1. The process of preparing a solid, elastic, curable methylpolysiloxane which comprises advancing a liquid methylpolysiloxane containing an average of from 1.98 to 2.00 methyl groups per silicon atom, and consisting essentially of a liquid polymeric dimethylsiloxane containing up to 2 mol per cent copolymerized monomethylsiloxane to the solid, elastic, curable state with an agent consisting solely of an acidic material selected from the class consisting of sulfuric acid and chlorosulfonic acid, and thereafter removing substantially all of the acidic material from the solid elastic product.

2,469,884
REVOLVING CHRISTMAS TREE STAND
Anthony N. Masone, Waterbury, Conn.
Application June 19, 1947, Serial No. 755,652
1 Claim. (Cl. 248—45)



In a revolving Christmas tree stand, a stationary supporting base, a revolving plate, an annular bearing supporting said plate on said base, means for supporting a Christmas tree in erect position on said plate, insulated electric conductor means extending from the stationary supporting base through said annular bearing to said revolving plate, and adapted to conduct current to electrical apparatus upon said plate, said conductor means including relatively movable contacts mounted within said annular bearing for maintaining the continuity of the conductor means during continued revolution of the revolving plate, a receptacle, and means mounting said receptacle on said plate.

2,469,885
COLLAPSIBLE FIREBOX
Charles P. Molla, New Hyde Park, N. Y.
Application January 20, 1945, Serial No. 573,790
1 Claim. (Cl. 126—144)

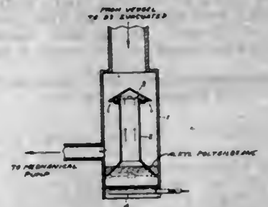
A collapsible fire box comprising a pair of similar opposed wall plates, having side edge portions converging from the upper edge to the lower edge thereof, another opposed pair of similar but smaller wall plates having side edge portions converging from the upper edge to the lower edge thereof, side edge portions of both pairs of plates having alined apertures inwardly of and adjacent upper and lower edges, rings mounted in alined apertures of adjacent plates in providing a free hinge coupling between said plates, said hinge coupling producing of the assembled plates a substantially hopper-shaped fire box body wherein the wall plates are adapted for movement into collapsed position with one wall plate of each pair disposed upon an adjoining wall plate of each pair, the upper edge portion of at least one pair of wall plates having outwardly extending supporting flanges, said wall plates having small draught apertures centrally thereof, and other draught apertures formed between side edges of adjacent plates.

2,469,886
PIN DISCHARGING MECHANISM FOR BOWLING ALLEYS
John F. Murphy, Middleboro, Mass., assignor to Murphy Automatic Pinsetter Co., Inc., Cambridge, Mass., a corporation of Massachusetts
Original application April 13, 1943, Serial No. 482,852. Divided and this application December 4, 1944, Serial No. 566,461
3 Claims. (Cl. 273—43)

1. In a machine of the class described, an alley floor section for supporting standing pins hinged at its rear end and means to raise the same to an elevated and rearwardly sloping position to discharge pins thereon to the pit comprising a lifting member with which said section is engaged by force closure and an electric drive the circuit of which comprises contacts on said section and lifting member respectively and which are closed together when the two are in normal engagement, whereby if the section is jammed in raised position, drive of the machine will be intermitted through motion of the member relative to the section.

2,469,887
FORGEABLE HIGH-TEMPERATURE ALLOYS
Eugene L. Olcott, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 2, 1945, Serial No. 619,899
3 Claims. (Cl. 148—31)

1. A heat treated and heat-resistant alloy containing 10 to 14% chromium, .06 to .13% carbon, .2 to .6% columbium, .2 to 1% manganese, .15 to .45% silicon, .1 to .8% nickel with the balance iron, the ratio of columbium to carbon varying from about 3 up to 5:1.



2,469,888
ORGANO-POLYSILOXANES
Winton I. Patnode, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 29, 1942, Serial No. 463,814
24 Claims. (Cl. 260—448.2)

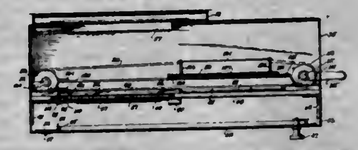
1. Liquid polysiloxanes having the formula

$$R_{(2a+2)}Si_aO_{(a-1)}$$

wherein the various R's represent monovalent hydrocarbon radicals, and a is a whole number equal to at least 3, and in which every oxygen atom is situated between two silicon atoms, every silicon atom is attached through oxygen to at least one other silicon atom, and each terminal silicon atom in the Si—O—Si skeletal structure is joined to three R groups.

2,469,889
VACUUM PUMP
Donald F. Wilcock and Edward G. Chace, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application June 28, 1945, Serial No. 602,158
9 Claims. (Cl. 230—101)

1. Means for producing vacua which comprises a condensation pump containing a high molecular weight liquid alkyl polysiloxane as a pumping fluid, said polysiloxane containing from 9 to 17 silicon atoms per molecule.



2,469,890
LINEAR METHYLPOLYSILOXANES
Winton I. Patnode, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Original application October 29, 1942, Serial No. 463,814. Divided and this application March 8, 1946, Serial No. 653,131
4 Claims. (Cl. 260—448.2)

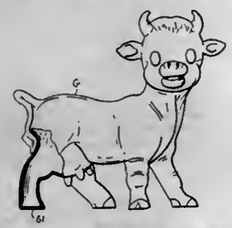
1. A methylpolysiloxane corresponding to the formula

$$(CH_3)_3Si\left[\begin{matrix}CH_3\\|\\O-Si\\|\\CH_3\end{matrix}\right]_n O-Si(CH_3)_3$$

where n represents an integer which is at least 1 and not more than 4.

2,469,891
COLOR SEPARATION CAMERA
Frank T. Powers, Glen Cove, and Augustin J. Powers, Jr., Roslyn Heights, N. Y., and Francis E. Wattier, St. Lambert, Quebec, Canada, assignors to Powers Photo Engraving Company, Glen Cove, N. Y., a corporation of New York
Application September 14, 1945, Serial No. 616,342
12 Claims. (Cl. 88—24)

1. In a color separation camera, the combination of means for supporting a sensitized element or a ground glass in the focal plane of the camera, a slideway for a second sensitized element to overlie the first element in register therewith



or to be positioned completely to one side thereof where it may be placed in or removed from the slideway, said slideway having edges to overlie opposite margins of the second element and having a fixed position axially of the camera, spring means to press against opposite edges of the second sensitized element and urge the element against the fixed edges and cooperating with said slideway for holding the second element parallel to the first element.

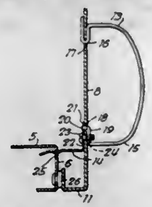
2,469,892

HOLLOW ARTICLE AND METHOD AND APPARATUS FOR PRODUCING THE SAME

Dietrich G. Rempel, Akron, Ohio, assignor to Rempel Enterprises, Akron, Ohio, a partnership

Application September 10, 1947, Serial No. 773,209
16 Claims. (Cl. 18—26)

1. A method of making hollow articles, comprising the steps of providing a plurality of sectional molds of porous material, each mold having a plurality of article-forming cavities therein and each cavity being supplied with a predetermined volume of aqueous dispersion material sufficient for forming an article of desired wall thickness, and while maintaining said molds in stacked relation applying compound rotary motion to the stack about a plurality of angularly disposed axes to deposit the predetermined volumes of dispersion material in successive accreted layerings over the surface portions of the respective article-forming cavities in diverse directions of flow of the dispersion material, whereby said deposition and accretion of the dispersion material is accomplished by removing water from the dispersion material by capillary attraction outwardly through the mold pores and evaporation at the outer mold surface portions.



15. Apparatus for producing hollow articles by deposition of aqueous dispersion material, comprising a plurality of sectional cavity molds of porous material each having at least one article-forming cavity therein adapted to contain predetermined quantities of the dispersion material in all positions of rotation of the molds, a mold support having guide means for removably retaining said molds in stacked relation, releasable clamping means on said support for clamping the molds in said stacked relation in said support, spacer means between adjacent molds of the stack, said support and spacer means being proportioned to provide for exposure of the pores of the molds over substantial proportions of the outer surface areas of the molds including the spaced adjacent surfaces of the same, means for mounting said mold support to be rotatable about a plurality of angularly disposed axes to apply compound rotary motion to said mold stack, and means operable to apply said compound rotary motion to said mold support to deposit predetermined quantities of dispersion material in successive accreted layerings over the surfaces of the respective article-forming cavities, by capillary removal of water from the dispersion material outwardly through the mold pores and evaporation at said exposed outer mold surface areas.

2,469,893

CABINET DOOR PULL AND CATCH

Lyle C. Rockwell, Elgin, Ill., assignor to Acme Visible Records, Inc., Chicago, Ill., a corporation of Delaware

Original application May 22, 1944, Serial No. 536,679. Divided and this application March 29, 1945, Serial No. 585,465
1 Claim. (Cl. 292—76)

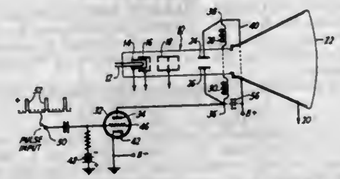
A door pull and catch structure comprising, a panel formed with a pair of handle receiving slots and a bolt aperture, a handle formed from a single elongated piece of metal, one end of said handle being bent C-shape for detachable engagement in one of said handle receiving slots, the other end of said handle being bent inwardly toward the C-shape end of the handle and substantially parallel to said panel and provided with a threaded aperture and having a prong formed at its inner end projecting laterally through the other of said handle receiving slots, a detent spring clip comprising a generally L-shape body, one leg of which has a bowed detent portion formed thereon near the free end thereof to be inserted into a keeper slot, the other leg of said detent spring clip providing an attaching portion disposed in abutment with the inside of said panel and having an elongated longitudinally extending slot formed therein to receive the aforesaid prong on the handle for adjustment of the detent spring clip relative to said handle, and a fastening screw entered through said slot in the detent spring clip and through said bolt aperture provided in said panel and threaded in said aperture provided in the inwardly bent end portion of the handle to fasten the handle and detent spring clip in adjusted relation against opposite sides of said panel.

2,469,894

METHOD FOR IMPROVING THE SURFACE OF SYNTHETIC RUBBER SPONGE

Thomas H. Rogers, Jr., Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

No Drawing. Application June 12, 1946, Serial No. 676,341
5 Claims. (Cl. 260—84.5)



3. In a method of preparing a sponge-like composition by frothing a latex of a copolymer of butadiene-1,3 and a polymerizable mono-olefinic monomer, the improvement which comprises heating the surface of the frothed mass, prior to gelling, to a temperature between 40° C. and 90° C. by contacting it with steam.

2,469,895

CATHODE-RAY BEAM DEFLECTION CIRCUIT

Gordon F. Rogers, New Hyde Park, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application February 12, 1947, Serial No. 728,001
4 Claims. (Cl. 315—24)

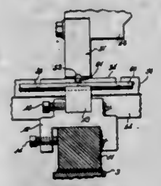
3. In a system in which the electron scanning beam of a cathode ray tube is deflected, the combination of a pair of electrostatic deflecting plates within said cathode ray tube, a pair of electromagnetic deflecting coils exterior of said tube, means for so connecting said pair of plates and said pair of coils that the electrical capacity between said plates together with the electrical inductance of said coils forms a damped resonant circuit, and means for periodically applying pulses of energy to shock-excite said circuit, the frequency of said pulses being a small fraction of the free oscillation frequency of said damped resonant circuit.

2,469,896

ADJUSTABLE PEDESTAL STOOL

Harold M. Schaef, Chicago, Ill.

Application June 15, 1945, Serial No. 599,674
8 Claims. (Cl. 155—94)



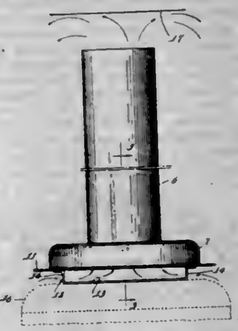
1. A stool comprising, in combination, an upright tubular member, a second tubular post telescoped into the upper end of said tubular member, a cone carried on the lower end of said tubular post, a stem carried in the tubular post and extending through the cone, a washer on said stem including a ring having a hollow hub portion, at least the top surface of said ring being inclined upwardly outwardly radially, a plurality of rolling elements seated on said top surface of the ring surrounding the cone, and a spring to normally urge said washer into telescoped relation with said cone to move the rolling elements outwardly radially into wedging engagement between the cone and tubular member.

2,469,897

METHOD AND APPARATUS FOR RESISTANCE WELDING OF ALUMINUM

Ernest W. Schilling and Andrey M. Bramblett, La Fayette, Ind., assignors to Peerless Wire Goods Co., Inc., La Fayette, Ind., a corporation of Indiana

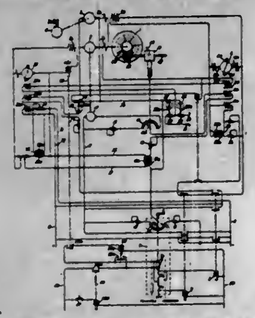
Application November 10, 1948, Serial No. 59,302
4 Claims. (Cl. 219—4)



1. In a welding apparatus for welding aluminum rods in crossed relation, a pair of electrodes relatively movable toward and from each other, one of said electrodes having a single groove in its working face of a size and shape to snugly receive a portion of one of said rods, the working face of the other electrode having a single groove therein of a size and shape to loosely receive a portion of the other of said rods and to make substantially line contact therewith.

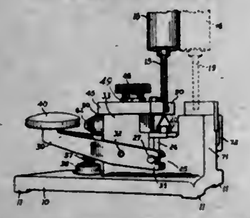
2,469,898

SPACE HEATING DEVICE



Fred C. Schoch, Oak Park, Ill.

Application January 26, 1946, Serial No. 643,586
1 Claim. (Cl. 126—67)

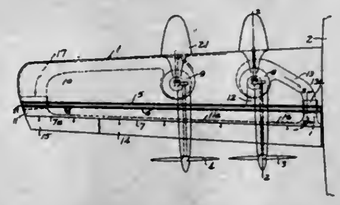


In a space heating device for conducting heated air from adjacent the top surface of a stove to a remote part of a room, a portable tubular stack, said stack having an enlarged air inlet end substantially equal to the area of a stove top, means adapted to support said stack in an upright position upon and in spaced relation to the top surface of a stove, whereby heat radiated from the top of a stove acts to draw unheated air laterally across the top of a stove and upwardly through the stack, the outlet end of said stack being disposed at a higher elevation than said inlet end and adapted to open into a room and disperse heated air in same, said stack supporting means comprising a pair of U-shape supporting legs having their ends secured to the inlet end of said stack.

2,469,899
MOTOR CONTROL SYSTEM
Earl H. Sills, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 28, 1947, Serial No. 771,059
5 Claims. (Cl. 318—145)

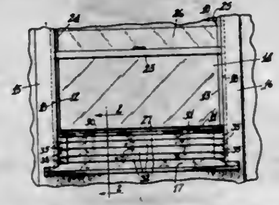
1. A control system comprising a generator, a motor supplied from said generator, means for varying the voltage of said generator to vary the speed of said motor, a source of reference voltage, means for deriving a control voltage from said generator voltage, means for supplying exciting current to the field winding of said motor comprising a dynamoelectric machine provided with a control field winding connected to be responsive to the difference of said derived voltage and said reference voltage to control said dynamoelectric machine to weaken the field of said motor and a rectifier in circuit with said control field winding for preventing excitation of said control field winding when said derived voltage is less than said reference voltage to maintain a relatively strong excitation of said motor for voltages of said generator less than a predetermined value and for effecting excitation of said control field winding when said derived voltage exceeds said reference voltage to weaken said motor field for generator voltages in excess of said predetermined value.

2,469,900
DRILL SHARPENER
William R. Spiller and Lloyd L. West, Dayton, Ohio, assignors to Harris-Seybold Company, Cleveland, Ohio, a corporation of Delaware
Application October 12, 1945, Serial No. 622,020
13 Claims. (Cl. 76—82)



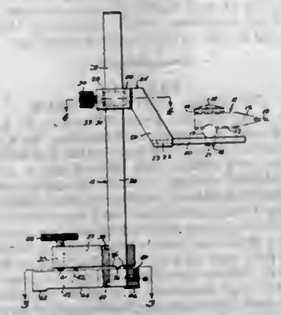
1. Sharpener for sharpening a hollow drill while the drill is rotatably supported in a spindle comprising a base adapted to be supported below the hollow end of said drill, a sharpening tool mounted in said base, means on said base for moving said tool into sharpening relation with the lower end of said drill while the drill is rotated in its spindle, and means on said base engaging the outside wall of said drill to establish proper operating relation of said drill and said tool during sharpening.

2,469,901
PRODUCTION OF CALCIUM HYPOCHLORITE
Jerome W. Spraner, Roslyn, Pa., assignor to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application November 24, 1945, Serial No. 630,705
7 Claims. (Cl. 23—86)



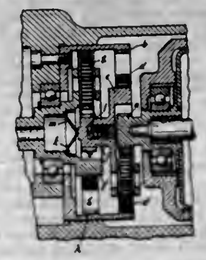
1. In a process for precipitation of neutral calcium hypochlorite by chlorination of a basic aqueous mixture containing calcium ions, the improvement which comprises adding chlorine to the mixture, at least from the time the liquid phase of the mixture is saturated with respect to neutral calcium hypochlorite, at a rate of at least 0.5% per minute of the "final chlorine equivalent" of the mixture, maintaining the liquid phase of the mixture substantially free of sulfate ion during the precipitation, maintaining the calcium chloride concentration in said liquid phase during said precipitation below about 35 parts by weight calcium chloride per 100 parts water, and carrying out the precipitation at a temperature below about 30° C.

2,469,902
AIRCRAFT WINGS HAVING BOUNDARY LAYER CONTROL
Edward A. Stalker, Bay City, Mich.
Application June 14, 1943, Serial No. 490,712
15 Claims. (Cl. 244—42)



1. In combination, a hollow wing main body and a flap supported in variable relation to form a wing, said wing having an induction slot in the upper surface aft of the midpoint of the wing chord and near the junction of the said body and flap, said wing having a discharge slot in the upper surface of said flap aft of said induction slot, a partition in said wing segregating the space forwardly thereof into an induction chamber in communication with said induction slot and the space rearwardly thereof into a discharge chamber in communication with said discharge slot, blower means located within said wing forwardly of said induction slot, means establishing communication between the inlet of said blower means and said induction chamber, means establishing communication between the discharge of said blower means and said discharge chamber, and means for maintaining communication between said discharge chamber and said discharge slot throughout the variable positioning of said flap.

2,469,903
COLLAPSIBLE WINDOW VENTILATOR
Joseph Swanski, Worcester, Mass.
Application February 13, 1947, Serial No. 728,221
2 Claims. (Cl. 160—102)



1. A collapsible ventilator for a window frame having a vertically disposed window sash slidably mounted within said frame, said ventilator comprising, a pair of guide channels in said frame, said guide channels being vertically disposed at the respective sides of said frame, an elongated member having one marginal edge portion thereof securable to the lower rail of said window sash, a plurality of parallel and vertically stacked nestable slats each having a substantially inverted trough-shaped cross section and having one end portion thereof slidingly received within one of said guide channels, a member telescopically secured at the other end portion of each of said slats, each of said telescopic members being slidingly received within the other one of said guide channels, and flexible means carried by said elongated member and secured at spaced locations along its length to the apex portion of each of said slats thereby normally to support said slats in spaced relation with each other whenever said window sash is raised a substantial distance off the lower portion of said frame, said slats being adapted to be nested successively together whenever said window sash is moved downwardly toward the lower portion of said frame.

2,469,904
GAUGE SUPPORT
Edward A. Szuba, Lincoln Park, Mich.
Application January 10, 1947, Serial No. 721,431
6 Claims. (Cl. 248—124)

1. A gauge support comprising a base, an upright secured to said base and having a slender portion therebetween, a dial indicator gauge holder connected to said upright, and adjusting mechanism engaging said upright for tilting said upright relatively to said base around said slender portion as a fulcrum.

2,469,905
EPICYCLIC MECHANISM
Percy Tatlow, London, England, assignor to Rotax Limited, London, England
Application February 15, 1946, Serial No. 647,842
In Great Britain December 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires December 14, 1964
5 Claims. (Cl. 74—801)

1. In a gear mechanism comprising a pair of bearings axially aligned relative to and spaced from each other, and a gear train including orbital gear means, the combination of members and portions of said train respectively adapted to be journaled by and to have thrust relation to said bearings, elements of the train between said bearings including sun and planet gear and planet-gear carrier element means disposed in radial floating relation to each other and to said orbital gear means, and means providing endwise support for a carrier element of said carrier-element means including means causing said portions to be biased in axially opposite resilient yieldable thrust relation to said bearings.

2,469,906
URETHRAL DILATOR
Frederick J. Wallace, New York, N. Y., assignor to American Cystoscope Makers, Inc., New York, N. Y., a corporation of New York
Application June 12, 1946, Serial No. 676,216
2 Claims. (Cl. 128—7)

1. In an instrument of the character described, a body, an endoscopic sheath connected to the body and having a lateral fenestra in its forward portion, a member dividing the interior of the sheath into a first compartment for the reception of a telescope and a second compartment for the reception of a flexible instrumentality, a deflector pivotally connected to the forward end of the member for directing an end of the instrumentality through the fenestra, rod means pivotally secured at one end to the deflector, a support mounted on the body, and oscillatory means including a lever pivotally connected to the support, said lever comprising a pair of arms and an actuating handle positioned intermediate the arms, and a pivotal connection between each arm and the other end of the rod means.

2,469,907
MOLD COMPOSITION
Burgess P. Wallace, Brooklyn, N. Y., assignor to Whitehead Brothers Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application August 22, 1946, Serial No. 692,377
1 Claim. (Cl. 22—188)

An unbaked green mold for casting difficultly oxidizable metals, consisting essentially of grains of highly refractory carbon of pre-selected grain sizes and between about 50 and 250, on scale set forth in the foundry sand grading classification of the American Foundrymen's Association, and containing a minor proportion, but at least about 5%, of bentonite intimately incorporated therewith and also between about 2% and 6% of an organic gummy adhesive belonging to the group consisting of dextrine and gum arabic, said mold having excellent "green bond" strength whereby the same is rendered capable of resisting disintegration or fracture during the formation thereof and especially during the removal of a pattern therefrom as well as during the initial pouring of the mold, and also having excellent "hot strength," whereby the same is rendered capable of resisting the erosive action of the molten metal and of preserving designs on the mold surfaces substantially unimpaired; and said mold being essentially sand-free, at least to a depth of about one-quarter inch below the inner surface thereof.

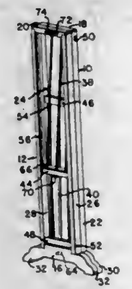
2,469,908
SYNTHETIC MOLD COMPOSITION AND METHOD OF MAKING SAME
Burgess P. Wallace, Brooklyn, N. Y., assignor to Whitehead Brothers Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 24, 1947, Serial No. 756,817
6 Claims. (Cl. 22—188)

3. A mold composition for metal-casting purposes consisting essentially of sharp silica sand grains which are individually externally coated with high melting-point pitch that is essentially free from volatiles and in which pitch coatings are embedded particles of refractory powdered carbon, the said mold composition containing a modicum of a clay-like bond, the particles of which are out of direct contact with said sharp silica grains and the amount of such refractory carbon present in the mold composition being sufficient to prevent the burn-on of the silica sand grains to a metal casting during the forming thereof in a mold formed with such mold composition.

2,469,909
ANTITIP CONSTRUCTION FOR BABY CARRIAGES
Helmer W. Wickman and George A. J. Racine, Gardner, Mass., assignors to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts
Application November 17, 1945, Serial No. 629,210
6 Claims. (Cl. 280—47)

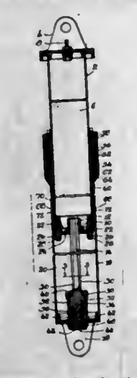
1. In a baby carriage, the combination with running gear, a carriage body, and spring means for resiliently supporting said body on said running gear, of a safety device including an elongated strut pivotally mounted at one end thereof at the upper portion of said carriage body, said strut being adapted to be swung upwardly about its pivotal mounting into an inoperative position and to be swung downwardly to its operative position so as to depend from said carriage body for engagement with the ground thereby substantially to immobilize said spring means, and means

for releasably maintaining said strut in both its operative and inoperative positions.



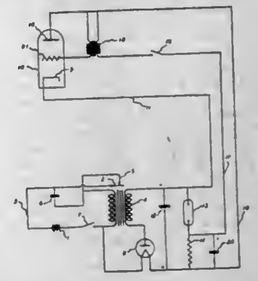
2,469,910
ELECTRICAL TESTING DEVICE FOR ATTACHMENT TO FLASHLIGHTS
Gottfried Carl Zachae, Norwich, Conn.
Application February 13, 1946, Serial No. 647,288
3 Claims. (Cl. 175—183)

1. A testing device for attachment to a flashlight having an open-ended casing of conducting material containing a battery, comprising, a cup-shaped cap providing a portion of conducting material adapted to be detachably secured over and to be electrically connected to the open end of the flashlight casing, a resilient conducting member insulatingly carried within said cap and having one end portion thereof extending outwardly from said cap so as to be adapted for engaging one pole of the battery, the other end of said member being normally disposed in contact with said cap, a manually operable push button mounted within said cap and operable from the outside of said cap to break the normal connection between said cap and said resilient member, first and second testing terminals each mounted upon the outer face of and insulated from said cap, said first terminal being electrically connected to said resilient member, a meter secured upon said cap, an electrical lead connecting one side of said meter to said resilient member, and an electrical lead connecting the other side of said meter to said second terminal.



2,469,911
FOLDING CLOTHES RACK
Walter N. Applegate, Point Pleasant, N. J., and Charles A. Petersen, Brooklyn, N. Y.
Application May 17, 1946, Serial No. 670,591
8 Claims. (Cl. 211—178)

4. A folding clothes rack comprising a pair of substantially vertical standards movable toward and away from each other and each including a pair of generally parallel side frames, each standard being provided with elongated, vertical slots opening into the inner faces of the side frames, upper and lower crossbraces, said upper brace having an end pivotally mounted adjacent the top of one of said standards and said lower brace having an end pivotally mounted adjacent the bottom of the other of said standards and both braces having their opposite ends slidably mounted within the slots of the respectively opposite standard, the slidable end of said upper brace being formed to provide a shoulder adapted to abut against the top of its associated standard, and horizontal and vertical dowel pins on the

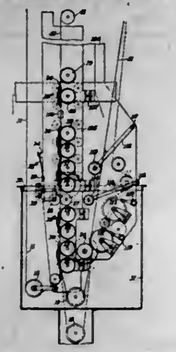


bottom of one of said standards alternately engageable in holes formed in the bottom of the other of said standards and in the movable end of said lower brace.

2,469,912
SHOCK STRUT
Fred E. Bachman, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application May 26, 1944, Serial No. 537,478
22 Claims. (Cl. 267—64)

1. In an hydraulic shock strut, a bottom follower in the form of a cylinder comprising a high pressure chamber, a cylindrical metering pin chamber in the bottom of said cylinder, a cylindrical metering pin with a piston-like portion at one end thereof slidably fitted within said chamber, abutment means for limiting movement of said portion outwardly with respect to said second-mentioned chamber, resilient means for yieldingly urging said portion against said abutment means, a top follower in the form of a hollow piston having an internal low pressure chamber and a head slidably fitted within said high pressure chamber for vertical reciprocation therewithin, said head comprising a cylindrical opening affording communication between said high and low pressure chambers, said pin being slidably fitted at all times during extension and closure of the strut within said opening, longitudinal flutes in the perimeter of said pin extending from a point adjacent said piston-like portion thereof to the opposite extremity thereof and flaring toward said opposite extremity, a passage through said head spaced from said opening and affording communication between said high and low pressure chambers, and a flapper plate resiliently mounted on said head within said high pressure chamber for closing said passage on the closure stroke of the strut.

2,469,913
ELECTRONIC FLASH TUBE APPARATUS
Raymond B. Basham, Fort Worth, Tex., assignor to Westronics, Inc., Fort Worth, Tex., a corporation of Texas
Application February 15, 1947, Serial No. 728,912
1 Claim. (Cl. 315—238)



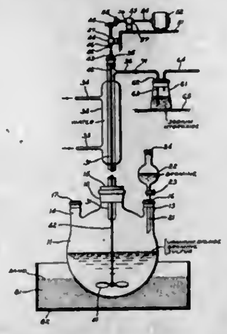
A flash tube unit comprising: a grid controlled flash tube, a high voltage direct current supply including positive and negative terminals, a positive lead connecting said positive terminal with the anode of said flash tube, a negative lead connecting said negative terminal with the cathode of said flash tube, an ignition coil including primary and secondary windings, said secondary winding being connected between the grid and the anode of said flash tube, a condenser connected between said primary and said negative leads, a voltage regulator comprising a gas filled discharge tube and resistor connected with each other in series and between said positive and said negative leads, and an ignition coil lead connected between said discharge tube and said resistor of said voltage regulator and with one end of said primary winding of said ignition coil, means connecting the remaining end of said primary winding of said ignition coil with the anode of said flash tube, a condenser connected between said positive lead and said ignition coil lead, and a switch within said ignition coil lead between said primary winding and the last said condenser.

2,469,914
PROCESS FOR PRESERVING PERISHABLES
Walter A. Bridgeman, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
No Drawing. Application April 18, 1946, Serial No. 663,247
4 Claims. (Cl. 99—168)

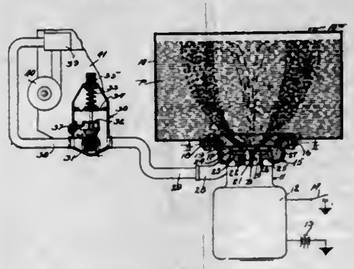
1. A process for preserving perishables of the character of fruits and vegetables which comprises adding from about 0.5 to 3% by weight of a fungicidal agent selected from the group

consisting of orthophenylphenol, diphenyl, sodium salt of orthophenylphenol and mixtures thereof to an aqueous wax emulsion comprising a waxy component, water and an emulsifying component, agitating the wax emulsion sufficient to form a foam and applying the foam to the perishable.

2,469,915
APPARATUS FOR HANDLING MOTION-PICTURE FILM
John G. Capstaff, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 20, 1945, Serial No. 589,326
24 Claims. (Cl. 271—2.6)



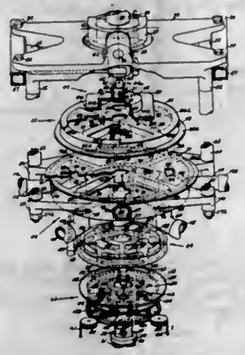
1. Apparatus for accurately registering two film strips having similarly dimensioned perforations along at least one edge and comprising a series of sprockets over which said strips are arranged to be moved in contacting relation, means for guiding said strips in a straight line relation over certain of said sprockets, and expansible teeth formed on at least one of said certain sprockets and extending through aligned perforations of said strips to fill said perforations in one direction to register said films.



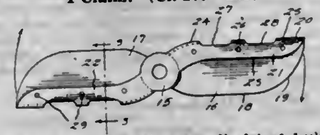
17. Apparatus for accurately registering two film strips having similarly dimensioned perforations along at least one border thereof and comprising a pair of spaced registering sprockets over which two film strips are adapted to be moved in contacting relation, means for guiding said strips over said sprockets and in engagement with the teeth thereof, means associated with said sprockets for tensioning said strips to register the latter longitudinally, and yieldable means associated with certain of the teeth of said sprockets for registering the strips laterally.

2,469,916
PROCESS OF PRODUCING URANIUM TETRABROMIDE
James M. Carter, Pasadena, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application August 4, 1944, Serial No. 548,118
8 Claims. (Cl. 23—14.5)

1. In a liquid phase process for preparing uranium tetrabromide, the steps comprising refluxing a reaction mixture containing a uranium oxide, sulfur and bromine so that sulfur bromide is formed and sulfur dioxide is given off, continuing said refluxing until uranium tetrabromide is formed in the reaction mass and thereafter separating uranium tetrabromide from said reaction mass.

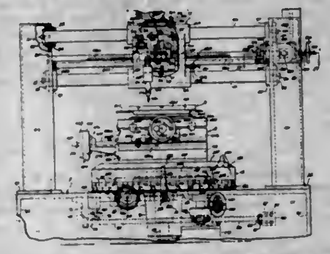


2,469,917
METHOD OF SEPARATING GASES FROM LIQUID FUEL
Russell R. Curtis, Dayton, Ohio, assignor to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio
Application August 11, 1941, Serial No. 406,277
3 Claims. (Cl. 183—2.5)



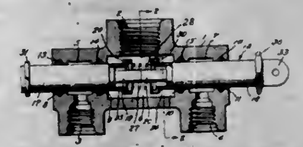
1. The method of eliminating vapor lock in an airplane fuel system and stabilizing volatile liquid fuel for high altitude performance which comprises providing a pond of volatile liquid fuel, flowing fuel under hydraulic head pressure from the pond, agitating the flowing fuel about to leave the pond while it is still in lateral communication with the pond to create a laterally outward flowing stream of bubble-rich liquid, diverting said stream away from the flowing fuel to the surface of the pond where the bubbles may burst to discharge their gases and vapors, recirculating the bubble-liberated fuel back to the flowing fuel, and pressuring said flowing fuel immediately after it has been agitated to a pressure sufficient to stop spontaneous separation of additional gas or vapor therefrom, whereby volatiles in the fuel which successfully become unstable at increasing altitudes are successively eliminated from the pond to provide a stable fuel for pressuring in fully liquid form.

2,469,918
VALVE CONSTRUCTION FOR GROUNDED AVIATION TRAINERS
Samuel Arthur Douglas, Union, N. Y., assignor to Link Aviation, Inc., a corporation of New York
Application November 30, 1945, Serial No. 631,906
7 Claims. (Cl. 35—12)



5. In a grounded aviation trainer of the type comprising a fuselage universally mounted with respect to a stationary base and four expansible-contractible bellows connected to said fuselage for pivoting the same, a valve comprising a flat surface, two pairs of ports in said flat surface, and a pneumatic connection between each port and a different one of said bellows, a plate arranged to substantially cover all of said ports when the plate is neutrally positioned, a vacuum chamber formed in said plate, a manually controllable member, and a connection between said manually controllable member and said plate arranged to move said plate in any direction radially of said flat surface dependent upon the direction of movement of said manually controllable member, whereupon said ports are selectively opened into said vacuum chamber and vented to the atmosphere.

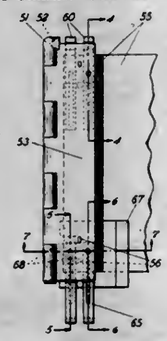
2,469,919
PROPELLER
Joseph Fischer, San Diego, Calif.
Application October 18, 1944, Serial No. 559,309
1 Claim. (Cl. 170—165)



A propeller comprising a cylindrical hub, oppositely extending main blades overlying the rear end of said hub and extending radially therefrom, an auxiliary blade overlying each of said main blades on the forward side thereof, said auxiliary blade overlying the forward end of said hub and extending outwardly therefrom parallel to said main blade, spacers between said auxiliary blade and said main blade, the leading edge of said auxiliary blade being disposed rearwardly of the leading edge of said main blade, the trailing edge of said main blade extending rearwardly at least as far as the trailing edge of said auxiliary blade.

2,469,920
MACHINE TOOL
Ferdinand J. Henkel, Royal Oak, Mich., assignor to Lamina Dies and Tools, Inc., Berkley, Mich., a corporation of Michigan
Application September 16, 1944, Serial No. 554,356
2 Claims. (Cl. 90—58)

2. In a machine tool having a base with a vertical frame structure and a tool carrier mounted thereon, the combination of a turntable rotatably mounted on said base on a vertical axis of rotation, mechanism for rotating said turntable, a slide reciprocably mounted upon said turntable for motion diametrically thereof, mechanism for reciprocating said slide, a cross-slide reciprocably mounted upon said slide for motion transversely to said slide, mechanism for reciprocating said cross-slide, a rotary work-holder rotatably mounted upon said cross-slide, and a rotary indexing device operably interconnecting said work-holder and said cross-slide.

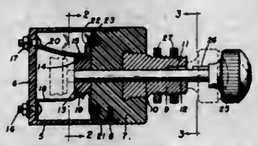


2,469,921
VALVE
George F. Hoge, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application March 7, 1945, Serial No. 581,411
1 Claim. (Cl. 251—76)

A valve including a valve body having three aligned chambers, a central chamber and two outer chambers, fluid passages extending through the walls of said valve body, one communicating with each chamber, transverse partitions in said valve body forming the end walls of each chamber, said end walls provided with aligned circular bores, a valve having cylindrical end portions mounted for axial movement in said bores, said cylindrical end portions proportioned to extend through the end walls of the outer chambers and to form a sliding fit with said bores, the edges of said bores each having a V-groove opening toward said valve member, a resilient elastic O-ring seal positioned in each of said grooves surrounding said valve member with a snug fit, the portion of said valve between said cylindrical end portions extending through said central chamber being of decreased diameter, a pair of sleeve followers mounted for limited movement on said central portion, said followers having outer di-

ameters corresponding to the diameter of said cylindrical end portions forming extensions thereof, the inner diameter of said sleeve being greater than the diameter of said central portion of said valve to form a passage therethrough, spring means urging said followers into abutting relationship with said end portions during a portion of the axial travel of said valve, stop means on each of said followers to limit the axial travel after said follower has passed under said O-ring seal, affording a flow path for fluid through said sleeve when said valve is in one extreme axial position, and affording a two-directional fluid-tight seal between adjacent chambers.

2,469,922
LOOSE-LEAF BINDER
Clarence Z. Hubbell, Endicott, N. Y.
Original application September 4, 1940, Serial No. 355,336. Divided and this application January 5, 1945, Serial No. 571,381
3 Claims. (Cl. 129—1)

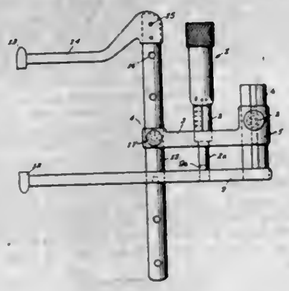


1. A loose leaf binder comprising a pair of spaced covers hingedly connected at one edge; oppositely projecting pins spanning the space between said covers for supporting a plurality of data sheets; and a pair of spring clips each having a short arm and a long arm for clamping said covers together, said spring clips being spaced along one pair of end edges of said covers with their long arms slidably mounted on respective covers, whereby the short arms of the spring clips may be selectively disengaged from the respective covers and interposed between adjacent data sheets to securely retain all of said sheets when said covers are opened.

2,469,923
MIRROR SUPPORT HAVING SPACING FRAME
Charles R. Jones, Berkley, Mich.
Application February 13, 1946, Serial No. 647,315
2 Claims. (Cl. 88—97)

1. A mirror support comprising a mirror frame, having frame members extending around the periphery of the mirror behind the edge thereof and forming a recess at the back of the mirror, a supporting frame structure spacing said mirror frame away from the wall and having inclined forward and vertical rear portions adjacent the mirror frame and wall respectively extending substantially the full height of the mirror, said frame structure having fastener receiving portions thereon for attachment to said wall, attachment members extending between the forward portion of said structure and the mirror frame for securing the mirror frame thereto, and a relatively thick layer of heat insulating material disposed behind said mirror in said recess formed by said mirror frame and the mirror and extending over the major portion of the rear surface of said mirror.

2,469,924
RHEOSTAT WITH SWITCH
John G. Kunz, Jr., Battle Ground, Wash.
Application February 6, 1947, Serial No. 726,929
16 Claims. (Cl. 201—55)



1. A circuit controlling device of the class described comprising a cylindrical housing, having an open end, a plug placed in the open end of said housing, a bore extending through the plug and into the housing, a key slot in the outer end of said bore, a shaft slidably and rotatably mounted in the bore, a key extending outwardly from the shaft to engage the key slot in the bore, a resistance coil mounted on the inner surface of the plug, a block mounted on the inner end of the shaft, and a rheostat contact arm carried by the block extending radially across the coil, said arm being movable around the coil by a rotation of the shaft when the shaft is pulled outwardly and said arm being locked against rotation out of contact with the coil when the shaft is pushed inwardly.

2,469,925
SPRING
Elmer Latshaw, Philadelphia, Pa., assignor to ACF-Brill Motors Company, New York, N. Y., a corporation of Delaware
Application October 17, 1944, Serial No. 559,005
7 Claims. (Cl. 267—47)

1. A spring comprising at least two adjacent leaves and having the metal of one leaf bent back upon itself adjacent an end thereof to form an eye with its axis located substantially in the medial plane of the leaf, the bent back metal being given a reverse bend adjacent the closure of the eye forming an extension of the metal of the eye underlapping said leaf and bearing upon the next adjacent leaf, and means immovably securing together said extension and overlapping leaf.

2,469,926
COMBINATION MICROMETER
Ray Layton, Muskegon, Mich.
Application June 7, 1946, Serial No. 674,999
3 Claims. (Cl. 33—164)

2. A combination micrometer having a graduated sleeve with the plunger extending therefrom, comprising a frame with a small hub at one end and a large hub at the other mounted on the end of the graduated sleeve and perpendicular thereto, a post having a keyway therein slidably mounted in the large hub at one end of the frame, means clamping the post in adjusted positions in the hub through the key in the keyway, and a long gage bar fixed at one end to one end of the post and having an opening therethrough, a contact member on the other end of said long gage bar, said long gage bar having a pin therein positioned to be engaged by the plunger extending from the micrometer, a gage rod having spaced depressions therein slidably mounted in the small hub of the frame and positioned in the opening of the large gage bar, means clamping said gage rod in the small hub, and a short gage bar having a contact member on the outer end thereof aligned with the contact member of the large gage bar and carried by one end of the said gage rod.

2,469,927
INFINITY SIGHT VIEW FINDER
Pompey Mainardi and Marcus N. Mainardi, Hawthorne, N. J.
Application August 6, 1947, Serial No. 766,678
9 Claims. (Cl. 88—1.5)

1. A view finder for finding a rectangular field defined by a geometrical pyramid having angular dimensions a by b each greater than 10° at the apex which corresponds to the eye position, comprising a block of light refractive material with parallel entrance and exit surfaces transverse to the central axis of the pyramid, a flat layer of non gaseous material with a refractive index between .10 and .25 less than that of the adjacent material of the block corresponding to each side of the rectangular field located obliquely in the block at the critical angle of refraction to the side of the pyramid in the block to transmit only light angularly within the pyramid characterized by tan A equaling

$$\frac{\sqrt{N_1^2-\sin^2 x}-N_1\cos x}{\sqrt{N^2-N_1^2(1-\cos x)}}$$

and tan B equaling

$$\frac{\sqrt{N_2^2-\sin^2 y}-N_2\cos y}{\sqrt{N^2-N_2^2(1-\cos y)}}$$

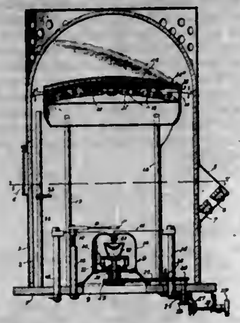
where A is the angle between the layer and said surfaces and N_1 the index of refraction of the layer for each of the a angle sides of the field, B and N_2 are the corresponding angle and index for the b angle sides of the field, N is the index of the block material adjacent to the layers, x is between

$$\frac{a}{4} \text{ and } a$$

and y is between

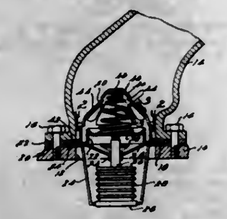
$$\frac{b}{4} \text{ and } b$$

2,469,928
GOLF TEE
John Mursch, Teaneck, N. J.
Application September 19, 1945, Serial No. 617,284
2 Claims. (Cl. 273—33)



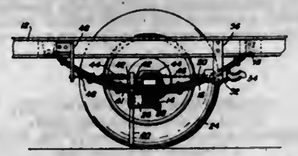
1. A golf tee comprising a flat base formed of sheet material and being of annular formation and encircling an open space, inner and outer marginal edges of said base being provided with downwardly projecting ground-engaging flanges, teeth extending downwardly from the outer flange and spaced from each other circumferentially thereof, and an arm extending upwardly from the inner edge of said base and disposed at an incline over the space encircled by the base and having a thick head at its free end constituting a ball-receiving seat disposed in a plane substantially parallel to the plane of the base.

2,469,929
APPARATUS FOR COATING ARTICLES
Harold Osterberg and Roger E. Matter, Buffalo, N. Y., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association.
Application September 24, 1943, Serial No. 503,674
10 Claims. (Cl. 91—12.2)



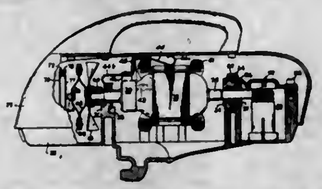
1. In a device of the character described, for use in adjustably positioning a crucible member in an evacuated chamber whereby the position of said crucible member may be adjusted without disturbing the vacuum in said evacuated chamber, said means comprising a support for said crucible member, a member for raising or lowering said support member, means connected with

said adjustable member and operable from without the evacuated chamber and means for



operating said adjustable member to adjustably position said support and crucible member.

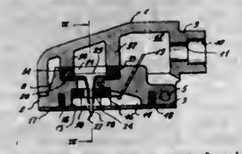
2,469,930
AUXILIARY CONTROL DEVICE FOR THERMOSTATIC VALVES
Lambert M. Payne, Detroit, Mich., assignor to L. M. Payne Company, Detroit, Mich., a corporation of Michigan
Application March 12, 1945, Serial No. 582,351
2 Claims. (Cl. 236—34)



1. In an internal-combustion engine of the water-cooled type having a water-outlet connection removably secured to the cylinder head thereof and a thermostatic valve structure for controlling the flow of water through said connection including a member sealed with respect to the walls of said connection and forming a valve seat, a poppet valve in co-operative relation with respect to said seat and a thermostatic element co-operating between said valve and member to control the relative position of the valve with respect to the seat in accordance with the temperature of the water in said passage surrounding said element and tensioned at room temperatures to hold said valve against said seat, the combination of a spring seat member removably fixed in co-operating relation with respect to said seat-forming member and extending into overlying relation with respect to said valve, said spring-seat member being formed for substantially free flow of water therethrough and being provided with an outwardly directed annular flange clamped between a face of said water outlet connection and said seat-forming member, spring means held under compression between said spring-seat member and said valve constantly urging said valve toward closed position.

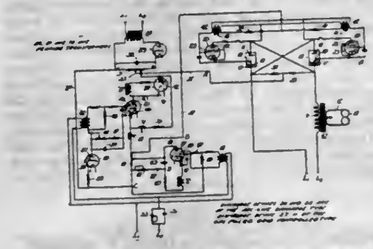
2,469,931
TRAILER TIRE DEFLATION SIGNAL
Charles T. Pratt, Solvay, N. Y.
Application September 26, 1947, Serial No. 776,361
3 Claims. (Cl. 200—58)

2. A circuit closer for use with a tire deflation signal apparatus, comprising a tie bar rotatably securable to an axle of a vehicle, said tie bar being sectional and adjustable as to length and having bearings on the ends of the tie bar, depending arms carried in said bearings, collars on said arms above said bearings and adjustable on the arms to vary the distance said arms depend beneath the axle, springs connected between upper portions of said arms extending above said tie bar and adjacent portions of the vehicle to bias said arms into substantially upright position, one of said springs having an electric switch connected therewith, said bearings being split bearings, and clamping bolts for said bearings, whereby said arms may alternatively be rigidly secured to the tie bar when desired.



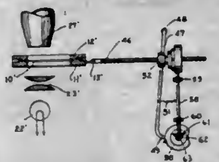
2,469,932
ELECTRIC MOTOR FOR FOOD MIXERS OR THE LIKE
John G. Ritter, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 6, 1947, Serial No. 766,774
7 Claims. (Cl. 172—36)

1. A motor comprising a rotor having a rotary shaft extending longitudinally of the motor, a bearing on the shaft, a stator core around the rotor, a casing around the stator core, the casing being divided into first and second longitudinally-extending parts, the first of the parts having formed therein seats for the bearing and the stator core, and a spring-supporting member attached to the first casing part, said member having springs contacting said bearing and said stator core for holding same in said seats, and means for securing said casing parts together.



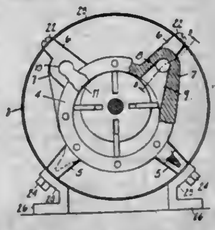
2,469,933
ELECTROMAGNETIC PICKUP
Harvey F. Schwarz, London, England
Application October 19, 1945, Serial No. 623,277
In Great Britain June 18, 1945
14 Claims. (Cl. 179—100.41)

13. In an electromagnetic phonograph pick-up, the combination of: a body member; a stylus assembly comprising a rock bar of channel shaped cross section, and a tubular stylus shank secured to said rock bar intermediate ends thereof at right angles to the length of said shank having a generally tapered form disposed with the larger



end at said rock bar, said shank having a substantially constant wall thickness along its length; and resilient mounting means interposed between each of the ends of said rock bar and said body for flexibly securing said stylus assembly to said body.

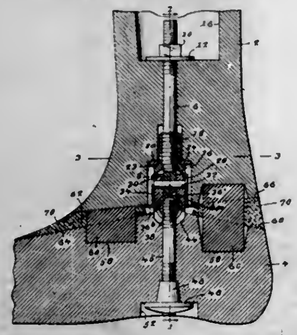
2,469,934
ELECTRONIC CONTROL FOR WELDING MACHINES
Julius L. Solomon, Chicago, Ill., assignor to Welding Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 26, 1944, Serial No. 551,403
6 Claims. (Cl. 250—27)



1. In a control system, a source of alternating current, a pair of electric discharge valves of the immersed-ignition type connected in anti-parallel between said source and the load, a control valve for firing each discharge valve when the control valve is conducting, and a sequence control circuit for alternately rendering said control valves conducting and nonconducting, said circuit including a source of direct current, a resistor, a first timing valve having a series connection with the resistor, said valve and resistor being connected across the source of direct current, a capacitor connected to be charged by current flow in said direct current circuit and in circuit relation with said timing valve for maintaining said valve nonconductive when said capacitor is charged, a discharge circuit for said capacitor, means for periodically producing a peak voltage capable of rendering the timing valve conductive provided said capacitor has discharged through its discharge circuit to a predetermined extent, whereby direct current flows through said circuit when the timing valve is conductive to render said control valves conducting, a second timing valve having a parallel circuit relation with said resistor, a capacitor electrically associated with said second timing valve and connected to be charged by current flow in the direct current circuit, other means for periodically producing a peak voltage capable of rendering the second timing valve conductive provided the second capacitor has charged to a predetermined extent, said second capacitor discharging through the second timing valve upon conductivity of the valve, and means energised by the conductivity of said second timing valve for interrupting the flow of current in the direct current circuit, whereby the control valves are rendered nonconducting.

2,469,935
GRAININESS METER HAVING TRANSVERSE AND OSCILLATORY MOVEMENT OF THE SPECIMEN
Monroe H. Sweet, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application May 17, 1945, Serial No. 594,250
2 Claims. (Cl. 88—14)

1. In an apparatus for determining the graininess of film or other light-transmissive specimen by repeatedly exploring an area thereof, a holder for said specimen between a light source and a light-responsive device, means for oscillating said holder in a plane transverse to the beam of said light source comprising a threaded rod attached to said holder, a lever pivoted at a fixed point, a rotatable cam engaging said lever, and a collar on said rod having a stud journaled in said lever for imparting movement to said rod upon rotation of said cam and means for progressively moving said specimen transverse to said beam while maintaining oscillation thereof comprising means rotatable in said collar and in threaded engagement with said rod and means for rotating said sleeve in unison with the rotation of said cam whereby the area explored is progressively extended over the entire specimen.



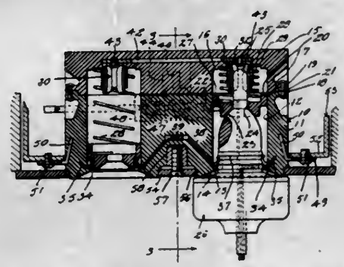
2,469,936
ROTARY PUMP
Paul C. Tabbert, Bridgman, Mich.
Application March 14, 1945, Serial No. 582,741
9 Claims. (Cl. 230—152)

6. A rotary pump comprising a cylinder body member having a plurality of angularly spaced outwardly projecting portions integral with the cylinder body member, one of said outwardly projecting portions having an inlet passage therein with a port opening to said cylinder, the other

having an outlet passage therein with a port opening to said cylinder, an open-ended housing constituting an air conduit surrounding said cylinder body member and mounted on said outwardly projecting portions, cylinder end members constituting end enclosure walls for the cylinder body member and secured thereto and provided with bearings, a rotor provided with fluid impelling elements and mounted within said cylinder body member, a shaft rotatably supporting said rotor and carried by said bearings, and supporting brackets engaging said housing opposite said outwardly projecting portions and secured thereto.

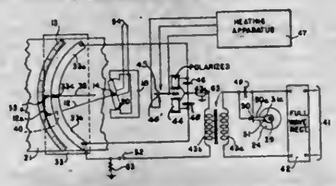
2,469,937
ARTIFICIAL LIMB
John M. Tachar, Dearborn, Mich.
Application October 4, 1946, Serial No. 701,275
4 Claims. (Cl. 3—7)

1. An artificial limb comprising a shin portion having a central opening therein, a single bolt extending downwardly through the opening, said opening being wide at its lower end, a bushing threaded upon the lower end of the bolt and extending into the enlargement of the opening, said bushing having a socket formation at its lower end, said bolt having an eye formation, a member having a semi-spherical formation fitting the socket formation of the bushing, a pin extending through the semi-spherical formation and the eye of the bolt, said member having a sleeve formation depending from the semi-spherical formation and a transverse bottom slot therewithin, rod means within the sleeve formation of said member, said rod means having a threaded transverse opening, a foot portion, a bolt extending upwardly through the foot portion and through the sleeve formation of the member and threadedly connected with the rod member within the sleeve formation of the member, cushioning means extending between the shin portion and the foot portion to limit the amount of adjustment of one portion relative to the other portion.



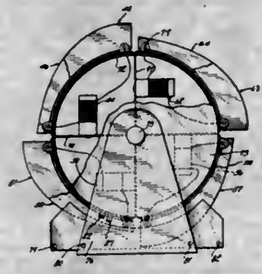
2,469,938
CABLE CLAMP
Nathan Tarnow, Detroit, Mich., assignor to Charles E. Lifka, doing business as Tomic Sales and Engineering Company, Detroit, Mich.
Application September 10, 1947, Serial No. 773,151
1 Claim. (Cl. 285—47.3)

In a cable clamp for clamping a cable to a surface having a hole through which the cable passes, said cable clamp consisting of two similar complementary halves, each half being in the form of an angularly bent sheet metal piece, including a base portion and a back portion, each base portion having its center part curved to fit closely around a cable, and having apertured wings on its ends, the back portions being spaced axially from said wings sufficiently to permit said surface to be disposed in front of said back portions and in back of said wings, and two screw bolts connecting the pairs of adjacent wings of the complementary halves to clamp them together around a cable, with the base portions in front of said surface, the back portions being so proportioned with respect to said hole that they can be entered through said hole, without the cable in the clamp, from the front of said surface, even when the halves of the clamp are interconnected by the bolts, the improvement



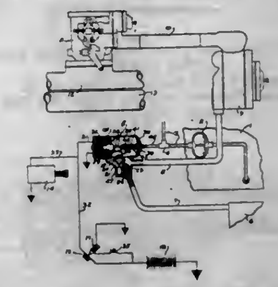
which consists in making the angle between the base portion and the back portion of each half being slightly less than 90°, whereby tightening of the bolts when the halves are around a cable rocks the halves so that their extremities first engage the back of said surface and the halves are held tightly against said surface, and stops formed from said halves or sections to project into the space between said base or body portions to engage and stop the end of an armor of an armored cable, while permitting the conductors thereof to pass said atops said stops being in the form of two pairs of lugs, disposed at the intersections of the bases and backs of the halves, one pair for each of the halves, with the lugs of each pair being relatively spaced laterally, and with all the lugs projecting rearwardly from the back portions and inwardly from the base portions.

2,469,939
ELECTRIC WALL SOCKET
Joseph C. Walton and Raymond R. Rundell, Miami, Fla.
Application September 24, 1945, Serial No. 618,128
2 Claims. (Cl. 173—330)



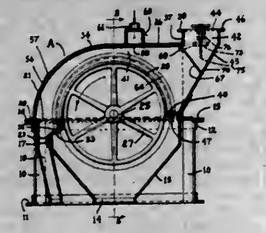
2. An electric socket for single plug connectors comprising an insulating body formed with a socket opening therethrough, a rear plate fixed to said body, a spring-pressed closure plate slidable in said socket, a contact member carried by slad body in said socket, a terminal member carried by said body connected to said contact member, a second terminal member carried by said body, resilient means releasably connecting said second terminal member to said inner contact, said means including a contact bar connected to said inner contact, and a resilient contact member on said body connected to said second terminal member engageable with said contact bar.

2,469,940
INDICATING, CONTROLLING, AND RECORDING INSTRUMENT
Edward H. Yonkers, Chicago, Ill.
Application October 16, 1944, Serial No. 558,939
6 Claims. (Cl. 346—74)



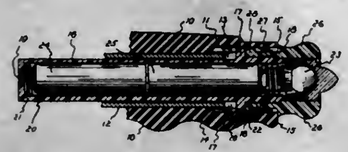
1. In a recording device comprising a pair of spaced electrodes, means for moving a record strip between said electrodes, means for moving one of said electrodes relative to the other electrode in accordance with a variable quantity to be recorded, means for impressing voltage pulses between said electrodes at spaced intervals and over different ones of a plurality of current paths, each of said voltage pulses being of sufficient magnitude to produce an electrical discharge between said electrodes, whereby a line of discharge points indicative of variations in the relative positions of said electrodes is produced on said record strip, and control means including circuit elements serially included in different ones of said paths, said control means being selectively responsive to the energization of different ones of said circuit elements as said pulses are impressed between said electrodes over different ones of said paths.

2,469,941
TUNING CONTROL AND BAND SWITCHING ARRANGEMENT
Hardin T. Abrams, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application March 5, 1946, Serial No. 652,156
2 Claims. (Cl. 250—40)



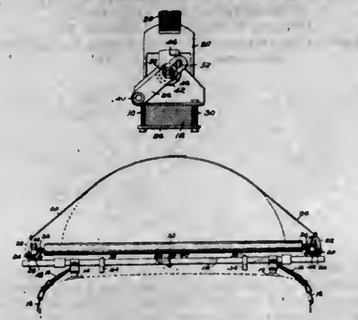
1. A tuning control and band-change arrangement for radio sets and the like, comprising a rotatable drum of conductive material, a first inductance coil carried interiorly of said drum and rotatable as a unit therewith, a first condenser rotor plate insulatingly mounted on the external periphery of said drum and electrically connected to one terminal of said first inductance, a second condenser rotor plate insulatingly mounted on the external periphery of said drum and electrically connected to another terminal of said first inductance, said first and second plates being of similar segmental shape and of co-extensive circumferential length around the periphery of said drum but being displaced from each other longitudinally of said drum, a second inductance coil carried interiorly of said drum and rotatable as a unit therewith, a third condenser rotor plate insulatingly mounted on the external periphery of said drum and electrically connected to one terminal of said second inductance, a fourth condenser rotor plate insulatingly mounted on the external periphery of said drum and electrically connected to another terminal of said second inductance, said third and fourth plates being of similar segmental shape and circumferential extension around the periphery of the drum with the third plate in circumferential alignment with the first plate and the fourth plate in circumferential alignment with the second plate, respective stator condenser plates for said rotor plates fixedly mounted adjacent said drum, commutator means carried by said drum for connecting each of said inductances and their respective electrically connected rotor plates to a common utilization circuit, and a single control shaft for rotating said commutator and said drum to effect continuous band-change and tuning within each band.

2,469,942
CONTROL FOR FUEL SUPPLY SYSTEMS
James Fred Armstrong, Detroit, Mich., and James T. W. Moseley, Clayton, Mo., assignors to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application March 13, 1947, Serial No. 734,434
8 Claims. (Cl. 123—179)



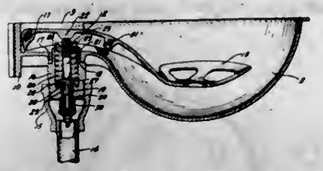
8. In combination with an internal combustion engine having a self-starter circuit, a pressure lubricating system, a source of fluid fuel normally stored under pressure, and a duct connecting said source with the engine, a safety valve controlling said duct, a drainage port and valve controlling the same in said duct between said safety valve and the engine and means operable responsive to the energizing of said starter circuit or the existence of normal pressure in said lubricating system to open said safety valve and close said drainage port said means functioning to close said safety valve and open said drainage valve when said starter circuit is not energized and subnormal pressure exists in said lubricating system.

2,469,943
HORIZONTAL ROTARY SCALPER
Archie Axell, Minneapolis, Minn., assignor to Haaky Manufacturing Company, St. Paul, Minn., a corporation of Minnesota
Application December 9, 1944, Serial No. 567,372
1 Claim. (Cl. 209—288)



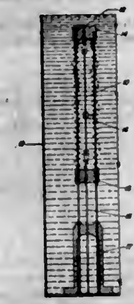
A rotary scalper including a frame, a cylindrical screen, a shaft supported by said frame, spaced open spiders on said shaft for supporting said screen for rotation about a horizontal axis, a seal engaging against the screen on opposite sides thereof, an enclosure for said screen, a pair of baffles on said enclosure extending into close proximity with the upper portion of the screens between said seals, flange means on the screen near the ends thereof and arranged in overlapping relation with the baffle means, means for rotating said screen, one of said seals acting as a grain support and the other of the seals acting to strip from the surface of the screen material carried thereby, and a hopper beneath said screen to receive material passing through said screen, said hopper enclosing the lower portions of the ends of said screen and spaced therefrom to receive material passing through said spiders.

2,469,944
SIGNALING DEVICE FOR CYCLES AND THE LIKE
Joseph Philip Bauters, Chicago, Ill.
Application August 13, 1947, Serial No. 768,331
6 Claims. (Cl. 177—329)



6. In a signaling device an elongated tubular non-conductive casing, said casing having external threads at one end thereof; a pair of projecting studs on said casing; said casing being adapted to hold batteries therein; a yieldable spring-like socket in said casing adapted to receive a light globe; a circuit wire adapted to connect said socket with the battery terminal at the opposite end of said casing; a flanged head adapted to permit seeing of a light therein and rotatably threaded on the threads of said casing, the rotation of said head being adapted to press a light globe inwardly to cause such globe to contact the central terminal of a battery and to close the battery circuit.

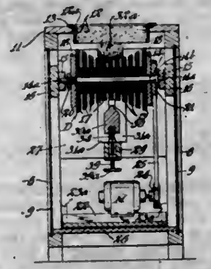
2,469,945
LOAD HANDLING ATTACHMENT FOR AUTOMOBILES
Daniel L. Brei, Cambridge, Mass., assignor to Wesbar Stamping Corporation, West Bend, Wis., a corporation of Wisconsin
Application October 3, 1944, Serial No. 557,025
8 Claims. (Cl. 193—42)



1. In a load handling apparatus for attachment to the roof of a car, the combination of a horizontally disposed, load supporting roller, spindles projecting from the ends of said roller, arms which support said spindles, and fixed brackets on which said arms are pivoted to swing about a horizontal axis from an elevated position to a lowered position and to carry said roller from an elevated, operating position to a lowered, non-operating position, said brackets having downwardly directed attaching means constructed for support above the roof of the car, said arms being provided with slots providing for movement of said roller toward and from said axis during swinging movement of said arms about said axis.

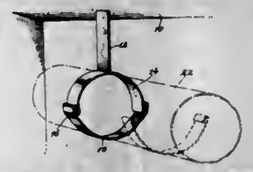
2,469,946
STOCK WATERING BOWL
Harry E. Bremer, Milwaukee, Wis.
Application September 28, 1944, Serial No. 556,169
1 Claim. (Cl. 119—75)

In a stock watering bowl assemblage including a bowl and a water supply pipe connected with the bowl, a chambered member in said pipe provided with a pair of axially spaced ports, a main valve controlling one port, an auxiliary valve controlling the other port, said valves being movable in opposite directions to open their respective ports, the auxiliary valve being so constructed that when it is seated with respect to its port it provides a pervious closure to permit the passage of a trickle of fluid, a valve rod spacedly carrying both valves and axially reciprocatably movable relative to the chambered member and ports, a spring for normally holding the valve rod at one limit of its range of movement and for urging it in a direction wherein the main valve is seated relative to its port and the auxiliary valve is removed from its port, and an animal operated lever member movably mounted in the bowl and engageable with the valve rod to move it in a direction opposite to the last described direction to a selected position within certain limits for the establishment of a predetermined positional relationship between both valves and their ports for the control of fluid flow from the pipe into the bowl, the limit of movement of the valve rod caused by the operation of the lever member providing for an unseating of the main valve relative to its port and for the seating of the auxiliary valve relative to its port whereby a trickle of fluid may pass into the bowl, and an intermediate position of the valve rod caused by the operation of the lever member providing for an unseating of both valves relative to their ports to permit a full flow of fluid into the bowl.



2,469,947
PRODUCTION OF EXTREMELY THIN FILAMENTS
Frank G. Brockman, Woodbury, and John W. Wescott, 2nd, Chatsworth, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application April 13, 1944, Serial No. 530,950
1 Claim. (Cl. 204—12)

In a method of producing an extremely thin nickel filament by plating nickel on copper foil to a thickness of 0.1 micron, cutting the plated foil to form a ribbon having the length and width of the desired finished filament, and dissolving the copper foil from the nickel filament by submerging the composite ribbon in a bath formed of an aqueous solution of a cyanide of an alkali metal, the improvement which comprises securing the ribbon to a platinum frame in conducting relationship therewith before it is submerged in the bath to form a voltaic couple, whereby on submerging the frame and ribbon in a bath the copper will be dissolved and bubbling occasioned by liberation of hydrogen during dissolution of the copper will occur only at the platinum electrode of the voltaic couple.



2,469,948
BOWLING BALL CLEANER
Edwin O. Bune, Anoka, Minn.
Application August 28, 1944, Serial No. 551,502
5 Claims. (Cl. 15—97)

5. A ball-cleaning machine having in combination a spool-shaped rotary brush mounted on a horizontal axis, said brush being composed of a series of circular, axially aligned cleaning elements of decreasing diameter from each end to the central portion of said brush, each comprising a multiplicity of compressible, superimposed piles of flexible material cut in circular form and having their medial portions secured together and thereby slightly compressed, with their edges forming in combination, a substantially continuous ball-engaging surface, means for clamping

said several elements together to form a spool-shaped brush with the peripheral contour thereof corresponding to the spherical periphery of a ball, means for rotating said brush at high speed and a supporting cradle for holding a ball above said brush, said cradle having yieldable supporting elements whereby the lower portion of the ball will be engaged by the periphery of said brush.

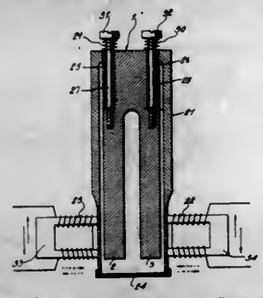
2,469,949
PIPE SUPPORT CLAMP
Paul C. Cantrell, Berkeley, Calif.
Application October 29, 1945, Serial No. 625,199
3 Claims. (Cl. 248—58)

1. A pipe hanger which comprises a support, a first resilient, semi-circular, metal band secured to said support, an outwardly turned lip disposed on each end of said band, a second resilient, semi-circular, metal band, and an inwardly turned lip disposed at each end of said second band, whereby the lips on said bands may be brought into locking engagement and then bent in toward the pipe to shorten the inner circumference of the joined bands from a length greater than the circumference of said pipe to a length slightly shorter than said circumference.

2,469,950
HAMMOCK SUPPORT
Louis Carl, Brooklyn, N. Y.
Application May 7, 1947, Serial No. 746,546
6 Claims. (Cl. 5—129)

3. A hammock support comprising: a base composed of a plurality of successively overlapping sections all of which are formed from channel beams, one of each two overlapping sections having channel beams thereof arranged with their flanges in edge abutting relation and weld-

ed together to form a tubular structure and the other having its channel beams spaced apart a distance substantially equal to the thickness of such tubular structure to permit the tubular structure to lie between them, one of each two overlapping sections being provided at its upper and lower edges with stops spaced longitudinally of such section while the overlapping section is provided with at least one notch adapted to engage one of said stops while the end of said section engages the other stop to permit of assembly of the sections when in angular relation to one another and to lock said sections against longitudinal movement when in alinement with one another, a transverse foot at the outboard end of each terminal section to hold said sections in upright position, upwardly divergent posts each intermediate the ends of each terminal section and brackets detachably telescoped with respect to the said posts and provided at their upper ends with attaching means for the opposite ends of a hammock.



2,469,951

TUNING FORK AND CONTROL SYSTEM

Austin G. Cooley, New York, N. Y., assignor to Times Facsimile Corporation, a corporation of New York

Application October 10, 1945, Serial No. 621,403

21 Claims. (Cl. 84—457)

1. A frequency control device comprising an evacuated housing, a tuned vibratory member hermetically sealed through a wall of said housing with a portion thereof interior of the housing and with a portion exterior of the housing, a passage-way in said member but accessible from the exterior of said housing, and an adjusting member in said passage-way and accessible from the exterior of said housing for mechanically adjusting the natural frequency of said vibratory member.

2,469,952

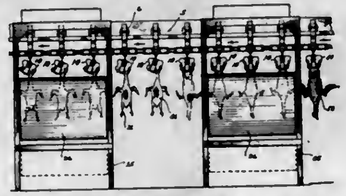
PENCIL POINT SHARPENER

Antonio Cornish-Bess, Santiago, Chile

Application June 16, 1945, Serial No. 599,881

3 Claims. (Cl. 120—91)

3. A pencil point sharpener for mechanical pencils, said sharpener comprising a sleeve reversibly mounted in the barrel of a mechanical pencil, a sharpening member affixed at an end of said sleeve, said sharpening member having an annular groove formed therein which is cone-shaped in cross-section and which has abrasive walls, said sharpening member having an apertured disc rotatably mounted thereon coaxially therewith, the apertures in said disc being of different diameters which respectively correspond to the diameters of pencil points of different thicknesses, said apertures being arranged on a circular line which registers with the circular axis of the groove.



2,469,953

DEFEATHERING POULTRY

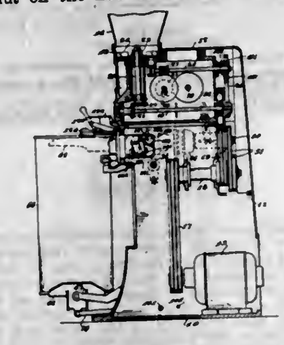
Elmer M. Davis, St. Paul, Minn., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois

Application September 8, 1944, Serial No. 553,185

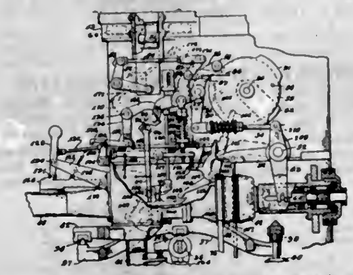
11 Claims. (Cl. 17—45)

1. A method of defeathering poultry comprising mechanically suspending a carcass in a predetermined vertical position, conveying the same along a predetermined fixed path past a picking station, applying a picking force in one direction with respect to the lay of the feathers to substantially the entire area of the carcass at said picking station, thereafter again mechanically conveying said carcass, while suspended in a predetermined vertical position, along a predetermined fixed path past a picking station and applying a picking force thereto in the opposite direction with respect to the lay of the feathers to substantially the entire area of the carcass while at said picking station.

2,469,954



APPARATUS FOR PACKAGING MATERIAL



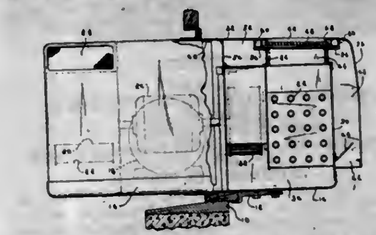
Neill E. Dorrington and John A. Dyker, Oswego, N. Y., assignors to St. Regis Paper Company, New York, N. Y., a corporation of New York

Application December 23, 1942, Serial No. 469,890

19 Claims. (Cl. 249—56)

15. In apparatus for filling valve bags, a scale adapted to be locked in fixed position and releasable for weighing action, a hopper mounted on said scale, a filling spout, a manually operable clamp for securing a bag to said spout, means including a material feeding screw for feeding material from the hopper through the spout into a bag held on said spout, a timing device, flow control means operatively associated with said timing device whereby a bulk flow of material is maintained to said hopper for a predetermined bulk flow period, means controlled by said timing device for governing said flow control means to maintain a dribble flow after said bulk flow, means controlled by said timing device for releasing said scale for weighing action during a predetermined weighing period commencing at the end of said bulk flow period, means for locking said scale at the end of said weighing period, primary means controlled by the scale normally to shut off the flow of material to the hopper during said weighing period in response to a full charge having entered the hopper, clamp opening means controlled by said timing device and said scale for automatically opening said clamp in response to a full charge entering the hopper, secondary means controlled by said timing device for actuating said flow control means to shut off the flow of material a predetermined length of time after the expiration of said weighing period, said secondary means being effective only when said primary means have failed to shut off said flow, and means for rendering inoperative said clamp opening means in response to a dribble feed position of said flow control means.

2,469,955



GRILLE ASSEMBLY FOR AIR-CONDITIONING APPARATUS

Arthur H. Eberhart, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 25, 1944, Serial No. 560,266

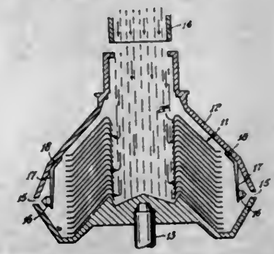
3 Claims. (Cl. 98—40)

1. In an air conditioning unit, a heat exchanger, a duct leading from said heat exchanger, a support adjacent the free end of said duct, a compressible cushion member carried by said support, a grille carried by said cushion member in registration with said end of said duct, a compressible U-shaped resilient member also carried by said cushion member adjacent the periphery of said grille, a cover abutting the limbs of the U-shaped member and at least partially enclosing said grille, said heat exchanger, and said duct, there being an opening in said cover registering with said grille and said end of said duct, and said cover having a pendant flange surrounding said opening and abutting against said grille, said parts being constructed and arranged for flow of air successively through said heat exchanger, said duct, said grille and said opening in the cover.

2,469,956

CENTRIFUGAL SEPARATOR

Harold William Fawcett, Harrogate, England



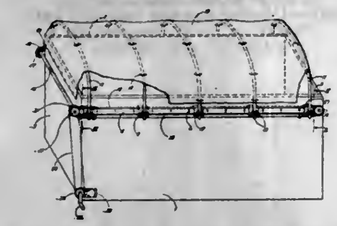
Application January 13, 1947, Serial No. 721,697

In Great Britain January 9, 1946

Section 1, Public Law 690, August 8, 1946

Patent expires January 9, 1966

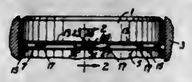
2 Claims. (Cl. 233—43)



1. A centrifugal separator which comprises; a revoluble separator bowl having a plurality of valve-controlled apertures for washing liquid positioned in the periphery thereof; a pack of frusto-conical discs disposed in said bowl in spaced superposed relationship with respect to one another, said discs being formed with center holes therein, and said center holes in said discs being arranged, one above the other, so that a substantially cylindrical space extending axially of said bowl, through said superposed discs, is provided; and means for introducing a washing liquid into said substantially cylindrical space so that said liquid flows downwardly, through said cylindrical space, directly onto the inner edges of said superposed discs; the inner edge portions of each of said discs of said pack of discs, adjacent said cylindrical space extending axially

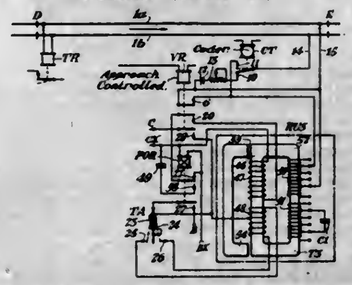
of said bowl, being bent downwardly so that it extends at an acute angle to the adjacent portion of said disc surface, the distance between terminal edges of said bent-over edge portions of adjacent discs being less than the distance between adjacent discs as they are arranged, one above the other, in said pack, whereby entry of washing liquid into the spaces between said superposed discs, at the terminal edges of said bent-over edge portions defining said substantially cylindrical space, is baffled and restricted.

2,469,957
DUSTING POWDER AND METHOD OF MAKING SAME
James E. Fenn, Baldwin, N. Y.
No Drawing. Application December 9, 1946, Serial No. 715,131
13 Claims. (Cl. 260—209)



1. The method of treating starch which includes the steps of acidifying dry starch with a volatile acid admixed with a minimum amount of water which will give a pH in a range of approximately 1.8 to 4, introducing formaldehyde into the acidified dry starch in such concentration as to prevent gelatinization of starch granules, applying heat and continuous agitation until a sample withdrawn from said acidified-heated starch will withstand boiling in water for at least 15 minutes without swelling or gelling, and removing the last traces of free formaldehyde.

2,469,958
MOTOR VEHICLE COVER
Roy H. Fowler, Beaver Falls, Pa.
Application January 18, 1948, Serial No. 641,881
3 Claims. (Cl. 296—105)



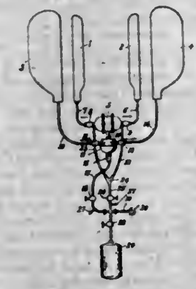
2. A vehicle cover comprising a pair of spaced horizontal rails each in the form of a tube having a slot extending lengthwise of it, a plurality of normally spaced short pipe sections slidably mounted inside of each rail, a substantially horizontal pipe below each rail, vertical plates rigidly connecting the pipes to the rails above them and adapted to be mounted on opposite sides of a vehicle, a bracket secured to the side of each pipe section and extending out through the slot in the adjoining rail, the thickness of said bracket being materially less than the width of the slot to permit the adjoining pipe section and rail to turn relative to each other, parallel ribs extending across the space between the rails and overlapping the upper surfaces of the outer ends of said brackets, said overlapping ends of the ribs and brackets being provided with aligned openings extending transversely and downwardly therethrough, a fastening member extending through each pair of said aligned openings for flexibly connecting a rib and bracket together, a tarpaulin supported above said space by the ribs to which it is attached, bearing members rigidly connected to the opposite ends of said rails, sprockets rotatably mounted in said bearing members, endless chains extending around the sprockets, each chain having an upper strand extending lengthwise through the adjacent rail and the pipe sections therein and having a lower strand extending through the pipe below, the upper strands of the chains being connected to said pipe sections at one end of the rails, and means for turning the sprockets to cause the chains to slide said pipe sections toward one end of the rails for moving the tarpaulin-supporting ribs toward that end to uncover the vehicle.

2,469,959
PISTON RING
Elihu E. Frazier, St. Louis, Mo., assignor to The Gill-Owen Company, Litchfield, Ill., a corporation of Illinois
Application December 12, 1945, Serial No. 634,440
5 Claims. (Cl. 309—45)

1. A multi-piece piston ring assembly comprising a ring of axially waved shape composed of crests and troughs and having a gap, a second ring lying adjacent the first ring and engaging the crests of said waved shape, said second ring having two adjacent ends, an offset portion near one of said ends and lapping the other end, and an angled extension from said offset portion engaging a trough in the waved shape.

2,469,960
RAILWAY TRACK CIRCUIT APPARATUS
Robert M. Gilson, Pittsburgh, and Paul N. Martin, Penn Township, Allegheny County, Pa., assignors to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application April 24, 1946, Serial No. 664,474. Divided and this application November 14, 1947, Serial No. 785,966
3 Claims. (Cl. 246—34)

1. In a track circuit for a track section, the combination comprising, a normal source of alternating current, a stand-by source of alternating current including a tuned alternator and a source of direct current, a transformer having a non-saturating core leg carrying a first and a second primary winding and a saturating core leg carrying a first and a second secondary winding and a shunt magnetic leakage core leg, said first secondary winding connected across the rails of said section to supply current to said track circuit, a capacitor connected across said second

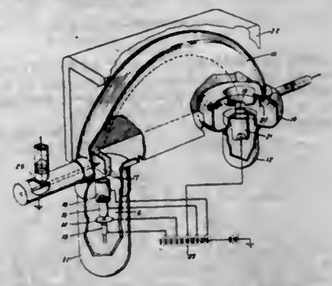


secondary winding, a power-off relay operable to a first position when energized and biased to a second position when deenergized and said relay having connections to said normal source of alternating current to energize the relay as long as said normal source is active, a first circuit means including a first position contact of said power-off relay connected to said normal source to connect the normal alternating current source to said first primary winding, and a second circuit means including a second position contact of said power-off relay to connect said stand-by source of alternating current to said second primary winding.

2,469,961
KNIT GOODS AND THE LIKE, AND METHODS
Lawrence W. Gottschalck, Riverdale, N. Y.
Application April 17, 1947, Serial No. 742,118
11 Claims. (Cl. 2—239)

6. Contoured seamless hosiery having a guide line down the back thereto substantially defining the center of the back, said guide marking corresponding substantially to the contour of the back of a boarding form and being composed of a non-fugitive fluorescent material which is substantially invisible in ordinary light but visible under special radiation with reduced visible illumination.

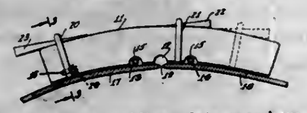
2,469,962
PNEUMATIC SUSPENSION MEANS FOR VEHICLES
Rene Gouirand, New York, N. Y.
Application March 2, 1945, Serial No. 580,655
3 Claims. (Cl. 267—11)



1. In a pneumatic suspension means for vehicles, a pair of upper air cushions, a pair of lower air cushions, a compensating device including a chamber divided into three compartments by a pair of spaced flexible diaphragms, the two upper cushions being connected by conduit means into the central one of the three compartments, each of the lower cushions being connected by conduit means into one of the other two compartments, whereby an expulsion of air in the upper cushions will expand the side walls of the central compartment to cause air in the two other compartments to be forced therefrom toward and into the lower cushions, valve means located between the lower cushions and the compartments to which said lower cushions are connected for causing slow return flow of said air into said compartments, and a valve located between the central compartment and the two upper cushions for causing equalization of pressure in said two cushions.

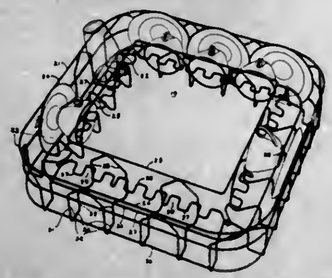
2,469,963
HEATING UNIT
Harry W. Grosjean and Elmer M. A. Sizer, Milwaukee, Wis.
Application June 19, 1946, Serial No. 677,768
1 Claim. (Cl. 257—124)

In a wall or ceiling having its plaster removed for predetermined distance to expose the joists and form a chamber; the combination of a heating unit comprising a widely corrugated plate for closing the chamber, and a coil of pipe having its stretches secured to the high points of said corrugations whereby condensation from the pipe is drained off into the gutters or lower points of the widely spaced corrugations to keep said pipes clear of fluid, whereby the maximum heat is maintained, the said chamber being filled with asbestos.



2,469,964
ELECTRON DISCHARGE APPARATUS
Paul L. Hartman, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 3, 1941, Serial No. 391,689
11 Claims. (Cl. 250—27.5)

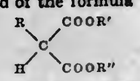
1. Electron discharge apparatus comprising an input element having spaced members defining an input gap, means for projecting a stream of electrons through said gap, means for directing the electrons in said stream along an arcuate path after the electrons leave said gap, an output element inductively energizable by said electron stream having an output gap positioned substantially 180 degrees from said input gap along said arcuate path, and means for producing a periodic grouping at said output gap of the electrons in said stream including means for impressing upon said electron stream while traversing the input gap a cyclically varying velocity compo-



nent normal to the direction of projection of the electron stream into said input gap and substantially in the direction of a line connecting said input and output gaps.

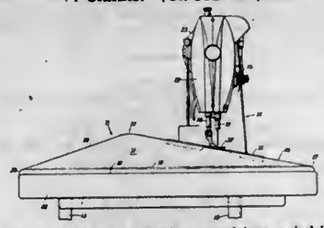
2,469,965
ALIGNING CLAMP FOR WELDING
Donald C. Holt, Oradell, N. J., assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application January 29, 1946, Serial No. 644,086
4 Claims. (Cl. 113—99)

1. A device for holding plate members preparatory to welding along adjoining edges comprising an elongated strap member adapted to be set on edge transversely across the gap between said members, said strap member having a longitudinally curved narrow side coinciding with the desired curvature in the assembled plate structure transversely of said edges and having an elongated longitudinally extending slot through the side thereof, U-shaped members adapted to freely straddle said strap member and be welded at their ends to said plate members, at least one U-shaped member being provided for each plate member, and tapered pins adapted to be driven between the closed end of said U-shaped members and the outer edge of said strap, to conform the curvature of said plate members to the curvature of said strap member, and through said slot between an end thereof and a side of said U-shaped member to adjust the spacing between said adjoining edges, the connection between said slot and its associated pin and U-shaped members being yieldable to permit creepage of the plate member with respect to the strap member as a result of shrinkage in the welded joint upon cooling.



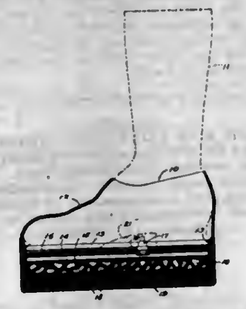
2,469,966
DISH SUPPORTING RACK STRUCTURE
James G. Idle, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 31, 1945, Serial No. 613,768
5 Claims. (Cl. 211—71)

1. In a dish-supporting rack, the combination of spaced first and second generally horizontal wires, said second wire being disposed below and to one side of the first wire and defining a support for a conventional teacup, a member having a plurality of spaced fingers defining recesses therebetween, said fingers extending from adjacent the first wire toward the second wire and terminating in spaced relation therewith, the spacing of said fingers being such that the intervening recesses defined thereby are positioned to receive the rim of said teacup, and means securing said wires and said member together.



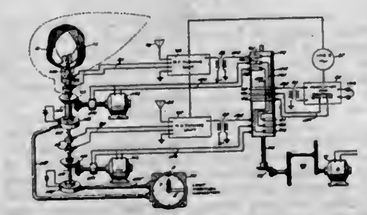
2,469,967
CYCLOPENTANO PERHYDROPHENANTHRENE COMPOUNDS
Emil Kaiser and Jerry Svarz, Chicago, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application April 17, 1946, Serial No. 662,930
8 Claims. (Cl. 260—397.1)

1. A compound of the formula



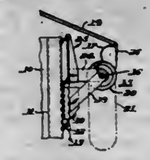
where R is a cyclopentano perhydrophenanthrene structure, R' is adrenalin and R'' is a structure chosen from the group consisting of hydrogen and adrenalin.

2,469,968
SEWING-MACHINE TABLE
Charles A. Kessler, Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application November 28, 1945, Serial No. 631,336
7 Claims. (Cl. 311—12)



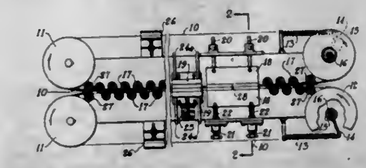
7. In a table for a sewing machine, a table-top comprising a first supporting surface of extended area inclined upwardly from the front toward the rear of the table and so constructed and arranged as to support a complete sewing machine, a second supporting surface of extended area declining toward the rear of the table and so constructed and arranged as to facilitate movement of work away from the sewing machine, and a third supporting surface of extended area sloping upwardly from the left side of the table, so constructed and arranged as to facilitate the movement of work toward the sewing machine and to support the left arm of an operator; the said first supporting surface merging with the said second supporting surface by way of a first horizontally extending rounded edge, and the said third supporting surface merging with the said first and second supporting surfaces by way of second and third inclined rounded edges respectively; the first edge being spaced slightly rearwardly from the back edge of the sewing machine, the second edge being spaced to the left of the sewing machine, and the third edge being spaced rearwardly of the second edge.

2,469,969
IMPACT ABSORBING ARTICLE OF FOOTWEAR
Clement T. Lee, Cleveland, Ohio
Application June 9, 1947, Serial No. 753,458
8 Claims. (Cl. 36—7.8)



1. An overshoe of the class described comprising an enclosing member made of an elastic material and adapted to be removably engaged with the foot portion of a shoe, said enclosing member being of such normal size as to be expanded when engaged with a shoe to compress against it tightly, said enclosing member having a downwardly directed shoulder formed on its interior spaced from the lower portion thereof, a plate member positioned in said enclosing member and engaged with said shoulder to be retained against upward movement thereby, a rubber pad positioned within said enclosing member below said plate member but not filling such space completely, an inflatable member positioned around said rubber pad, and means for inflating said inflatable member so that the pressure therein can be controlled to vary the load supporting and shock absorbing characteristics of the overshoe.

2,469,970
DIRECTIONAL RADIO RECEIVER SYSTEM
William P. Lear, North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Original application November 27, 1939, Serial No. 306,315, now Patent No. 2,379,363, dated June 26, 1945. Divided and this application August 28, 1943, Serial No. 500,332
16 Claims. (Cl. 343—117)



1. The method of radio guidance which comprises transmitting signals of different radio frequencies from a plurality of points; directionally receiving the different radio signals separately by the manipulation of a like plurality of antennas; successively connecting the separately received radio signals to a common system for amplifying them; deriving therefrom independent directional bearings on each of the points of radio transmission; and continuously maintaining each of such bearings.

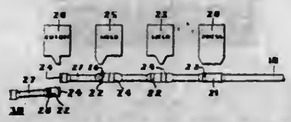
2,469,971
APPARATUS FOR REMOVING ICICLES FROM THE EAVES OF BUILDINGS
Benjamin F. Liston, Garrettsville, Ohio
Application April 21, 1947, Serial No. 742,980
4 Claims. (Cl. 108—1)

1. An icicle breaker for an eave projecting beyond a wall of a building and having a laterally extending edge, comprising spaced brackets mounted on the building, a shaft mounted on said brackets, said shaft being spaced from the edge of the eave below said edge and inwardly of said edge toward the wall, and a vane mounted on the shaft and having an edge adapted to swing closely past the edge of the eave when the vane is rotated.

2,469,972
MACHINE FOR WELDING THERMOPLASTIC FILMS
Robert D. Lowry and William Roland Church, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application February 23, 1945, Serial No. 579,440
6 Claims. (Cl. 154—42)

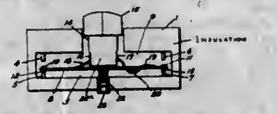
1. A machine for welding superposed layers of thermoplastic films, comprising a pair of opposed flexible endless metal tapes adapted to travel through respective closed circuits, said tapes being disposed in face-to-face relation through a portion of their circuits to form a working zone in which the superposed films are confined between the tapes, means to drive the tapes at the same linear speed, means to maintain said tapes under sufficient tension to apply a holding pressure upon the films therebetween, fixed guide rollers in said working zone between which the pair of tapes is caused to pass in a sinuous path, heating shoes in sliding engagement with said tapes, and cooling means following said heating shoes in the direction of travel of the tapes.

2,469,973
GAS TANK DRAIN LOCK
Assad M. Malluk, New York, N. Y.
Application May 2, 1946, Serial No. 666,630
1 Claim. (Cl. 70—232)



In combination with a tank drainage plug having a universal head and an annular flange of smaller diameter adjacent said head, of a lock to cover said plug, said lock comprising a base, a pair of hinged members, one of said members engaging said base and each of said members having semi-annular recesses adapted to cover said head and loosely surrounding said annular flange whereby said lock may be freely rotated without turning said plug, a cover for said lock and means for holding said lock stationary while the cover is removed or placed on said lock.

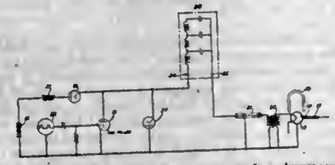
2,469,974
TELEPHONE CALLING DIAL
Cecil C. McCain, Glen Ellyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application February 4, 1947, Serial No. 726,256
6 Claims. (Cl. 179—90)



4. In a telephone calling device having pulsing contacts and means for actuating said pulsing contacts including a rotatable wheel, the combination with said rotatable wheel of a housing means substantially enclosing said actuating means and including a front wall having a central aperture therein, a removable dial on the outside of said housing operatively associated with said wheel and concealing said aperture in said front wall, bearing means carried by said housing means for supporting said wheel and said dial for rotation about a common axis extending through the aperture in the front wall, an annular adjusting member encircling said bearing means and axially movable into engagement with the rear face of said wheel, said adjusting member having a plurality of equally spaced apertures therein located equi-distant from the axis of rotation of said wheel, a pin on said wheel axially engageable in any one of said apertures in said adjustable member for locking said adjusting member on said wheel against rotation relative to each other, and a helical spring encircling said bearing means and having one end thereof fixed relative to the housing and the other end thereof connected to the adjusting member for rotating said adjusting member and urging said member into engagement with said wheel, said wheel having an aperture therein uncovering a plurality of apertures in the adjusting member whereby, when the dial has been removed, the adjusting member may be adjusted relative to the wheel with the aid of a tool inserted through the central aperture in the front wall of the housing and the aperture in said wheel.

2,469,975
METHOD FOR CHARGING INDIVIDUAL CAPSULES WITH A COMPRESSED GAS
Graham S. McCloy, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 7, 1946, Serial No. 708,392
1 Claim. (Cl. 226—20)

The method of charging and forming individual capsules from a continuous tube, which method comprises sealing one end of the tube, supplying a fluid under pressure to the other end of the tube to completely fill the tube with the charging mixture, flattening a portion of the tube a predetermined distance from the end thereof, scoring the flattened portion adjacent the end thereof, welding the flattened portion beyond the scored portion to form an hermetic seal, partially welding the flattened portion between the body of the tube and the scored portion so as to leave a restricted passageway, and severing the formed capsule beyond the hermetically-sealed welded portion.

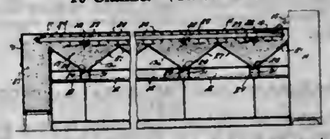


2,469,976
MECHANISM FOR SEQUENTIAL CONTACT SWITCHES
Edwin August Miller, Fairfield, Conn.
Application April 23, 1947, Serial No. 743,265
4 Claims. (Cl. 200—67)

1. A snap-acting switch mechanism comprising a base; pairs of upper and lower fixed stops provided by said base; a contact-carrying switch blade bodily movable between said upper and lower stops and having an opening therethrough; a non-rotatable push actuator slidingly supported by said base and extending transversely to, and movable within, said opening; notches with which the actuator is provided upon opposite sides and lower end thereof; a pair of relatively opposing compression arms within said opening, each arm having an end carried by an extremity of said blade, and an opposite end engaged within one of said notches; and a looped end portion of one of said compression arms adjacent its notch engagement, said looped portion depending from said arm below said blade;

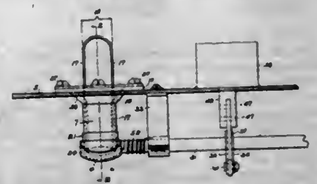
a lowered position of said looped portion resulting from a partial actuator operation moving with a snap-action the other compression arm from an over-center to an under-center relation to said blade, and also in a contact engagement of said blade with one of said upper stops; a cramped position of said looped portion resulting, upon a full operation of said actuator, in a snap-acting under-centering movement of the looped compression arm with respect to said blade; and a sequential contact engagement of said blade with the other of said upper stops, said engagement being in sequence with respect to the contact engagement of said blade with an upper stop.

2,469,977
PULSER CIRCUIT
Howard Morrison, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 12, 1945, Serial No. 593,507
4 Claims. (Cl. 250—36)



2. An ultra-high frequency pulse transmitter comprising a space discharge oscillator, a source of electrical energy, and a circuit for supplying pulses of space current to said oscillator, including a reflecting line type storage and pulse-forming network, an inductor connecting said source to said network and forming with said network a resonant charging circuit, a grid-controlled gas discharge tube connected to discharge said network to said oscillator, means for triggering said tube, and a unilateral conducting device connected to prevent the accumulation of charges on said network of polarity opposite to that supplied by said resonant charging circuit.

2,469,978
WIELDABLE IMPLEMENT SELF-RESTORING TO CARRIED POSITION
John Leo Mrozinski, Danbury, Conn.
Application June 26, 1947, Serial No. 757,174
2 Claims. (Cl. 242—107)



1. In a wieldable implement including a handle, in combination, a reel, means rotatably mounting said reel in the handle of said implement, said handle being of sufficient length to position its inner end adjacent the wrist of the user when said implement is in use, a spring, means connecting said spring to said reel, a flexible line wound on said reel, means for guiding said line so that it leaves said handle at the outer end thereof adjacent the wrist of the user, and means for connecting said line to a user, said implement being supported in a rest position on a user by said line, said line unwinding from and turning said reel to tension said spring as said implement is moved by the user away from the point of connection of said line to the user, said spring having sufficient strength to rewind said line and return said implement to its rest position on the user when said implement is released by the user.

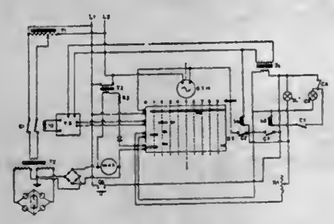
2,469,979
APPARATUS AND METHOD OF MAINTAINING THE FRESHNESS OF COUNTER DISPLAYED VEGETABLES
Alexander L. Munson, Port Washington, and Roy C. Follett, Garden City, N. Y.
Application June 4, 1948, Serial No. 31,014
10 Claims. (Cl. 62—37)

1. Apparatus for the refrigeration of vegetables and other commodities comprising a source of flaked ice and a plurality of racks for displaying vegetables disposed in series on a store counter, conveyor means for directing a stream of flaked ice from the source to the series of racks and means for controlling a sufficient flow of ice to the several racks to maintain the vegetables in a refrigerated condition.

2,469,980
SANDER
Frank H. Myshrall, Stoneham, Mass., assignor to The Palmer Electric & Manufacturing Co., Wakefield, Mass., a corporation of Massachusetts
Application December 31, 1947, Serial No. 794,900
10 Claims. (Cl. 291—29)

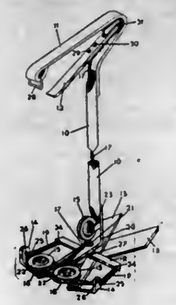
5. In a sander for vehicles, the combination of a conduit for sand, the same having a flexible terminal portion, and a second flexible portion, a shut-off which engages and flexes said terminal portion, and means to cause flexing of said second portion and lateral movement of said conduit.

2,469,981
PIVOTAL BRACKET
Arthur E. Nelson, University City, Mo.
Application June 23, 1945, Serial No. 601,264
6 Claims. (Cl. 248—282)



1. In a bracket, a plate member, an upper shelf formed integrally with the plate member and extending outwardly therefrom, a pivot

means on the shelf, a lower opening in the plate member, a lower shelf disposed through the lower opening, said lower shelf projecting outward from the plate member and being of greater width than the plate member, a second pivot means on the lower shelf aligned with the first

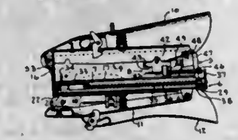


pivot means, said lower shelf having a projection behind the plate member and united thereto, said lower shelf member having an edge providing locking means angularly spaced thereabout and substantially concentric with the pivot means.

2,469,982
X-RAY MASS CHEST APPARATUS CONTROL GEAR
Anthony Nemet and Matei Berindei, London, England, assignors to The Hartford National Bank & Trust Company, Hartford, Conn., as trustee
Application July 16, 1945, Serial No. 605,406
In Great Britain March 8, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 8, 1964
4 Claims. (Cl. 250—95)

1. In an X-ray apparatus for screen radiography, the combination with an X-ray tube and means for photographing on a film of a device for identifying the photograph, means for accommodating the identification device, means for indicating the presence and proper disposition of the identification device, a guard relay circuit controlled by said identification means, said indicating means including a low voltage card illumination lamp connected in series with said guard relay and a source of power for illuminating the indicating device whereby the corresponding film being exposed is identified, means for effecting the several operations necessary in the use of the X-ray tube for the film exposure, a motor-operated drum provided with contact segments for automatically controlling the operation effecting means in correctly timed sequence, circuit means operable by said guard relay circuit for controlling the motor circuit to initiate operation of said drum, a manually controlled switch for initially closing the motor circuit, and means controlled by the drum upon initiation thereof by the manual switch, for holding the drum-motor circuit closed for the duration of one predetermined cycle of operations by the effecting means.

2,469,983
GRASS SHEARS
Park L. Newbold, Cedar Rapids, Iowa
Application April 19, 1946, Serial No. 663,511
2 Claims. (Cl. 30—248)



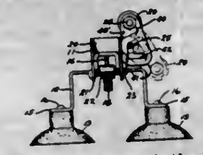
1. In a grass shears, the combination of a pair of blades pivoted together and attached to an angled base which extends rearward and upward, a handle attached to the elongated upward part of the base, a lever attached to the handle, a single pulley attached to the forward part of the base and adjacent to the angle, a pulley engaged to the left rearward part of the base, a pulley engaged to the right rearward part of the base, a horizontal stationary member engaged to the forward part of the base a pair of springs engaged to rearward ends of the blades and anchored to the stationary member, a flexible connecting means secured to the rearward end of each of the blades and extending over the adjacent cooperating pulleys to converge and connect with a single flexible means extending under the single forward pulley and upward to engage the operating lever so that a movement of the lever upwards will cause the blades of the shears to close, and a reverse action be produced by the retraction of the closing springs.

2,469,984
STAPLING DEVICE
William G. Pankonin, Chicago, Ill.
Application April 30, 1945, Serial No. 591,009
15 Claims. (Cl. 1—49)

1. In a stapling device, a body portion comprising a magazine and ejection chute, a staple driver pivoted to said body member and having a driving blade operable in said ejection chute, said driver being swingable to withdraw said blade from said chute and to provide access to said magazine, an upper handle also pivoted to said body portion and overlying said driver, a latch releasably connecting said upper handle and said driver to transmit force therebetween, and an anvil carrier operable in connection with said upper handle.

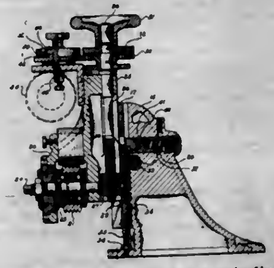
2,469,985
FEED MECHANISM FOR STAPLING MACHINES
William G. Pankonin, Chicago, Ill.
Original application April 30, 1945, Serial No. 591,009. Divided and this application April 2, 1947, Serial No. 738,782
5 Claims. (Cl. 1—49)

1. In a stapling device, a body portion comprising a magazine having a loading opening and an ejection chute, a staple follower adapted to be received in said magazine including a head and means for urging said head forwardly in said magazine, said staple follower being movable to a loading position outside of said opening, a follower retainer pivotally mounted in said body portion, lugs on said head adapted to engage with said retainer as said follower is withdrawn from said magazine, and resilient means associated with said retainer to engage said head and hold said follower in said loading position out of the path to the opening of said magazine.



2,469,986
SOUND DISTRIBUTING SYSTEM FOR DRIVE-IN THEATERS
James D. Phyfe, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1945, Serial No. 585,830
13 Claims. (Cl. 179—1)

1. In an outdoor theater having a screen and an area adjacent thereto comprising a plurality of automobile stallways in which automobiles may be parked facing said screen, a sound distributing system for simultaneously conveying to occupants of said automobiles at pairs of adjacent stallways sound related to action portrayed on said screen which comprises, in combination with a source of electric signals representing said sound, a supporting member located between the stallways constituting each of said pairs throughout said area, a pair of loudspeakers loosely carried by each of said supporting members for ready removal therefrom each into a separate stallway and an automobile in said stallway, and circuit means carried by said supporting members coupling said loudspeakers to said source.

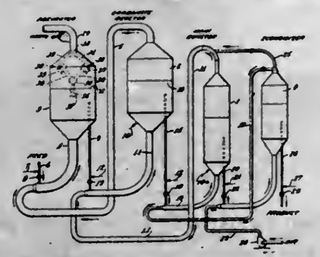


2,469,987
ROLLER JACK FOR AUTOMOBILE ROOFS
Richard A. Pilsner, Waupun, Wis., assignor to Wesbar Stamping Corporation, West Bend, Wis., a corporation of Wisconsin
Application June 27, 1945, Serial No. 601,788
8 Claims. (Cl. 193—42)

1. The combination with a support, of fixed brackets extending vertically above the end portions of the support, a roller, and slotted arms pivotally and slidably interconnected with the brackets and having means at their outer ends for rotatably supporting the ends of the roller whereby the roller may rotate about its own axis and may be shifted from an idle position below the support to an operative loading and unload-

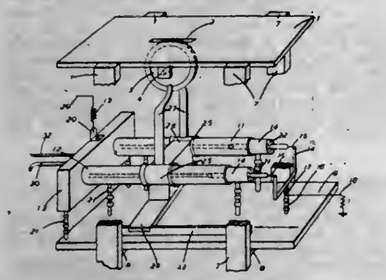
ing position above the support, the brackets presenting abutments against which the slotted arms bear when the roller and slotted arms are swung to operative position above the support and the slotted arms dropped into engagement with said abutments to releasably retain the roller in such position for rotation about its own axis.

2,469,988
GRINDING MACHINE WITH AUTOMATIC FEED CRUSH DRESSING ROLL
Louis F. Polk, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application June 4, 1945, Serial No. 597,425
8 Claims. (Cl. 125—11)



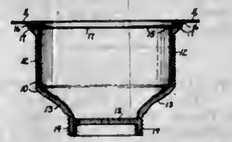
1. A grinding machine having a grinding wheel operable at comparatively high speed in a grinding operation, drive means for driving said grinding wheel comparatively slowly in a forming operation on the grinding wheel, a rotatable crusher for dressing the grinding wheel, means manually operable to bodily adjust the crusher from a remote position into peripheral contact with the grinding wheel, switch means under the control of the operator, a motor controlled by said switch means and having a drive shaft and a threaded feed member mechanically connected to said shaft for positively moving the crusher axis toward the grinding wheel axis at a uniform rate of speed irrespective of any eccentricity of the grinding wheel.

2,469,989
PROCESS OF FORMING CHEMICAL REACTION PRODUCTS OF METAL OXIDES
Robert Pyzel, New York, N. Y., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application August 19, 1944, Serial No. 550,298
15 Claims. (Cl. 106—100)



3. A method for producing a hydraulic cement which comprises flowing a gas stream upwardly

in a reaction zone through a mass of finely divided solids containing silica and calcium oxide to maintain the mass substantially in suspension in said stream, limiting the upward velocity of said gas stream to maintain the greater part of said mass of finely divided solids in a relatively dense pseudo-liquid phase in which the solid particles circulate at a high rate, and maintaining said fluidized mass of solids at a temperature substantially higher than 2000° F., withdrawing said gas stream from said first-mentioned reaction zone, introducing a mass of finely divided solids

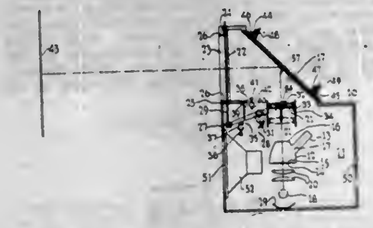


containing calcium carbonate into said withdrawn gas stream and passing the mixture of gas and solids upwardly into a second reaction zone to maintain the mass in said second reaction zone in said dense fluidized condition, maintaining said last-mentioned fluidized mass of solids at a temperature substantially lower than 2000° F. but sufficiently high to convert said calcium carbonate to calcium oxide, withdrawing a portion of the solids comprising said second-mentioned fluidized mass including calcium oxide, and introducing the same into said gas stream prior to passage thereof upwardly in said first-mentioned reaction zone.

2,469,990
MEANS FOR FEEDING HIGH-FREQUENCY ELECTRIC CURRENTS TO THE ELECTRODES OF DIELECTRIC HEATING APPARATUS
Joshua Creer Quayle, Helsby, and Peter Jones, Kelsall, near Chester, England, assignors to British Insulated Callender's Cables Limited, London, England, a British company
Application October 9, 1946, Serial No. 702,219
In Great Britain October 25, 1945
4 Claims. (Cl. 219—47)

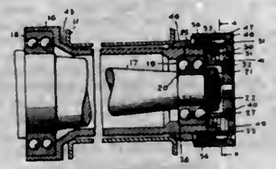
1. In apparatus for producing heat in a dielectric material by passing said material through an electric field adjacent to or between two rotating electrodes between which a high frequency alternating potential is maintained by an oscillator, a variable coupling between said oscillator and said electrodes which is adjustable to vary the potential difference between said electrodes comprising an output tank circuit for said oscillator in the form of a resonant line which structurally includes two parallel rigid conducting members, two fixed coupling members each at least partially surrounding one of said conducting members without making contact therewith, a contact member on each of said coupling members which makes rubbing contact with one of said rotating electrodes and means for moving said oscillator and said line together in a direction parallel with the longitudinal axes of said rigid conducting members thereby effecting the required adjustment.

2,469,991
BIMETALLIC DRAIN FITTING
Howard F. Reichenbach, Waterbury, Conn., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application December 6, 1945, Serial No. 633,231
2 Claims. (Cl. 285—49)



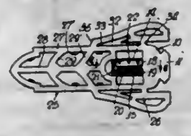
1. A bimetallic drain-fitting, including in combination: a body-member formed of a different metal from the herinafter mentioned seating-member; a flat ring-like seating-member formed of abrasion-resisting metal and surmounting and rigidly attached to the upper portion of the said body-member, the said ring-like seating-member being formed at its inner edge with an integral downwardly-and-outwardly directed attaching-flange having its upper surface spaced downwardly from the adjacent under surface of the seating-member proper; the said hollow body-member being provided at its upper end with a clamping-flange projecing upwardly above its upper end, said clamping-flange being bent inwardly into the space between the under surface of the said flat seating-member and the upper surface of the attaching-flange of the said flat seating-member to clamp the upper end of said body-member beneath the under surface of said attaching-flange whereby said flat ring-like seating-member overlies and protects the upper end of said hollow body-member.

2,469,992
TELEVISION CABINET WITH REMOVABLE SCREEN CONTROLLING FOCUSING SYSTEM
Adolph H. Rosenthal, New York, N. Y., assignor to Scophony Corporation of America, New York, N. Y., a corporation of Delaware
Application June 20, 1944, Serial No. 541,154
3 Claims. (Cl. 178—7.5)



2. An apparatus for visibly reproducing electric signal impulses representative of intelligence on a viewing screen by means of light rays emerging from a cathode ray controlled light valve upon which said impulses are impressed, essentially

comprising, in combination, within enclosed space a radiant energy controlled light valve, means for directing light rays upon said valve, light ray deflecting means exemplified by an oblique front surface mirror in the path of light rays emerging from said valve, an aperture in the enclosure of said space, a viewing screen removably associated with said enclosure and arranged so that it can be observed from the outside through said aperture, adjustable optical means arranged in said path for directing light rays emerging from said valve upon said deflecting means whence they are projected upon said viewing screen, said optical means in one of its adjustments capable of focusing said light rays on said viewing screen



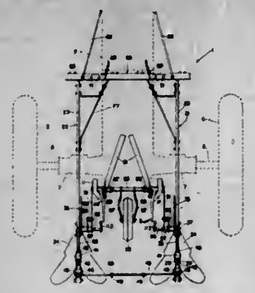
when it is in observation position relative to said aperture, said optical means in another one of its adjustments capable of focusing light rays emerging from said valve and projected by said deflecting means through said aperture, when said viewing screen is removed, on another viewing screen outside said space, and automatic means for controlling the adjustment of said optical means dependent on the position of said removable viewing screen, so that said optical means are adjusted to focus light rays emerging from said valve upon said viewing screen when it is in observation position and to focus said light rays on said other viewing screen at given distance from said space when said viewing screen is removed.

2,469,993
LOCKING DEVICE
Duer C. Robson, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 12, 1946, Serial No. 661,745
4 Claims. (Cl. 242—68)

1. A device for mounting a reel, which comprises an arbor having a threaded end thereon and also being provided with an interlockable socket, a nut designed to be screwed on the threaded end of the arbor to secure a reel on the arbor, a locking ring having a portion complementary to the interlocking socket for fitting into the socket and also being provided with a plurality of radially disposed outwardly projecting teeth, means for securing the complementary portion of the locking ring in said interlocking socket to fasten the locking ring against rotating and axial movement relative to the arbor, a cap having a plurality of radially disposed inwardly projecting teeth complementary to the teeth formed on the locking ring for fitting slidably over the nut, and means for urging the cap over the nut to hold the teeth on the cap in interlocking engagement with the teeth on the locking ring.

2,469,994
JEWELRY CLIP
Jack Ruderman, New York, N. Y.
Application March 24, 1945, Serial No. 584,702
16 Claims. (Cl. 63—20)

1. In an article of jewelry of the type having a sheet metal clip blank; the combination therewith of a holder integral with said clip, said holder including curved elements stamped from the metal of the clip blank, protruding from the plane of the clip and determining retaining means for holding a perfume-impregnated piece against the body of the clip.



2,469,995
PROCESS FOR THE PRODUCTION OF FOOD PREPARATIONS FROM POTATOES AND SIMILAR FARINACEOUS TUBERS
Martin Carl Schaul, London, England
No Drawing. Application December 26, 1946, Serial No. 718,598. In Great Britain July 23, 1946
3 Claims. (Cl. 99—207)

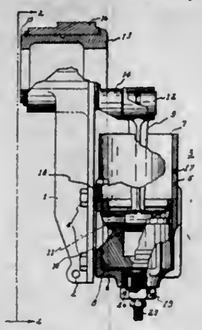
1. A process for the production of food preparations from potatoes, which comprises cooking the potatoes in water and converting said cooked potatoes into a mash, said cooking being carried out to such an extent that such mash consists of unicellular unbroken and undextrinised cells, adjusting the consistency and nature of said mash by incorporating therewith a dry powdered edible starch material from an extraneous source in the form of a dry powder containing dextrinised starch and damaged starch cells, extruding the mixture into a form suitable for rapid and uniform drying, and thereupon baking and drying the resultant product.

2,469,996
TRACTOR MOUNTED PLOW AND GAUGE WHEEL
Walter H. Silver and John I. Cantral, Moline, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application November 8, 1944, Serial No. 562,472
12 Claims. (Cl. 97—47)

1. An agricultural implement comprising a wheel supported frame, a pair of laterally spaced generally vertically movable tools connected with said supporting frame for independent movement relative thereto, a ground engaging gauge means swingably connected with said supporting frame means and including a rockshaft journaled on said supporting means and defining the axis of swinging movement of said gauge means and

rockable with swinging of the latter, a pair of arms fixed to the ends of said rockshaft, and

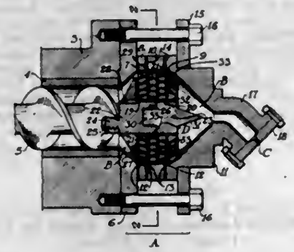
means connecting the ends of said arms with said tools, respectively.



2,469,997
WHEEL BALANCE WEIGHT
Leonard R. Simpson, Birmingham, Ala.
Application May 7, 1946, Serial No. 667,903
7 Claims. (Cl. 301—5)

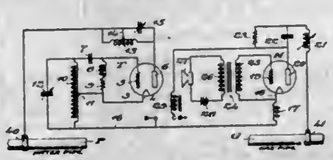
1. In a wheel balance weight for engagement over the edge of a tire rim flange, the combination of a weight, a spring clip carrying the weight up against the outside of the rim and extending over the edge of the rim down inside thereof in compressive engagement with the rim, and a tire-marker member extending upwardly from said clip and adapted to lie against the outer wall of the tire carried by the rim.

2,469,998
COMPRESSOR
Edwin A. Smith, Danville, Ill., assignor to Willard-Anderson Company, Danville, Ill., a company wholly owned by William A. Anderson
Application September 6, 1946, Serial No. 695,122
1 Claim. (Cl. 230—235)



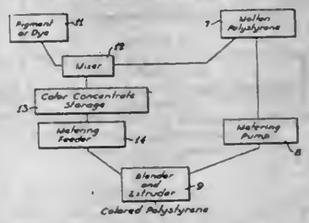
In a compressor a cylinder, a piston and a discharge valve, said cylinder having side walls and having one end closed and one end open, means for reciprocating the piston in said cylinder, said piston further adapted and arranged such that said piston approaches the open end of said cylinder during the intake stroke, said walls of said cylinder having a plurality of intake ports therein, said ports adapted and arranged to be in open communication with said cylinder when said piston is at its maximum intake stroke and said ports being further adapted and arranged to be immediately closed by said piston when said piston begins its discharge stroke, and a vertical support, said cylinder removably attached to said support near one end thereof, the other end of said support comprising a sleeve bearing, a rotatable crank journalled in said sleeve bearing, a connecting rod rotatably attached to said crank at one end and rotatably attached to said piston at the other end, a discharge valve suitable for use in a compressor comprising a body, said body comprising a threaded portion and a head portion, said threaded portion adapted and arranged to be screwed into one wall of the cylinder of a compressor, said body having an opening extending lengthwise therethrough, the portion of the opening through the head of said body being threaded, a connector fitting threaded on both ends also having an opening therethrough, said fitting screwed into the threads in the opening in the head of said valve such that it is flush therein, said other end of said fitting arranged to be

attached to a suitable hose connection, said opening through said threaded portion of said body being larger than the opening through said fitting, said opening at the end opposite the threaded connector being larger thereby forming a shoulder therein, a spring in said opening through said threaded portion of said body abutting against said connector, a cap abutting against the other end of said spring, said cap being smaller in cross-section than the opening through said threaded section of said body, a shoulder washer placed into said opening in said threaded portion of said body and onto the shoulder portion in said opening thereby maintaining said spring under compression, said cap being larger in cross-section than the opening through said shoulder washer, said valve being sealed during the suction stroke of the piston of the compressor by the urging of said cap against said shoulder washer by said spring, and said valve adapted and arranged to discharge compressed gas therethrough when said cap is urged away from said shoulder washer during the discharge stroke of said piston.



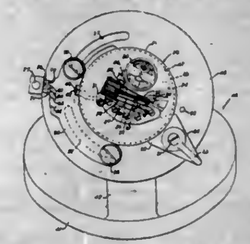
2,469,999
MIXING HEAD FOR EXTRUSION MACHINES
Kenneth E. Stober, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application May 30, 1945, Serial No. 596,626
7 Claims. (Cl. 18—12)

1. In an extruder, in combination with an extrusion orifice and a feeder for forcing plastic material through the orifice: a mixing head having therein a chamber of circular cross-section constituting a passage between the feeder and the orifice; a spindle extending axially in the chamber and having a diameter small in comparison to that of the chamber and means for rotating the spindle; a plurality of multiply-perforated disks mounted on the spindle at spaced intervals not greatly exceeding the thickness of a disk, each disk being of such diameter that the



clearance between the edge thereof and the wall of the chamber is only a fraction of the thickness of the disk; and a plurality of spaced multiply-perforated stationary annular disks mounted transversely in the chamber and extending from the wall thereof into the spaces between the rotatable disks, the thickness of each annular disk and the internal diameter of its annulus being such that the clearances between the disk and the adjacent rotating disks and spindle are only fractions of the thickness of the disk.

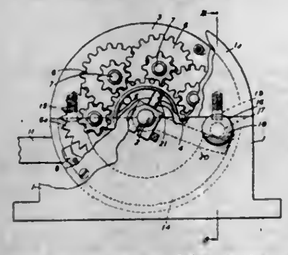
2,470,000
RADIO-FREQUENCY TRANSMISSION THROUGH GROUNDED CONDUCTING STRUCTURES AND THE LIKE
Keith Lansing Bell, Washington, D. C., assignor to Curtis E. McGhee
Application September 20, 1944, Serial No. 554,984
15 Claims. (Cl. 179—1)



1. In a system for transmitting modulated radio-frequency energy, extended massive conductor structure means of dimensions much greater than are normally employed for transmitting radio-frequency communication currents, said massive conductor means being positioned in close electrical relation to ground, and a radio-frequency transmitter comprising an oscillator, said oscillator including a prime source generating radio-frequency alternating voltage and delivering the same across primary output electrodes thereof, the output circuit of said oscillator being directly conductively connected to said primary output electrodes and comprising a substantial length of said massive conductor means which constitutes a substantially pure resistance path.

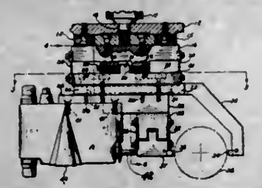
2,470,001
PROCESS FOR PRODUCING UNIFORMLY COLORED EXTRUDED ARTICLES FROM VINYL AROMATIC RESINS
Kenneth E. Stober, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application May 30, 1945, Serial No. 596,627
5 Claims. (Cl. 18—55)

1. A continuous process for producing uniformly colored articles from thermoplastic resinous polymerized vinyl aromatic compounds which comprises: forming a color concentrate by mixing together a coloring material and a polymerized vinyl aromatic compound, delivering a stream of the color concentrate in the molten state and a relatively much larger stream of the molten uncolored resinous compound to a closed mixing zone maintained at a temperature of at least 200° C. and therein working the materials together to form a uniformly colored mass while still in stream form, and continuously extruding the mass.



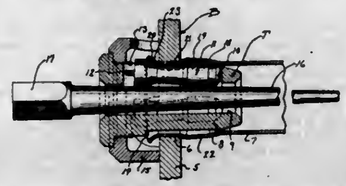
2,470,002
APPARATUS FOR TESTING TELEPHONE CALLING DIALS
Henry J. Thielker, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 3, 1947, Serial No. 752,205
5 Claims. (Cl. 179—175.1)

5. An apparatus for testing a telephone calling dial having a finger wheel rotatable relative to a dial casing, distances limited by a finger stop on the casing, the casing housing some of the actuating mechanism of the calling dial and supporting contact springs and members selectively actuated by the said mechanism from their given normal positions during relative rotation of the finger wheel and casing, the apparatus comprising a mounting plate recessed to receive the finger wheel of the dial, a base to support the mounting plate, an index gage mounted on the mounting plate for movement into a normal position and into operating positions, a notch in the index gage to initially interengage the finger



stop of the dial at the normal position of the index gage, an element to clamp the finger wheel against rotation in the recess of the mounting plate, a latch carried by the mounting plate to secure the index gage in the normal position and in any of the operating positions, means normally urging the latch into latching position toward the index gage, and a cam lever to move the latch away from the index gage into open position.

2,470,003
TIME CONSUMING OR DELAY ACTION MECHANISM
Harold Ernest Ray Thomas, Crick, near Rugby, England
Application January 23, 1947, Serial No. 723,678
In Great Britain June 19, 1946
7 Claims. (Cl. 188—1)

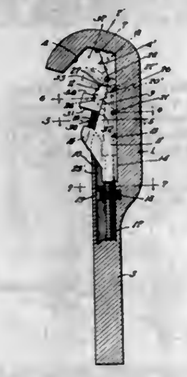


1. A time consuming or delay action mechanism incorporating a main shaft, actuating means for turning the main shaft, a rotatable member rotatably mounted in relation to the main shaft, a train of gear wheels controlled by retarding means and carried by the rotatable member, a gear wheel on the main shaft co-operating with the train of gears, means for holding the rotatable member during a stroke of the actuating means in one direction, and means movable with the main shaft for dis-engaging the holding means during a portion of the said stroke of the actuating means, so arranged that whilst the rotatable member is held the main shaft has to drive the train of gear wheels and consequently has a slow or retarded movement and when the holding means is released the rotatable member moves with the main shaft to allow an un-retarded or quick movement.

2,470,004
GAUGING DEVICE
Joseph A. Trame, Jr., Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application August 17, 1945, Serial No. 610,966
4 Claims. (Cl. 33—147)

1. Gauging apparatus comprising a support having means for holding a workpiece to be gauged, an elongated carrier, means mounting said carrier on said support for yielding movement in the direction of the length of the carrier, a pair of bars extending along said carrier so that a bar extends between another bar and the carrier, said bars and carrier having interfitting longitudinal grooves and projections, means extending from a bar through another bar and to the carrier and fixing both said bars to said carrier and providing for independent longitudinal adjustment of said bars with respect to said carrier and with respect to one another, a gauging device on one of said bars, a work engaging member yieldingly mounted on said one bar and having an operable connection to said gauging device, and a projection on the other bar providing a work engaging member, whereby said bars are adjustable to provide for gauging workpieces of various sizes while maintaining the work axis in fixed position with respect to said support.

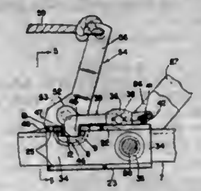
2,470,005
FLUE ROLLER
Ernest F. Vilter, Milwaukee, Wis.
Application January 16, 1948, Serial No. 2,593
2 Claims. (Cl. 153—82)



1. A rolling in tube for boiler tubes comprising a cage, rollers movable radially in said cage, a tapered mandrel slidably and rotatably associated with the cage for moving the rollers outwardly, each of said rollers including a generally cylindrical body gradually tapering from its outer end toward its inner end, and each body having a tube expanding portion, a tube flaring portion and a connecting rolling in neck, said neck being tapered in the opposite direction from the body and the mandrel, said mandrel also gradually tapering from its outer toward its inner end.

2,470,006
STABILIZED FERMENTED BEVERAGES AND METHODS OF MANUFACTURING SAME
James S. Wallerstein and Ralph T. Alba, New York, N. Y., assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application March 24, 1945, Serial No. 584,733
11 Claims. (Cl. 99—48)

1. The method of improving fermented beverages of mildly acid nature derived from cereals and normally containing organic components of proteinaceous nature which are soluble in mildly acid medium but are capable of causing turbidity on changes of temperature, comprising bringing the beverage at any stage during its manufacture into intimate contact with a dilute alkaline solution of a lignin material prepared by the alkaline cook method and soluble in dilute alkali but insoluble in dilute acid while maintaining the pH value of the beverage liquor in the acid range, and removing the insoluble matter that is formed and is composed of the lignin and said organic components.



2,470,007
PIVOTED INNER JAW WRENCH
Gilbert L. Watson, II, Chestertown, Md.
Application April 9, 1947, Serial No. 740,319
3 Claims. (Cl. 81—97)

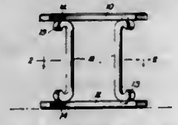
1. An open-end wrench comprising a body portion terminating at its outer end in a fixed jaw portion and at its inner end in a handle, the inner face of the fixed jaw having two fixed flat jaw faces immovably disposed at an angle of 60° to each other to receive two facets of a hexagonal work piece engaged by the wrench, said body formed with a longitudinal recess, a jaw supporting member slidably mounted in said recess, a movable jaw pivotally supported by said jaw supporting member, said movable jaw having two flat faces immovably disposed with respect to each other at an angle of 120° and adapted to receive two more facets of the work piece, said movable jaw and said movable jaw supporting member having opposing ratchet teeth, whereby said teeth on said movable jaw may be swung into and out of engagement with the teeth on said jaw supporting member, means for normally forcing said ratchet teeth into engagement with each other and the gripping faces of the movable jaw toward the gripping faces of the fixed jaw, said jaw faces of the movable jaw coacting with the jaw faces of the fixed jaw to engage the entire length of three facets of the hexagonal work piece, for the purpose of transmitting torque to said work when the wrench is turned in one direction, the movable jaw being automatically pivoted about its pivot by the pressure of the work to disengage the ratchet teeth and permit free ratcheting of the wrench about the work when the wrench is rotated in a counterdirection.

2,470,008
DISK HARROW LATCH UNIT
Charles H. White, William P. Oehler, and Charles H. Youngberg, Moline, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application March 30, 1945, Serial No. 585,692
13 Claims. (Cl. 55—81)

1. An agricultural implement comprising a pair of relatively movable parts, a latch unit for locking said parts together and including a detent carried by one part and adapted to engage the other part, and a lever movable into one position for momentarily disengaging said detent from said other part and movable into another

position to continuously hold said detent disengaged from said other part.

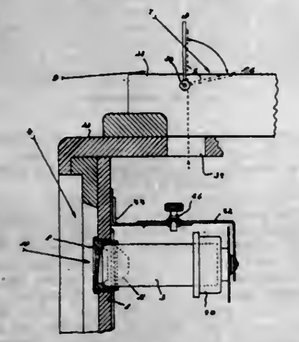
2,470,009
PIPE
Loomis Goff Wilhelm, Henryetta, Okla., assignor to Lock Joint Pipe Company, East Orange, N. J., a corporation of New Jersey
Application June 29, 1944, Serial No. 542,696
3 Claims. (Cl. 138—84)



3. A high pressure reinforced concrete pipe comprising a fluid-tight steel sleeve, a layer of concrete in contact with and lining said steel sleeve, a layer of concrete thicker than said first-named layer of concrete and in contact with and covering the outside of said steel sleeve, a wrapping of tensioned wire overlying said covering layer of concrete, said wire being under sufficient tension to maintain said covering layer of concrete, said steel sleeve and said lining layer of concrete in a state of compression when said pipe is subjected to normal working pressure from fluid material contained in the pipe, and a protective covering over said winding of tensioned wire.

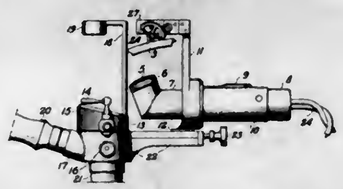
2,470,010
MELTING IRON IN ELECTRIC FURNACES
Sidney D. Williams, Warren, Ohio
No Drawing. Application June 17, 1946, Serial No. 677,412
5 Claims. (Cl. 75—12)

3. The method of producing low carbon steel from steel scrap and molten metal in an electric furnace which comprises intermingling highly heated steel scrap and iron oxide and forming such materials into a relatively dense, hot self-sustaining briquette, penetrable by molten metal and throughout which the iron oxide is distributed and which briquette includes all of the solid material for a single furnace charge and constitutes one third or more, by weight, of such charge, introducing such hot briquette into the furnace chamber, thereafter introducing into the furnace chamber the remainder of the charge, comprising a molten body of metal of relatively high carbon content so as to form on the bottom of the furnace chamber and at the base of the briquette, a pool of metal having a relatively low melting point, and immediately thereafter es-



tablishing an electric arc in the furnace chamber to quickly cause the heated briquette to melt and the iron oxide to react with the carbon of the molten metal.

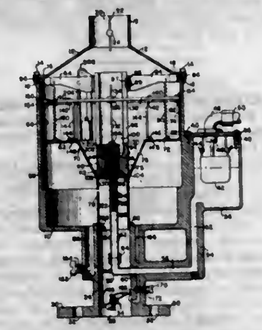
2,470,011
COMBINATION FOOTSTOOL AND TABLE
Arthur Winter, Weehawken, and Vincent Haggerty, Tenafly, N. J.
Application June 3, 1947, Serial No. 752,178
3 Claims. (Cl. 311—3)



3. A combination table and foot-rest which comprises a pair of spaced polygonal-sided plates, connecting bars connecting said plates and disposed around a common center in pairs along the diagonals of said polygon, said bars acting as foot rests when the plates are disposed in the vertical plane, the ends of said bars being turned reversely toward the corners of the plates to act as limiting means to lateral movement of the feet when resting thereon and said bars acting as legs for a table when the plates are disposed in a horizontal plane.

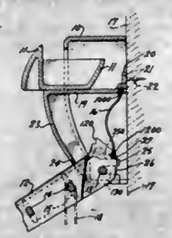
2,470,012
RADIO RECEIVER TUNING INDICATOR, INCLUDING A WIDE ANGLE VIEWING LENS
Jan Bergmans, Johan George Kronouer, and Max Leeuwin, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 23, 1946, Serial No. 664,398
In the Netherlands September 4, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 4, 1961
5 Claims. (Cl. 88—1)

1. A radio-receiving apparatus comprising a cabinet, a tuning dial mounted on top of said cabinet and pivoted on a horizontal axis extending from left to right of said cabinet so as to be adjustable to an inclined position, said apparatus further comprising a tuning indicator which is rigidly mounted in the front wall of said cabinet, means for displacing the angle at which said indicator may be viewed to a value to permit viewing thereof from a position in front of said cabinet at which said tuning dial in the different inclined positions thereof is normally viewed, said means comprising a prismatic optical body mounted in front of said indicator, whereby an operator of said radio receiving apparatus may simultaneously view said tuning indicator and said tuning dial even when said dial is in inclined position.



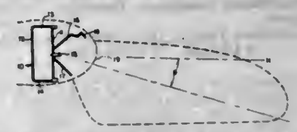
2,470,013
ENDOSCOPE HANDLE
Madhav V. Bhajekar, Bombay, India
Application January 24, 1945, Serial No. 574,378
In India February 7, 1944
2 Claims. (Cl. 128—4)

1. An endoscope handle, for endoscopic examination tubes, with proximal illumination made up of two horizontal pieces joined by a vertical piece; one end of the upper horizontal piece is immovably fixed to one end of the vertical piece while the other end of the horizontal piece has a tilting concave mirror attached thereto with a cog-wheel arrangement for changing the angle of the mirror; the other end of the vertical piece is attached to one end of the lower horizontal piece in such a way that the whole vertical piece, through about the middle of which is inserted the illuminating apparatus, together with the fixed upper horizontal piece can be moved in a horizontal direction away from or towards the socket which forms the free end of the lower horizontal piece, and in which socket can be fitted various endoscopic tubes, while a tilted removable cap having a transparent face and fitted with taps and stop-cocks adapted for irrigation, insufflation and inflation purposes can be fitted to close the proximal end of the socket.



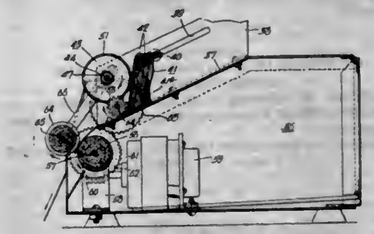
2,470,014
CARBURETOR
Chester W. Brown, Linton, Ind.
Application December 23, 1946, Serial No. 718,049
20 Claims. (Cl. 261—44)

1. A downdraft carburetor comprising, a cylinder having an air inlet at its upper end and a mixture outlet at its lower end provided with a throttle valve therein and adapted to be connected to the intake manifold of an internal combustion engine, a piston reciprocable within said cylinder including a tapered intermediate section having a depending tubular skirt reciprocable within said outlet, a plurality of springs supporting said piston from the upper portion of said cylinder, a float chamber formed at one side of said cylinder and providing a substantially constant level of liquid fuel therein, a tubular conduit connected to said float chamber and mounted in said outlet to extend axially upward adjacent the center of said cylinder, a generally cylindrical piston stop mounted on the top of said conduit having a beveled lower edge and including a central cavity having a plurality of radial apertures extending therefrom to said beveled edge, a generally cylindrical jet body secured in said cavity with a reduced diameter lower portion extending downwardly into said conduit including an axial bore therein having a metering orifice at its lower end and a plurality of radial jets connected to said bore and opening into said apertures, a plunger bar



mounted on said piston, a tapered plunger adjustably secured to said bar and extending through said orifice, and an air passage interconnecting the interior of said cylinder below said piston and said outlet above said throttle valve whereby said piston may move in response to the pressure differential between said inlet and said outlet.

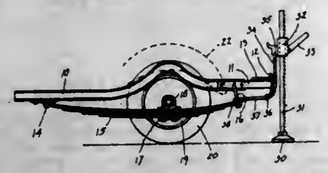
2,470,015
TIE RACK
Herman Martin Canner, Detroit, Mich.
Application April 11, 1947, Serial No. 740,811
1 Claim. (Cl. 211—100)



A rack for neckties and the like comprising a fixed head securable to a structure disposed in a substantially vertical plane, a depending arm pivotally connected to the said fixed head at a point below the top thereof, the said fixed head and top of the pivoted depending arm having oppositely disposed notches therein extending parallel to the pivoted axis of the said depending arm, and a concavo-convex leaf type compression spring disposed at its ends in the said notches in compressive abutment against the said fixed head and the top of the pivoted depending arm exerting constant compressive spring pressure between the fixed head and the pivoted depending arm at a point above its pivot point whereby to maintain the said pivoted arm selectively either in vertical depending relationship substantially parallel to the structure on which the said head is mounted or in a diagonally outward relationship thereto responsive to manual movement of the said arm from one position to the other, rods laterally extending from the said pivoted arms for supporting objects in display relationship to each other, and means on the outer end of each of the said laterally extending rods for preventing accidental removal of objects therefrom when the pivoted arm is in its depending relationship.

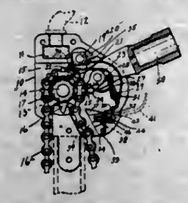
2,470,016
ANTENNA
Roger E. Clapp, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application September 14, 1945, Serial No. 616,370
3 Claims. (Cl. 250—33.65)

3. In a linear array antenna having a longitudinal wave guide, means for propagating energy within said wave guide, a plurality of dipoles aligned along one of the walls of said wave guide, means for shaping the radiation pattern produced by said dipoles, said means comprising two reflector plates one disposed above and the other below said aligned dipoles, said reflector plates being arranged at an angle to said wall of said wave guide and flared outwardly away from each other, one of said reflector plates having at least one bend along the length of the end portion remote from said wall, said bend being parallel to said wall and forming a secondary reflecting surface whereby an asymmetrical radiation pattern is obtained.



2,470,017
CHECK FEEDING MACHINE
Paul J. Clark, Germantown, Pa.
Application November 28, 1947, Serial No. 788,607
3 Claims. (Cl. 271—39)

1. In a feeding device adapted particularly for the feeding of mixed bank checks to a photographing machine, an inclined surface for supporting a stack of checks on edge, said surface being disposed at a relatively small acute angle to the horizontal, a follower adapted to engage the back of the stack, said follower being disposed at a relatively greater acute angle to the horizontal, means adapted to engage the front of the stack while permitting removal of the checks in succession, at least one rotatable stripping member positioned so as to be adjacent the lowermost part of said stack at the front thereof, said member having a substantial number of closely-spaced

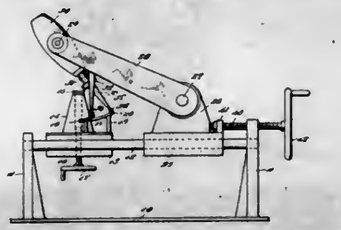


radial resilient vanes, the axis of rotation of said member being substantially equidistant from said surface and the foremost check of said stack, the location of said axis being such as to cause said vanes to engage the foremost check successively and to maintain engagement of the check by a plurality of said vanes during the sliding of the check from the stack, and power means for driving said rotatable member at a predetermined speed to cause successive feeding of said checks accordingly.

2,470,018
METHOD OF AND MECHANISM FOR LIFTING PORTIONS OF VEHICLES
Fredrick W. Coffing, Danville, Ill., assignor to Coffing Hoist Company, Danville, Ill., a corporation
Application June 2, 1945, Serial No. 597,166
2 Claims. (Cl. 254—133)

2. Mechanism for lifting a portion of a vehicle having a vehicle frame, a bumper carried thereby at an end thereof, a spring, a shackle structure connecting a spring end to the frame adjacent the end thereof, and an axle connected to the spring for vehicle support, comprising a jack having a standard extending upwardly and positioned adjacent the bumper, a member movable longitudinally of the standard, and a non-extensible flexible means connected to the member and depending therefrom and bearing upon and initially slidable relative to the bumper, and elongated hook means carried by the free end of said flexible means and adapted for ready and direct attachment to and detachment from the spring-shackle structure connection, the hook means having a length approximately equal to the distance between the spring shackle and the bumper.

2,470,019
COMBINATION HOIST, JACK, AND WIRE STRETCHER
Fredrick W. Coffing, Danville, Ill., assignor to Coffing Hoist Company, Danville, Ill., a corporation
Application December 12, 1947, Serial No. 791,333
4 Claims. (Cl. 74—156)

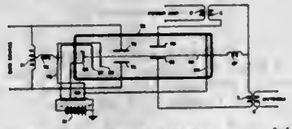


1. In a hoist having a toothed member rotatable in opposite directions for lifting and lowering purposes, a pair of notched end pivoted pawls having selective engagement with the toothed member, an oscillatable handle, means operatively connecting the handle and pawls, and a selective manual control rendering the hoist effective for different purposes, the combination therewith of a hook upon one of the pawls and a yielding structure relatively stationarily anchored at one end and provided at another end with a loop, the loop being disposed contiguous to the hook for selective engagement therewith only when the handle is oscillated and when the hoist is conditioned for one type of operation.

2,470,020
QUICK FROZEN HOMOGENIZED MILK
Frank L. Crowley, Binghamton, N. Y., assignor to Crowley's Milk Company, Inc., Binghamton, N. Y., a corporation of New York
No Drawing. Application April 24, 1946, Serial No. 664,696
1 Claim. (Cl. 99—192)

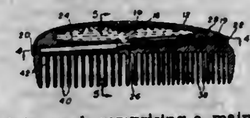
A process for treating and packaging sweet fresh milk comprising the steps of clarifying the milk at normal temperature to remove impurities, homogenizing the clarified milk, de-aerating the homogenized milk at normal temperature under vacuum, heating the de-aerated milk to a temperature of approximately 120° F., concentrating the heated de-aerated milk at a temperature of approximately 120° F., pasteurizing the milk for thirty minutes at a temperature between 165° F. and 185° F., packaging and sealing the pasteurized milk under vacuum at a temperature between 165° and 185° F., creating a self-contained vacuum in each package by cooling to a temperature of approximately 60° F., and quick freezing the packaged milk at a temperature on the order of 20° below zero.

2,470,021
GRINDING AND POLISHING MACHINE
Pierre de Vitry d'Avaucourt, Bainbridge, Pa., assignor of fifty per cent to William Boston Bailey, Huntington, W. Va.
Application November 20, 1944, Serial No. 564,252
3 Claims. (Cl. 51—100)



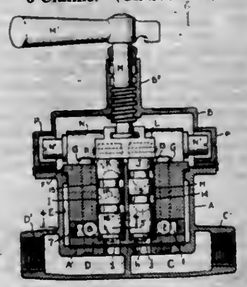
2. A grinding and polishing machine for toric lenses with a rotating grinding tool, the curvature of which determines the curvature of the lens in one direction, comprising a frame, guide members for longitudinal movement along said frame, a fixed support member, and a swingable member, one of the two last named members being provided with the rotatable grinding tool the other being adapted to hold the lens blank, a member longitudinally movable along the aforesaid guide members of said frame, means for producing the longitudinal movement of said member along said frame, an arm, pivotally secured to said movable member, a pivot means for securing said swingable member on said arm, two guiding surfaces arranged in fixed relation to said support member, guide feelers adapted to slide over said guiding surfaces, one of said guide feelers being attached to the arm and the other being fixedly attached to the swingable member for simultaneously controlling the swinging movement of the pivoted arm about its pivot during its advance and the swinging movement of the swingable member around said pivot, the simultaneous sliding of the feelers on the guiding surfaces determining the movement of the grinding tool relatively to the work piece.

2,470,022
KNIFE SHARPENER
Joseph A. De Cicco, Callicoon, N. Y.
Application May 10, 1948, Serial No. 26,117
5 Claims. (Cl. 51—181)



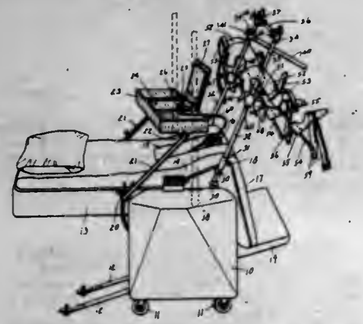
1. A knife sharpener comprising a base, a strop, means for removably and resiliently securing the strop to the base, an emery stone, means for slidably and removably supporting the emery stone on the base, emery paper, and means for slidably and removably securing the emery paper to the base.

2,470,023
MODULATING SYSTEM
Joseph C. Ferguson and Albert T. Mayle, Jr., Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 1, 1944, Serial No. 561,354
6 Claims. (Cl. 332—56)



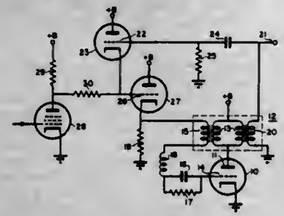
1. A signal modulating system comprising an input circuit and an output circuit, means for applying a carrier signal to said input circuit, means including a variable capacitance element for coupling said input circuit to said output circuit, said variable capacitance element including two spaced electrodes, means for developing an electron beam and for passing it between said electrodes, and means for deflecting said electron beam in accordance with a modulating signal to vary the capacitance of said electrodes, thereby to develop an amplitude-modulated carrier signal in said output circuit.

2,470,024
FOUNTAIN COMB
John H. Francis, Vista, Calif.
Application March 20, 1947, Serial No. 735,931
1 Claim. (Cl. 132—13)



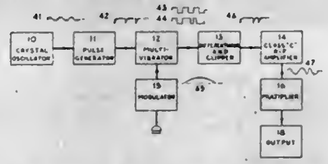
A fountain comb comprising a main rib provided with a reservoir and a longitudinally disposed channel, a plurality of spaced teeth on one side of said rib, an aperture allowing flow from said reservoir to said channel, a plurality of small channels leading from said channel to the exterior of said rib at points between adjacent pairs of teeth, said first mentioned channel being substantially cylindrical, a cylindrical and longitudinally shiftable valve within said channel to open and close said aperture, said valve being spring biased into closed position, said channel extending throughout the length of said rib and having at each end screw-threaded plugs, thereby adapting the fountain comb for easy cleaning, a longitudinally disposed slot in one side of said main rib, a finger grip longitudinally slidably mounted in an outer portion of said slot, and a pin extending transversely through an inner portion of said slot and connecting said finger grip with said valve.

2,470,025
MIXING VALVE HAVING ACCESSIBLE PRESSURE EQUALIZING MEANS
James Fraser, Wilmington, Del., assignor to Speakman Company, Wilmington, Del., a corporation of Delaware
Application March 15, 1948, Serial No. 14,986
3 Claims. (Cl. 277—18)



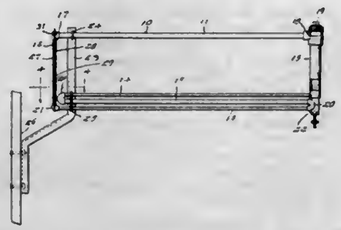
1. A mixing valve comprising a hollow housing shell structure with juxtaposed, spaced apart openings, closure means normally closing but movable to open each of said openings, a partition wall structure within said shell including walls surrounding cold and hot water inlet chambers, an outlet chamber, a pressure equalizing chamber extending between and in substantial alignment with said openings, and passages and ports forming separate inflow paths from said cold and hot water inlet chambers to respectively different portions of said pressure equalizing chamber and forming a separate outflow path to said outlet chamber from each of said equalizing chamber portions, a pressure equalizing valve element in said equalizing chamber forming a movable partition between said chamber portions and being automatically adjustable in response to variations in the water pressures in said inflow paths to inversely throttle the flows between the two inflow paths and the corresponding outflow path as required to equalize the water pressures in said outflow paths, valve means adjustable to inversely throttle said outflow paths to thereby control the temperature of the water in said outlet chamber, said partition structure also including a separable end wall part for each end of said equalizing chamber, each end wall part and said equalizing valve element being removable and replaceable through either of said shell openings when the latter is opened.

2,470,026
OBSTETRICAL AND FRACTURE ATTACHMENT FOR BED STRUCTURES
Robert R. Freund, Mount Carmel, Ill.
Application August 11, 1944, Serial No. 548,986
4 Claims. (Cl. 5—92)



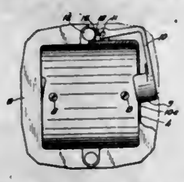
1. A knee clamp structure including a supporting standard, a socket member having two transversely disposed adjacent sockets therethrough, the standard extending through one for axial and rotatable adjustment of the member thereon, a rod longitudinally and rotatably adjustable in the other socket of said member substantially transverse to the standard, a ball and socket connection at one end of the rod, a knee clamp, and clamp support means carried by one portion of said connection and interposed between the connection and clamp for adjustable support thereof.

2,470,027
PULSE-TIME MODULATOR
Harold Goldberg, Towson, Md., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application February 21, 1947, Serial No. 730,090
9 Claims. (Cl. 332—14)



1. In combination, a blocking oscillator having an input circuit; a source of modulating voltage; means applying said voltage to said input circuit to control the recurrence frequency of the output impulses of said oscillator; and means for establishing a reference voltage in said input circuit at the termination of each cycle of the output of said oscillator; the last named means comprising a source of said reference voltage, means constituting a normally interrupted coupling path between the last named source and said input circuit, and means utilizing the output of said oscillator to complete said path during each impulse of said output.

2,470,028
PULSE GENERATION
James F. Gordon, Baltimore, Md., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application January 16, 1946, Serial No. 641,945
4 Claims. (Cl. 332—14)



1. In a system for generating position modulated energy pulses, the combination which comprises: a relaxation oscillator generating a square wave output, said relaxation oscillator comprising two electron discharge tubes, the anode of each of which is capacitively coupled to a control electrode of the other; means stabilizing the recurrence frequency of said square wave output by the application of synchronizing pulses to the control electrode of one of said electron discharge tubes; a source of modulating voltage; means varying the control electrode potential of the other of said electron discharge tubes in accordance with said modulation voltage; means differentiating the output of said relaxation oscillator, thus producing two alternating series of energy pulses, one of said series being of uniform spacing conforming to the spacing of said synchronizing pulses and the other position modulated as a function of said modulating voltage; and means eliminating said uniformly spaced pulses.

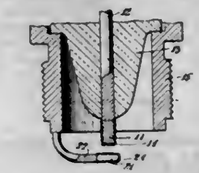
2,470,029
GRADE INDICATOR
Adolph P. Gubrud, Hudson, S. Dak.
Application February 11, 1946, Serial No. 646,935
2 Claims. (Cl. 33—209)

1. A grade indicator comprising an endless tubular member including a front vertical tube, a transparent rear vertical tube, a horizontal tube between the upper ends of said vertical tubes, a reduced diameter horizontal tube connected at one end to the lower end of said front tube, a reduced diameter horizontal tube connected at one end to the lower end of said rear tube parallel to said first reduced tube, a graduated level indicating card on said transparent tube, and a horizontal connecting tube between the free end of said reduced diameter tubes, said latter tube being of a diameter greater than said reduced tubes.

2,470,030
TOILET PAPER DISPENSING APPARATUS
Martin Habuda, Thoroid, Ontario, Canada
Application September 7, 1948, Serial No. 48,090
4 Claims. (Cl. 242—55.2)

1. A dispensing holder for a paper roll comprising a housing, a pair of arms each pivoted on the housing, a paper roll engaging projection on one end of each of the pair of arms, yieldable means for normally retaining the paper roll engaging ends of said arms toward each other in paper roll engaging position, a push button, and means connecting the push button with the other end of each of said pair of arms for swinging the paper roll engaging ends of said arms away from each other to disengage a paper roll.

2,470,031
ADJUSTABLE HOUSE DRESS
Margaret L. Harris, Hamilton, Mont.
Application January 2, 1947, Serial No. 719,775
2 Claims. (Cl. 2—76)

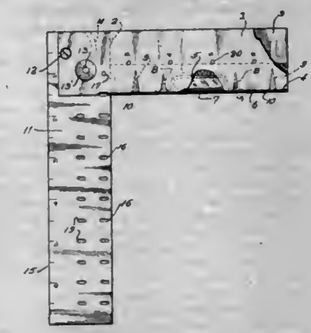


1. A house dress including a skirt having its lower portion turned inwardly and upwardly to form a wide hem composed of inner and outer layers, spaced lines of stitching securing said layers together at the top of the inner layer, said inner layer having an upward fold that extends upwardly between the layers of the hem, and manually operable means attached to said fold and extending upwardly between said lines of stitching and said layers to adjust the depth of said fold to lengthen or shorten the dress.

2,470,032
VAT DYESTUFFS
Robert Norman Heslop, Francis Irving, and Allstair Livingston, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 14, 1945, Serial No. 610,869. In Great Britain August 15, 1944
1 Claim. (Cl. 260—276)

6 - butanesulphonylbenzoylamino - 3′:4′ - phthaloylacridone.

2,470,033
SPARK PLUG
Franz R. Hensel, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application November 27, 1945, Serial No. 631,205
2 Claims. (Cl. 123—169)



2. A spark plug comprising a pair of spaced electrodes, at least the sparking areas of said electrodes being formed of nickel the surface of which has been roughened, and an electrodeposited coating of palladium over said nickel surface, the surface of said electroplated coating conforming to the configuration of the said nickel surface.

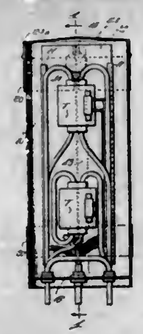
2,470,034
ELECTRIC CONTACT FORMED OF A RUTHENIUM COMPOSITION
Franz R. Hensel, James W. Wiggs, and Vernon E. Heil, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
No Drawing. Application November 27, 1945, Serial No. 631,206
4 Claims. (Cl. 75—172)

1. An electric contact formed of a metal composition consisting of 60 to 95% by weight of ruthenium, .5 to 20% by weight of cobalt, and the balance all gold.

2,470,035
SQUARE
Clyde Hudkins, Moundsville, W. Va.
Application January 10, 1946, Serial No. 640,329
2 Claims. (Cl. 33—112)

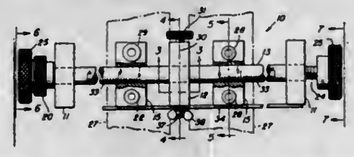
1. In a square of the class described, an oblong handle having a working side edge with a longitudinal slot in the other side edge thereof, an elongated blade of the same width as said handle

pivoted at one end in one end of the handle for folding edgewise into said slot and unfolding selectively out of said slot into right angular relation to said working edge or into longitudinal alignment with said handle with opposite side edges of the blade aligned with opposite side edges of the handle, a facing strip on said working edge having a stop forming end engaged by said blade when said blade is unfolded into right angular relation, and means for adjustably securing said strip to said working edge to vary the position of said stop forming end and true up said blade in said right angular position of the same.



2,470,036
PIVOTED BENDER WITH ABUTMENT ROLLER ADJUSTABLY MOUNTED ON VERTICALLY INCLINED BRACKET
Albert E. Lemay, Bath, Maine
Application November 7, 1944, Serial No. 562,355
1 Claim. (Cl. 153—40)

A bending machine for metal stock comprising a support including a table, a substantially circular plate rotatively journalled on said table, a shaft secured to said plate and extending through said table for rotating the plate, means adjustably secured to said plate for attaching metal stock to the plate, an angularly disposed bracket secured to said table, a second bracket having a shoulder and a slot, a roller journalled on said second bracket adjacent said plate, a substantially U-shaped bracket, seated on said second bracket, pins secured to said angularly disposed bracket extending through said slot and clampingly engaging said U-shaped bracket, threaded means adjustably received in said U-shaped bracket engaging said shoulder for adjustment of the second bracket and roller to selected positions of proximity relative to said plate.

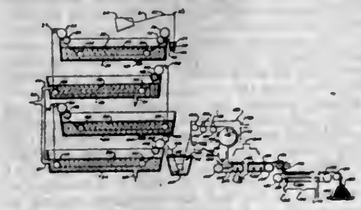


2,470,037
ELECTRICAL METERING ASSEMBLY
John S. Liddle, Frank R. Horton, and Eph A. Armstrong, El Dorado, Ark.
Application July 9, 1946, Serial No. 682,180
3 Claims. (Cl. 174—52)

1. In electric metering assemblies of the transformer type designed for outdoor service, and in combination, an open-ended tubular housing shell with its axis extending substantially vertical, said shell having internal opposed vertically-extending guides secured thereto, a vertically-extending plate carrying metering equipment of the metering transformer type positioned by said guides in spaced relation to such axis, said plate having a vertically-extending angular reinforce and also having a planar bottom extending at right angles to the direction of length of the plate, said bottom being dimensioned to close the bottom zone of the housing shell and having means adapted to potentially provide for the passage of transformer circuit connections, disengageable means cooperative with the upper end zones of the reinforce and the shell for supporting said plate within the housing, a removable cover for the upper end of the shell, and external means for supporting the housing, said plate forming the support for the transformer equipment and forms therewith a unit bodily positionable within and removable from the housing by movements lengthwise

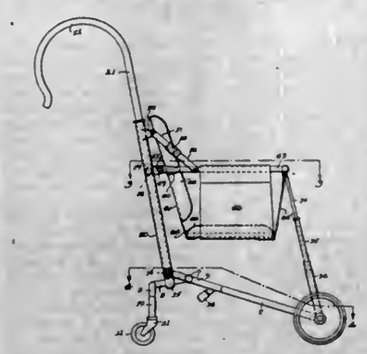
of the housing shell, whereby production of the unit assembly may be provided independently and with service attention provided without disturbing the position of the housing shell.

2,470,038
DOWELING JIG
Gleeman D. Long, Sterling, Kans.
Application August 25, 1947, Serial No. 770,433
3 Claims. (Cl. 77—62)



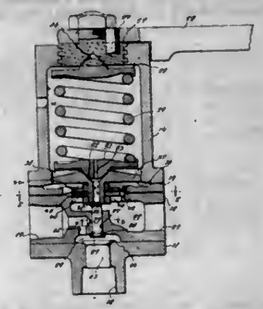
1. A dowelling jig comprising in combination, a pair of side plates and a center plate disposed in spaced relation therebetween, a pair of guide rods securing said plates together, a pair of guide blocks slidable on said rods, said blocks being disposed at the relatively opposite sides of said center plate and being equidistant therefrom, drill bushings provided in said blocks, an actuating shaft extending through and rotatable in said plates, a left-hand screw thread on one end portion and a right-hand screw thread on the remaining end portion of said shaft, each of said blocks being formed with a screw-threaded bore adapted to operatively engage one screw-threaded portion of said shaft, and clamping screwa provided in said side plates whereby pieces of work may be clamped simultaneously against opposite sides of said center plate.

2,470,039
APPARATUS AND PROCESS FOR MAKING FILAMENTS
Edward E. Lovig, Chicago, Ill.
Application May 4, 1945, Serial No. 591,904
10 Claims. (Cl. 28—76)



1. A process of making a kinky filament, comprising the steps of taking a cellulose strand, immersing said strand in a bath of sulfuric acid

solution, removing said strand when it has acquired a gelatinous outer layer, but before the core of said strand has been substantially treated by said acid solution, rinsing said gelatinous coated strand in water until the same is substantially free of acid, immersing said strand thereafter in a bath of weak ammonia solution to neutralize any acid remaining on said strand after the water rinse, rinsing said strand there-

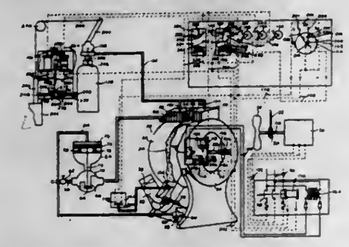


after in water until the ammonia is washed off, then removing excess liquid from said strand, thereafter immersing said strand in a bath of sodium silicate until it has acquired a film of said sodium silicate, moistening said film, curling the filament while said film is moist, partially drying said film, corrugating the curled filament while partially dry, and thereafter baking said filament to permanently set the curls and corrugations and permanently kink the strand.

2,470,040
COLLAPSIBLE PERAMBULATOR
James D. Mackin and Erick W. Bergmann, Monroe, Mich.; said Mackin assignor to said Bergmann
Application June 29, 1945, Serial No. 602,190
18 Claims. (Cl. 280—41)

1. A collapsible perambulator comprising a front axle, wheels carried thereby, a bottom frame pivotally attached to said axle and extending rearwardly therefrom, a post structure pivotally attached to the rear portion of said frame and extending upwardly therefrom, a collapsible prop pivotally attached to said axle and extending upwardly therefrom, an upper frame pivotally mounted on said prop and post structure, a seat supported by said upper frame, a rear wheel assembly carried by said bottom frame.

2,470,041
VALVE STRUCTURE
John W. Marsh, Alexandria, Va.
Application August 8, 1945, Serial No. 609,547
14 Claims. (Cl. 303—53)

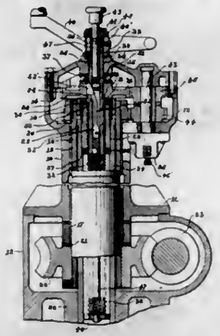


1. A fluid pressure control valve comprising a housing having a plurality of ports including an inlet port, a control pressure port, and an outlet port, a brake chamber communicating with said outlet port, a pair of fluid-tight elements of unequal area defining a closed chamber, said fluid-tight elements being interconnected for conjoint reciprocating movement, the exterior face of one of said fluid-tight elements being subject to fluid pressure in said outlet port and the interior faces of both of said elements being subject to fluid pressure in said control pressure port, resiliently compressible means applied to said fluid-tight elements to oppose said fluid pressure in said outlet port, means to operatively control the pressure exerted by said resiliently compressible means, an exhaust conduit extending through said fluid-tight elements and leading from the brake chamber to the external atmosphere, a multiple valve element provided with a plurality of valve portions, a fixed seat for one of the valve portions normally closing the inlet ports to the brake chamber, and a valve seat provided on the inlet end of said exhaust conduit adapted to be closed by a second portion of the valve element, the fixed seat of the valve element being opened by a reduction in control pressure acting between said diaphragms, thereby venting fluid under pressure in the inlet port to aforesaid chamber and aforesaid outlet port.

2,470,042
PROCESS FOR FLAMEPROOFING COMBUSTIBLE CELLULOSIC MATERIAL AND PRODUCT RESULTING THEREFROM
Andrew McLean, West Kilbride, and Stanley Frederic Marrian, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 21, 1946, Serial No. 711,464. In Great Britain November 26, 1945
12 Claims. (Cl. 117—137)

1. A process for flame-proofing a combustible cellulosic material which comprises impregnating said material with a polyethyleneimine and then treating the impregnated product with an aqueous solution of the reaction product resulting from the interaction of dipentaerythritol, orthophosphoric acid, and phosphorus pentoxide.

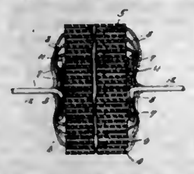
2,470,043
APPARATUS FOR DRYING HAVING SAFETY AND SEQUENCE CONTROLS
Nicholas Monsarrat, Rumford, R. I., assignor, by mesne assignments, to Pantex Manufacturing Corporation, a corporation of Delaware
Application April 15, 1942, Serial No. 439,027
42 Claims. (Cl. 34—45)



1. Apparatus for drying, comprising a casing, a garment containing basket movable within said casing, duct means in said casing for passing drying air through said basket including an inlet duct to said basket and an outlet duct from said basket, means to circulate a current of drying air through said duct means and basket, means to preheat said air prior to passage through said basket, means including thermostatic means in said outlet duct immediately adjacent said basket controlled by the temperature of the air in said outlet duct immediately adjacent said basket reduced by the latent heat of evaporation of cleaning fluid in said garments in said basket for controlling said preheating means to maintain the temperature of the air containing cleaning fluid after contact with said garments below a predetermined non-inflammable degree, means to move said basket, means to actuate said air circulating means, a signal indicating normal operating movement of said basket and a signal indicating completion of the proper time interval of movement of said basket, timer means and means including means controlled by said timer means settable for adjustably variable time controlled intervals of operation of said timer means for changing signals, means including thermostatic means in said outlet duct controlled by the temperature of air in said outlet duct immediately adjacent said basket operable when the temperature rises above said predetermined degree and signal means actuated by said last means including thermostatic means, for indicating rise of temperature of the air in the outlet duct immediately adjacent said basket above said predetermined degree.

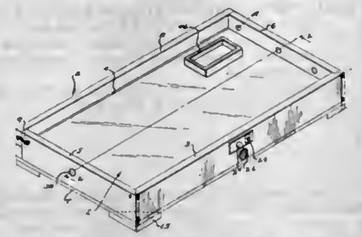
33. Apparatus for drying, comprising in combination, a casing having a door, a garment containing perforate basket movable within said casing, means for passing drying air through said basket including an inlet duct to said casing and an outlet duct from said casing and means to circulate a current of drying air through said ducts and basket, means to preheat said air prior to passage through said basket, electric motor means for moving said basket and actuating said air circulating means, an electric circuit for actuating said motor means, means for flooding said casing with fire inhibiting fluid, normally inactive electric control means for rendering said flooding means operative on a failure of current in said electric circuit and thermostatic means in said apparatus in the path of said drying air operative above a predetermined temperature of said drying air to render said control means active.

35. Apparatus for drying, comprising in combination, a casing having an opening in a wall thereof, a door for closing said opening, a perforate basket movable within said casing, means for passing drying air through said basket including an inlet duct to said casing and an outlet duct from said casing and means to circulate a current of drying air through said ducts and basket, means to preheat said air prior to passage through said basket, means to move said basket, means to actuate said air circulating means, means movable to a position simultaneously latching said door in closed position and starting operation of said air circulating and basket moving means, means for retaining said latching means in latching position, means for moving said retaining means to position to release said latching means and means including thermostatic means in said apparatus in the path of said drying air, operable to prevent actuation of said moving means for the retaining means to position to release the door latching means while the temperature of said drying air is above a predetermined degree.



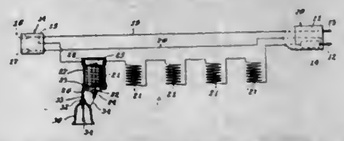
2,470,044
DRILLING MACHINE
Frank H. Mueller and John J. Smith, Decatur, Ill., assignors to Mueller Co., Decatur, Ill., a corporation of Illinois
Application May 27, 1946, Serial No. 672,610
8 Claims. (Cl. 77—33)

1. Apparatus of the class described comprising a support, a boring bar mounted in said support and guided for rotation and axial reciprocation, means for rotating said boring bar, a feed nut carried by said boring bar and positioned within the same, a separate feed screw mounted in said support and engaging said nut, drive means for the feed screw, and means including a member driven with the boring bar in the direction of advance for arresting the action of the drive means after predetermined advance of the boring bar.



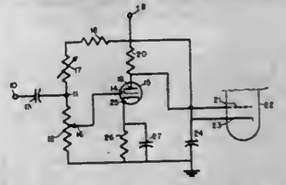
2,470,045
CONDENSER CONSTRUCTION
John J. Nagy, Arlington, Va.
Application November 7, 1945, Serial No. 627,262
1 Claim. (Cl. 175—41)

A condenser, comprising insulating strips and conductor foil strips, each conductor foil strip having a straight edge and a tapered edge providing a wide portion and a narrow portion, said conductor foil strips and insulating strips being laid one upon another, the side edges of the foil strips extending beyond the side edges of the insulating strips, the strips being wound



together comprising central short contacts and long outer contacts at the ends of the condenser, leads having coils positioned against the short contacts, and said long contacts being pressed over the coils, securing the leads to the contacts.

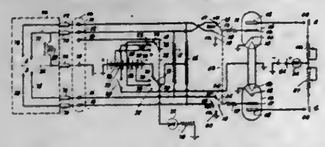
2,470,046
ELECTRIC INCUBATOR
James W. Napier, Macon, Ga.; Margaret H. Napier executrix of said James W. Napier, deceased
Application July 11, 1946, Serial No. 682,767
3 Claims. (Cl. 119—37)



1. Electric incubator comprising a rectangular cabinet having surrounding front, back, and end walls, and a horizontal bottom and removable top, a flat sheet metal imperforate partition above said bottom and parallel thereto having its edges engaging said surrounding walls and being supported thereby, dividing said cabinet into lower and upper chambers, a system of battens secured to said bottom including opposite pairs convergent inwardly from the corners of said bottom, terminating in apices spaced apart in the longitudinal medial line of said bottom, and a pair of spaced parallel battens extending from the front of said cabinet toward said medial line between said apices forming a space to receive a thermostat, series of correspondingly spaced upright pins on said battens, and a heating element comprising a resistance wire wound serially about corresponding pins of each series, reversed in direction at each of said parallel battens whereby the space between them is free from wiring, a thermostat operatively connected with said heating element carried by the front wall of said cabinet extending into said space and having manual control means at the exterior of said front wall, a horizontal egg rack fitting said cabinet supported by the edge margins of said partition including a floor of spaced slats out of contact with said partition, and a rectangular reciprocable egg turning frame slidable upon said slat floor, being shorter than the interior or said cabinet in the direction of its reciprocation and having an operating handle extending freely through a hole in an end wall of said cabinet, said bottom and top having central ventilating holes, and at least one of said surrounding walls having bi-passages placing said lower and upper chambers into communication.

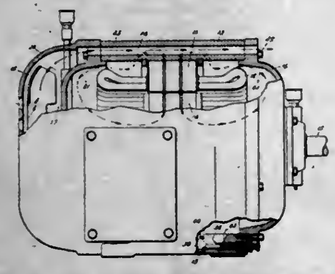
2,470,047
PORTABLE STRING OF SOUND PRODUCING DEVICES
Edwin J. Nicorvo, South Amboy, N. J.
Application June 23, 1948, Serial No. 34,676
8 Claims. (Cl. 177—7)

1. A portable electric decorative set of bells comprising a connector having a pair of electrical contacts capable of being electrically connected to an ordinary live electric female plug in a home, a plurality of solenoid windings, a plurality of bell elements, striker elements for said bell elements, means movable upon the electrical energization of said windings, said means associated with said bell elements and striker elements for moving one of said elements relative to the other, circuit making and breaking means, each of said windings, said circuit making and breaking means and said contacts being in series, said circuit making and breaking means being automatically operable to make and break the circuit made when said contacts are electrically connected to said live female plug.



2,470,048
TELEVISION RECEIVER
Frank R. Norton, Towson, Md., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application May 31, 1946, Serial No. 673,292
3 Claims. (Cl. 315—22)

1. In a television circuit comprising a video amplification channel and a picture tube, said amplification channel comprising a final stage having a control electrode, an input circuit and an anode circuit and said picture tube having a control electrode and a cathode; a load impedance in said anode circuit; means connecting said control electrode and cathode of said picture tube across said impedance; a source of plate supply voltage for said final stage and a voltage divider in said input circuit, said voltage divider being connected between said source and the control electrode of said final stage and being variable to simultaneously vary the amplitude of the video signal and the magnitude of the control



electrode bias of said stage, thereby controlling the contrast of the picture on said picture tube while maintaining constant the black level thereof.

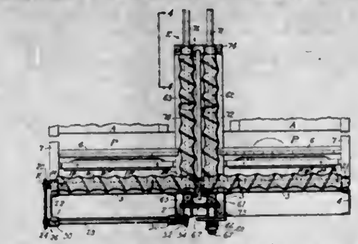
2,470,049
VIBRATOR TEST CIRCUIT
Marvin E. Nulsen, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application November 21, 1944, Serial No. 564,529
4 Claims. (Cl. 175—183)

1. A testing arrangement for a vibrator including a reed, a pair of contacts cooperating with said reed and electromagnetic driving means for said reed; comprising a pair of contact terminals adapted to be respectively connected to said contacts, a reed terminal adapted to be connected to said reed, a load having its ends connected to said contact terminals, a source of direct current having its positive pole connected to said reed terminal and its negative pole connected to a point of said load, a tube having an anode, a cathode and a control grid, a connection between one of said contact terminals and said control grid, a connection between said reed terminal and said cathode, and an indicator of the average current type connected in the anode circuit of said tube, said tube being biased to cut off when said load is disconnected from said source.

2,470,050
DRAIN ARRANGEMENT FOR ENCLOSURES SUCH AS ENCLOSURES OF EXPLOSION-PROOF MOTORS OR THE LIKE
Gustav E. Petterson, Florham Park, N. J., assignor to Continental Electric Company, Inc., Newark, N. J., a corporation of New Jersey
Application February 5, 1946, Serial No. 645,568
20 Claims. (Cl. 172—36)

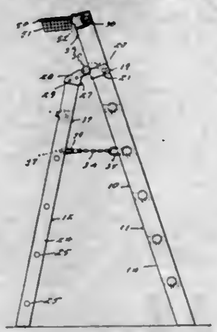
1. In a drain arrangement for enclosure structure, such as an enclosure of an explosion-proof electric motor: a duct structure for a lower wall member of said enclosure having an elongated passage for connecting the interior to the exterior of the enclosure and draining liquid accumulating in the enclosure to the exterior thereof; an elongated plunger member longitudinally movable in said passage between an inner receiving position and an outer delivering position; the cross-sectional area of a trap portion of the length of said passage being larger than the cross-sectional area of a trap portion of the length of said plunger member extending therethrough when said plunger member is in the receiving position to form between the trap portions of the passage and the plunger member a trap compartment receiving liquid from said enclosure when said plunger member is in the receiving position; an inward ejecting portion of the length of said plunger member being of a greater cross-sectional area than the trap portion of the plunger member for causing said ejecting portion to eject liquid from the compartment to the exterior of the enclosure when said plunger member is moved from said receiving position to said delivery position; the outwardly facing surface of said plunger member and the inwardly facing surface of said passage being so shaped that in all positions of the plunger member over a predetermined stroke range said facing surfaces confine the flow of fluid through said passage to gap-like passage elements of sufficiently small cross-section and sufficient passage length so as to quench ignited gases flowing from within the enclosure before they leave the exterior end of the passage.

2,470,051
ELECTRICAL IMPEDANCE FILAMENT AND THE METHOD OF MAKING SAME
Arthur C. Ruge, Cambridge, Mass., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application June 14, 1947, Serial No. 754,749
5 Claims. (Cl. 201—63)



1. An electrical resistance filament having a substantially zero change of electrical resistance in response to temperature change, comprising a continuous body portion of electrically conductive material substantially uniform in cross section along its length, and a coat of substantially uniform cross sectional area, on said body, of electrically conductive material having a change of electrical resistance in response to temperature change different and of opposite sign from that of said body and of a thickness so that the filament has an overall substantially zero resistance change in response to temperature change.

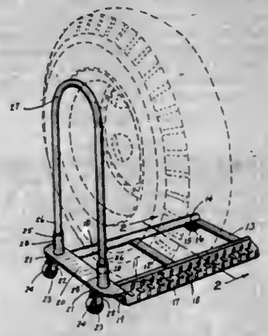
2,470,052
BALL RETURN MECHANISM FOR BOWLING PIN SETTING MACHINES
Rupert E. Rundell, Rockville Centre, and Gustaf E. Haguist, Brooklyn, N. Y., assignors to American Machine and Foundry Company, a corporation of New Jersey
Application October 30, 1942, Serial No. 463,922
37 Claims. (Cl. 273—49)



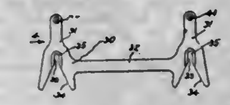
1. In a bowling ball return device for use with bowling alleys, a ball return runway having an elevated ball receiving portion, means on said runway for receiving a ball at one end of an alley and returning said ball to a player at the other end thereof, a conveyor extending along said portion and located at the receiving end of said runway and coacting with said first-named means for imparting positive motion to said ball to move said ball along said runway, mechanism for driving said conveyor, including means for increasing the rate of travel thereof operable as a result

of a ball moving thereon, and mechanism for automatically forwarding and guiding a ball to be

returned into the range of operation of said ball receiving means and conveyor.



2,470,053
CONVERTIBLE STEPLADDER
Raymond R. Salisbury, Ann Arbor, Mich.
Application July 8, 1946, Serial No. 682,015
1 Claim. (Cl. 228—68)

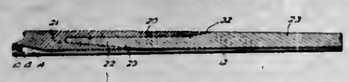


In a combination step and extension ladder having hingedly connected front and rear section a releasable locking means for locking the front and rear ladder sections in aligned position, said locking means comprising locking members carried by one of said ladder sections, rearwardly diverging flanges on said locking member, a wedge-shaped keeper fixed to said member between said flanges and spaced inwardly from the ends thereof, locking members carried by the other of said ladder sections, rearwardly diverging flanges on said latter members slidably engaging said first mentioned flanges and spacing said latter members from said first mentioned members, a spring-pressed hook on said latter members between the flanges and ends thereof engageable with said keeper for locking said ladder sections together, and a hook releasing member carried by said hook extending beyond one end of said locking members.

2,470,054
TIRE WHEEL CREEPER
Henry C. Schildmeier, Indianapolis, Ind.
Application March 28, 1945, Serial No. 585,313
3 Claims. (Cl. 280—49)

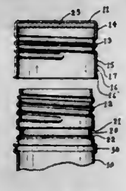
1. A non-cocking, tire casing accommodating creeper comprising in combination a pair of substantially parallel tubes, means disposed transversely thereof at opposite ends of the tubes and forming an open type tire casing supporting base wherein the lower portion of the casing may rest, caster wheel means at each of the resulting corners of the base, a plate disposed transversely of the tubes at one end thereof and including upwardly directed sockets disposed near the ends of the said plate, inverted U-shaped handle means having its ends seated in said sockets, and an apron extending downwardly from an upper portion of one tube and outwardly therefrom and the base and rigid and substantially coextensive therewith.

2,470,055
SLIVER CONDENSING DEVICE
Otto W. Schlums, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application August 31, 1945, Serial No. 613,731
2 Claims. (Cl. 19—131)



1. In a long draft apparatus having a pair of draft rolls and having a pair of aprons rearwardly adjacent thereto, in combination, a sliver condensing device positioned between said rolls and said aprons and normally engaging rear surfaces of said pair of draft rolls, said device being normally supported by the slivers only, and having rearwardly projecting lugs each engaging an apron and being supported thereby when the associated sliver is missing.

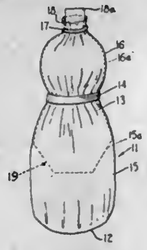
2,470,056
ROTOR BLADE
Charles M. Seibel, Kenmore, N. Y., assignor to Bell Aircraft Corporation, Wheatfield, N. Y.
Application October 23, 1946, Serial No. 705,203
6 Claims. (Cl. 170—159)



1. A rotor blade comprising a beam-like structure disposed interiorly of the contours of the blade, said beam-like structure including a pair of beam flange portions formed of relatively strong wood and extending from the root of said blade in spaced relation, one of said pair extending

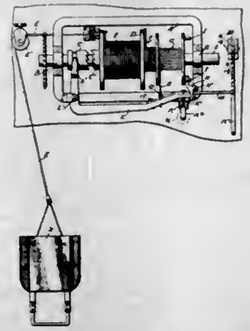
along the entire leading edge and the other of said pair extending along the trailing edge portion of said blade and terminating at approximately the mid span of the blade, a beam web portion

formed of relatively strong wood interconnecting said flange portions, and filler members formed of relatively light weight wood cemented to said beam-like structure and shaped to define the exterior surfaces of said blade.



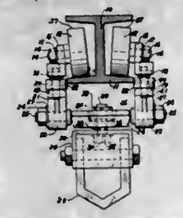
2,470,057
TAMPERPROOF SCREW CLOSURE
Donald L. Spender, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application December 6, 1945, Serial No. 633,099
3 Claims. (Cl. 220—39)

1. A tamper-proof closure member comprising a container having a cylindrical open end with a threaded section adjacent said open end, a continuous circumferential recess disposed in the outer wall of said container immediately below the threaded section, a threaded cap member for closing the open end of the container and having a cylindrical skirt section extending beyond its threaded section, and axial locking lug means formed in the skirt section of said cap and initially lying in the plane of said skirt, said lug means having an inverted U-shaped clearance slot circumscribing three of its sides and being connected to said skirt by frangible bridging members adjacent the lower end of said skirt, said cap member being of relatively inert material such that after assembly to the container said lug means may be manually bent inwardly from its initial position to lie within the area of said container recess at any position that the cap may be threaded to for complete assembly upon said container.



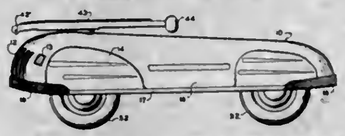
2,470,058
NOVELTY PACKAGE
Stanley B. Stefan, Hamtramck, Mich., assignor of fifty per cent to Jane H. Stefan, Hamtramck, Mich.
Application June 29, 1945, Serial No. 602,339
3 Claims. (Cl. 46—151)

1. A combination candy bag and paper doll of the class described comprising a paper bag adapted to be filled with candy, or the like, the central portion of said bag being gathered to define upper and lower body portions, the bottom being substantially flat, the mouth of the bag being open and also gathered and retained in gathered state to form a neck, and an insert in said bag having a restricted central portion and upper and lower coacting portions cooperating with the upper and lower body portions of the bag, the upper portion of said insert having an



extension projecting upwardly through and beyond said neck.

2,470,059
SAFETY DEVICE
Harvey P. Watson and George W. Rogers, Louisville, Ky.
Application March 20, 1945, Serial No. 583,744
4 Claims. (Cl. 254—173)

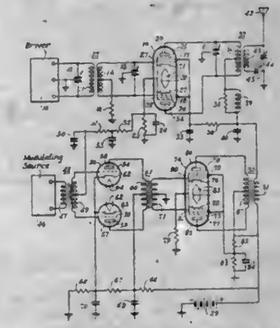


1. A safety attachment for an automatic power operated car unloader, including the cable drawn shovel, the cable winding mechanism and the power control clutch thereof, said attachment comprising an extension from said control clutch, an actuating lever adjacent the free end of said extension, a flexible connection between said actuating lever and said extension, a barrier adapted to be positioned across the door opening of said car above the cable to said winding mechanism, a sheave supported above said actuating lever, a flexible element trained over said sheave and having one end connected to said actuating lever, a counter-weight carried on the other end of said flexible element, a trip-latch normally taking the strain of said counter-weight from said flexible element, and means connecting said barrier with said trip-latch for its actuation to release said counter-weight, whenever the barrier is forcibly contacted by a person entangled in the cable between said shovel and the barrier, the pull of the counter-weight on said flexible element acting to operate the actuating and control levers to disconnect said power from said winding mechanism.

2,470,060
FOUR-WHEEL TROLLEY BRACKET
Jervis B. Webb, Bloomfield Hills, and Andrew G. Rose, Detroit, Mich., assignors to Jervis B. Webb Company, Detroit, Mich., a corporation of Michigan
Application June 10, 1946, Serial No. 675,521
4 Claims. (Cl. 105—154)

1. A four wheel trolley conveyor assembly for dirigible movement along an overhead conveyor track, said assembly comprising two longitudinally spaced pairs of opposed trolley brackets, each of said brackets having a single load supporting trolley wheel rotatably mounted at its upper end upon a transverse axis, pivotal means for connecting said opposed brackets together at their lower ends in laterally spaced relationship permitting relative articulation of said brackets about a transverse axis, a load supporting member common to said longitudinally spaced pairs of brackets, and a pivotal connection between each opposed pair of said brackets and said member for pivotal movement about a vertical axis.

2,470,061
WAGON
John Delbert Wheeler, Detroit, Mich., assignor to American Metalcraft Corporation, Detroit, Mich., a corporation of Michigan
Application January 7, 1947, Serial No. 720,627
8 Claims. (Cl. 280—87.01)

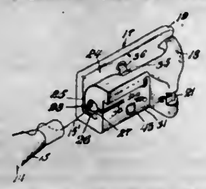


2. In a vehicle a body comprising a one-piece metal shell-like structure simulating an automobile said body having an outer portion forming substantially upright sides and ends thereof said outer portion being provided with a reinforced lower edge, resilient bumper members secured to said reinforced lower edge at the front and rear of said body, the upper part of said outer portion being curved gradually inwardly and defining an inner side wall and a substantially horizontally disposed intermediate load supporting portion located at an elevation between the top and the bottom of said outer portion with front and rear sections of said load supporting portion disposed at different elevations and providing a corresponding difference in clearance therebeneath the section of said intermediate load supporting portion disposed at the higher elevation having a post receiving opening, an inclined flat portion connecting said load supporting portions and a simulated instrument panel on the inner surface of said inclined flat portion, corrugations or depressions provided in said outer portion at the front of said body and constructed and arranged to reinforce said body and simulate a radiator grille, an axle carrying member fastened beneath each of said front and rear sections, an axle carried by each of said axle carrying members, wheels rotatably mounted on said axles adjacent the outer ends thereof, a tubular post in said receiving opening rotatably mounting one of said axle carrying members beneath the section affording the greater clearance, steering and pulling means secured to the upper end of said tubular post, said wheels and associated axle supports being enclosed within said outer portion whereby damage due to collision or the like is minimized.

2,470,062
PRECOATED MATERIAL AND DRY LUBRICATING COATING COMPOSITION THEREFOR
Roland A. Whitbeck, Lorain, Ohio, assignor to Gilron Products Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 8, 1948, Serial No. 53,591
17 Claims. (Cl. 252—18)

5. A coating material for admixture with water for coating a piece of blank metal stock and forming thereon a permanent, self-adherent dry homogeneous lubricating and protecting film consisting essentially of the following ingredients by weight:

	Per cent
Water-soluble high titre soap having a melting point of from about 36 to 42	10 to 33
Borax	90 to 67

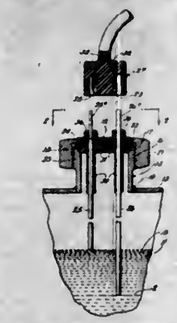


2,470,063
MODULATOR SYSTEM
Henry T. Winchel, Roscoe, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 21, 1944, Serial No. 523,303
4 Claims. (Cl. 332—38)

1. In apparatus for modulation of a carrier wave by a signal wave; a modulation amplifier tube having a cathode, a control grid and an anode; a source of carrier waves and means for applying them between said cathode and said grid; a load circuit coupled to the anode and cathode of said tube; a variable mu signal-amplifier tube having a cathode, a control grid and an anode, the amplification of which increases with increasingly positive bias on its

grid; a source of signal waves and means for applying them between said grid and cathode of said signal amplifier tube; a source of unidirectional anode potential and means connecting its positive terminal to the anode of said modulation amplifier tube; means negatively biasing the grid of said modulation amplifier tube to such extent that the average cathode current increases with increasing signal output; means intercoupling the anodes of said tubes for applying amplified signal waves from said signal amplifier tube to said anode of said modulation amplifier tube; resistance means connected between the negative terminal of said potential source and the cathode of said modulation amplifier tube for developing a potential on said cathode that is increasingly positive relative to said negative terminal with increasing cathode current; and means for applying said cathode potential to the grid of said signal amplifier tube to bias it; whereby variations in the cathode current of said modulation amplifier tube continuously produce corresponding variations in the amplitude of the signal wave.

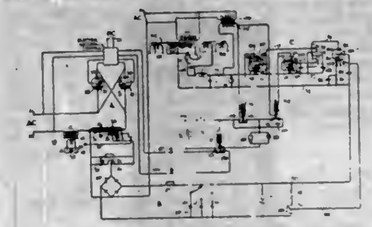
2,470,064
YARN GUIDING BLOCK FOR WEAVING SHUTTLES
Seth Wood, Pawtucket, R. I.
Application December 1, 1948, Serial No. 62,885
9 Claims. (Cl. 139—223)



1. A shuttle guide block to be disposed between the end of the bobbin chamber and the tip of the shuttle, said block being a solid one-piece structure having a longitudinal yarn entrance slot extending throughout the length of the block from its top surface downwardly, a substantially cylindrical yarn guiding tunnel of uniform diameter also extending longitudinally through a substantial part of the length of the block but laterally spaced from said slot and a threading passage throughout the length of the tunnel and extending from said slot beneath said tunnel and entering said tunnel on the opposite side of the center thereof from said slot to leave a distinct bottom wall between said tunnel and passage for the length of said substantially cylindrical tunnel.

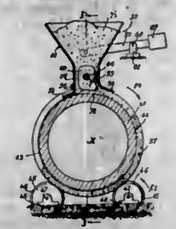
2,470,065
EMULSION POLYMERIZATION OF BUTADIENES
Carl E. Barnes, Belvedere, N. J., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application August 11, 1944, Serial No. 549,115
9 Claims. (Cl. 260—23.7)

1. In the process of polymerizing a butadiene-1,3 hydrocarbon and styrene in aqueous emulsion in the presence of an emulsifying agent and a polymerization catalyst, the improvement which comprises conducting the polymerization in the presence of an emulsifying agent which is a water-soluble soap of a fatty acid having from 12 to 18 carbon atoms and of about 5–10% by volume on the total volume of the emulsion of an inert water-soluble organic solvent for the soap.



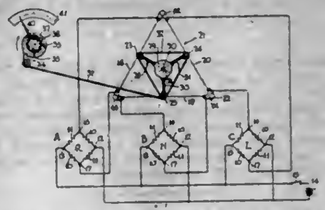
2,470,066
ELECTRODE ASSEMBLY
George V. Calabrese, Chicago, Ill., assignor to Lumenite Electronic Company, Chicago, Ill., a corporation of Illinois
Application March 30, 1948, Serial No. 658,399
4 Claims. (Cl. 174—152)

1. An electrode assembly comprising a base provided with an axial passage and having exterior threads on the upper portion and a lower depending skirt adapted to be secured within an opening in a tank wall, the outer end of said base providing a seating surface of inverted frusto-conical form, an electrode supporting member comprising an electrical insulating disc having a marginal wall on the lower side thereof of frusto-conical form adapted to seat on and provide self-centering sealing contact with said seating surface of said base member and to cooperate with said seating surface to effect disposal of said disc in a plane normal to the axis of said passage, an electrode supported by said disc and extending through the same and through the passage of said base for contact at the inner end with a fluid in the tank and provided with a jack terminal at the outer end, said electrode having an insulating sheath secured to the outside thereof in fluid-tight relationship on the underside of the disc, and a cylindrical clamping member having an axial passage therethrough and having an internally threaded lower portion adapted for coaction with the exterior threads of said base and having a flange at the outer end extending inwardly for engagement with a marginal portion of said disc for clamping the same firmly between said member and base with the conical walls of the base and disc in sealing contact with the electrode terminal projecting outwardly through said clamping member.



2,470,067
WELDING CURRENT INDICATOR AND LOCKOUT
Edwin M. Callender, Cynwyd, Robert S. Phair, Philadelphia, and Herbert D. Van Selver, Merion, Pa., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 24, 1944, Serial No. 523,692
5 Claims. (Cl. 177—311)

4. A current limit indicator comprising a main circuit, a control circuit operable on energization to initiate supply of variable current in recurrent intervals to said main circuit, a current transformer connected to said main circuit, a rectified current branch circuit including a direct current rectifier connected across said transformer, a capacitor and resistor connected across said rectifier, a constant potential circuit including a load tube having an anode, cathode and control grid, connections from the cathode and grid of said tube to opposite ends of said resistor, and means connected to the anode of said tube, and dependent on variations of current through said



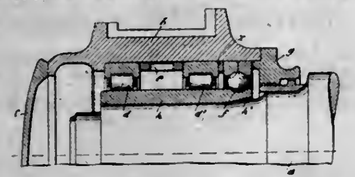
resistor, for indicating a limit of current change in said main circuit, said means comprising two parallel resistors, each having variable contacts forming voltage dividers, two gas thermionic tubes, each having an anode, a cathode and a control grid connected to one of said voltage divider contacts, a power relay connected to the cathode and anode of each gas tube, and indicating means operable by each of said relays, said voltage divider contacts being set to energize said gas tubes at predetermined limits of current flow through said resistor.

2,470,068
DEVICE FOR MOLDING AND COATING PIPES AND LIKE ARTICLES
Jean Louis Albert Contenson, Rueil-Malmaison, France, assignor to Societes Reunies Everite-Sifube, Paris, France, a French company
Application December 24, 1946, Serial No. 718,247
In France December 26, 1945
8 Claims. (Cl. 25—38)

1. Apparatus for moulding and coating pipes or like articles made of concrete or like material comprising a cylindrical support adapted to rotate about its longitudinal axis of revolution and intended to receive said material on its outer surface, means for carrying said support, means for driving the same, a hopper for conveying said material to said outer surface and comprising four walls, means for supplying said hopper with said material, a strickle secured at the base of one of the two longitudinal walls of said hopper, said strickle being parallel to the axis of said support and spaced from the external surface thereof a distance corresponding to the desired thickness of the layer of material to be coated on said support by strickling and sealing means on the base of the rear wall of said hopper, said sealing means being adapted to form a retractable joint between said hopper and the surface to be coated.

2,470,069
CENTER OF GRAVITY AND WEIGHT INDICATOR
Henry Richard Davies, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 10, 1944, Serial No. 521,798
9 Claims. (Cl. 73—65)

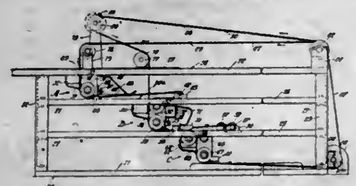
8. A combined gravity center and weight indicating apparatus for a support adapted to receive a load comprising an indicia plate zoned to indicate corresponding sections of the support, a pointer mounted for universal movement over said plate for gravity center indication, a weight indicator for the load on said support, an operating unit for simultaneous actuation of the weight indicator and pointer; and weight responsive means connected to said support and operating unit for activating said operating unit.



2,470,070
PROCESS FOR THE MANUFACTURE OF 2,5 DIMETHYLFURAN AND ACETONYLACETONE
Ian M. Heilbron and Ewart R. H. Jones, London, England
No Drawing. Application January 25, 1947, Serial No. 724,474. In Great Britain January 28, 1946
18 Claims. (Cl. 260—345)

1. A process for the manufacture of 2:5 dimethylfuran which comprises subjecting hex-3-en-5-yn-2-ol to the action of heat at a temperature not exceeding 100° C. in the presence of an inorganic mercuric catalyst.

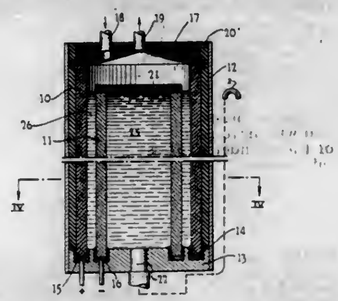
2,470,071
AXLE BOX
John Leslie Hilton, Chelmsford, England, assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn.
Application December 8, 1945, Serial No. 633,644
In Great Britain May 7, 1945
1 Claim. (Cl. 308—180)



In an axle box having a casing with a bore and a shaft concentrically spaced from said bore, and having a roller bearing with its outer race ring held by the wall of said bore and having rollers, the combination of a ball bearing outer race ring circumferentially divided into two parts, held by said wall of said bore, with one part adjacent the roller bearing, a cage for the balls of the ball bearing having ball retaining pockets of a ball enclosing contour to allow radial displacement of

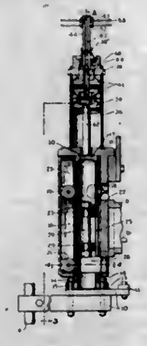
the balls, an inner race sleeve secured to the axle having the same outer diameter throughout with a ball race groove of smaller diameter at one end for said balls, forming a common sleeve for said balls and said rollers, and a closure member for the casing at said sleeve end and adjacent one of said outer race ring parts, whereby, upon removal of the closure member from the casing and

relative axial movement of the casing and sleeve, and with the outer race ring parts axially separated, the radial displacement of the balls in the cage and their removal from the smaller diameter race groove to the larger diameter of the common sleeve enables the cage retained balls and the rollers to slide along the sleeve, without removing the sleeve from the axle.



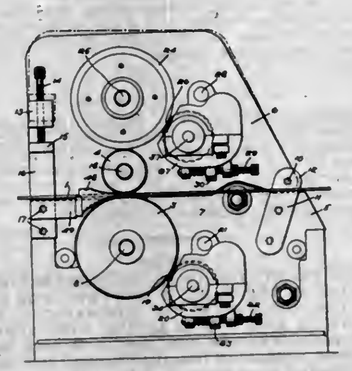
2,470,072
FOLDING MACHINE
Henry D. Lawrie, Wilmette, Ill.
Application October 18, 1946, Serial No. 704,101
4 Claims. (Cl. 270—70)

1. A device for folding shoelaces and the like comprising a plurality of separate folding stations, a pair of belts disposed adjacent to each other and interconnecting the stations, projecting means on one belt for conveying the laces progressively through the stations, and projecting means on the other belt cooperating with the first means to effect the folding at the various stations, and means for moving the belts, the projecting means remaining a constant distance apart throughout their travel through the stations.



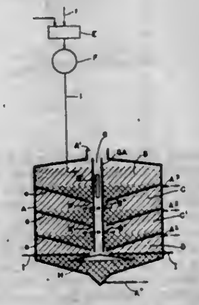
2,470,073
ELECTROLYTIC CELL AND METHOD OF OPERATING SAME
Frank S. Low, Bronxville, N. Y., assignor to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware
Application August 16, 1944, Serial No. 549,664
3 Claims. (Cl. 204—266)

1. In an electrolytic cell, a vertical annular impervious anode forming one wall of an electrolyte chamber and extending to the bottom of said chamber, a vertical annular cathode having an annular active porous area extending to the bottom of said chamber and with all of the active surface thereof at a uniform distance from the nearest active surface of the anode and axially substantially coextensive therewith so as to form an electrolyte chamber only between said active surface of the cathode and anode, a catholyte chamber on the other side of said cathode opposite said electrolyte chamber, the said electrolyte and catholyte chambers being communicably connected only through the pores of said cathode, a non-porous cover member extending into said catholyte chamber and sealing the top thereof, an inlet connected to said electrolyte chamber for introducing electrolyte into said electro-



lyte chamber, a discharge outlet connected to said catholyte chamber for withdrawing catholyte therefrom, said catholyte passing through the pores of said cathode and through said discharge outlet, an outlet conduit connected to the top of said electrolyte chamber through which anodic gases can be withdrawn, and a liquid level regulator connected to the cathode discharge outlet maintaining the level of the electrolyte in the electrolyte chamber above the level of the catholyte in the catholyte chamber.

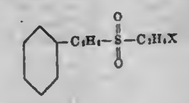
2,470,074
WELDING DEVICE
Matthew J. Manning, East Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 3, 1946, Serial No. 666,893
5 Claims. (Cl. 219—4)



1. In a device for moving one electrode of an electric welding machine toward and away from a second electrode, a stationary cylinder having one end closed, two floating pistons in said cylinder the one behind the other, means for connecting the space between one piston and the closed end of the cylinder to a source of pressure fluid, a second means for connecting the space between the two pistons to the same source of pressure fluid, said second means including means for reducing the pressure of the pressure fluid before it enters into the space between the two pistons, and a third single-acting fluid operated reciprocating motor of less effective area than said first two pistons, means for connecting said motor to the same source of pressure fluid, said motor having a movable part engaging one of said first two pistons and a stationary part so that admission of pressure fluid to the motor will resiliently oppose movement of said pistons under the influence of pressure fluid admitted to said spaces and will move said pistons toward the closed end of the cylinder if pressure fluid is released from said spaces.

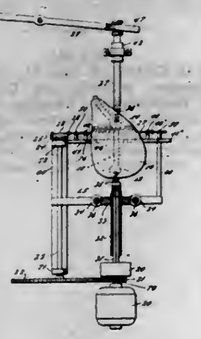
2,470,075
MACHINE FOR MARKING WIRE, CABLE, RODS, AND THE LIKE
Charles F. Robbins, Keene, N. H., assignor to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application March 3, 1945, Serial No. 580,761
1 Claim. (Cl. 101—36)

A machine for marking wire comprising a supporting frame presenting a stationary base section having a vertically extending lower plate element, an upper vertically extending plate element situated directly above and in the same vertical plane as the lower plate element, means at one vertical edge of the lower plate element for pivotally connecting said upper plate element thereto, a shaft journaled in the lower plate element, a lower printing wheel carried by said shaft, a second shaft journaled in the upper plate element, an upper printing wheel carried by said second shaft, an inking mechanism for each printing wheel provided with an ink roll for feeding ink to the corresponding printing wheel, a sprocket wheel on each shaft, a sprocket wheel rigid with each ink roll, a drive shaft journaled in the lower plate element, a driving sprocket wheel on said drive shaft, a sprocket chain engaging all of said sprocket wheels whereby rotation of the drive shaft rotates both the printing wheels and the ink rolls, and means at the other vertical edges of said plate elements for turning the upper plate element about its pivot thereby to adjust the space between the printing rolls to accommodate the size of the wire to be printed.



2,470,076
CLARIFICATION OF SUGAR CANE JUICE
George Thomas Warren and Reginald Albert Jordan, Gunthorpes, Antigua, British West Indies, assignors to The Dorr Company, New York, N. Y., a corporation of Delaware
Application September 30, 1947, Serial No. 776,982
13 Claims. (Cl. 127—57)

1. In the known process of continuously clarifying sugar cane juice by sedimentation and decantation in which hot limed juice is passed into a series of superposed clarifier compartments from which clarified juice is withdrawn, and in which the mud including the solids settling out of the juice in the different compartments is collected and thickened by moving elements in the lowermost of said compartments, the improvement which consists in passing sufficient lime into admixture with the mud being thickened in said lowermost compartment to substantially minimize decomposition of the mud and inversion of its sucrose content.



2,470,077
PHENYLETHYL SULFONES
John K. Fincke, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application February 12, 1948, Serial No. 8,011
3 Claims. (Cl. 260—607)

1. The compounds having the formula:

where X is selected from the group consisting of Cl and OH.

2,470,078
APPARATUS FOR SLICING HAM ON THE BONE
Harry J. Hoenselaar, St. Albans, N. Y.
Application September 7, 1944, Serial No. 552,966
2 Claims. (Cl. 146—151)

1. In a meat slicing machine for slicing a joint of meat having a bone extending longitudinally therein, the combination of: means for mounting the joint upon said bone as an axis about which to revolve the joint, a reciprocating knife for slicing the joint, means for supporting said knife at an angle other than 90° to the axis of the bone to enable a spiral cut to be made in the joint, means for longitudinally reciprocating said knife against the joint, means for tensioning said reciprocating knife against the joint, and means for simultaneously rotating the joint and advancing it past the reciprocating knife as the joint is cut.

2,470,079
GARMENT HANGER
Robert A. Kelsey, Glendale, Calif.
Application December 22, 1945, Serial No. 636,566
6 Claims. (Cl. 223—95)

1. In a garment hanger, a central support, and pant-leg supporting arms extending from the lower end of the support, each of said arms being provided at its end with garment-supporting elements spaced laterally with respect to the opposite sides of the hanger, said elements diverging upwardly and the upper ends of the elements being raised above the portions immediately inwardly thereof toward the middle of the hanger.

2,470,080
METHOD OF DYEING WITH METALLIZED DYES
Henry E. Millson, Plainfield, and Shannon Meoradian, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 18, 1946, Serial No. 677,526
20 Claims. (Cl. 8—43)

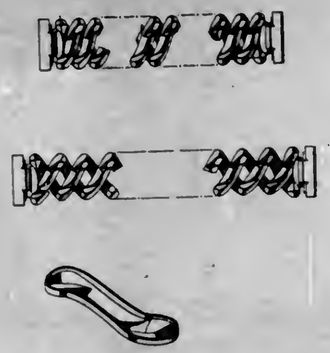
2. A method of dyeing wool with metallized dyes soluble in acid baths which comprises subjecting the material to be dyed to a dyebath containing the metallized dye and an amount, sufficient to be effective but insufficient to cause scum formation and extensive precipitation in the bath, of a water soluble condensation product of at least 16 to 18 mols of a lower alkylene oxide with a lower alkylolamide of a thermally dimerized drying oil acid.

2,470,081
ALKYLENE OXIDE CONDENSATION PRODUCTS OF DIMERIZED FATTY ACID ALKYLOL AMIDES
Jack T. Thurston, Riverside, and Ruth B. Warner, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 18, 1946, Serial No. 677,524
12 Claims. (Cl. 260—404.5)

1. Water-soluble condensation products of lower alkylene oxides of 2–4 carbon atoms with dialkylolamides of dimerized polyunsaturated fatty acids of the formula

$$HO.C_nH_{2n}.N.OC.R.CO.N.C_nH_{2n}.OH$$
(R′ above each N)

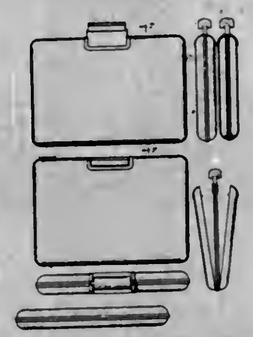
wherein R is the residue of dimerized polyunsaturated fatty acids of approximately 18 carbon atoms, n is a whole number from 2 to 4 inclusive and R′ is a member of the group consisting of hydrogen and $-C_nH_{2n}.OH$ said condensation products having from 8 to 175 mols of said lower alkylene oxide condensed therein.



2,470,082
GAS-PRODUCING CHARGES SUITABLE FOR THE GENERATION OF GAS PRESSURE FOR THE OPERATION OF MECHANICAL DEVICES AND FOR BLASTING OPERATIONS
Alexander Thomson Tyre, Newton Stewart, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application September 7, 1945, Serial No. 615,105. In Great Britain September 8, 1944
7 Claims. (Cl. 52—7)

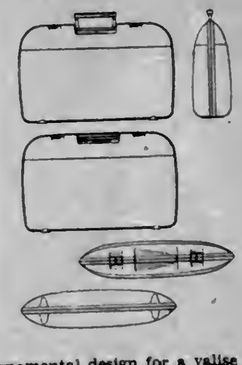
1. Gas producing charges capable of self-sustaining decomposition comprising a mixture of at least one of the compounds selected from the group consisting of nitroguanidine, guanidine nitrate, nitrodicyandiamidine, and dicyandiamine nitrate with a hypophosphite selected from the group consisting of sodium hypophosphite, calcium hypophosphite and ammonium hypophosphites, wherein the hypophosphite is from 5–35% of the total weight of the charge.

DESIGNS



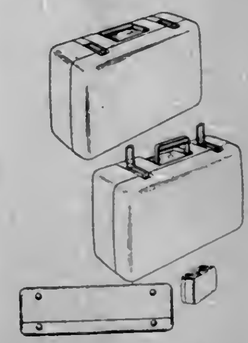
MAY 10, 1949

153,657
DESIGN FOR AN EXPANSIBLE WATCH BRACELET
Arthur Albanese, Providence, R. I., assignor to Marvel Jewelry Mfg. Company, Providence, R. I., a corporation of Rhode Island
Application January 3, 1949, Serial No. 1
Term of patent 7 years
(Cl. D45—4)



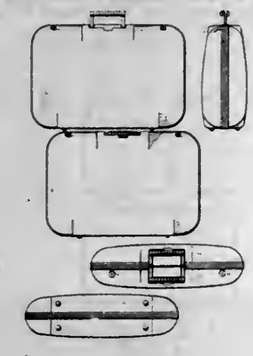
The ornamental design for an expansible watch bracelet, as shown and described.

153,658
DESIGN FOR A BRIEF CASE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,055
Term of patent 14 years
(Cl. D87—5)



The ornamental design for a brief case, substantially as shown and described.

153,659
DESIGN FOR A VALISE OR SIMILAR ARTICLE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,056
Term of patent 14 years
(Cl. D87—5)

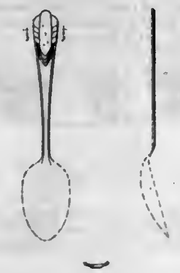


The ornamental design for a valise or similar article, substantially as shown.

153,660
DESIGN FOR A VALISE OR SIMILAR ARTICLE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,057
Term of patent 14 years
(Cl. D87—5)

The ornamental design for a valise or similar article, substantially as shown and described.

153,661
DESIGN FOR A VALISE OR SIMILAR ARTICLE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,059
Term of patent 14 years
(Cl. D87—5)

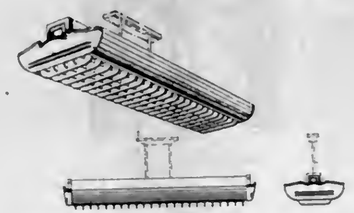


The ornamental design for a valise or similar article, substantially as shown.

153,662
DESIGN FOR A JACKET
J. Leah Asteroff, New York, N. Y.
Application October 15, 1948, Serial No. 149,126
Term of patent 3½ years
(Cl. D3—4)

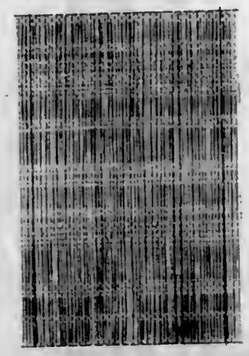
The ornamental design for a jacket, substantially as shown.

153,663
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF FLATWARE
Milton Bernstein, New York, N. Y., assignor to National Silver Company, New York, N. Y., a corporation of New York
Application April 17, 1948, Serial No. 145,799
Term of patent 14 years
(Cl. D54—12)



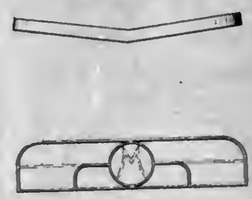
The ornamental design for a spoon or similar article of flatware, as shown and described.

153,664
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Nord Bowlen, Greenfield, Mass., assignor to Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts
Application June 23, 1948, Serial No. 147,139
Term of patent 14 years
(Cl. D54—12)



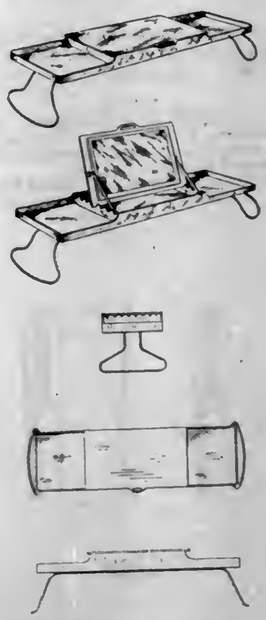
The ornamental design for a spoon or similar article, as shown and described.

153,665
DESIGN FOR A FLUORESCENT LIGHTING FIXTURE
Carl C. Braun, Riverside, Conn.
Application March 29, 1948, Serial No. 145,411
Term of patent 7 years
(Cl. D48—23)



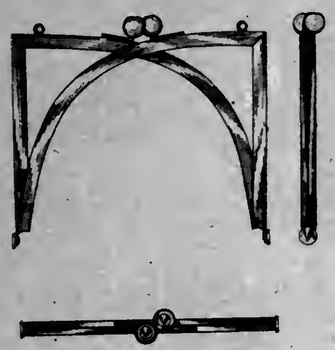
The ornamental design for a fluorescent lighting fixture, as shown and described.

153,666
DESIGN FOR WALLPAPER OR THE LIKE
William Burton, Chicago, Ill., and Dorothy W. Liebes, San Francisco, Calif.
Application April 30, 1947, Serial No. 138,725
Term of patent 3½ years
(Cl. D59—10)



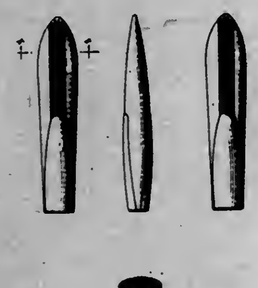
The ornamental design for wallpaper or the like, as shown and described.

153,667
DESIGN FOR AN EMBLEM HOLDER FOR AUTOMOBILE RADIATOR GUARD
Leopold Bustin, Mamaroneck, N. Y.
Application October 16, 1947, Serial No. 141,955
Term of patent 3½ years
(Cl. D14—6)



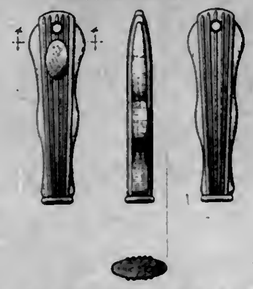
The ornamental design for an emblem holder for automobile radiator guard, substantially as shown and described.

153,668
DESIGN FOR A VANITY TRAY FOR BATHTUB USE
Clara Mauriece Craighead, San Francisco, Calif.
Application January 11, 1947, Serial No. 136,097
Term of patent 7 years
(Cl. D86—10)



The ornamental design for a vanity tray, for bathtub use, as shown.

153,669
DESIGN FOR A HANDBAG FRAME
Louis S. David, New York, N. Y.
Application May 1, 1948, Serial No. 146,120
Term of patent 3½ years
(Cl. D87—2)



The ornamental design for a handbag frame, substantially as shown and described.

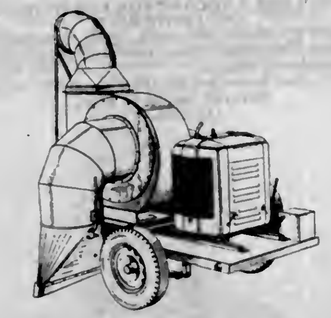
153,670
DESIGN FOR A HANDLE
Philip Derham, Rosement, Pa., assignor to Mastercraft Plastics Co. Inc., Jamaica, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,641
Term of patent 7 years
(Cl. D44—29)

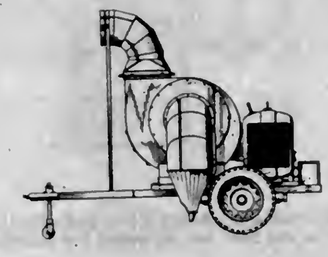
The ornamental design for a handle, as shown.

153,671
DESIGN FOR A HANDLE
Philip Derham, Rosement, Pa., assignor to Mastercraft Plastics Co. Inc., Jamaica, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,642
Term of patent 7 years
(Cl. D44—29)

The ornamental design for a handle, as shown.

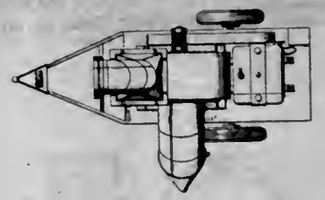
153,672
DESIGN FOR A HIGH CHAIR
Rocco Di Giorgio, Franklin Park, Ill.
Application August 13, 1947, Serial No. 140,840
Term of patent 3½ years
(Cl. D15—1)

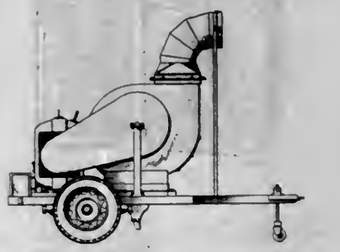




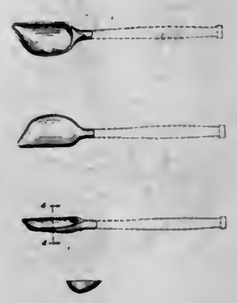
The ornamental design for a high chair, as shown and described.

153,672—Continued





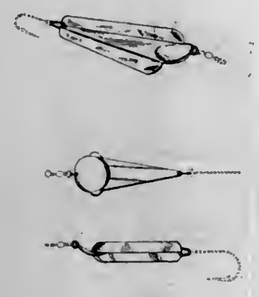
153,673
DESIGN FOR A VACUUM LEAF LOADER
Marion A. Elliotte, Detroit, Mich.
Application February 25, 1947, Serial No. 137,158
Term of patent 14 years
(Cl. D14—3)



153,673—Continued

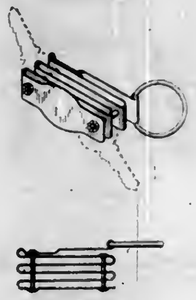
The ornamental design for a vacuum leaf loader, as shown.

153,674
DESIGN FOR A STIRRING, SCRAPING, AND BEATING SPOON
Genevieve J. Erker, Clayton, Mo.
Application April 25, 1946, Serial No. 128,959
Term of patent 14 years
(Cl. D44—29)



The ornamental design for a stirring, scraping, and beating spoon, substantially as shown.

153,675
DESIGN FOR A PHONOGRAPH CABINET
Paul M. Fuller, Buffalo, N. Y., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application September 8, 1947, Serial No. 141,271
Term of patent 7 years
(Cl. D56—4)



The ornamental design for a phonograph cabinet, as shown and described.

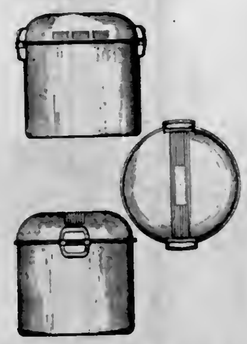
153,676
DESIGN FOR A TROLLING SPOON
Joseph Scheeland Gardemeyer, San Francisco, Calif.
Application October 19, 1946, Serial No. 134,068
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a trolling spoon, as shown and described.

153,677
DESIGN FOR A COMBINED COMPACT KEY AND MONEY CLIP OR THE LIKE
George E. Georginta, Muskegon, Mich.
Application June 27, 1947, Serial No. 139,949
Term of patent 14 years
(Cl. D17—14)

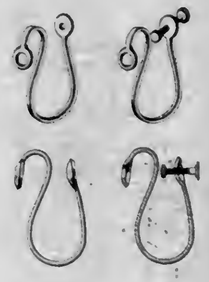
The ornamental design for a combined compact key and money clip or the like, substantially as shown and described.

153,678
DESIGN FOR A SOCKET FOR USE WITH CLIP AND LIGHT BULB
Robert K. Grubb, Portland, Oreg., assignor to On-A-Lite Corporation, Portland, Oreg., a corporation of Oregon
Application December 30, 1947, Serial No. 143,430
Term of patent 14 years
(Cl. D26—1)



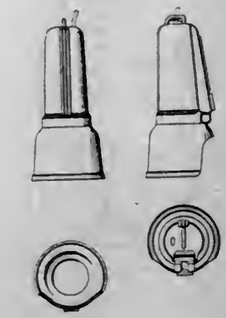
The ornamental design for a socket for use with clip and light bulb, as shown and described.

153,679
DESIGN FOR A WRITING INSTRUMENT
Francis E. Gruber, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a corporation of Minnesota
Application January 8, 1948, Serial No. 143,596
Term of patent 14 years
(Cl. D74—17)



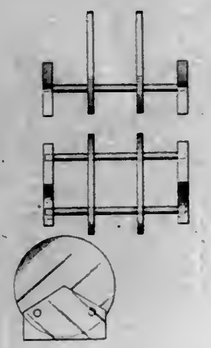
The ornamental design for a writing instrument, as shown.

153,680
DESIGN FOR A WASHING MACHINE
Lawrence H. Haase, Evansville, Ind., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 27, 1946, Serial No. 132,057
Term of patent 14 years
(Cl. D49—1)



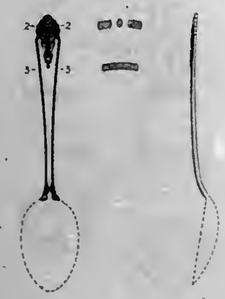
The ornamental design for a washing machine, as shown and described.

153,681
DESIGN FOR AN EARRING ATTACHMENT DEVICE
Clarence B. Haegert, Coffeyville, Kans.
Application February 4, 1947, Serial No. 136,667
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring attachment device, as shown.

153,682
DESIGN FOR A PORTABLE ELECTRIC LAMP
Arthur C. Haggstrom, Rockford, Ill., assignor to H. L. Baumgardner Corporation
Application February 15, 1947, Serial No. 136,922
Term of patent 14 years
(Cl. D48—25)

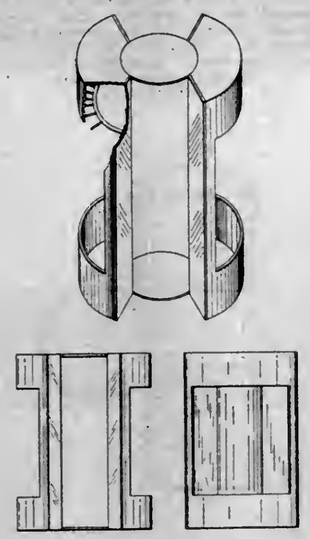


The ornamental design for a portable electric lamp, substantially as shown.

153,683
DESIGN FOR A PAPER NAPKIN HOLDER
Paul B. Hamilton, Birmingham, Ala.
Application February 21, 1947, Serial No. 137,072
Term of patent 3½ years
(Cl. D44—24)

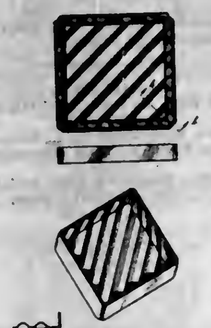
The ornamental design for a paper napkin holder, as shown.

153,684
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Lillian V. M. Helander, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application November 18, 1948, Serial No. 149,702
Term of patent 14 years
(Cl. D54—12)



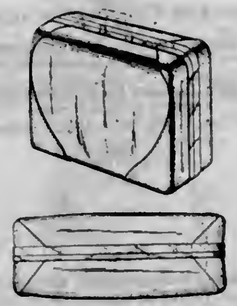
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

153,685
DESIGN FOR A HOSE NOZZLE
Andrew L. Henkel, Chicago, Ill.
Application February 12, 1947, Serial No. 136,864
Term of patent 7 years
(Cl. D62—2)



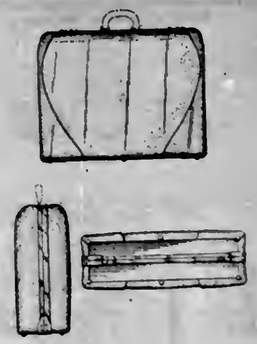
The ornamental design for a hose nozzle, substantially as shown and described.

153,686
DESIGN FOR A CLOTHING DISPLAY RACK
Geraldine Hinkle, San Francisco, Calif.
Application June 30, 1947, Serial No. 140,016
Term of patent 14 years
(Cl. D80—9)



The ornamental design for a clothing display rack, as shown.

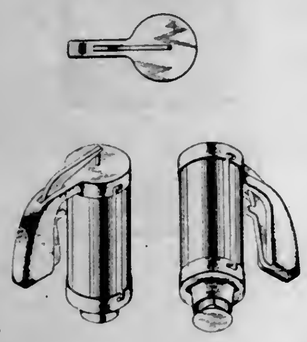
153,687
DESIGN FOR AN ASH TRAY
Roderick W. Hoag, Melrose, Mass.
Application April 5, 1947, Serial No. 138,176
Term of patent 14 years
(Cl. D85—2)



The ornamental design for an ash tray, as shown.

153,688
DESIGN FOR A LUGGAGE CASE OR A SIMILAR ARTICLE
Leo Horwitz, Chicago, Ill.
Application May 1, 1948, Serial No. 146,117
Term of patent 7 years
(Cl. D87—5)

153,688—Continued



The ornamental design for a luggage case or a similar article, as shown and described.

153,689
DESIGN FOR A LAMP OR SIMILAR ARTICLE
Alice Mason Johnson, Long Island City, N. Y.
Application June 19, 1948, Serial No. 147,090
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a lamp or similar article, substantially as shown.

153,690
DESIGN FOR A DOUGHNUT FORMING DEVICE
David F. Jones, Richmond, Calif., assignor to Hem-Ade, Inc., Oakland, Calif., a corporation of California
Application January 11, 1947, Serial No. 136,102
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a doughnut forming device, substantially as shown.

153,691
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 8, 1949, Serial No. 136
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,692
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 8, 1949, Serial No. 137
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,693
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 8, 1949, Serial No. 139
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,694
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 8, 1949, Serial No. 141
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

153,695
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1949, Serial No. 263
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

153,696
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 19, 1949, Serial No. 324
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,697
DESIGN FOR A PIN CLIP OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1949, Serial No. 361
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a pin clip or similar article, substantially as shown.

153,698
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 25, 1949, Serial No. 478
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,699
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 28, 1949, Serial No. 545
Term of patent 7 years
(Cl. D45—19)

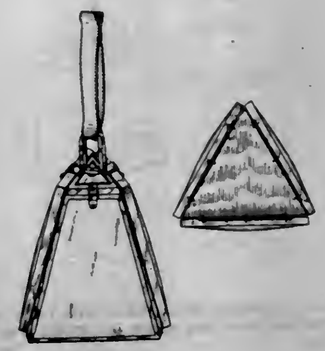
The ornamental design for a brooch or similar article, substantially as shown.

153,700
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 28, 1949, Serial No. 546
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

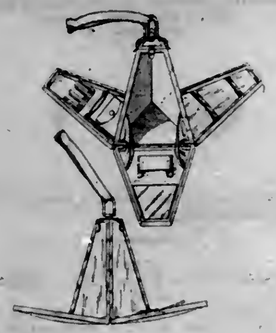
622 O. G.—39

153,701
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 28, 1949, Serial No. 552
Term of patent 7 years
(Cl. D45—19)



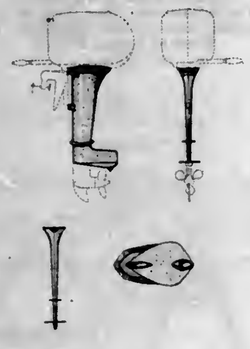
The ornamental design for a brooch or similar article, substantially as shown.

153,702
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 2, 1949, Serial No. 641
Term of patent 7 years
(Cl. D45—19)

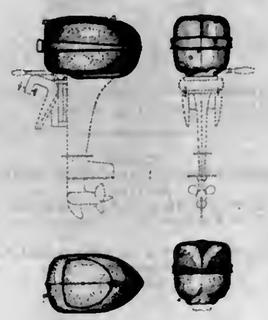


The ornamental design for a brooch or similar article, substantially as shown.

153,703
DESIGN FOR A HANDBAG
Louis Kaufman, New York, N. Y.
Application June 22, 1948, Serial No. 147,116
Term of patent 7 years
(Cl. D87—3)

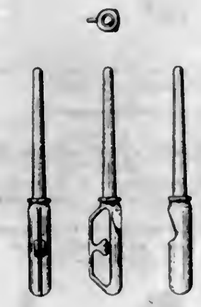


153,703—Continued



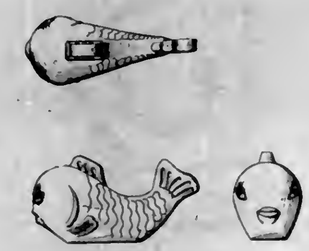
The ornamental design for a handbag, substantially as shown.

153,704
DESIGN FOR A DRIVE SHAFT HOUSING FOR AN OUTBOARD MOTOR
Elmer C. Kiekhaefer, Cedarburg, Wis.
Application September 5, 1947, Serial No. 141,230
Term of patent 14 years
(Cl. D71—1)



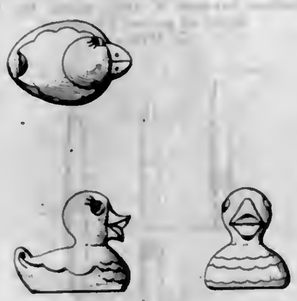
The ornamental design for a drive shaft housing for an outboard motor, as shown and described.

153,705
DESIGN FOR AN OUTBOARD MOTOR HAVING A POWER HEAD
Elmer C. Kiekhaefer, Cedarburg, Wis.
Application September 5, 1947, Serial No. 141,231
Term of patent 14 years
(Cl. D71—1)



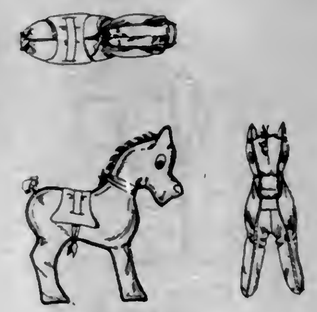
The ornamental design for an outboard motor having a power head, as shown and described.

153,706
DESIGN FOR A SCISSORS SHARPENER
Ruth C. Lathom, Gillette, Wyo.
Application December 31, 1947, Serial No. 143,484
Term of patent 3½ years
(Cl. D37—1)



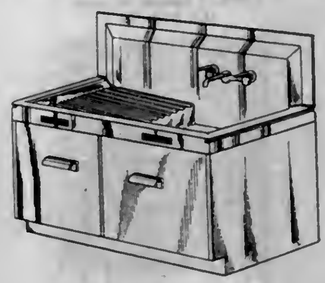
The ornamental design for a scissors sharpener, as shown.

153,707
DESIGN FOR A TOY FISH OR SIMILAR ARTICLE
Ludwig Leaf, Forest Hills, N. Y., assignor to Empire Plastic Corporation, New York, N. Y.
Application April 17, 1948, Serial No. 145,792
Term of patent 3½ years
(Cl. D34—2)



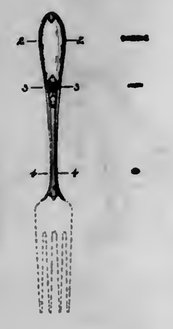
The ornamental design for a toy fish or similar article, substantially as shown.

153,708
DESIGN FOR A TOY DUCK OR SIMILAR ARTICLE
Ludwig Leaf, Forest Hills, N. Y., assignor to Empire Plastic Corporation, New York, N. Y.
Application April 17, 1948, Serial No. 145,793
Term of patent 3½ years
(Cl. D34—2)



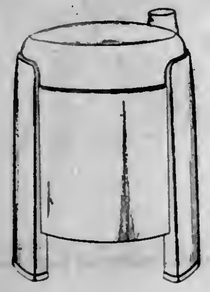
The ornamental design for a toy duck or similar article, substantially as shown.

153,709
DESIGN FOR A TOY ANIMAL FIGURE
Morris C. Levich, New York, N. Y.
Application May 1, 1948, Serial No. 146,126
Term of patent 14 years
(Cl. D34—2)



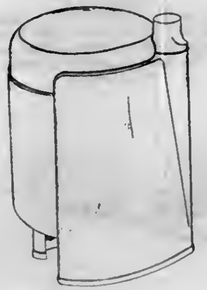
The ornamental design for a toy animal figure, substantially as shown.

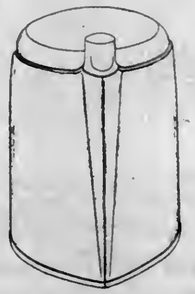
153,710
DESIGN FOR A CABINET SINK
Nena Lewis, Campbell, Ohio
Application April 2, 1947, Serial No. 138,110
Term of patent 7 years
(Cl. D33—19)



The ornamental design for a cabinet sink, as shown.

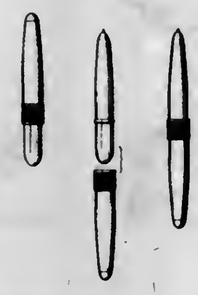
153,711
DESIGN FOR A FORK OR OTHER ARTICLE OF FLATWARE
Isadore Albert Lipman, Meriden, Conn., assignor, by mesne assignments, to Amston Silver Company, Inc., Amston, Conn., a corporation of Connecticut
Application November 16, 1948, Serial No. 149,672
Term of patent 14 years
(Cl. D54—12)



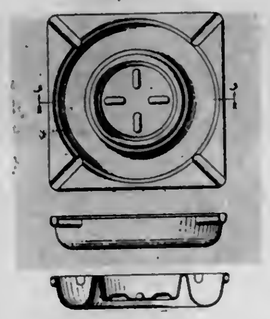


The ornamental design for a fork or other article of flatware, substantially as shown and described.

153,712
DESIGN FOR A WASHING MACHINE
John M. Little, Toledo, Ohio, assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application February 28, 1947, Serial No. 137,227
Term of patent 14 years
(Cl. D49—1)

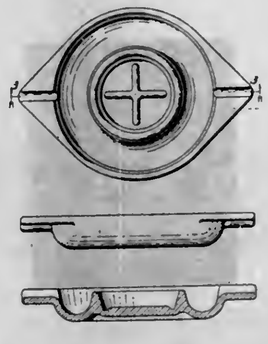


153,712—Continued



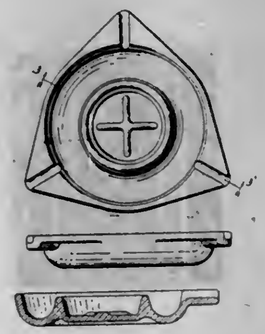
The ornamental design for a washing machine, substantially as shown.

153,713
DESIGN FOR A BALL POINT FOUNTAIN PEN
Raymond J. Lohr and Laurie J. Campbell, Erie, Pa., assignors to Louis Marx & Company, Inc., New York, N. Y., a corporation of New York
Application January 8, 1947, Serial No. 136,008
Term of patent 3½ years
(Cl. D74—17)



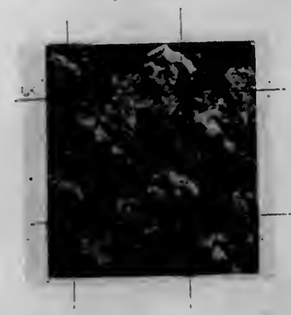
The ornamental design for a ball point fountain pen, as shown and described.

153,714
DESIGN FOR AN ASH TRAY
William P. Mader, Detroit, Mich., assignor to Roethel Engineering Corporation, Detroit, Mich., a corporation of Michigan
Application October 6, 1947, Serial No. 141,762
Term of patent 7 years
(Cl. D85—2)



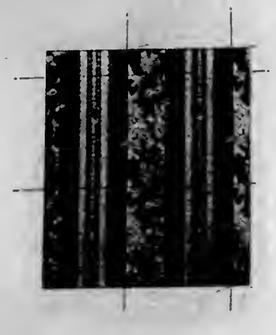
The ornamental design for an ash tray, substantially as shown.

153,715
DESIGN FOR AN ASH TRAY
William P. Mader, Detroit, Mich.
Application November 26, 1947, Serial No. 142,819
Term of patent 7 years
(Cl. D85—2)



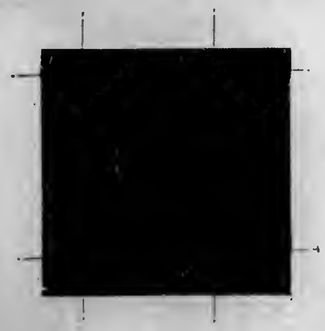
The ornamental design for an ash tray, substantially as shown.

153,716
DESIGN FOR AN ASH TRAY
William P. Mader, Detroit, Mich., assignor to Roethel Engineering Corporation, Detroit, Mich., a corporation of Michigan
Application November 26, 1947, Serial No. 142,820
Term of patent 7 years
(Cl. D85—2)



The ornamental design for an ash tray, substantially as shown.

153,717
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application June 14, 1948, Serial No. 146,941
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric, substantially as shown and described.

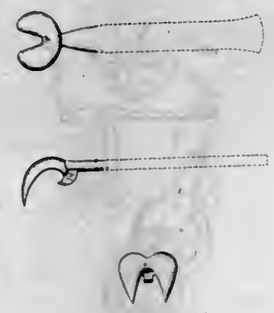
153,718
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application June 14, 1948, Serial No. 146,942
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric, substantially as shown and described.

153,719
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application June 14, 1948, Serial No. 146,943
Term of patent 3½ years
(Cl. D92—1)

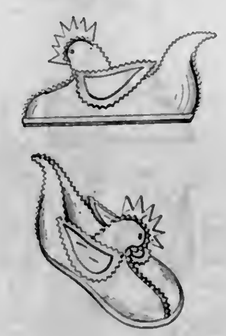
The ornamental design for a textile fabric, substantially as shown and described.

153,720
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application June 14, 1948, Serial No. 146,944
Term of patent 3½ years
(Cl. D92—1)



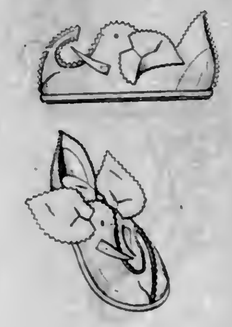
The ornamental design for a textile fabric, substantially as shown and described.

153,721
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application June 14, 1948, Serial No. 146,945
Term of patent 3½ years
(Cl. D92—1)



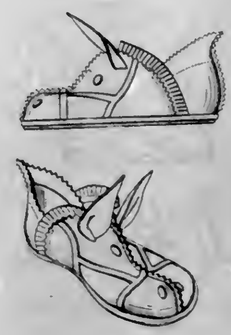
The ornamental design for a textile fabric, substantially as shown and described.

153,722
DESIGN FOR A CAN OPENER
Henning Odenerants, New York, N. Y., assignor to Zegerav Inc., New York, N. Y., a corporation of New York
Application July 29, 1947, Serial No. 140,574
Term of patent 14 years
(Cl. D22—2)



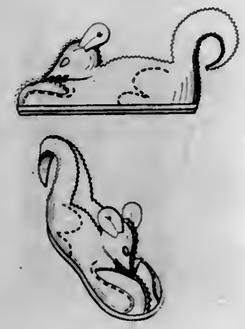
The ornamental design for a can opener, as shown.

153,723
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application December 31, 1948, Serial No. 150,473
Term of patent 7 years
(Cl. D7—7)



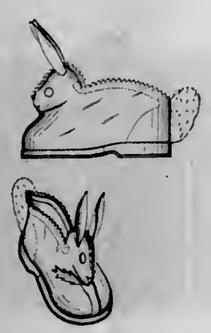
The ornamental design for a house shoe, substantially as shown.

153,724
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application December 31, 1948, Serial No. 150,474
Term of patent 7 years
(Cl. D7—7)



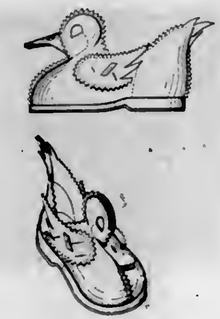
The ornamental design for a house shoe, substantially as shown.

153,725
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application December 31, 1948, Serial No. 150,475
Term of patent 7 years
(Cl. D7—7)



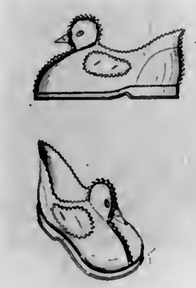
The ornamental design for a house shoe, substantially as shown.

153,726
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application December 31, 1948, Serial No. 150,476
Term of patent 7 years
(Cl. D7—7)



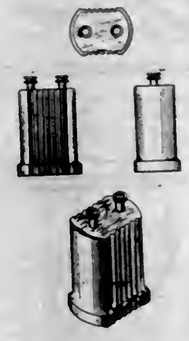
The ornamental design for a house shoe, substantially as shown.

153,727
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application January 26, 1949, Serial No. 492
Term of patent 7 years
(Cl. D7—7)



The ornamental design for a house shoe, substantially as shown.

153,728
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application January 26, 1949, Serial No. 493
Term of patent 7 years
(Cl. D7—7)



The ornamental design for a house shoe, substantially as shown.

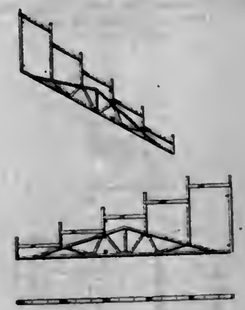
153,729
DESIGN FOR A HOUSE SHOE
John B. Reinhart, Jr., and Joseph B. Ruebel, Farmington, Mo., assignors to Trimfoot Company, Farmington, Mo.
Application January 26, 1949, Serial No. 494
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a house shoe, substantially as shown.

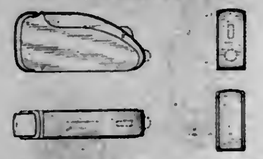
153,730
DESIGN FOR A FLUORESCENT STARTER SWITCH
Arthur A. Richardson, Cranston, R. I., assignor to The Lloyd Products Company, a corporation of Rhode Island
Application July 16, 1947, Serial No. 140,365
Term of patent 3½ years
(Cl. D26—13)

The ornamental design for a fluorescent starter switch, substantially as shown.

153,731
DESIGN FOR A SKI BOOT
Rudolf Rominger, St. Moritz, Switzerland
Application August 6, 1947, Serial No. 140,722
In Switzerland June 2, 1945
Term of patent 14 years
(Cl. D7—7)

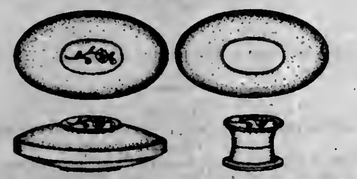


153,731—Continued



The ornamental design for a ski boot, substantially as shown.

153,732
DESIGN FOR A PORTABLE GRANDSTAND FRAME
John F. Roney, Los Angeles, Calif., assignor to Safway Steel Products, Inc., Milwaukee, Wis., a corporation of Wisconsin
Application January 30, 1948, Serial No. 144,150
Term of patent 14 years
(Cl. D54—1)

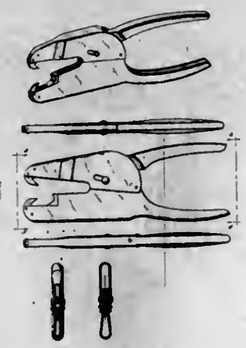


The ornamental design for a portable grandstand frame, substantially as shown.

153,723
DESIGN FOR A FLASHLIGHT
Earl L. Schofield, Rockford, Ill., assignor to Burgess Battery Company, Freeport, Ill., a corporation of Delaware
Application December 26, 1947, Serial No. 143,349
Term of patent 14 years
(Cl. D48—25)

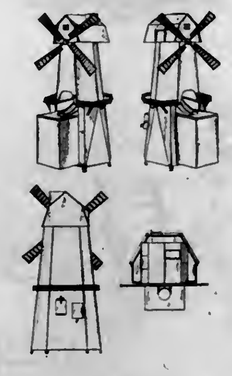
The ornamental design for a flashlight, as shown and described.

153,734
DESIGN FOR A COMBINED CAKE OF SOAP AND SPOOL HOLDER
Victor Silson, New York, N. Y.
Application June 5, 1948, Serial No. 146,777
Term of patent 3½ years
(Cl. D73—1)



The ornamental design for a combined cake of soap and spool holder, substantially as shown and described.

153,735
DESIGN FOR A RECLINING CHAIR
James R. Staudt and Rochelle E. Goddard, Fort Worth, Tex.; said Staudt assignor to said Goddard
Application October 28, 1946, Serial No. 134,338
Term of patent 14 years
(Cl. D15—1)



The ornamental design for a reclining chair, substantially as shown and described.

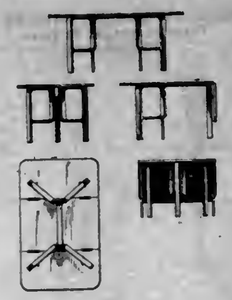
153,736
DESIGN FOR A SLIDE FASTENER REPAIR TOOL
Kurt Stern, Chicago, Ill.
Application September 3, 1948, Serial No. 148,452
Term of patent 3½ years
(Cl. D54—13)

The ornamental design for a slide fastener repair tool, substantially as shown.

153,737
DESIGN FOR A COMBINED FREEZER AND DISPENSER FOR FROZEN FOODS
Walter von Lindeck, Los Angeles, Calif.
Application February 15, 1947, Serial No. 136,941
Term of patent 3½ years
(Cl. D52—2)

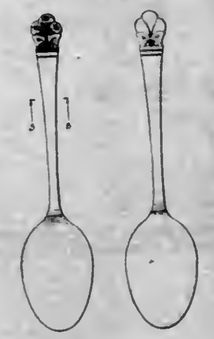
The ornamental design for a combined freezer and dispenser for frozen foods, as shown.

153,738
DESIGN FOR A TABLE OR SIMILAR ARTICLE
Donald A. Wallance, New York, N. Y.
Application April 23, 1947, Serial No. 138,543
Term of patent 3½ years
(Cl. D33—14)

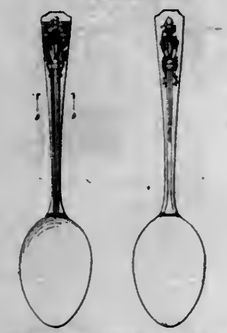


The ornamental design for a table or similar article, as shown.

153,739
DESIGN FOR A TABLE OR SIMILAR ARTICLE
Donald A. Wallance, New York, N. Y.
Application April 23, 1948, Serial No. 145,926
Term of patent 7 years
(Cl. D33—14)

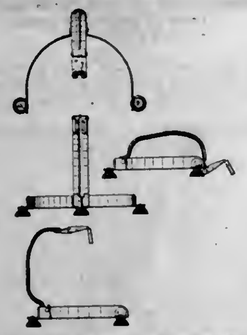


153,739—Continued



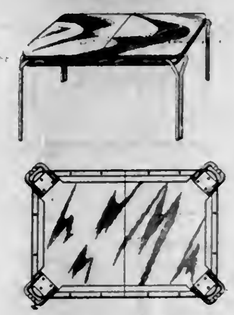
The ornamental design for a table or similar article, as shown.

153,740
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
William S. Warren, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a corporation of Connecticut
Application May 15, 1948, Serial No. 146,401
Term of patent 14 years
(Cl. D54—12)



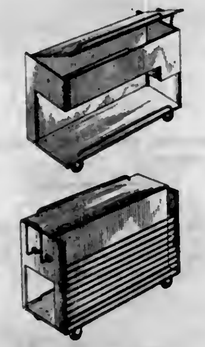
The ornamental design for a spoon or other article of flatware, substantially as shown.

153,741
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
William S. Warren, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a corporation of Connecticut
Application May 15, 1948, Serial No. 146,402
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or other article of flatware, substantially as shown.

153,742
DESIGN FOR A COLLAPSIBLE STAND FOR KITCHEN UTENSILS
Joseph Weber, Forest Hills, N. Y.
Application June 30, 1947, Serial No. 140,018
Term of patent 3½ years
(Cl. D44—29)



The ornamental design for a collapsible stand for kitchen utensils, substantially as shown.

153,743
DESIGN FOR A TABLE
Bernard G. Zolet, Philadelphia, Pa.
Application July 22, 1947, Serial No. 140,441
Term of patent 3½ years
(Cl. D33—14)

The ornamental design for a table, substantially as shown.

153,744
DESIGN FOR A MOBILE CARRIER FOR VACUUM CLEANER AND ACCESSORIES OR THE LIKE
John L. Zver and Martin G. Zver, Chicago, Ill.
Application November 15, 1947, Serial No. 142,564
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a mobile carrier for vacuum cleaner and accessories or the like, as shown.

Cosmetic compound. J. A. Brown. 33,737, Nov. 14, 1899. Republished May 10.
Cosmetics. Rexall Drug Company. 509,744, May 10; Serial No. 550,260, published Dec. 28, 1948.
Cosmetics. Rhode Island Laboratories, Inc. 509,634, May 10; Serial No. 536,836, published Jan. 18, 1949.
Cream, Face and hand. H. D. Koenig. 442,681, May 10; Serial No. 521,076, published Jan. 4, 1949.
Cream for the complexion and astringent lotion. The Artesia Cream Company. 216,576, Aug. 17, 1926. Republished May 10.
Decahydronaphthalene. Newport Manufacturing Company. 231,301, Jan. 1, 1929. Republished May 10.

Dentifrices and mouth washes. The Guerlain Perfumery Corporation. 509,651, May 10; Serial No. 538,540, published Dec. 21, 1948.
Dentifrices, denture powders, dental plate securing preparations, etc. M. Haefeli. 442,669, May 10; Serial No. 516,835, published Dec. 21, 1948.
Dentifrices, denture powders, dental plate securing preparations etc. M. Haefeli. 442,670, May 10; Serial No. 516,836, published Jan. 4, 1949.
Dentifrices, denture powders, dental plate securing preparations, etc. M. Haefeli. 442,671, May 10; Serial No. 516,838, published Jan. 4, 1949.
Deodorant, antiseptic, and germicide preparation. Kats Drug Company. 356,822, May 10. Republished May 10.
Deodorants. J. Rubel. 442,661, May 10; Serial No. 510,619, published Jan. 11, 1949.
Disinfectants, germicides, and sterilisers. The Diversey Corporation. 351,188, Oct. 19, 1937. Republished May 10.
Disinfectants, Insecticides, fungicides, etc. Eastern States Farmers' Exchange. 509,761, May 10; Serial No. 551,259, published Jan. 25, 1949.
Dyes, Fabrics, and glass frosting. Red Spot Paint & Varnish Co. 249,109, Nov. 6, 1928. Republished May 10.
Dyestuffs. National Aniline & Chemical Company, Incorporated. 144,872-3, July 19, 1921. Republished May 10.
Elixir, Compound purgative. Hanrahan Pharmaral Co. Inc. 69,809, July 7, 1908. Republished May 10.
Embalming preparations. Frigid Fluid Company. 509,670, May 10; Serial No. 539,949, published Dec. 7, 1948.
Emulsifying agents. General Dyestuff Corporation. 509,550, May 10; Serial No. 511,079, published Jan. 11, 1949.
Emulsifying, dispersing, solubilising and wetting agents. Atlas Powder Company. 509,692, May 10; Serial No. 543,871, published Dec. 21, 1948.
Face powder and powder bases. G. A. Lawrence. 509,740, May 10; Serial No. 550,158, published Dec. 21, 1948.
Filling agent useful in the manufacture of leather. American Gum Products Company. 509,784, May 10; Serial No. 558,985, published Jan. 18, 1949.
Flotation reagents. American Cyanamid Company. 257,817, renewed June 18, 1949. O. G. May 10.
Folic acid parenteral product. Bristol Laboratories Inc. 509,679, May 10; Serial No. 541,506, published Jan. 18, 1949.
Garlic oil extract in capsules. S. P. R. L. Weks. 442,667, May 10; Serial No. 514,385, published Dec. 28, 1948.
Haarlem oil. Gold Medal Haarlem Oil Corporation. 509,663, May 10; Serial No. 539,311, published Jan. 18, 1949.
Hypo-allergenic product. Mead Johnson & Company. 509,558, May 10; Serial No. 516,937, published Dec. 7, 1948.
Incense. Hindu Incense Manufacturing Co. 509,571, May 10; Serial No. 527,376, published Jan. 13, 1948.
Insecticidal chemical. J. T. Berdan. 509,734, May 10; Serial No. 549,138, published Jan. 18, 1949.
Insecticide. Westvaco Chemical Corporation. 509,783, May 10; Serial No. 558,975, published Jan. 18, 1949.
Insecticides. Geigy Company, Inc. 509,688, May 10; Serial No. 543,176, published Nov. 30, 1948.
Insecticides. Andrew Wilson, Inc. 509,639, May 10; Serial No. 537,267, published Jan. 11, 1949.
Internal remedy. Turner's Pharmacy. 81,181, Mar. 7, 1911. Republished May 10.
Intravenous solutions. Don Baxter, Inc. 321,355, Jan. 29, 1935. Republished May 10.
Laxative. C. J. Moffett Medicine Company. 509,727, May 10; Serial No. 547,474, published Jan. 25, 1949.
Laxative preparations. The Weber Medical Tea Company. 252,567, renewed Feb. 12, 1949. O. G. May 10.
Laxatives. A. M. Leccas. 509,788, May 10; Serial No. 560,028, published Jan. 18, 1949.
Lighter fluid. Universal Chemical Corporation. 509,726; May 10; Serial No. 547,290, published Jan. 11, 1949.
Liniment. Old 97 Company. 509,748, May 10; Serial No. 551,041, published Jan. 11, 1949.
Lipstick, rouge, nail polish. Avon Products, Inc. 509,809, May 10; Serial No. 534,865.
Lip sticks. The Guerlain Perfumery Corporation. 509,640, May 10; Serial No. 538,538, published Nov. 23, 1948.
Lipsticks, eyebrow pencils, mascara, etc. Beautymasters of Beverly Hills, Inc. 509,745, May 10; Serial No. 550,294, published Jan. 18, 1949.
Lotion, Antiseptic. H. W. Tinker. 442,687, May 10; Serial No. 523,930, published Feb. 1, 1949.
Lotion, Hand. Welch Industries, Incorporated. 509,778, May 10; Serial No. 557,880, published Feb. 1, 1949.
Lotions, Toilet. Elmo, Inc. 509,687, May 10; Serial No. 543,027, published Jan. 11, 1949.
Medicinal preparation. Cortunon Co., Inc. 509,787, May 10; Serial No. 559,995, published Feb. 1, 1949.
Medicinal preparation. The Denver Chemical Manufacturing Company. 509,739, May 10; Serial No. 550,031, published Dec. 28, 1948.
Medicinal preparation. Katz Drug Company, 412,406, Mar. 6, 1945. Republished May 10, 1949.
Medicinal preparation. M. A. Maffey. 509,738, May 10; Serial No. 549,740, published Jan. 18, 1949.
Medicinal preparation. Marvin R. Thompson, Inc. 509,765, May 10; Serial No. 554,063, published Jan. 18, 1949.
Medicinal preparation. The Upjohn Company. 509,749, May 10; Serial No. 551,065, published Feb. 1, 1949.
Medicinal preparation. W. H. Varney. 237,166, May 28, 1929. Republished May 10.
Medicinal preparations. Reed & Carnrick. 259,547, renewed July 30, 1949. O. G. May 10.
Medicinal preparations. W. W. Watkins. 238,906, renewed Feb. 14, 1948. O. G. May 10.
Mineral waters, effervescent crystals, and laxative pills. Pinto Corporation. 509,717, May 10; Serial No. 546,728, published Jan. 25, 1949.
Moth-proofing composition. B. Peterson. 414,481, June 12, 1945. Republished May 10.
Nail enamel, lipstick, and face powder. Revlon Products Corporation. 442,643, May 10; Serial No. 463,980, published Dec. 19, 1944.
Nail enamel, nail polish, nail paste, etc. Sage, Peggy, Inc. 509,640, May 10; Serial No. 537,510, published Jan. 11, 1949.
Ointment and powder for athlete's foot. Brunswick Laboratories, Inc. 509,604, May 10; Serial No. 532,660, published Dec. 7, 1948.
Ointment, lice exterminator, disinfectant, etc. Barker, Moore & Mein Company. 376,184, Mar. 12, 1940. Republished May 10.
Ointment preparations. W. Pierschalski. 509,791, May 10; Serial No. 560,230, published Feb. 1, 1949.
Ointment, Skin. Madeleine Laboratories, Inc. 509,703, May 10; Serial No. 544,652, published Feb. 1, 1949.
Ointments and other pharmaceutical preparations. The Scholl Manufacturing Company, Inc. 192,076, Nov. 26, 1924. Republished May 10.
Oleaginous material. Haas-Miller Corporation. 509,790, May 10; Serial No. 560,107, published Feb. 1, 1949.
Ovarian extract. The Maltine Company. 509,728-9, May 10; Serial Nos. 547,641-2, published Nov. 23, 1948.
Paste, Viscous light brown, self-emulsifiable lubricating. Haas-Miller Corporation. 509,780, May 10; Serial No. 560,103, published Jan. 18, 1949.
Perfume, cologne, bubble bath, etc. Wetherholt's Perfume Co. 442,647, May 10; Serial No. 490,728, published Feb. 1, 1949.
Perfumes, face creams, rouge. Societe Anonyme, Bienaime. 509,719, May 10; Serial No. 547,161, published Jan. 18, 1949.
Perfumes, toilet water, cologne, etc. Benard & Honnorat. 509,753, May 10; Serial No. 551,357, published Nov. 30, 1948.
Perfumes, toilet waters, rouge, etc. Les Parfums Norante, Societe A Responsabilite Limitee. 509,581, May 10; Serial No. 528,494, published Jan. 25, 1949.
Petroleum gases, Liquified. Green's Fuel, Inc. 509,780, May 10; Serial No. 558,850, published Jan. 18, 1949.
Petroleum gases, Liquefied, and tanks filled with such gas. Northwestern Blaugas Company. 329,309, Oct. 22, 1935. Republished May 10.
Pharmaceutical preparations. A. Palm. 509,766, May 10; Serial No. 554,147, published Jan. 18, 1949.
Powder, Face. The Guerlain Perfumery Corporation. 509,650, May 10; Serial No. 536,539, published Dec. 21, 1948.
Powder, Vaginal hygiene. Optimus Pharmaceuticals Co., Inc. 509,762, May 10; Serial No. 553,895, published Jan. 18, 1949.
Preparation for diabetes, asthma and a pile lotion. A. S. Sharpe. 509,619, May 10; Serial No. 535,088, published Dec. 28, 1948.
Preparation for the treatment of essential hypertension, arteriosclerosis, etc. Table Rock Laboratories, Inc. 509,572, May 10; Serial No. 527,428, published Nov. 23, 1948.
Preparation for the treatment of gout and rheumatism. E. Bejean. 509,709, May 10; Serial No. 545,045, published Jan. 25, 1949.
Preparation for use in the treatment of dyspepsia. A. E. Smith. 251,078, renewed Dec. 25, 1948. O. G. May 10.
Preparation in liquid form for external application in the treatment of skin diseases. J. E. Wilkinson, Jr. 240,812, Apr. 10, 1928. Republished May 10.
Preparation to be applied externally. R. E. Stallings. 323,886, May 7, 1935. Republished May 10.
Preparation to be applied to soil to bring earthworms to the surface. National Equipment Co., Inc. 442,675, May 10; Serial No. 518,774, published Feb. 1, 1949.
Preparations for the treatment of diseases peculiar to women. S. B. Leonardi & Co., Inc. 509,761, May 10; Serial No. 553,406, published Jan. 11, 1949.
Preparations for use as an expectorant. Hy-Pure Laboratories, Inc. 509,754, May 10; Serial No. 551,457, published Nov. 30, 1948.
Prophenpyramine. Schering Corporation. 509,760, May 10; Serial No. 553,134, published Jan. 11, 1949.
Protein, carbohydrate preparation. Sharp & Dohme, Incorporated. 509,741-2, May 10; Serial Nos. 550,176-7, published Jan. 13, 1949.
Proteinic preparation. Sharp & Dohme, Incorporated. 509,785, May 10; Serial No. 559,737, published Jan. 18, 1949.
Remedy for diarrhea, indigestion, cholera infantum, etc. Merrick Medicine Co. 74,560, re-renewed July 20, 1949. O. G. May 10.

Repellants, Insect. W. F. Wilhelm. 509,743, May 10; Serial No. 550,190, published Jan. 13, 1949.
Rouge and lipstick. R. Hudnut. 442,685, May 10; Serial No. 523,778, published Dec. 28, 1948.
Salts: Water softener, deodorant and sewage disposal chemicals, pipe solvent; air driers, etc. Sears, Roebuck and Co. 509,746, May 10; Serial No. 550,443, published Feb. 1, 1949.
Salve. R. E. Martinez. 509,553, May 10; Serial No. 513,628, published Jan. 25, 1949.
Salve, Healing. Anthony Smith and Company. 442,676, May 10; Serial No. 518,986, published Dec. 21, 1948.
Shampoo. Bonne Bell, Inc. 509,671, May 10; Serial No. 540,026, published Feb. 1, 1949.
Shields or pads, Adhesive medicated. The Scholl Manufacturing Company. 167,379, May 1, 1923. Republished May 10.
Silicate of soda. Philadelphia Quartz Company. 509,700–1, May 10; Serial Nos. 544,502–3, published Jan. 11, 1949.
Sizing for paper and textiles. Monsanto Chemical Company. 509,731, May 10; Serial No. 547,863, published Jan. 4, 1949.
Sodium paraaminophenylarsonates. H. S. Wellcome. 73,155, re-renewed Mar. 23, 1949. O. G. May 10.
Specially prepared milk modifier and dietetic product. Mead Johnson & Company. 509,556–7, May 10; Serial Nos. 516,613–14, published Jan. 18, 1949.
Specific preparations designed for the oral treatment of those symptons such as rhinitis, sinusitis, urticaria, etc. Dalare Associates. 509,794, May 10; Serial No. 564,022, published Jan. 25, 1949.
Sulfuric acid solutions, Aqueous. Allied Chemical & Dye Corporation. 509,770, May 10; Serial No. 554,460, published Jan. 18, 1949.
Tablet, Medicated and perfumed foot-bath. Scholl Manufacturing Company, Inc. 197,403, Apr. 14, 1925. Republished May 10.
Tape or oxide of zinc, Adhesive; alum; ammonia, etc. The Styron-Beggs Company. 387,972, June 10, 1941. Republished May 10.
Toilet water, bath oil, cologne, etc. Harriet Hubbard Ayer, Inc. 509,680, May 10; Serial No. 542,209, published Jan. 11, 1949.
Toilet waters, dusting powder, etc. Charles of the Ritz, Inc. 424,697, Oct. 22, 1946. New certificate. O. G. May 10.
Tonic, Hair. Joequim Rodrigues. 509,611, May 10; Serial No. 533,677, published Dec. 28, 1948.
Tooth paste. The Bon Ami Company. 297,071, Aug. 30, 1932. Republished May 10.
Tooth paste. The Bon Ami Company. 297,182, Sept. 6, 1932. Republished May 10.
Veterinary antiseptic. Cutter Laboratories. 509,796, May 10; Serial No. 564,061, published Jan. 18, 1949.
Veterinary preparations in tablet, liquid and powdered form. L. A. Mosher Company. 509,638, May 10; Serial No. 537,217, published Jan. 18, 1949.
Vitamin concentrates. The Stuart Company. 509,674, May 10; Serial No. 540,337, published Jan. 4, 1949.
Wax derived from petroleum. The C. P. Hall Company. 509,585, May 10; Serial No. 528,790, published Jan. 25, 1949.
Zinc oxide. The New Jersey Zinc Company. 509,771, May 10; Serial No. 554,690, published Jan. 18, 1949.

CLASS 8

Necklaces and bracelets, finger rings, earrings, etc. Cohn & Rosenberger, Inc. 378,425, June 11, 1940. Republished May 10.
Necklaces, bracelets, earrings, etc. Coro, Inc. 407,960, July 11, 1944. Republished May 10.

CLASS 9

Cartridges and shotgun shells. Federal Cartridge Corporation. 509,767, May 10; Serial No. 554,221, published Feb. 1, 1949.
Dynamite and gelatinised powder. E. I. du Pont de Nemours Powder Company. 74,364, re-renewed July 6, 1949. O. G. May 10.
Matches. The Ohio Match Company. 509,704–5, May 10; Serial Nos. 544,667–8, published Jan. 11, 1949.
Pistols. Colt's Patent Fire Arms Manufacturing Company. 32,536, re-renewed Feb. 21, 1949. O. G. May 10.
Rifles, Sporting and target, cartridge loading tools, etc. V. Gipson. 509,635, May 10; Serial No. 536,892, published Dec. 7, 1948.
Shotgun and rifle recoil pads. Jostam Manufacturing Co. 509,618, May 10; Serial No. 535,044, published Dec. 14, 1948.
Signalling and life-saving apparatus and parts thereof, fire alarms and pyrotechnic articles, etc. The Schermuly Pistol Rocket Apparatus Limited. 442,663, May 10; Serial No. 511,422, published Dec. 14, 1948.

CLASS 10

Expanded perlite. Dant & Russell, Inc. 509,665, May 10; Serial No. 539,669, published Feb. 1, 1949.
Fertiliser. The Stadler Products Company. 509,812, May 10; Serial No. 533,937, published Jan. 18, 1949.
Fertiliser. Tennessee Corporation. 509,736, May 10; Serial No. 549,193, published Aug. 24, 1948.
Fertiliser, Mineral. Saratoga Laboratories Inc. 509,782, May 10; Serial No. 558,314, published Nov. 30, 1948.
Fertilizer, Super phosphate. Stauffer Chemical Company. 509,769, May 10; Serial No. 554,435, published Jan. 18, 1949.
Fertilizers. Armour and Company. 509,577, May 10; Serial No. 528,420, published Dec. 28, 1948.
Fertilizers. G. Calbeck. 509,755, May 10; Serial No. 551,852, published Feb. 1, 1949.
Fertilizers. Darling and Company. 509,582, May 10; Serial No. 528,558, published Nov. 30, 1948.
Fertilizers. Eastern States Farmers' Exchange. 509,750, May 10; Serial No. 551,253, published Feb. 1, 1949.
Fertilizers. Eastern States Farmers' Exchange. 509,752, May 10; Serial No. 551,260, published Dec. 14, 1948.
Fertilizers, Chemical. The Consolidated Mining and Smelting Company of Canada Limited. 509,595, May 10; Serial No. 531,314, published Jan. 11, 1949.
Mineral fertiliser ingredients. Scientific Soil Improvements Corp. 509,647, May 10; Serial No. 538,316, published Jan. 11, 1949.
Plant food, bone meal, dehydrated manure, etc. A. H. Hoffman, Inc. 509,626, May 10; Serial No. 536,263, published Feb. 1, 1949.

CLASS 11

Ink, Printing. Sun Chemical Corporation. 509,721–2, May 10; Serial Nos. 547,175–6, published Jan. 18, 1949.
Ink, Printing. Sun Chemical Corporation. 509,723–4, May 10; Serial No. 547,184–5, published Jan. 18, 1949.
Ink, Printing. Sun Chemical Corporation. 509,725, May 10; Serial No. 547,188, published Jan. 18, 1949.
Ink rolls. Markem Machine Company. 509,763, May 10; Serial No. 553,987, published Jan. 18, 1949.
Pigment colors used in the manufacture of ink. Sun Chemical Corporation. 509,720, May 10; Serial No. 547,169, published Jan. 18, 1949.
Pigments for use in coloring inks. Reichhold Chemicals, Inc. 509,772, May 10; Serial No. 554,705, published Jan. 18, 1949.

CLASS 12

Casement window units. The Casement Hardware Company. 509,693, May 10; Serial No. 543,884, published Jan. 11, 1949.
Concrete, Sacks of. Sackrete, Inc. 373,104, Nov. 28, 1939. Republished May 10.
Dwellings, cottages, bungalows, tourist cabins, etc., Complete and sectional pre-built. Warren Portahome Company, Inc. 509,654, May 10; Serial No. 538,687, published Jan. 11, 1949.
Flooring structures, Reenforced concrete. Irving Iron Works Company. 252,098–9, Jan. 22, 1929. Republished May 10.
Gratings, Metal. Irving Iron Works Company. 252,100, Jan. 22, 1929. Republished May 10.
Paint, Flat wall, four-hour enamel, automobile enamel, etc. Red Spot Paint & Varnish Co., Inc. 312,099, Apr. 17, 1934. Republished May 10.
Paints, Dry and ready-mixed, fillers for wood, paint and varnish remover, etc. Red Spot Paint & Varnish Co. 249,840, Nov. 20, 1928. Republished May 10.

CLASS 13

Bolts, Boiler stay, track frog and switch bolts and nuts, etc. Flannery Bolt Company. 161,468, Nov. 14, 1922. Republished May 10.
Catches, upholstery nails, end clips, etc. North & Judd Manufacturing Company. 242,829–30, June 5, 1928. Republished May 10.
Tubing, Metal. Wolverine Tube Company. 250,433, Dec. 11, 1928. Republished May 10.
Utensils made of a base metal, Cooking. Craftmaster Products Corporation. 427,267, Feb. 4, 1947. Canceled. O. G. May 10.

CLASS 14

Alloys, Age-hardenable, corrosion-resistant, high-nickel. The International Nickel Company, Inc. 509,776, May 10; Serial No. 555,676, published Jan. 11, 1949.
Alloys, High temperature. Westinghouse Electric Corporation. 442,673, May 10; Serial No. 517,940, published Jan. 18, 1949.
Alloys, Metal. The Duraloy Company. 442,650, May 10; Serial No. 493,951, published Mar. 16, 1948.
Aluminum and aluminum alloys. American Chemical Paint Company. 509,686, May 10; Serial No. 542,901, published Feb. 1, 1949.
Cast iron metal molds and cast iron metal mold accessories. Vulcan Mold & Iron Company. 509,637, May 10; Serial No. 537,108, published Feb. 1, 1949.
Castings, Metal. American Car and Foundry Company. 509,775, May 10; Serial No. 555,646, published Feb. 1, 1949.
Castings, Metal. Budda Aero Castings, Incorporated. 442,648, May 10; Serial No. 491,311, published Jan. 18, 1949.
Metals, Ferrous alloy. Shofner Iron and Steel Works. 509,778, May 10; Serial No. 557,781, published Feb. 1, 1949.
Metals, Soldering. Multicore Solders Limited. 509,539, May 10; Serial No. 493,207, published Feb. 1, 1949.
Printers' type, galley locks, and type tie-ups. The Riehl Galley Lock Company. 509,548, May 10; Serial No. 507,077, published Feb. 1, 1949.

Rods, Coated metal welding. American Brake Shoe Company. 509,606, May 10; Serial No. 533,255, published Feb. 1, 1949.
Rods, Wire hot rolled, hoops and bands, and sheets of steel. Soulé Steel Company. 509,773, May 10; Serial No. 554,822, published Jan. 11, 1949.
Steel, Rolled sheet. Wheeling Steel Corporation. 257,859, June 18, 1929. Republished May 10.
Welding wire and metallic welding electrodes. The Lincoln Electric Company. 509,777, May 10; Serial No. 557,050, published Jan. 18, 1949.

CLASS 15

Greases, Mineral. Panama Lubricants Company. 151,203, Jan. 24, 1922. Republished May 10.

CLASS 16

Cleaning and polishing liquid. Liquid Veneer Corporation. 263,984, Nov. 12, 1929. Republished May 10.
Colors, Artists' and artists' varnishes. George Rowney & Co. 80,466, Dec. 27, 1910. Republished May 10.
Enamels and varnishes, Automobile, furniture, and metal. Nu-Enamel Corporation. 323,079, Apr. 2, 1935. Republished May 10.
Finish in the nature of a cleaner and polish, Bowling alley. The Brunswick-Balke-Collender Company. 411,139, Jan. 2, 1945. Republished May 10.
Paint, Flat wall, four-hour enamel, automobile enamel, etc. Red Spot Paint & Varnish Co., Inc. 312,099, Apr. 17, 1934. Republished May 10.
Paint, Ready-mixed. Patek Brothers, Inc. 258,655, renewed July 9, 1949. O. G. May 10.
Paint, Ready-mixed asphalt. Red Spot Paint & Varnish Co., Inc. 249,975, Nov. 27, 1928. Republished May 10.
Paints, Dry and ready-mixed, fillers for wood, paint and varnish remover, etc. Red Spot Paint & Varnish Co. 249,840, Nov. 20, 1928. Republished May 10.
Paints, Enamel. Keystone Varnish Company. 259,497, renewed July 30, 1949. O. G. May 10.
Paints, Plastic. John McQuade & Co., Inc. 420,603, Apr. 23, 1946. Republished May 10.
Paints, Ready-mixed. Alfred Hague & Company, Inc. 252,902, renewed Feb. 19, 1949. O. G. May 10.
Polish. Liquid Veneer Corporation. 307,543, Oct. 31, 1933. Republished May 10.
Polish, Automobile, furniture polish, etc. The American Oil Company. 436,013–16, Jan. 20, 1948. Canceled. O. G. May 10.
Solvent, Lacquer. H. E. Stone. 258,625, renewed July 9, 1949. O. G. May 10.
Solvent used for thinning purposes. Pacific Distillers, Inc. 354,086, Feb. 1, 1938. Republished May 10.
Varnish. Red Spot Paint & Varnish Co. 323,072, Apr. 2, 1935. Republished May 10.

CLASS 17

Cigars. Grabosky Bros., Inc. 414,588, June 10, 1945. Republished May 10.
Cigars. L. B. Grabosky. 286,824–5, Sept. 8, 1931. Republished May 10.
Cigars. R. G. Sullivan. 153,326, Mar. 14, 1922. Republished May 10.
Cigars. The B. F. Topper Cigar Company. 509,575, May 10; Serial No. 727,796, published Jan. 18, 1949.
Cigars and smoking tobacco. S. S. Pierce Co. 257,032, renewed May 28, 1949. O. G. May 10.
Tobacco, Smoking. John Cotton, Limited. 249,294, Nov. 13, 1928. Republished May 10.
Tobacco, Smoking. G. S. Mann. 71,941. Re-renewed Dec. 22, 1948. O. G. May 10.

CLASS 19

Air deflector. Blake Manufacturing Co. 509,758, May 10; Serial No. 552,632, published Oct. 5, 1948.
Automobiles and automobile trailers. Empire Tractor Corporation. 442,657, May 10; Serial No. 506,994, published Jan. 11, 1949.
Automobiles, Passenger. Kaiser-Frazer Corporation. 442,656, May 10; Serial No. 505,590, published Jan. 25, 1949.
Baby carriages, baby strollers. W. P. Kuonl. 509,730, May 10; Serial No. 547,736, published Jan. 4, 1949.
Boats, Inflatable and inflatable floats. New York Rubber Corporation. 442,690–1, May 10; Serial Nos. 524,714–15, published Jan. 4, 1949.
Boats, Motor. Higgins Industries, Inc. 420,027, Mar. 19, 1946. Republished May 10.
Boats, Shallow draft motor. Higgins Industries, Inc. 405,601, Feb. 8, 1944. Republished May 10.
Boats, Surf landing motor. Higgins Industries, Inc. 405,300, Jan. 18, 1944. Republished May 10.
Brake, Horizontal wheel high power hand drop type high power hand brake, vertical wheel high power hand brake, etc. 509,541, May 10; Serial No. 496,528, published Jan. 11, 1949.
Cars, Railway freight and passenger. Union Pacific Railroad Company. 32,036, Oct. 4, 1898. Republished May 10.
Control handles for aircraft, and control wheels. Guardian Electric Manufacturing Co. 401,353. May 11, 1943. Republished May 10.

Covers, Automobile seat. Ben Federman Motor Sales Corporation. 509,718. May 10; Serial No. 547,106, published Jan. 11, 1949.
Covers, Automobile seat. Gloster Products, Inc. 442,664, May 10; Serial No. 511,466, published Jan. 4, 1949.
Motorcycles. J. N. Gladden. 438,384, Apr. 20, 1948. Republished May 10.
Motorcycles and constructive parts thereof. Indian Motorcycle Company. 509,706, May 10; Serial No. 545,002, published Jan. 11, 1949.
Rear-view automobile mirrors. Whitehead Stamping Company. 509,662, May 10; Serial No. 539,249, published Jan. 4, 1949.
Row boats, motor boats, sail boats, etc. A. R. Harmon. 442,683, May 10; Serial No. 523,263, published Jan. 4, 1949.
Seat cushions, Built-in. United States Rubber Company. 509,732, May 10; Serial No. 548,200, published Jan. 4, 1949.
Shock absorbers. Cle-Draulic Company. 442,665, May 10; Serial No. 513,028, published Jan. 4, 1949.
Shock absorbers. Cle-Draulic Company. 442,666, May 10; Serial No. 513,388, published Jan. 4, 1949.
Spokes and nipples for wheels of cycle vehicles, pedals, handle bars, etc. The Torrington Company. 509,711, May 10; Serial No. 546,071, published Jan. 4, 1949.
Trailers. Reliance Trailer & Truck Co. Inc. 140,527, Mar. 13, 1921. Republished May 10.
Trailers, Camping and housing. The Karriall Company. 442,653, May 10; Serial No. 499,050, published Jan. 25, 1949.
Trailers, Hydraulic lift. Coeur & Hallock Mfg. Co. 509,708, May 10; Serial No. 545,238, published Jan. 4, 1949.
Trucks, Automotive. Six Wheels, Inc. 442,664, May 10; Serial No. 465,901, published Dec. 23, 1947.
Windshield wipers. C. A. Sprague. 442,654, May 10; Serial No. 499,442, published Jan. 11, 1949.

CLASS 21

Apparatus for controlling the electrification of fences, and parts therefor. Landon P. Smith, Inc. 378,302, June 4, 1940. Republished May 10.
Batteries, Automobile, automobile battery cables, etc. The American Oil Company. 433,124–5, Sept. 23, 1947. Canceled. O. G. May 10.
Batteries, Automobile, automobile battery cables, etc. The American Oil Company. 433,513, Oct. 14, 1947. Canceled. O. G. May 10.
Batteries, Automobile, automobile battery cables, etc. The American Oil Company. 434,051, Nov. 4, 1947. Canceled. O. G. May 10.
Condensers, Electric. Sprague Specialties Company. 277,908, Dec. 2, 1930. Republished May 10.
Condensers, Electrical. Sprague Specialties Company. 402,614, Aug. 3, 1943. Republished May 10.
Condensers, Electrical. Sprague Specialties Company. 405,510, Feb. 1, 1944. Republished May 10.
Conductors, Electrical. Sprague Specialties Company. 404,943, Dec. 28, 1943. Republished May 10.
Conductors, Insulated electrical. The Acme Wire Company. 72,678, re-renewed Feb. 9, 1949. O. G. May 10.
Contactors, Solenoid, radio relays, electric circuit adapter plugs, etc. Guardian Electric Manufacturing Co. 400,523, Mar. 16, 1943. Republished May 10.
Control equipment, Electrical. Guardian Electric Manufacturing Co. 349,228, Aug. 24, 1937. Republished May 10.
Control handles for aircraft and control wheels. Guardian Electric Manufacturing Co. 401,353, May 11, 1943. Republished May 10.
Electric switch-boards and switches, electric-arc lamps, sockets and receptacles. Crouse-Hinds Company. 71,092, re-renewed Dec. 29, 1948. O. G. May 10.
Insulation, Electrical. Sprague Electric Company. 420,203, Apr. 2, 1940. Republished May 10.
Lamps, Electric. North American Electric Lamp Company. 368,723, June 27, 1939. Republished May 10.
Switches, Electrical. N. B. Birge. 436,635, Feb. 17, 1948. Republished May 10.
Timers, Electric. Electromaster, Inc. 435,655, Jan. 6, 1948. Canceled. O. G. May 10.

CLASS 22

Artificial fishing lure. The Creek Chub Bait Company. 509,808, May 10; Serial No. 531,444.
Billiard balls. The Brunswick-Balke-Collender Company. 261,840, Sept. 24, 1929. Republished May 10.
Billiard cue tips. The Brunswick-Balke-Collender Company. 296,835, Aug. 23, 1932. Republished May 10.
Dolls. E. J. Herte. 347,106, June 15, 1937. Canceled. O. G. May 10.
Fishing lines. United States Whip Company. 217,440, Aug. 31, 1926. Republished May 10.
Fishing spoons. The Paul Bunyan Bait Company. 421,828, June 18, 1946. Republished May 10.
Pop guns, air rifles, toy airplanes, etc. All Metal Products Company. 286,966, Sept. 8, 1931. Republished May 10.

CLASS 23

Apparatus for washing mechanical parts. Practical Products Company. 438,776, May 11, 1948. Republished May 10.

Automatic ice cream cone machines and parts therefor. Sugar Shell Corporation. 442,674, May 10; Serial No. 515,704, published Jan. 18, 1949.
Beverage vending machines. Rudd-Melikian, Inc. 509,559, May 10; Serial No. 517,168, published Jan. 18, 1949.
Blades, Razor. Unsinger-A P Corporation. 442,660, May 10; Serial No. 510,123, published May 6, 1947.
Carburetors. Automotive Utilities, Inc. 509,658, May 10; Serial No. 538,707, published Jan. 25, 1949.
Cartridges, Oil filter. The American Oil Company. 436,360, Feb. 3, 1948. Canceled. O. G. May 10.
Cartridges, Oil filter. The American Oil Company. 436,363, Feb. 3, 1948. Canceled. O. G. May 10.
Cartridges, Oil filter. The American Oil Company. 437,476, Mar. 23, 1948. Canceled. O. G. May 10.
Cartridges, Oil filter. The American Oil Company. 437,469, Mar. 23, 1948. Canceled. O. G. May 10.
Conveyors and driers for processing leather tanners, pasting plates, etc. Special Equipment Company. 329,598, Nov. 5, 1935. Republished May 10.
Couplings, Shaft. Charles Bond Company. 509,623–4, May 10; Serial Nos. 536,039–40, published Jan. 18, 1949.
Emery-wheel dressers, diamond turning and boring tools, cutting-off tools, etc. Standard Diamond Tool Corporation. 259,416, renewed July 30, 1949. O. G. May 10.
Engines, Internal combustion, and structural parts thereof. The Cushman Motor Works. 362,712, Nov. 29, 1938. Republished May 10.
Equipment, Diesel engine. Aircraft & Diesel Equipment Corporation. 509,601, May 10; Serial No. 531,876, published Feb. 1, 1949.
Fire alarms, Portable, mechanically operated. Models & Patents Corporations. 442,689, May 10; Serial No. 524,555, published Jan. 18, 1949.
Gears, Automotive, automotive axle shafts, automotive transmissions, etc. National Automotive Parts Association. 389,980, Sept. 2, 1941. Republished May 10.
Hay balers. Minneapolis-Moline Power Implement Company. 509,561, May 10; Serial No. 518,773, published Feb. 1, 1949.
Hoes, shovels, and axes. Rector Trading Corporation. 509,660. May 10; Serial No. 539,211, published Jan. 25, 1949.
Looms and parts thereof. Crompton & Knowles Loom Works. 509,579–80, May 10; Serial Nos. 528,432–3, published Feb. 1, 1949.
Machine for feeding stationery through an addressing machine. Uarco Incorporated. 509,605, May 10; Serial No. 532,768, published Feb. 1, 1949.
Machine for mixing and spraying liquid soap and water. Sinclair Refining Company. 257,959, renewed June 25, 1949. O. G. May 10.
Machinery for cutting or trimming parts of boots or shoes, etc. United Shoe Machinery Company. 72,304, renewed Jan. 12, 1949. O. G. May 10.
Machines, Agricultural. Allis-Chalmers Manufacturing Company. 509,617, May 10; Serial No. 534,717, published Feb. 1, 1949.
Machines, parts for such machines, collapsible cores, etc. Ralphs-Pugh Company, Inc. 509,599, May 10; Serial No. 531,717, published Feb. 1, 1949.
Machines, Pencil sharpening, and replaceable cutters. J. R. Kramer Manufacturing Company. 509,620, May 10; Serial No. 535,329, published Jan. 18, 1949.
Motors, Outboard. Johnson Motor Company. 259,154, renewed July 23, 1949. O. G. May 10.
Pasteurizers, Industrial plant. American Machinery Corporation. 509,546, May 10; Serial No. 502,679, published Jan. 18, 1949.
Plow shares and cultivator shovels. Deere & Company. 509,589, May 10; Serial No. 530,178, published Jan. 18, 1949.
Pumps, Dredging, and dredging machinery. Ellicott Machine Corporation. 264,337, Nov. 26, 1929. Republished May 10.
Pumps, Forest-fire. Pacific Marine Supply Company. 234,938, Nov. 8, 1927. Republished May 10.
Pumps, Regulated flow type fluid dispensing. Gilbert & Barker Manufacturing Company. 442,672, May 10; Serial No. 517,475, published Jan. 18, 1949.
Radiator type oil coolant-regulators, radiator type heat exchange units, etc. The Garrett Corporation. 509,534, May 10; Serial No. 476,905, published Jan. 25, 1949.
Ring gears and pinions, pressure plates, timing chains, etc. Perfection Gear Company. 509,607, May 10; Serial No. 533,047, published Feb. 1, 1949.
Saws. Simonds Manufacturing Company. 139,884, Feb. 22, 1921. Amended. O. G. May 10.
Saws. Simonds Saw and Steel Company. 264,872, Dec. 10, 1929. Amended. O. G. May 10.
Screw-drivers, pinking-tools, treeing-irons, etc. United Shoe Machinery Company. 72,305, re-renewed Jan. 12, 1949. O. G. May 10.
Shovels, picks, hoes, Metal, etc. Edward Elwell Ltd. 227,072, Apr. 26, 1947. Republished May 10.
Spades, Ditching, shovels, furnace scoops, etc. Western Auto Supply Company. 509,631, May 10; Serial No. 536,566, published Jan. 18, 1949.
Tools, Tire. Hewitt's Incorporated. 509,591, May 10; Serial No. 530,310, published Jan. 18, 1949.
Tractors and parts thereof. International Harvester Company. 509,632, May 10; Serial No. 536,694, published Jan. 18, 1949.
Wrenches and twisting tool sets. Blackhawk Mfg. Co. 509,634, May 10; Serial No. 542,433, published Jan. 25, 1949.

CLASS 24

Ironing tables, Folding. Saginaw Manufacturing Co. 255,755, renewed Apr. 30, 1949. O. G. May 10.

CLASS 26

Device to limit the temperature of the air in the casing of a warm-air furnace. Minneapolis-Honeywell Regulator Company. 250,706, renewed Dec. 11, 1949. O. G. May 10.
Frames and parts therefor, Eyeglass and spectacle. A. Kono. 372,939, Nov. 21, 1939. Republished May 10.
Frames and parts therefor, Eyeglass and spectacle. A. Kono. 411,523, Jan. 23, 1945. Republished May 10.
Frames and parts therefor, Eyeglass and spectacle. The Kono Manufacturing Company. 409,185. Sept. 19, 1944. Republished May 10.
Frames and parts therefor, Eyeglass and spectacle. The Kono Manufacturing Company. 414,325, June 5, 1945. Republished May 10.
Frames and parts therefor, Eyeglass and spectacle. The Kono Manufacturing Company. 428,186, Mar. 11, 1947. republished May 10.
Frames and parts therefor, Eyeglass and spectacle. The Kono Manufacturing Company. 428,529, Mar. 25, 1947. Republished May 10.
Gauge, Electronic limit comparator. Pollak Manufacturing Company. 435,854, Jan. 13, 1948. Republished May 10.
Gauges, Liquid level. W. S. Krueger. 437,989, Apr. 6, 1948. Republished May 10.
Glasses and parts therefor, Sun. The Kono Manufacturing Company. 416,919, Oct. 2, 1945. Republished May 10.

CLASS 27

Clocks. William L. Gilbert Clock Company. 243,854, July 3, 1928. Republished May 10.
Clocks. William L. Gilbert Clock Company. 246,726, Sept. 11, 1928. Republished May 10.
Clocks, Alarm. Kats Drug Company. 398,241, Oct. 20, 1942. Republished May 10.
Watches and parts thereof. Manufacture des Montres Niton S. A. 253,664, renewed Mar. 5, 1949. O. G. May 10.
Watches, Open-face and hunting-case wrist, and pocket watches. Olsen & Ebann. 187,774, Aug. 12, 1924. Republished May 10.

CLASS 28

Badges, Gold plated. Irons & Russell. 49,860, Feb. 20, 1906. Republished May 10.
Badges, Solid gold. Irons & Russell. 50,328, Mar. 13, 1906. Republished May 10.
Bracelets. Speidel Corporation. 437,795, Mar. 30, 1948. Republished May 10.
Jewelry. Irons & Russell Company. 362,290, Nov. 15, 1938. Republished May 10.
Necklaces and bracelets, finger rings, earrings, etc. Cohn & Rosenberger, Inc. 378,425, June 11, 1940. Republished May 10.
Necklaces, bracelets, earrings, etc. Coro, Inc. 407,909, July 11, 1944. Republished May 10.
Necklaces, bracelets, finger rings, etc. Coro, Inc. 428,993, Apr. 15, 1947. Republished May 10.
Pearls. A. C. Becken Co. 432,280, Aug. 26, 1947. Republished May 10.
Rings, Finger, brooches, etc. I. E. Landstrom. 428,039, Mar. 4, 1947. Canceled. O. G. May 10.

CLASS 29

Broome. Indianapolis Brush & Broom Mfg. Co. 163,091, Jan. 2, 1923. Corrected. O. G. May 10.
Brooms and brushes. Amsterdam Broom Co. 73,311. Renewed Apr. 13, 1949. O. G. May 10.

CLASS 32

Cabinets, Kitchen. Davis Millwork Company. 434,008, Nov. 4, 1947. Republished May 10.
Furniture, Upholstered. Chittenden & Eastman Company. 336,144, June 30, 1936. Republished May 10.
Mattresses and box springs. Chittenden & Eastman Company. 361,827, Oct. 11, 1938. Republished May 10.
Racks used for transporting shoes and shoe parts. United Shoe Machinery Corporation. 251,881, renewed Jan. 15, 1949. O. G. May 10.
Spring assemblies for upholstery and upholstery units. Nachman Spring Filled Corporation. 367,838, May 30, 1939. Republished May 10.
Spring units. Nachman Spring-Filled Corporation. 375,164, May 28, 1940. Republished May 10.
Spring units and supports. Nachman Spring-Filled Corporation. 409,785, Oct. 24, 1944. Republished May 10.
Tables, Wrought iron. The A. L. Smith Iron Works. 255,788, renewed Apr. 30, 1949. O. G. May 10.

CLASS 33

Plate glass. Pittsburgh Plate Glass Company. 247,212, Sept. 25, 1928. Republished May 10.
Sheet glass, Laminated. Pittsburgh Safety Glass Company. 244,656, July 24, 1928. Republished May 10.

CLASS 34

Device to limit the temperature of the air in the casing of a warm-air furnace. Minneapolis-Honeywell Regulator Company. 250,607, renewed Dec. 11, 1948. O. G. May 10.
Incinerators, Domestic garbage and refuse. Home Incinerator Company. 251,932, Jan. 22, 1929. Republished May 10.
Incinerators, Domestic garbage and refuse. Home Incinerator Company. 253,306, Feb. 26, 1929. Republished May 10.

CLASS 35

Asbestos brake lining and clutch facings. Asbestos Manufacturing Company. 509,643, May 10; Serial No. 537,782, published Feb. 1, 1949.
Belting, Round leather. Western Rawhide & Belting Company. 509,795, May 10; Serial No. 564,032, published Feb. 1, 1949.
Brake lining, clutch facing, pump packing, etc. National Automotive Parts Association. 390,101, Sept. 9, 1941. Republished May 10.
Leather belting. Pfeil Bros. 509,648, May 10; Serial No. 538,445, published Feb. 1, 1949.
Leather packings. Horace G. Preston Company. 509,652, May 10; Serial No. 538,560, published Feb. 1, 1949.
Rings, Metal piston. The Simplex Piston Ring Company of America, Inc. 255,218, renewed Apr. 16, 1949. O. G. May 10.
Rings, Packing. Raybestos-Manhattan, Inc. 509,609, May 10; Serial No. 533,386, published Feb. 1, 1949.
Rings, Packing. Raybestos-Manhattan, Inc. 509,610, May 10; Serial No. 533,388, published Feb. 1, 1949.
Rings, Piston. Moog Industries, Inc. 509,594, May 10; Serial No. 531,046, published Feb. 1, 1949.
Rings, Piston. Perfect Circle Corporation. 509,642, May 10; Serial No. 537,615, published Feb. 1, 1949.

Staudt, James R., and Goddard.
Grubb, Robert K., assignor to On-A-Lite Corporation, Portland, Oreg. Socket for use with clip and light bulb. 153,678, May 10.
Gruber, Francis E., assignor to Brown & Bigelow, St. Paul, Minn. Writing instrument. 153,679, May 10.
Haase, Lawrence H., Evansville, Ind., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Washing machine. 153,680, May 10.
Huegert, Clarence B., Coffeyville, Kans. Earring attachment device. 153,681, May 10.
Haggstrom, Arthur C., Rockford, Ill., assignor to H. L. Baumgardner Corporation. Portable electric lamp. 153,682, May 10.
Hamilton, Paul B., Birmingham, Ala. Paper napkin holder. 153,683, May 10.
Helander, Lillian V. M., assignor to The International Silver Company, Meriden, Conn. Spoon or other article of flatware. 153,684, May 10.
Henkel, Andrew L., Chicago, Ill. Hose nozzle. 153,685, May 10.
Hinkle, Geraldine, San Francisco, Calif. Clothing display rack. 153,686, May 10.
Hoag, Roderick W., Melrose, Mass. Ash tray. 153,687, May 10.
Hom-Ade, Inc., assignee: *See*—
Jones, David F.
Horwitz, Leo, Chicago, Ill. Luggage case or a similar article. 153,688, May 10.
International Silver Company, The, assignee: *See*—
Helander, Lillian V. M.
Johnson, Alice M., Long Island City, N. Y. Lamp or similar article. 153,689, May 10.
Jones, David F., Richmond, assignor to Hom-Ade, Inc., Oakland, Calif. Doughnut forming device. 153,690, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,691, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,692, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,693, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 153,694, May 10.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 153,695, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,696, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Pin clip or similar article. 153,697, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,698, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,699, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,700, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,701, May 10.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 153,702, May 10.
Kaufman, Louis, New York, N. Y. Handbag. 153,703, May 10.
Kiekhaefer, Elmer C., Cedarburg, Wis. Drive shaft housing for an outboard motor. 153,704, May 10.
Kiekhaefer, Elmer C., Cedarburg, Wis. Outboard motor having a power head. 153,705, May 10.
Lathom, Ruth C., Gillette, Wyo. Scissors sharpener. 153,706, May 10.
Leaf, Ludwig, Forest Hills, assignor to Empire Plastic Corporation, New York, N. Y. Toy fish or similar article. 153,707, May 10.
Leaf, Ludwig, Forest Hills, assignor to Empire Plastic Corporation, New York, N. Y. Toy duck or similar article. 153,708, May 10.
Levich, Morris C., New York, N. Y. Toy animal figure. 153,709, May 10.
Lewis, Nena, Campbell, Ohio. Cabinet sink. 153,710, May 10.
Liebes, Dorothy W. *See*—
Burton, William, and Liebes.
Lipman, Isadore A., Meriden, assignor, by mesne assignments, to Amston Silver Company, Inc., Amston, Conn. Fork or other article of flatware. 153,711, May 10.
Little, John M., Toledo, Ohio, assignor to Westinghouse Electric Corporation. Washing machine. 153,712, May 10.
Lloyd Products Company, The, assignee: *See*—
Richardson, Arthur A.
Lohr, Raymond J., and L. J. Campbell, Erie, Pa., assignors to Louis Marx & Company, Inc., New York, N. Y. Ball point fountain pen. 153,713, May 10.
Mader, William P., assignor to Roethel Engineering Corporation, Detroit, Mich. Ash tray. 153,714, May 10.
Mader, William P., Detroit, Mich. Ash tray. 153,715, May 10.
Mader, William P., assignor to Roethel Engineering Corporation, Detroit, Mich. Ash tray. 153,716, May 10.
Marvel Jewelry Mfg. Company, assignee: *See*—
Albanese, Arthur.
Marx, Louis, & Company, Inc., assignee: *See*—
Lohr, Raymond J., and Campbell.
Mastercraft Plastics Co. Inc., assignee: *See*—
Derham, Phillip.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 153,717, May 10.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 153,718, May 10.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 153,719, May 10.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 153,720, May 10.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 153,721, May 10.
National Silver Company, assignee: *See*—
Bernstein, Milton.
Odenerants, Henning, assignor to Zegorav Inc., New York, N. Y. Can opener. 153,722, May 10.
On-A-Lite Corporation, assignee: *See*—
Grubb, Robert K.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,723, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,724, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,725, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,726, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,727, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,728, May 10.
Reinhart, John B., Jr., and J. B. Ruebel, assignors to Trimfoot Company, Farmington, Mo. House shoe. 153,729, May 10.
Richardson, Arthur A., Cranston, R. I., assignor to The Lloyd Products Company. Fluorescent starter switch. 153,730, May 10.
Roethel Engineering Corporation, assignee: *See*—
Mader, William P.
Rogers, Lunt & Bowlen Company, assignee: *See*—
Bowlen, Nord.
Rominger, Rudolf, St. Moritz, Switzerland. Ski boot. 153,731, May 10.
Roney, John F., Los Angeles, Calif., assignor to Safway Steel Products, Inc., Milwaukee, Wis. Portable grandstand frame. 153,732, May 10.
Ruebel, Joseph B.: *See*—
Reinhart, John B., Jr., and Ruebel.
Safway Steel Products, Inc., assignee: *See*—
Roney, John F.
Schofield, Earl L., Rockford, assignor to Burgess Battery Company, Freeport, Ill. Flashlight. 153,733, May 10.
Silson, Victor, New York, N. Y. Combined cake of soap and spool holder. 153,734, May 10.
Standt, James R., and R. E. Goddard, Fort Worth, Tex.; said Standt assignor to said Goddard. Reclining chair. 153,735, May 10.
Stern, Kurt, Chicago, Ill. Slide fastener repair tool. 153,736, May 10.
Trimfoot Company, assignee: *See*—
Reinhart, John B., Jr., and Ruebel.
United States Rubber Company, assignee: *See*—
Arbib, Richard H.
Von Lindeck, Walter, Los Angeles, Calif. Combined freezer and dispenser for frozen foods. 153,737, May 10.
Wallace, R., & Sons Manufacturing Company, assignee: *See*—
Warren, William S.
Wallance, Donald A., New York, N. Y. Table or similar article. 153,738, May 10.
Wallance, Donald A., New York, N. Y. Table or similar article. 153,739, May 10.
Warren, William S., Meriden, assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn. Spoon or other article of flatware. 153,740, May 10.
Warren, William S., Meriden, assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn. Spoon or other article of flatware. 153,741, May 10.
Weber, Joseph, Forest Hills, N. Y. Collapsible stand for kitchen utensils. 153,742, May 10.
Westinghouse Electric Corporation, assignee: *See*—
Little, John M.
Wurlitzer, Rudolph, Company, The, assignee: *See*—
Fuller, Paul M.
Zegorav Inc., assignee: *See*—.
Odenerants, Henning.
Zolot, Bernard G., Philadelphia, Pa. Table. 153,743, May 10.
Zver, John L. and M. G., Chicago, Ill. Mobile carrier for vacuum cleaner and accessories or the like. 153,744, May 10.
Zver, Martin G.: *See*—
Zver, John L. and M. G.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 10TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

ACF-Brill Motors Company, assignee: *See*—
Latshaw, Elmer.
Abbott, Henry H., Yonkers, and H. M. Bascom, New York, N. Y., and P. B. Fairlamb, Butler, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio Control system. 2,469,539, May 10.
Abrams, Hardin T., assignor to Collins Radio Company, Cedar Rapids, Iowa. Tuning control and band switching arrangement. 2,469,941, May 10.
Abrasive Dressing Tool Company, assignee: *See*—
Meyer, Erwin.
Acme Visible Records, Inc., assignee: *See*—
Rockwell, Lyle C.
Actiengesellschaft Joh. Jacob Rieter & Cie, assignee: *See*—
Mäder, Hermann.
Acton, Russel D., Chicago, Ill. Tractor-drawn implement turn responsive lifting and adjusting mechanism. 2,469,622, May 10.
Agriculture, United States of America as repeesented by the Secretary of, the, assignee: *See*—
Hellbach, Rudolph.
Aktiebolaget C. E. Johansson, assignee: *See*—
Hallin, Karl E. E.
Aktiebolaget Mapus, assignee: *See*—
Redin, Eric G., and Olander.
Aktiengesellschaft Brown, Bovere & Cie, assignee: *See*—
Eichenberger, Ernst.
Alba, Ralph T.: *See*—
Wallerstein, James, and Alba.
Albrecht, Alexander J.: *See*—
Stobb, Anton, and Albrecht.
Albrecht, Fritz, Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Method and apparatus for flash welding. 2,469,707, May 10.
Alcock, John F., North Lancing, assignor to H. R. Ricardo, London, England. Heat exchanger. 2,469,758, May 10.
Alcorn, Irwin W., Houston, Tex., and D. C. Bond, Northbrook, assignors to The Pure Oil Company, Chicago, Ill. Cementing earth borer. 2,469,353, May 10.
Alderson, Witty L., Jr., and J. A. Robertson, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of hydrazonitriles from azines of butyl ketones. 2,469,358, May 10.
Alexander, Verna C., Spartanburg, S. C. Sandal with pivoted-ring strap receivers. 2,469,708, May 10.
Allen, Grant, and R. Dabl, Fairview, Mont. Baby's nursing bottle. 2,469,480, May 10.
Allied Chemical & Dye Corporation, assignee: *See*—
Flett, Lawrence H.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Fergason, Hector C.
Scranton, Charles J.
Allyn, Welch, Inc., assignee: *See*—
Allyn, William N.
Allyn, William N., Skaneateles, assignor to Welch Allyn, Inc., Auburn, N. Y. Battery handle connector. 2,469,857, May 10.
Alt, Anne, Compton, Calif. Brassière. 2,469,623, May 10.
American Can Company, assignee: *See*—
Jones, Lyman L., and Ystrom.
Nordquist, Ronald E. J.
American Chicle Company, assignee: *See*—
Cohee, Wallace P.
American Cyanamid Company, assignee: *See*—
Dudley, James R.
Dudley, James R., and Lundberg.
Lundberg, Lennart A.
Lundberg, Lennart A., and Dudley.
Millson, Henry E., and Mooradian.
Redmon, Bryan C.
Thurston, Jack T., and Warner.
American Cystoscope Makers, Inc., assignee: *See*—
Held, Joseph E.
Wallace, Frederick J.
American Machine and Foundry Company, assignee: *See*—
Randell, Rupert E., and Hagquist.
American Metalcraft Corporation, assignee: *See*—
Wheeler, John D.
American Optical Company, assignee: *See*—
Osterberg, Harold, and Matter.
American Pulley Company, The, assignee: *See*—
Ingraham, Joseph H., and Williams.
American Steel Foundries, assignee: *See*—
Bachman, Fred E.
Ames, Butler, Boston, Mass. Portable support. 2,469,359, May 10.
Amidon, Roy C., assignor to Vanity Fair Mills, Inc., Reading, Pa. Knitting machine. 2,469,360, May 10.
Andersen, Arthur A., Los Angeles, Calif. Self-aligning furniture foot. 2,469,425, May 10.
Anderson, Eugene L.: *See*—
Lindsay, Edward C., and Anderson.
Anderson, Marvin R., Grosse Pointe Park, assignor to Michigan Tool Company, Detroit, Mich. Gear grinding machine. 2,469,807, May 10.
Anderson, Roger, Seattle, Wash. Orthopedic foot plate device. 2,469,361, May 10.
Anderson, Warren A., St. Charles, Ill. Paper file. 2,469,540, May 10.
Anthony, Felix M., Piedmont, Calif. Device for crimping tubular articles. 2,469,426, May 10.
Applegate, Walter N., Point Pleasant, N. J., and C. A. Peterson, Brooklyn, N. Y. Folding clothes rack. 2,469,911, May 10.
Armistead, William H., assignor to Corning Glass Works, Corning, N. Y. Infrared transmitting glass. 2,469,490, May 10.
Armour and Company, assignee: *See*—
Kaiser, Emil, and Svara.
Armstrong, Eph A.: *See*—
Liddle, John S., Horton, and Armstrong.
Armstrong, James F., Detroit, Mich., and J. T. W. Moseley, Clayton, assignors to Carter Carburetor Corporation, St. Louis, Mo. Control for fuel supply systems. 2,469,942, May 10.
Armhart, Harry A., Tulsa, Okla. Protective guard for rotary machine tools. 2,469,624, May 10.
Aschauer, George R., assignor to Twin Disc Clutch Company, Racine, Wis. Seal. 2,469,588, May 10.
Ashworth, Handel, Baldwin, and P. W. Doblin, Brooklyn, N. Y. Apparatus for melting chocolate and other confections. 2,469,709, May 10.
Aske, Leonard E., Minneapolis, Minn., assignor to General Mills, Inc. Induction motor rotor. 2,469,808, May 10.
Atlantic Refining Company, The, assignee: *See*—
Hunter, James B.
Atlas Powder Company, assignee: *See*—
Barker, George E.
Attorney General of the United States, vested in the, assignee: *See*—
Riehs, Carl.
Wolff, Julius.
Axell, Archie, Minneapolis, assignor to Hnaky Manufacturing Company, St. Paul, Minn. Horizontal rotary scalper. 2,469,643, May 10.
Baash-Ross Tool Company, assignee: *See*—
Johnson, Glenn D.
Babienco, Axentie T., San Diego, Calif. Compositions for intravenous treatment of genito-urinary infections and essential hypertension. 2,469,759, May 10.
Bachman, Fred E., assignor to American Steel Foundries, Chicago, Ill. Shock strut. 2,469,912, May 10.
Baechler, Roy H., Madison, Wis.: dedicated to the free use of the People in the territory of the United States. Treating wood. 2,469,427, May 10.

Bagge, Walter and G. F.
Bagge, Walter and G. F., Los Angeles, Calif. Gauging instrument for vehicle wheels. 2,469,541, May 10.
Bailey, James N., Mobile, Ala. Adapter for converting kerosene lamps into electric lamps. 2,469,491, May 10.
Bailey, William B., assignee: *See*—
D'Avaucour, Pierre de V.
Baker Castor Oil Company, The, assignee: *See*—
Colbeth, Ivor M.
Baldwin, Francis P., Pluckemin, N. J., assignor to Standard Oil Development Company, Laminating by means of an isoolefin-diolefin interpolymer tie ply. 2,469,710, May 10.
Baldwin Locomotive Works, The, assignee: *See*—
Jacobson, Carl A.
Ruge, Arthur C.
Ball, Roy, East Oronge, N. J. Screw-in circuit breaker. 2,469,492, May 10.
Barber, Everett M., Wappingers Falls, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Internal-combustion engine. 2,469,448, May 10.
Baresch, Charles A., Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Fairing assembly for turbine bearings. 2,469,711, May 10.
Barker, George E., Pleasant Hills, assignor to Atlas Powder Company, Wilmington, Del. Synthetic detergent composition. 2,469,493, May 10.
Barnes, Carl E., Belvedere, N. J., assignor to General Aniline & Film Corporation, New York, N. Y. Emulsion polymerization of butadienes. 2,470,065, May 10.
Barricini, Jack, Scarsdale, assignor, by mesne assignments, to The Toy Pop Corporation, New York, N. Y. Confection with support therefor. 2,469,589, May 10.

Barry, Arthur J.: *See*—
De Pree, Lee, Barry, and Hook.

Barry, Arthur J., assignor to The Dow Chemical Company, Midland, Mich. Rendering hydrophilic substance water repellent. 2,469,625, May 10.

Bascom, Henry M.: *See*—
Abbott, Henry H., Bascom, and Fairlamb.

Basham, Raymond B., assignor to Westronics Inc., Fort Worth, Tex. Electronic flash tube apparatus. 2,469,913, May 10.

Bashark, Nicholas, Dayton, Ohio. Fluid pump automatic air bleed valve. 2,469,362, May 10.

Baskin, Thurman L., Jr., Zion, Ill. Article carrier for kite strings. 2,469,449, May 10.

Basters, Joseph P., Chicago, Ill. Signaling device for cycles and the like. 2,469,944, May 10.

Beachell, Harold C., Lakewood, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Tanning product and process. 2,469,428, May 10.

Beam, Arthur P., and H. R. Shelton, Conn. Abrasive and polishing head. 2,469,429, May 10.

Beam, Harry R.: *See*—
Beam, Arthur, and H. R.

Becker, Stephen P., Poughkeepsie, N. Y. Connector. 2,469,542, May 10.

Beers, John R., Briar Cliff Manor, assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y. High vacuum getter. 2,469,626, May 10.

Bell Aircraft Corporation, assignee: *See*—
Seibel, Charles M.
Woods, Robert J.

Bell & Gossett Company, assignee: *See*—
Tidd, Edwin B.

Bell & Howell Company, assignee: *See*—
Howell, Albert S.
Phillimore, Charles E.

Bell, Keith L., Washington, D. C., assignor to C. E. McGhee. Radio-frequency transmission through grounded conducting structures and the like. 2,470,000, May 10.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Abbott, Henry H., and Bascom, and Fairlamb.
Hartman, Paul L.
Kinser, John P.
Mohr, Milton E.
Morrison, Howard.
Ohl, Russell S.
Pierce, John R.

Bendix Aviation Corporation, assignee: *See*—
Buxton, James E., Christian, and Demure.
Goldberg, Harold.
Gordon, James F.
Norton, Frank R.
Perry, Daniel D.
Ulrich, Bernhard, Jr., and Pontius, III.
Winchel, Henry T.

Bergmann, Erick W., assignee: *See*—
Mackin, James D., and Bergmann.

Bergmans, Jan, J. G. Kronouer, and M. Leeuwin, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Radio receiver tuning indicator, including a wide angle viewing lens. 2,470,012, May 10.

Berindei, Matei: *See*—
Nemet, Anthony, and Berindei.

Beringer, Joseph F., executor: *See*—
Broader, Harry.

Berry, William A., Essex Junction, Vt. Stake releasing means for vehicle log bunks. 2,469,760, May 10.

Bhajekar, Madhav V., Bombay, India. Endoscope handle. 2,470,013, May 10.

Biondi, Harry J., Gaithersburg, Md. Exterior bomb container. 2,469,863, May 10.

Bird, Paul G., and A. L. Jacoby, Western Springs, assignors to National Aluminate Corporation, Chicago, Ill. Inhibiting foaming in steam boilers. 2,469,450, May 10.

Blount, Edgar R., Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America. Bobbin holder. 2,469,590, May 10.

Bock, Edward P.: *See*—
Paquin, Joseph N., and Bock.

Bodmer, Ernest, Grand-Lancy-Geneve, Switzerland. Cam controlled pulse transmitter. 2,469,761, May 10.

Bond, Donald C.: *See*—
Alcorn, Irwon W., and Bond.

Bond, Donald C., Northbrook, assignor to The Pure Oil Company, Chicago, Ill. Production of oil. 2,469,354, May 10.

Bondhus, Tom M., Monticello, Minn. Counterboring device. 2,469,545, May 10.

Booth, Earl C., and F. Jones, assignors to Noblitt-Sparks Industries, Inc., Columbus, Ind. Ironing board. 2,469,809, May 10.

Borden Company, The, assignee: *See*—
Calhoun, John R., and Busso.

Bourne, Harry K., Rugby, England, assignor to General Electric Company. Electric discharge lamp system and operation. 2,469,357, May 10.

Bowers, Charles E., Moylan, assignor to Fibre Metal Products Company, Chester, Pa. Protecting helmet. 2,469,810, May 10.

Bowiser, Alfred H., Jr., Inglewood, Calif. Door latch. 2,469,430, May 10.

Bowman, John R., assignor to Gulf Research & Development Company, Pittsburgh, Pa. Calculating machine for solving simultaneous equations. 2,469,627, May 10.

Bowman, John R., and R. T. Steinback, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Calculating machine. 2,469,628, May 10.

Boye & Emmes Machine Tool Company, The, assignee: *See*—
Laubach, Howard E., Johnson, and Kramer.

Boyer, Howard B., assignor of one-third to W. R. Goss, Eugene, Oreg. Demountable rims for tires. 2,469,629, May 10.

Boyle, John D., Greenwich, Conn. Mortised block puzzle. 2,469,364, May 10.

Braaten, Oscar M., Rock Island, Ill. Tool for dressing grinding wheels. 2,469,365, May 10.

Bradley, William E., Springfield Township, Montgomery County, and J. C. Teller, Penn Wynne, assignors to Philco Corporation, Philadelphia, Pa. Oscillator circuits. 2,469,811, May 10.

Bramblett, Ardrey M.: *See*—
Schilling, Ernest W., and Bramblett.

Braun, Gideon, Columbus, Nebr. Faceplate for wood lathes. 2,469,630, May 10.

Brei, Daniel L., Cambridge, Mass., assignor to Wesbar Stamping Corporation, West Bend, Wis. Load handling attachment for automobiles. 2,469,945, May 10.

Bremer, Harry E., Milwaukee, Wis. Stock watering bowl. 2,469,946, May 10.

Breslav, Jack, New Haven, Conn. Attachment for industrial trucks. 2,469,812, May 10.

Bridgeman, Walter A., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Preserving perishables. 2,469,914, May 10.

British Insulated Callender's Cables Limited, assignee: *See*—
Quayle, Joshua C., and Jones.

Brockman, Frank G., Woodbury, and J. W. Wescott, 2nd, Chatsworth, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of extremely thin filaments. 2,469,947, May 10.

Broder, Harry, New York, N. Y.; W. Feistiner, L. Broder, and J. F. Berlinger, executors of said H. Broder, deceased. Lipstick holder with four-pin cup. 2,469,631, May 10.

Broder, Leonard, executor: *See*—
Broder, Harry.

Broderick, Aubrey E., South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Insolubilisation of water-soluble hydroxyl-containing polymeric materials. 2,469,431, May 10.

Brooks, Walter J. Baltimore, Md. Pencil sharpener. 2,469,853, May 10.

Brown, Chester W., Linton, Ind. Carburetor. 2,470,014, May 10.

Buck, Richard S., Glastonbury, and W. A. Ledwith, Hartford, assignors to United Aircraft Corporation, East Hartford, Conn. Control for spill ports in free-piston units. 2,469,712, May 10.

Budd Company, The, assignee: *See*—
Callender, Edwin M., Phair, and Van Sciver.
Davies, Henry R.
Manning, Matthew J.

Bundy Tubing Company, assignee: *See*—
Payne, Arthur W.

Bune, Edwin O., Onoka, Minn. Bowling ball cleaner. 2,469,948, May 10.

Bunn, B. H., Company, assignee: *See*—
Bunn, Benjamin H.

Bunn, Benjamin H., assignor to B. H. Bunn Company, Chicago, Ill. Tying machine for elongated packages. 2,469,544, May 10.

Burbank, Wendell T., Three Rivers, assignor to Sutherland Paper Company, Kalamazoo, Mich. Method of wrapping and labeling receptacles. 2,469,366, May 10.

Burgess, David S., E. A. Ramskill, and R. R. Miller, Washington, D. C. Canister and distributor therefor. 2,469,367, May 10.

Burrus, Paul B., Dayton, Ohio, assignor, by mesne assignments, to Worthington Pump and Machinery Corporation. Condenser bracket. 2,469,451, May 10.

Bushko, George, Eynon, Pa. Clothes tree. 2,469,494, May 10.

Butler, Edgar M., New Orleans, La. Self-energizing electrolytic water correction device. 2,469,545, May 10.

Butler, Edgar M., New Orleans, La. Electrolytic water correction device. 2,469,680, May 10.

Buttler, Allen J., Los Angeles, Calif. Airplane construction. 2,469,591, May 10.

Buxton, James E., F. T. Christian, and R. E. Demure, Elmira, N. Y., assignors to Bendix Aviation Corporation. Engine starter gearing. 2,469,792, May 10.

Busso, Thomas M.: *See*—
Calhoun, John R., and Busso.

Byer, John W., Cumberland, Md., assignor to Celanese Corporation of America. Locking device. 2,469,592, May 10.

C. & M. Envelope Company, assignee: *See*—
Terry, Thomas A.

C. & M. Manufacturing Company, assignee: *See*—
Thompson, William J.

Caesar, Philip D.: *See*—
Hansford, Rowland C., and Caesar.

Calabrese, George V., assignor to Lumenite Electronic Company, Chicago, Ill. Electrode assembly. 2,470,066, May 10.

Caldwell, Walter A., West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited. Production of viscous aqueous alkaline solutions of vegetable globulins. 2,469,452, May 10.

Calhoun, John R., Bainbridge, and T. M. Busso, Unadilla, assignors to The Borden Company, New York, N. Y. Forming protein compositions. 2,469,546, May 10.

Callender, Edwin M., Cynwyd, R. S. Phair, Philadelphia, and H. D. Van Sciver, Merion, assignors to The Budd Company, Philadelphia, Pa. Welding current indicator and lockout. 2,470,067, May 10.

Canner, Herman M., Detroit, Mich. Tie rack. 2,470,015, May 10.

Cantral, John I.: *See*—
Silver, Walter H., and Cantral.

Cantrell, Paul C., Berkeley, Calif. Pipe support clamp. 2,469,949, May 10.

Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Apparatus for handling motion-picture film. 2,469,915, May 10.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Broderick, Aubrey E.

Carl, Louis, Brooklyn, N. Y. Hammock support. 2,469,950, May 10.

Carter Carburetor Corporation, assignee: *See*—
Armstrong, James F., and Moseley.

Carter, Frank H., Taft, Calif. Divan mover. 2,469,547, May 10.

Carter, James M., Pasadena, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission. Producing uranium tetrabromide. 2,469,916, May 10.

Carvajal, Roberto, and J. J. Quiroga, Sewell, Chile, assignors to Kennecott Copper Corporation, New York, N. Y. Froth flotation of sulfide ores with phenyl-imido-amyl-dithiocarbonate. 2,469,368, May 10.

Celanese Corporation of America, assignee: *See*—
Blount, Edgar R.
Byer, John W.

Central National Bank of Cleveland, assignee: *See*—
Goss, Harold J.

Chace, Edward G.: *See*—
Wilcock, Donald F., and Chace.

Charbeneau, Ralph C., Mount Clemens, Mich., assignor to R. E. Watson, Pamlico County, N. C. Nursing bottle holder. 2,469,859, May 10.

Chase Brass & Copper Co. Incorporated, assignee: *See*—
Reichenbach, Howard F.

Child, Everett S., Barrington, R. I., assignor to United States Rubber Company, New York, N. Y. Connector. 2,469,495, May 10.

Christenson, Bjorn O., De Pere, Wis. Condition control system. 2,469,496. May 10.

Christian, Frank T.: *See*—
Buxton, James E., Christian, and Demure.

Church, William R.: *See*—
Lowry, Robert D., and Church.

Ciba Pharmaceutical Products, Inc., assignee: *See*—
Munson, Charles E.

Clapp, Roger E., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Antenna. 2,470,016, May 10.

Clark, Lawrence E., Arlington, Va. Communications copy and schedule holder. 2,469,369, May 10.

Clark, Paul J., Germantown, Pa. Check feeding machine. 2,470,017, May 10.

Cline, Wesley W., Charleston, W. Va. Selective information tab device. 2,469,762, May 10.

Coble, Ernest L., East Cleveland, assignor to The Star Welding & Manufacturing Company, Inc., Cleveland, Ohio. Ladder jack. 2,469,593, May 10.

Coby, George, Attleboro, Mass., assignor of forty per cent to J. V. Puglisee, Providence, R. I. Glass tube bottoming machine. 2,469,681, May 10.

Cochrane Corporation, assignee: *See*—
Rasek, Joseph.

Cockrell, William D., Schenectady, N. Y., assignor to General Electric Company. Control device. 2,469,860, May 10.

Coffing, Fredrick W., assignor to Coffing Hoist Company, Danville, Ill. Method of and mechanism for lifting portions of vehicles. 2,470,018, May 10.

Coffing, Fredrick W., assignor to Coffing Hoist Company, Danville, Ill. Combination hoist, jack, and wire stretcher. 2,470,019, May 10.

Coffing Hoist Company, assignee: *See*—
Coffing, Fredrick W.

Cohen, Irwin, Brooklyn, N. Y. Crinoline skirt. 2,469,855, May 10.

Coboe, Wallace P., New York, assignor to American Chicle Company, Long Island City, N. Y. Chewing gum base. 2,469,861, May 10.

Colbeth, Ivor M., Maplewood, assignor to The Baker Castor Oil Company, Jersey City, N. J. Producing unsaturated products. 2,469,370, May 10.

Colbeth, Ivor M., Maplewood, assignor to The Baker Castor Oil Company, Jersey City, N. J. Reacting glyceride oils. 2,469,371, May 10.

Coleman, Stephen L. C., Fredericton, New Brunswick, Canada. Universal joint. 2,469,713, May 10.

Collins, George H., Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for operating on shoes. 2,469,453, May 10.

Collins Radio Company, assignee: *See*—
Abrams, Hardin T.

Conley, Josephine M., Cleveland, Ohio. Stocking protector. 2,469,863, May 10.

Connelly, Emmett L., El Monte, Calif. Child's seat for barber chairs. 2,469,546, May 10.

Contenson, Jean L. A., Ruell-Malmaison, assignor to Societes Reunies Everite-Sitube, Paris, France. Device for molding and coating pipes and like articles. 2,470,068, May 10.

Continental Electric Company, Inc., assignee: *See*—
Petterson, Gustav E.

Conway, James F., Orange, N. J., assignor, by mesne assignments, to National Folding Box Company, Incorporated. Folding box. 2,469,497, May 10.

Conwell, Melvin E., Camp McCoy, Wis. Hair oil applicator. 2,469,763, May 10.

Cooley, Austin G., New York, N. Y., assignor to Times Facsimile Corporation. Tuning fork and control system. 2,469,951, May 10.

Cooper, Benjamin, Scotia, N. Y., assignor to General Electric Company. Thyratron motor control system. 2,469,862, May 10.

Cooper, Delmer C.: *See*—
Hagemeyer, Hugh J., Jr., and Cooper.

Cooper, Hugh S., Cleveland, Ohio. Cobalt base alloy composition. 2,469,715, May 10.

Cooper, Kenneth C., Portland, assignor to United Aircraft Corporation, East Hartford, Conn. Spill port control for free-piston units. 2,469,714, May 10.

Coppleman, Archie E., assignee: *See*—
Ritter, Saidee M.

Corning Glass Works, assignee: *See*—
Armistead, William H.

Cornish-Bess, Antonio, Santiago, Chile. Pencil point sharpener. 2,469,932, May 10.

Cornwell, Ralph E., La Canada, Calif. Hydraulic braking mechanism. 2,469,632, May 10.

Corson, William G., Barberton, Ohio. Apparatus for forming retreading strips for tires. 2,469,633, May 10.

Coston, Elmer D., assignor to Manufacturers Supplies Company, St. Louis, Mo. Folding machine. 2,469,813, May 10.

Cox, Walter Cecil, Englewood, Colo. Superspeed elevated railway. 2,469,432, May 10.

Craft, Belle B. and L. B., North Hollywood, Calif. Paint brush holder. 2,469,864, May 10.

Craft, Lynn B.: *See*—
Craft, Belle B. and L. B.

Crandall, George S.: *See*—
McCracken, John H. and Crandall.

Crane, Carlton L.: *See*—
Malm, Carl J., and Crane.

Crawford Manufactoring Co., Inc., assignee: *See*—
Boberts, Richard W., Jr.

Crompton & Knowles Loom Works, assignee: *See*—
Dion, Raymon F.
Wakefield, Walter H.

Crooks, Kenneth Donald, Chicago, Ill. Fumigating apparatus. 2,469,814, May 10.

Crouse-Hinds Company, assignee: *See*—
Parish, Willard E.

Crow, Clifford O., Columbia, Mo. Hand tool. 2,469,865, May 10.

Crowley, Frank L., assignor to Crowley's Milk Company, Inc., Binghamton, N. Y. Quick frozen homogenized milk. 2,470,020, May 10.

Crowley's Milk Company, Inc., assignee: *See*—
Crowley, Frank L.

Crown Zellerbach Corporation, assignee: *See*—
Winesett, Franklin P.

Crumrine, Chester W., Irondequoit Township, Monroe County, assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y. Animal trap. 2,469,454, May 10.

Crusell, Carl A., Minneapolis, Minn. Holder for flatirons. 2,469,866, May 10.

Curtis Pump Company, assignee: *See*—
Curtis, Russell R.

Curtis, Russell R., assignor to Curtis Pump Company, Dayton, Ohio. Separating gases from liquid fuel. 2,469,917, May 10.

Curtiss, Charles B., assignor to Valley Welding & Boiler Co., Bay City, Mich. Electric heating unit. 2,469,634, May 10.

Curtiss-Wright Corporation, assignee: *See*—
Lohmann, Earle F.

Cuthill, Robert W., Springfield Township, Delaware County, Pa. Nonslipping rubber base materials. 2,469,372, May 10.

Cutler-Hammer, Inc., assignee: *See*—
Pell, Eric.

Cutright, Robert S., assignor to Wingfoot Corporation, Akron, Ohio. Box welding machine. 2,469,815, May 10.

Dahl, Roger: *See*—
Allen, Grant and Dahl.

Dalin, David, Ronninge, and G. V. Hagby, Ostertalje, assignors to A./B. Svenska Maskinverken, Sodertalje, Sweden. Steam boiler or the like having extended heat transfer surfaces. 2,469,635, May 10.

Dall, Edward D., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Bumper guard. 2,469,816, May 10.

Danforth, George L., Danvers, assignor to Submarine Signal Company, Boston, Mass. Hoist-lower control. 2,469,594, May 10.

Dansin, André, Paris, France, assignor to Societe Francaise Radio Electrique. Glasses having a low coefficient of expansion. 2,469,867, May 10.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Shock absorbing mechanism for draft riggings. 2,469,549, May 10.

D'Avancourt, Pierre de Vitry, Bainbridge, Pa., assignor of fifty per cent to William Boston Bailey, Huntington, W. Va. Grinding and polishing machine. 2,470,021, May 10.

Davies, Henry R., assignor to The Budd Company, Philadelphia, Pa. Center of gravity and weight indicator. 2,470,080, May 10.

Davis, Elmer M., St. Paul, Minn., assignor to Swift & Company, Chicago, Ill. Defeathering poultry. 2,469,953, May 10.

Davis, Paul B.: *See*—
Noel, Edward H., and Davis.

Dearborn, Frederick E., Washington, D. C. Production of heavy metal nicotine silicates. 2,469,808, May 10.

Dearborn, Frederick E., Washington, D. C. Production of water repellent heavy metal nicotine silicates. 2,469,869, May 10.

De Cicco, Joseph A., Callicoon, N. Y. Knife sharpener. 2,470,022, May 10.

Decker, Joseph H. and M. E., Long Beach, Calif. Carousel. 2,469,408, May 10.

Decker, Mary E.: *See*—
Decker, Joseph H. and M. E.

Deere & Company, assignee: *See*—
Silver, Walter H., and Cantral.
White, Charles H., Oehler, and Youngberg.

Delaware Engineering Corporation, assignee: *See*—
Moore, William E.

Dempsey, George, Gloversville, N. Y. Apparatus for treating skins. 2,469,636, May 10.

Demure, Itene E.: *See*—
Bruxton, James E., Christian, and Demure.

De Nie, Willem Leendert Johannes: *See*—
Rumscheidt, G. E., and de Nie.

De Pree, Lee, Holland, A. J. Barry, and D. E. Hook, assignors to The Dow Chemical Company, Midland, Mich. Production of alkylhaloselanes. 2,469,355, May 10.

Desmond-Stephan Mfg. Co., The, assignee: *See*—
Eaton, George.

Dickey, Joseph B.: *See*—
McNally, James G., and Dickey.

Dickey, Joseph B., assignor to Eastman Kodak Company, Rochester, N. Y. Monazo dye compounds containing a butadiene-1,3 grouping. 2,469,682, May 10.

Dinsley, Alfred, La Canada, Calif. Sequentially depositing reactive solutions to form an insecticide. 2,469,433, May 10.

Dion, Raymond F., Leominster, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Control for axminster loom tube frame conveyor systems. 2,469,717, May 10.

Di Santi, Thomas G., Newark, N. J. Scaffold. 2,469,716, May 10.

Dixon, Ralph Hilliard, Belleville, N. J. Cartridge firing attachment for air rifles. 2,469,870, May 10.

Doblin, Perry W.: *See*—
Ashworth, Handel, and Doblin.

Donahue, John S., Brookline, Mass., and G. E. Strehan, Leonia, N. J., said Strehan, assignor to said Donahue. Column frame. 2,469,455, May 10.

Dorr Company, The, assignee: *See*—
Warren, George T., and Jordan.

Dorrington, Neill E., and J. A. Dyker, Oswego, assignors to St. Regis Paper Company, New York, N. Y. Apparatus for packaging material. 2,469,954, May 10.

Douglas, Samuel A., Union, N. Y., assignor to Link Aviation, Inc. Valve construction for grounded aviation trainers. 2,469,918, May 10.

Dow Chemical Company, The, assignee: *See*—
Barry, Arthur J.
De Pree, Lee, Barry, and Hook.
Lowry, Robert D., and Church.
Schwegler, Clare C., and Tennant.
Stober, Kenneth E.

Dresen, James P., assignor to The Rocky Mountain Gas Equipment Company, Denver, Colo. Gas burner. 2,469,499, May 10.

Drew, E. F., & Co., Inc., assignee: *See*—
Strauss, Frank A.

Dry, John D., Bridgeport, Conn. Mechanical movement. 2,469,500, May 10.

Drying & Concentrating Company, assignee: *See*—
Hall, Joseph M.

Dudley, James R.: *See*—
Lundberg, Lennart A., and Dudley.

Dudley, James R., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Anion active resins and producing the same. 2,469,684, May 10.

Dudley, James R., Cos Cob, and L. A. Lundberg, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Anion active resins and producing same. 2,469,683, May 10.

Dulaney, Anna D., Memphis, assignor to The University of Tennessee Research Corporation, Knoxville, Tenn. Producing an antigen for use in the diagnosis of malaria and product thereof. 2,469,456, May 10.

Dulaney, Anna D., Memphis, assignor to The University of Tennessee Research Corporation, Knoxville, Tenn. Producing an antigen for use in the diagnosis of malaria and product therefor. 2,469,457, May 10.

Dunn, R. B., assignee: *See*—
Tippett, William R.

Dunnells, Norman A., Manchester, and R. E. Gorton, assignors to United Aircraft Corporation, East Hartford, Conn. Blade form for supercharger impellers. 2,469,458, May 10.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Alderson, Witty L., Jr., and Robertson.
Beachell, Harold C.
Hoffman, Raymond A.
Kirk, Joseph S.
Salisbury, Leroy F.

Dyker, John A.: *See*—
Dorrington, Neill E., and Dyker.

Eagle, John H., assignor to Eastman Kodak Company, Rochester, N. Y. Focusing apparatus for enlargers. 2,469,685, May 10.

East Lancashire Chemical Company Limited, assignee: *See*—
Sellars, John C.

Eastman Kodak Company, assignee: *See*—
Capstaff, John G.
Dickey, Joseph B.
Eagle, John H.
Fuerst, Carl C.
Gresham, Donald C.
Hagemeyer, Hugh J., Jr., and Cooper.
Knott, Edward B.
Lee, Charles M.
Malm, Carl J., and Crane.
McNally, James G., and Dickey.
Minsk, Louis M., and Kenyon.
Moon, Nell S.
Stone, Herbert G.
Wittel, Otto.

Eaton, George, assignor to The Desmond-Stephan Mfg. Co., Urbana, Ohio. Grinding wheel dresser. 2,469,871, May 10.

Eaton, Malcolm W., Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del. Ganging switch. 2,469,686, May 10.

Eberhart, Arthur H., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Grille assembly for an air-conditioning apparatus. 2,469,955, May 10.

Edlund, Daniel L., and T. L. Oberle, Mount Lebanon, Pa., and J. Strauss, assignors to Vanadium Corporation of American, New York, N. Y. Alloys. 2,469,718, May 10.

Eichenberger, Ernst, Wettingen, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Gas blast circuit breaker. 2,469,459, May 10.

Electric Heat Devices, Inc., assignee: *See*—
Herrington, Lovic P.

Ellner, George G., Long Island, N. Y. Ray-emission apparatus. 2,469,872, May 10.

Erickson, Charles A., Dearborn, assignor, by mesne assignments, to E. L. Jacobs Co., Detroit, Mich. Diaphragm pump. 2,469,818, May 10.

Erickson, Donald R., Kalamazoo, Mich. Manufacture of hydroxy alkyl cellulose. 2,469,764, May 10.

Eriksson, Erik O., Hornsjofors, Sweden. Suction chuck. 2,469,817, May 10.

Ernest, Frederick I., Elkhart, Ind. Precision expanding adapter. 2,469,873, May 10.

Evans, S. W., & Son, assignee: *See*—
Evans, Wayne S., and Tartaglia.

Evans, Wayne S., and L. G. Tartaglia, assignors to S. W. Evans & Son, Philadelphia, Pa. Umbrella frame. 2,469,637, May 10.

Fair, James F., New Kensington, Pa. Take-up clamp. 2,469,550, May 10.

Fairchild Camera and Instrument Corporation, assignee: *See*—
Phair, Harry W.

Fairlamb, Preston B.: *See*—
Abbott, Henry H., Bascom, and Fairlamb.

Farnsworth Research Corporation, assignee: *See*—
Ferguson, Joseph C., and Mayle.
Harris, Albert S.
Mayle, Louis F.

Fawcett, Harold W., Harrogate, England. Centrifugal separator. 2,469,956, May 10.

Fearon, Robert E., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Radioactivity measurement. 2,469,460, May 10.

Feather, Donivan C., assignor of one-third to J. B. Pfonts, Portland, Oreg. Scissors joint and blade tension means. 2,469,373, May 10.

Feistner, William, executor: *See*—
Broder, Harry.

Fenn, James E., Baldwin, N. Y. Dusting powder and making same. 2,469,957, May 10.

Fergason, Rector C., La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Corn harvester husking roll with resilient section. 2,469,687, May 10.

Ferguson, Joseph C., and A. T. Mayle, Jr., Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation. Modulating system. 2,470,023, May 10.

Fetsko, John J., Jr., Neville Island, Pa. Gauge support. 2,469,874, May 10.

Fibre Metal Products Company, assignee: *See*—
Bowers, Charles E.

Filander, Arthur H.: *See*—
Woodard, William E., and Filander.

Fincke, John K., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Phenylethyl sulfones. 2,470,077, May 10.

Finney, John H. V., Denver, Colo. Gravity feed centrifugal pump. 2,469,374, May 10.

First Industrial Corporation, assignee: *See*—
Eaton, Malcolm W.

Fischer, Joseph, San Diego, Calif. Propeller. 2,469,919, May 10.

Fish, Edwin B., Binghamton, N. Y. Toboggan. 2,469,765, May 10.

Fish, Glenn L., assignee: *See*—
Wessels, Henry E.

Flagle, Charles D., Swarthmore, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Deicing apparatus for compressors. 2,469,375, May 10.

Flett, Lawrence H., Scarsdale, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Mixtures of alkyl aryl sulfonates. 2,469,376, May 10.

Flett, Lawrence H., Scarsdale, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Mixtures of alkyl aryl sulfonates. 2,469,377, May 10.

Flett, Lawrence H., Scarsdale, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Mixtures of alkyl aryl sulfonates. 2,469,378, May 10.

Flory, Paul J., Kent, and N. Rabjohn, assignors to Wingfoot Corporation, Akron, Ohio. Vulcanization of rubber compositions. 2,469,819, May 10.

Follett, Roy C.: *See*—
Munson, Alexander L., and Follett.

Food Machinery and Chemical Corporation, assignee: *See*—
Low, Frank S.

Ford, Thomas B., Jr., Fair Haven, N. J. Pressure reducing valve. 2,469,719, May 10.

Foster, Allen T., Chicago, Ill. Cooking apparatus. 2,469,595, May 10.

Foster and Kleiser Company, assignee: *See*—
Warde, Walter T.

Fowler, Roy H., Beaver Falls, Pa. Motor vehicle cover. 2,469,958, May 10.

Framhein, Herbert J., Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Wheel lifting linkage for pallet trucks. 2,469,638, May 10.

Francis, John H., Vista, Calif. Fountain comb. 2,470,024, May 10.

Franklin, Ernest M., Kingsport, Tenn. Magazine downdraft furnace. 2,469,639, May 10.

Fraser, James, assignor to Speakman Company, Wilmington, Del. Mixing valve having accessible pressure equalising means. 2,470,025, May 10.

Fraser, Lewis H. D., Toledo, Ohio, assignor to Owens-Illinois Glass Company. Heat insulating materials and making. 2,469,379, May 10.

Frazier, Elihu E., St. Louis, Mo., assignor to The Gill-Owen Company, Litchfield, Ill. Piston ring. 2,469,959, May 10.

Frese, Joseph F., assignor to Monitor Controller Company, Baltimore, Md. High potential equaliser for standoff insulators. 2,469,380, May 10.

Freund, Robert R., Mount Carmel, Ill. Obstetrical and fracture attachment for bed structures. 2,470,026, May 10.

Frietsche, William E., New Hyde Park, N. Y. Safety window lock adapter. 2,469,551, May 10.

Frohrieg, Paul R.: *See*—
Tabor, Joseph M., Seibert, and Frohring.

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. Automatic shutter with built-in synchroniser. 2,469,688, May 10.

Fuge, Harry B., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dynamoelectric machine. 2,469,820, May 10.

Furlin, John, New York, N. Y. Combination chair and ladder. 2,469,720, May 10.

Fyler, George W., Stratford, Conn., assignor to General Electric Company. Automatic frequency control for pulse transmission systems. 2,469,575, May 10.

Galbraith, Edward R., East Orange, N. J. Toolholder and adapter chuck for motor-driven tools. 2,469,821, May 10.

Gaiko, Andrew J., Aberdeen, Md. Handwheel load measuring device. 2,469,381, May 10.

Gayley, Charles T., Lansdowne, Pa. Welding equipment. 2,469,382, May 10.

Geisendorff, Ernest G., Bellville, Tex. Wire stretcher. 2,469,796, May 10.

Gellman Manufacturing Company, assignee: *See*—
Petskeyes, Charles H.

General Aniline & Film Corporation, assignee: *See*—
Barnes, Carl E.
Sweet, Monroe H.

General Biochemical, Inc., assignee: *See*—
Tabor, Joseph M., Seibert, and Frohring.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Bourne, Harry K.
Cockrell, William D.
Cooper, Benjamin.
Fyler, George W.
Hannon, Cyril H., and Jenny.
Hurd, Dallas T.
Marsden, James, and Roedel.
Noel, Edward B., and Davis.
Olcott, Eugene L.
Patnode, Winton I.
Sills, Earl H.
Willcock, Donald F., and Chace.

General Mills, Inc., assignee: *See*—
Aske, Leonard E.

General Railway Signal Company, assignee: *See*—
Hitchcock, Forest H.

Gibbs, Clifford J., Houston, Tex., and J. H. Stein, Garden City, assignors to Texaco Development Corporation, New York, N. Y. Method and apparatus for removing random fluctuations from intensity measurements. 2,460,383, May 10.

Gidley, Philip T., Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company. Electrical cable composition. 2,469,721, May 10.

Giese, Walter, Chicago, Ill. Bonding teeth to dental plates. 2,469,822, May 10.

Gill-Owen Company, The, assignee: *See*—
Frazier, Elihu E.

Gillespie, Henderson C., Moorestown, N. J., assignor to Radio Corporation of America. Method of and apparatus for forming stockings and the like. 2,469,640, May 10.

Gilron Products Company, assignee: *See*—
Ororro, Gilberg H., and Henricks.
Whitbeck, Roland A.

Gilson, Robert M., Pittsburgh, and P. N. Martin, Penn Township, Allegheny County, assignors to The Union Switch and Signal Company, Swissvale, Pa. Railway track circuit apparatus. 2,469,960, May 10.

Gogniat, Theodore, Pittsburgh, Pa. Portable fire alarm. 2,469,501, May 10.

Gohn, Joseph F., assignee: *See*—
Witthoft, Charles H.

Goldberg, Harold, assignor to Bendix Aviation Corporation, Towson, Md. Pulse-time modulator. 2,470,027, May 10.

Goldman, Aron L.: *See*—
Maiki, Moises, Matzkin, and Goldman.

Gordon, James F., Baltimore, Md., assignor to Bendix Aviation Corporation, Towson, Md. Pulse generation. 2,470,028, May 10.

Gorton, Robert E.: *See*—
Dunnells, Norman A., and Gorton.

Goss, Harold J., Nashua, N. H., assignor to Central National Bank of Cleveland, Cleveland, Ohio. Method of and machine for making unitary setup covered boxes. 2,469,641, May 10.

Goss, William R., assignee: *See*—
Boyer, Howard B.

Gottschalck, Lawrence W., Riverdale, N. Y. Knit goods and the like, and methods. 2,469,961, May 10.

Goudreau, Delphus, Northbridge, Mass. Dual cross communion set. 2,469,552, May 10.

Gouirand, Rene, New York, N. Y. Pneumatic suspension means for vehicles. 2,469,962, May 10.

Gould, Estelle, Chicago, Ill. Slip cover. 2,469,876, May 10.

Gowen, Jessie L., Colfax, Wash. Corset stay. 2,469,722, May 10.

Gratkowski, Alexander P., Scranton, Pa. Sash holder. 2,469,464, May 10.

Green, Vernon L.: *See*—
Nystrom, Karl F., and Green.

Greene, Wallace, New York, N. Y. Frame mounted axially collapsing type tire removing apparatus. 2,469,723, May 10.

Greiner, Carl F., assignee: *See*—
Harrison, John F.

Gresham, Donald C., Wealdstone, England, assignor to Eastman Kodak Company Rochester, N. Y. Making apertured metal sheets. 2,469,689, May 10.

Gretsch, Fred, Manufacturing Company, The, assignee: *See*—
Strong, Emerson.

Grewe, Edward A., Milwaukee, Wis. Blowgun. 2,469,642, May 10.

Groom, Percy G., Hamilton, Ontario, Canada. Spring. 2,469,596, May 10.

Groszjean, Harry W., and E. M. A. Sizer, Milwaukee, Wis. Heating unit. 2,469,963, May 10.

Gross, George W., Linden, N. J., assignor to Standard Oil Development Company. Hydrocarbon fractionating. 2,469,724, May 10.

Grupen, James L., San Gabriel, Calif. Insulator for line wires. 2,469,384, May 10.

Gubrud, Adolph P., Hudson, S. Dak. Grade indicator. 2,470,029, May 10.

Guigas, Gustav, Livingston, N. J. Method of and apparatus for beating, sizing, or forming quartz tubes and profiles. 2,469,597, May 10.

Gulf Research & Development Company, assignee: *See*—
Bowman, John E.
Bowman, John R., and Steinback.

Haaky Manufacturing Company, assignee: *See*—
Axell, Archie.

Haberman, Harry M., New York, N. Y. Combination tool. 2,469,377, May 10.

Habuda, Martin, Thorold, Ontario, Canada. Toilet paper dispensing apparatus. 2,470,030, May 10.

Hagby, Gustav V.: *See*—
Dalin, David, and Hagby.

Hagemeyer, Hugh J., Jr., and D. C. Cooper, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Continuous process of producing beta lactones. 2,469,090, May 10.

Haggerty, Vincent: *See*—
Winter, Arthur, and Haggerty.

Hagquist, Gustaf E.: *See*—
Rundell, Rupert E., and Hagquist.

Hall, Joseph M., Chicago, Ill., assignor to Drying & Concentrating Company. Spray drier apparatus. 2,469,553, May 10.

Hallewell, Harold S., assignee: *See*—
Porter, Charles B. A., and Seymour.

Hallin, Karl E. E., assignor to Aktiebolaget C. E. Johansson, Eskilstuna, Sweden. Combination length bar. 2,469,502, May 10.

Hallock, Eugene D., Snyder, N. Y. Razor blade testing device. 2,469,385, May 10.

Hamilton, James O., Dundalk, and L. J. Rosankowski, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for testing adjustable resistances. 2,469,465, May 10.

Hammond, Alice S., assignee: *See*—
Hammond, Claude G.

Hammond, Claude G., assignor to A. S. Hammond, Athens, Ga. Stabilized natural soil composition. 2,469,356, May 10.

Handloser, Edward J., Chesapeake, Ohio. Banjo head tightener. 2,469,643, May 10.

Hannon, Cyril H., and A. L. Jenny, Pittsfield, Mass., assignors to General Electric Company. Switch contact. 2,469,878, May 10.

Hansen, Odd A., and G. H. Smith, Kenmore, N. Y., assignors to The Linde Air Products Company. Apparatus and method for filling gas storage cylinders. 2,469,434, May 10.

Hansford, Rowland C., Woodbury, and P. D. Caesar, Wenonah, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Alkylation of thiophene. 2,469,823, May 10.

Hanson, Adolph N., Coulee Dam, Wash. Spud wrench holder. 2,469,366, May 10.

Hardman, Albert F., assignor to Wingfoot Corporation, Akron, Ohio. Methylol dithionaphthoates. 2,469,824, May 10.

Hardman, Peck & Company, assignee: *See*—
Sauerland, Joseph.

Harper, Howard W., Bridgeport, Conn. Electric demand controller. 2,469,645, May 10.

Harris, Albert S., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Harmonic class c amplifier. 2,469,598, May 10.

Harris, Margaret L., Hamilton, Mont. Adjustable house dress. 2,470,031, May 10.

Harris-Seybold Company, assignee: *See*—
Spiller, William R., and West.

Harrison, John F., assignor of one-fourth to C. F. Greiner, Springfield, Ohio. Work positioner. 2,469,644, May 10.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Bergmans, Jan, Kronouer, and Leenwin.
Nemet, Anthony, and Beriadel.
Strutt, Maximilliaan J. O., and van der Ziel.

Hartman, Paul L., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,469,964, May 10.

Hawes, Albert H., assignor, by mesne assignments, to Kwikform Limited, Birmingham, England. Apparatus for moiding building blocks. 2,469,599, May 10.

Haynor, Ethel N., assignee: *See*—
Ritter, Saidee M.

Heckman, William, Longmire, Wash., assignor to the United States of America as represented by the Secretary of the Interior. Conversion unit for fire finders. 2,469,387, May 10.

Heil, Vernon E.: *See*—
Hensel, Frans R., Wiggs, and Heil.

Hellbron, Ian M., and E. R. H. Jones, London, England. Manufacture of 2,5 dimethylfuran and acetonylacetone. 2,470,070, May 10.

Heinrich, Raymond L., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elisabeth, N. J. Synthetic lubrication oil production. 2,469,725, May 10.

Held, Joseph E., assignor to American Cystoscope Makers, Inc., New York, N. Y. Multiple lens hand type ophthalmoscope. 2,469,388, May 10.

Helibach, Rudolph, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture. Self-advancing winding reel. 2,469,787, May 10.

Hellman, Karl H., New York, N. Y., and H. N. Schmidt, Philadelphia, Pa. Indicator. 2,469,389, May 10.

Henkel, Ferdinand J., Royal Oak, assignor to Lamina Dies and Tools, Inc., Berkley, Mich. Machine tool. 2,469,920, May 10.

Henricks, John A.: *See*—
Orosco, Gilbert H., and Henricks.

Herrington, Lovic P., Hamden, Conn., assignor, by mesne assignments, to Electric Heat Devices, Inc., Pittsburgh, Pa. Heater. 2,469,466, May 10.

Hensel, Franz R., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Spark plug. 2,470,033, May 10.

Hensel, Frans R., J. W. Wiggs, and V. E. Heil, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electric contact formed of a ruthenium composition. 2,470,034, May 10.

Heslop, Robert N., F. Irving, and A. Livingston, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Vat dyestuffs. 2,470,032, May 10.

Heydle, Fredrich, Youngstown, Ohio. Lighter. 2,469,768, May 10.

Heyl, Dorothea, assignor to Merck & Co., Inc., Rahway, N. J. The process of preparing the lactone of 2 methyl 3 hydroxy 4 carboxy 5 hydroxy-methyl pyridine. 2,469,554, May 10.

Heywood-Wakefield Company, assignee: *See*—
Wickman, Helmer W., and Racine.

Hill, Jack M.: *See*—
Linda, John W., and Hill.

Hillery, Arthur M., Leominster, Mass. Combined comb and nail file. 2,469,760, May 10.

Hilton, John L., Chelmsford, England, assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn. Axle box. 2,470,071, May 10.

Hirsch, Abraham A., New Orleans, La. Regenerable desiccator. 2,469,435, May 10.

Hitchcock, Forest B., assignor to General Railway Signal Company, Rochester, N. Y. Selective radio communication system for a plurality of stations. 2,469,555, May 10.

Hjelmblad, Karl W. J., Alsten, Sweden. Grinding machine. 2,469,770, May 10.

Hoelzberger, William G., Baton Rouge, La., assignor to Standard Oil Development Company. Desulfurization of tri-isobutylene. 2,469,726, May 10.

Hoe, R. & Co., Inc., assignee: *See*—
Stobb, Anton, and Albrecht.

Hoenselaar, Harry J., St. Albans, N. Y. Apparatus for slicing ham on the bone. 2,470,078, May 10.

Hoffman, Raymond A., Euclid, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Electrodeposition of nickel. 2,469,727, May 10.

Hoge, George F., Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Valve. 2,469,921, May 10.

Hogreff, William E., Chicago, Ill. Manually operated rowboat. 2,469,646, May 10.

Hollander, Leo B., Sullivan, Mo. Slip lasted platform shoe. 2,469,647, May 10.

Holmes, August, Cranford, N. J., assignor to Standard Oil Development Company. Increasing adhesivity of asphalt to mineral aggregate consisting of mollusk shells. 2,469,725, May 10.

Holt, Donald C., Oradell, N. J., assignor to The M. W. Kellogg Company, New York, N. Y. Aligning clamp for welding. 2,469,965, May 10.

Hoos, Hunter E., assignor to Victor Adding Machine Co., Chicago, Ill. Key lever spacer and guide for stenographic machines. 2,469,390, May 10.

Hook, Donald E.: *See*—
De Pree, Lee and Barry and Hook.

Horning, James W., Bloomsburg, Pa. Quick release device for parachute harnesses. 2,469,391, May 10.

Hornstein, Samuel, Chicago, Ill. Automatic print washer. 2,469,825, May 10.

Horowitz, Robert M.: *See*—
Morris, Rupert C., and Horowits.

Horton, Frank R.: *See*—
Liddle, John S., Horton, and Armstrong.

Hotpoint Inc., assignee: *See*—
Vogel, Oliver G.
Vogel, Oliver G., and Ziffrin.

Hondaille-Hershey Corporation, assignee: *See*—
Dall, Edward D.
Johnson, Bernard C.

House, Samuel G., assignor of one-half to V. D. Payne, Jr., Abilene, Tex. Automatic control for refrigerators. 2,469,648, May 10.

Howell, Albert S., Culver, Ind., assignor to Bell & Howell Company, Chicago, Ill. Intermittent strip feed mechanism. 2,469,503, May 10.

Howland, Louis H.: *See*—
Tewksbury, Lyndon B., Jr., and Howland.

Hubbell, Clarence Z., Endicott, N. Y. Loose-leaf binder. 2,469,922, May 10.

Hudkins, Clyde, Moundsville, W. Va. Square. 2,470,035, May 10.

Hunter, James B., Upper Darby, assignor to The Atlantic Refining Company, Philadelphia, Pa. Heat exchange method for the drop-wise condensation of vapors. 2,469,729, May 10.

Hunter, William W., and I. McNab, Esquimalt, British Columbia, Canada. Stirring device. 2,469,649, May 10.

Hurd, Dallas T., Schenectady, N. Y., assignor to General Electric Company. Preparation of boron compounds. 2,469,767, May 10.

Hutchinson, Paul E., Rochester, N. Y. Sharpening lawn mower blades. 2,469,730, May 10.

I. T. E., Circuit Breaker Company, assignee: *See*—
Scott, William M., Jr.

Idle, James G., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dish supporting rack structure. 2,469,966, May 10.

Illinois Railway Equipment Company, assignee: *See*—
Johnson, Malcolm S., and Oakley.

Imagineering Corporation, assignee: *See*—
Johns, Harold A.

Imperial Chemical Industries Limited, assignee: *See*—
Caldwell, Walter A.
Heslop, Robert N., Irving, and Livingston.
McLean, Andrew, and Marrian.
Tyre, Alexander T.

Ingraham, Joseph H., Easton, Md., and W. A. Williams, assignors to The American Pulley Company, Philadelphia, Pa. Drum agitator. 2,469,557, May 10.

Insulation Products Company, assignee: *See*—
Sloat, John E.

Interior, United States of America as represented by the Secretary of the, assignee: *See*—
Heckman, William.
Roller, Paul S.

International Business Machines Corporation, assignee: *See*—
Leathers, Ward.

International Harvester Company of Canada Limited, assignee: *See*—
Scarlett, Arthur A., and James.

Interval Instruments, Inc., assignee: *See*—
Rieber, Frank.

Irving, Francis: *See*—
Heslop, Robert N., Irving, and Livingston.

Irving, John S., Birmingham, England. Internally expanding brake for vehicles. 2,469,826, May 10.

Isserstedt, Siegfried G., Toronto, Ontario, Canada. Multiple push-button switch. 2,469,650, May 10.

Jackman, Elmer F.: *See*—
Stecher, Henry D., and Jackman.

Jackman, Helen E., administratrix: *See*—
Stecher, Henry D., and Jackman.

Jackson, James G., Vancouver, British Columbia, assignor of one-half to J. N. Trumpour, Port Alberni, British Columbia, Canada. Audible reel signal for motion-picture projectors. 2,469,731, May 10.

Jacobs, F. L., Co., assignee: *See*—
Erickson, Charles A.

Jacobson, Carl A., Ardmore, Pa., assignor to The Baldwin Locomotive Works. Opposed piston engine construction with removable cylinders. 2,469,651, May 10.

Jacobson, Hamae W., St. Louis Park, Minn. Children's sleeping garment. 2,469,556, May 10.

Jacoby, Arthur L.: *See*—
Bird, Paul G., and Jacoby.

Scarlett, Arthur A., and J.

Jasco, Incorporated, assignee: *See*—
Smyers, William H.

Jaskala, Louie C., San Francisco, Calif. Signaling device for mailboxes. 2,469,558, May 10.

Jenny, Alfred L.: *See*—
Hannon, Cyril H., and Jenny.

Jensen Manufacturing Company, assignee: *See*—
Knowles, Hugh S.

Jeppson, Thelma W., Los Angeles, Calif. Facial hydrotherapeutic device. 2,469,771, May 10.

Johns, Harold A., assignor to Imagineering Corporation, Chicago, Ill. Ladder. 2,469,559, May 10.

Johnson, Bernard C., Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Evaporator unit. 2,469,828, May 10.

Johnson, Glenn D., Compton, assignor to Baash-Ross Tool Company, Los Angeles, Calif. Casing head. 2,469,772, May 10.

Johnson, Joseph P., assignor to Wingfoot Corporation, Akron, Ohio. Coagulation of emulsion polymers. 2,469,827, May 10.

Johnson, Malcolm S., and O. F. Oakley, assignors to Illinois Railway Equipment Company, Chicago, Ill. Brake beam supporting means for railroad cars. 2,469,504, May 10.

Johnson, Robert C.: *See*—
Laubach, Howard E., Johnson, and Kramer.

Johnson, S. C. & Son, Inc., assignee: *See*—
Bridgeman, Walter A.

Johnson Service Company, assignee: *See*—
Wohrer, Henry.

Jones, Charles R., Berkley, Mich. Mirror support having spacing frame. 2,469,923, May 10.

Jones, Ewart R. H.: *See*—
Hellbron, Ian M., and Jones.

Jones, Frank: *See*—
Booth, Earl C., and Jones.

Jones, Lyman L., and J. B. Ystrom, Seattle, Wash., assignors to American Can Company, New York, N. Y. Can soldering method and apparatus. 2,469,392, May 10.

Jones, Peter: *See*—
Quayle, Joshua C., and Jones.

Jones, Russell A., Akron, Ohio. Pool ball spotting frame. 2,469,652, May 10.

Jordan, Reginald A.: *See*—
Warren, George T., and Jordan.

Jordan, Sidney W., Cleveland, Ohio. Vise with quick positioning jaws. 2,469,600, May 10.

Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for shaping uppers over lasts. 2,469,407, May 10.

Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.

Judd, Frank M., Bellingham, Wash. Electric heating and drying device for footwear. 2,469,468, May 10.

Jutte, William B., Philadelphia, Pa. Indicator plug. 2,469,560, May 10.

Kaiser, Emil, and J. Svarz, assignors to Armour and Company, Chicago, Ill. Cyclopentano perhydrophenanthrene compounds. 2,469,967, May 10.

Kalitinsky, Andrew, Eagleville, assignor to United Aircraft Corporation, East Hartford, Conn. Turbine cooling. 2,469,732, May 10.

Kamborian, Jacob S., West Newton, Mass. Force-lasted shoe. 2,469,561, May 10.

Kearby, Kenneth K., Cranford, N. J., assignor to Standard Oil Development Company. Cracking oil with aerogel catalysts. 2,469,733, May 10.

Keefer Industries, assignee: *See*—
Keefer, Leonard O.

Keefer, Leonard O., assignor to Keefer Industries, Spokane, Wash. Bleed valve. 2,469,505, May 10.

Keith, Kenneth M.: *See*—
Ronning, Martin, and Keith.

Kellogg, M. W., Company, The, assignee: *See*—
Holt, Donald C.
Pyzel, Robert.

Kelsey, Robert A., Glendale, Calif. Garment hanger. 2,470,079, May 10.

Kennecott Copper Corporation, assignee: *See*—
Carvajal, Roberto, and Quiroga.

Kennedy, Joseph E., New York, N. Y. Material drying apparatus. 2,469,562, May 10.

Kenyon, William O.: *See*—
Misak, Louis M., and Kenyon.

Kerr, Kingdon, Los Angeles, and Malte Swensson, West Los Angeles, Calif. Folding wheel trailer. 2,469,506, May 10.

Kessler, Charles A., Plainfield, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing-machine table. 2,469,968, May 10.

Kinard, Robert K., Allentown, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y. Lapping machine. 2,469,563, May 10.

King, Carl C., Massapequa, assignor to Republic Aviation Corporation, Farmingdale, N. Y. Canopy construction. 2,469,436, May 10.

Kinser, John P., Ridgefield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Method and system for measuring frequency. 2,469,829, May 10.

Kirk, Joseph S., Newtown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Quinonedo resorcinol tanning agent and process. 2,469,437, May 10.

Kirk, Joseph S., Newtown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Quinonedo resorcinol tanning agent and process. 2,469,438, May 10.

Kluge, Herman D., Wappingers Falls, and E. C. Knowles, Beacon, assignors to The Texas Company, New York, N. Y. Oxidation inhibitors. 2,469,469, May 10.

Knott, Edward B., Harrow, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y. 2-bis(5-cyclylpyrrole) azamethine dyes. 2,469,830, May 10.

Knowles, Edwin C.: *See*—
Kluge, Herman D., and Knowles.

Knowles, Hugh S., River Forest, Ill., assignor to Jensen Manufacturing Company. Loud-speaker diaphragm support member. 2,469,773, May 10.

Kolter, Louis W., Sr., Knoxville, and W. G. Kolter, Oak Ridge, Tenn. Cigarette lighter. 2,469,507, May 10.

Kolter, William G.: *See*—
Kolter, Louis W., Sr., and Kolter.

Kopp, Jean, Berne, Switzerland. Stepless variable change-speed gear with roller bodies. 2,469,653, May 10.

Kosinski, John, New Hyde Park, N. Y. Sectional shield device. 2,469,774, May 10.

Kowan, Maurice H., Los Angeles, Calif. Proctoscope. 2,469,880, May 10.

Kramer, Vincent J.: *See*—

Linde Air Products Company, The, assignee: *See*—
Hansen, Odd A., and Smith.
Lindsay, Edward C., Newton Falls, Ohio, and E. L. Anderson, assignors to Standard Steel Spring Company, Coraopolis, Pa. Polishing machine. 2,469,735, May 10.
Link Aviation, Inc., assignee: *See*—
Douglas, Samuel A.
Liston, Benjamin F., Garrettaville, Ohio. Apparatus for removing icicles from the eaves of buildings. 2,469,971, May 10.
Livingston, Alistair: *See*—
Heslop, Robert N., Irving, and Livingston.
Locke, Arthur A., Detroit, Mich. Continuous drier. 2,469,882, May 10.
Lock Joint Pipe Company, assignee: *See*—
Wilhelm, Loomis G.
Logan, Alexander, Dundalk, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for forming metal tapes into tubular conductors. 2,469,565, May 10.
Lohmann, Earle F., Overland, Mo., assignor to Curtiss-Wright Corporation. Apparatus for rolling flanges on tubes. 2,469,775, May 10.
Long, E., Limited, assignee: *See*—
Patmore, De Forest C.
Long, Gleeman D., Sterling, Kans. Dowelling jig. 2,470,038, May 10.
Lord, Hugh C., Erie, Pa. Cushioned tire. 2,469,394, May 10.
Lorentzen Hardware Mfg. Corp., assignee: *See*—
Nelson, Harry.
Lovig, Edward E., Chicago, Ill. Apparatus and process for making filaments. 2,470,039, May 10.
Low, Frank S., Bronxville, assignor to Food Machinery and Chemical Corporation, New York, N. Y. Electrolytic cell and operating same. 2,470,073, May 10.
Low, John J., Los Angeles, Calif. Spring suspension for vehicle trucks. 2,469,566, May 10.
Lowry, Robert D., and W. R. Church, assignors to The Dow Chemical Company, Midland, Mich. Machine for welding thermoplastic films. 2,469,972, May 10.
Lufkin Rule Co., The, assignee: *See*—
Witchger, Eugene J.
Lumenite Electronic Company, assignee: *See*—
Calabrese, George V.
Lundberg, Lennart A.: *See*—
Bradley, James R., and Lundberg.
Lundberg, Lennart A., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Anion active resins prepared from alkylene polyamines and hydroxy-substituted aliphatic polyhalides. 2,469,693, May 10.
Lundberg, Lennart A., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Removing anions from liquids. 2,469,694, May 10.
Lundberg, Lennart A., Stamford, and J. R. Dudley, Cos Cob, Conn., assignors to American Cyanamid Company, New York, N. Y. Removing anions frum liquids. 2,469,692, May 10.
Lundquist, Wilton G., Hobokus, N. J., assignor to Wright Aeronautical Corporation. Gas turbine. 2,469,439, May 10.
Lyon, Harold R., Montreal, Quebec, Canada. Ski retainer. 2,469,604, May 10.
Mackin, James D., and E. W. Bergmann, Monroe, Mich.; said Mackin assignor to said Bergmann. Collapsible perambulator. 2,470,040, May 10.
Milder, Hermann, assignor to Actiengesellschaft Joh. Jacob Rieter & Cie, Winterthur, Switzerland. Mounting means for spinning rings. 2,469,658, May 10.
Maerz, Henry, assignor to Self Winding Clock Company, Inc., Brooklyn, N. Y. Electric clock motor and system. 2,469,834, May 10.
Mageoch, Nelson H., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Plating machine. 2,469,470, May 10.
Mahler, William C.: *See*—
Roth, Jay M., and Mahler.
Mahon, James: *See*—
Wood, George, and Mahon.
Mainardi, Marcus N.: *See*—
Mainardi, Pompey, and M. N.
Mainardi, Pompey, and M. N. Mainardi, Hawthorne, N. J. Infinity sight view finder. 2,469,927, May 10.
Malki, Moises, B. Matzkin, and A. L. Goldman, Buenos Aires, Argentina. Electrical accumulator with tubular electrodes. 2,469,508, May 10.
Mallory, P. R., & Co., Inc., assignee: *See*—
Hensel, Franz R.
Hensel, Franz R., Wiggs, and Heil.
Nulsen, Marvin E.
Malluk, Assad M., New York, N. Y. Gas tank drain lock. 2,469,973, May 10.
Malm, Carl J., and C. L. Crane, assignors to Eastman Kodak Company, Rochester, N. Y. Precipitation of cellulose triacetate. 2,469,395, May 10.
Manning, Matthew J., East Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa. Welding device. 2,470,074, May 10.
Manufacturers Supplies Company, assignee: *See*—
Corton, Elmer D.
Marinsky, Davis, Bronx, N. Y.; L. H. Morin, executor of said D. Marinsky, deceased, assignor of one-half to said L. H. Morin. Removable top stop. 2,469,509, May 10.
Markem Machine Company, assignee: *See*—
Robbins, Charles F.
Markey, William C., Seattle, Wash. Steam cargo hoist. 2,469,567, May 10.
Marrian, Stanley F.: *See*—
McLean, Andrew, and Marrian.
Marsden, James, and G. F. Roedel, Schenectady, N. Y., assignors to General Electric Comany. Preparation of methyl silicone elastomers. 2,469,883, May 10.
Marsh, John W., Alexandria, Va. Valve structure. 2,470,041, May 10.
Martin, Glenn L., Company, The, assignee: *See*—
Albrecht, Frita.
Hoge, George F.
Martin, James, Higher Denham, near Uxbridge, England. Tethering device for airplanes. 2,469,659, May 10.
Martin, James, Higher Denham, near Uxbridge, England. Control of variable pitch airscrews for aircraft. 2,469,660, May 10.

Martin, Paul N.: *See*—
Gilison, Robert M., and Martin.
Martinmaas, Werner W., Jr., Orient, S. Dak. Rotary vane engine. 2,469,510, May 10.
Masone, Antheny N., Waterbury, Conn. Revolving Christmas tree stand. 2,469,884, May 10.
Matter, Roger E.: *See*—
Osterberg, Harold, and Matter.
Matzkin, Boris: *See*—
Malki, Moises, Matzkin, and Goldman.
Mawdsley's Limited, assignee: *See*—
Minchin, Cecil W. H.
Mayle, Albert T., Jr.: *See*—
Ferguson, Joseph C., and Mayle, Jr.
Mayle, Louis F., Fort Wayne, Ind., assignor by mesne assignments, to Farnsworth Research Corporation. Video signal level control. 2,469,606, May 10.
McBrayer, Marvin L., Alhambra, Calif. Electronic apparatus for determining moisture content in materials. 2,469,736, May 10.
McCain, Cecil C., Glen Ellyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone calling dial. 2,469,974, May 10.
McCaskey Register Company, The, assignee: *See*—
Weaver, Galen K.
McCloy, Graham S., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Method for charging individual capsules with a compressed gas. 2,469,975, May 10.
McCracken, John H., Cumberland, Md., and G. S. Crandall, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Preparation of dinitroparaffins. 2,469,396, May 10.
McElrath, Thomas S., Sophia, W. Va. Mounting for field coil supports. 2,469,661, May 10.
McGee, George A., Hartford, Conn. Stove rack. 2,469,776, May 10.
McGhee, Curtis E., assignee: *See*—
Bell, Keith L.
McKay, Augusta P., assignor to Rome Plow Company, Cedartown, Ga. Connecting and operating mechanism for tractor drawn devices. 2,469,605, May 10.
McKeon, William D., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for removing shoes from lasts. 2,469,471, May 10.
McLean, Andrew, West Kilbride, and S. F. Marrian, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited. Flameproofing combustible cellulosic material and product resulting therefrom. 2,470,042, May 10.
McMartin, Florence H., Duluth, Minn. Bib. 2,469,835, May 10.
McNab, Ian: *See*—
Hunter, William W., and McNab.
McNab, John G., Cranford, and H. W. Rudel, Roselle Park, N. J., assignors to Standard Oil Development Company. Addition agent for gasoline. 2,469,737, May 10.
McNally, James G., Kingsport, Tenn., and J. B. Dickey, assignors to Eastman Kodak Company, Rochester, N. Y. Nitroaminobenzene ester compounds. 2,469,695, May 10.
Melsener, John, New York, N. Y. Tuning device for pianofortes. 2,469,738, May 10.
Meltzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Starting control for free-piston units. 2,469,739, May 10.
Merck & Co., Inc., assignee: *See*—
Heyl, Dorothea.
Meyer, Erwin, assignor to Abrasive Dressing Tool Company, Detroit, Mich. Abrasive wheel and making the same. 2,469,398, May 10.
Mezek, Melvin E., Chicago, Ill. Electrical connector. 2,469,307, May 10.
Michigan Tool Company, assignee: *See*—
Anderson, Marvin R.
Miesener, Benjamin F., Morristown, N. J. Piano action. 2,469,568, May 10.
Miller, Edwin A., Fairfield, Conn. Mechanism for sequential contact switches. 2,469,976, May 10.
Miller, Roman R.: *See*—
Burgess, David S., Ramskill, and Miller.
Millson, Henry E., Plainfield, and S. Mooradian, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Dyeing with metallized dyes. 2,470,080, May 10.
Milone, Charles R., assignor to Wingfoot Corporation, Akron, Ohio. Beta-cyano vinyl acetic acid esters. 2,469,836, May 10.
Minchin, Cecil W. H., assignor to Mawdsley's Limited, Dursley, England. Dynamoelectric machine. 2,469,662, May 10.
Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Minneapolis-Moline Company, assignee: *See*—
Rouning, Martin, and Keith.
Minsk, Louis M., and W. O. Kenyon, assignors to Eastman Kodak Company, Rochester, N. Y. Preparing water-soluble polyacrylamide. 2,469,606, May 10.
Mohr, Milton E., New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translating system. 2,469,837, May 10.
Molla, Charles P., New Hyde Park, N. Y. Collapsible firebox. 2,469,885, May 10.
Monitor Controller Company, assignee: *See*—
Frese, Joseph F.

Monsanto Chemical Company, assignee: *See*—
Fincke, John K.
Powers, Donald H., and Rossink.
Reneil, Mary W.
Monserrat, Nicholas, Rumford, R. I., assignor, by mesne assignments, to Pantex Manufacturing Corporation. Apparatus for drying having safety and sequence controls. 2,470,043, May 10.
Montclair Research Corporation, assignee: *See*—
Rust, John B.
Moon, Neil S., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of 2-chlorobenzothiazoles. 2,469,897, May 10.
Mooradian, Shannen: *See*—
Millson, Henry E., and Mooradian.
Moore, William E., assignor to Delaware Engineering Corporation, Pittsburgh, Pa. Arc furnace with lift and swing aside roof. 2,469,740, May 10.
Morgan, Roland J., Oakland, Calif., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Knockdown cooking grid. 2,469,698, May 10.
Merici, Nazarene G., Chicago, Ill. Combined frankfurter and roll warming and conditioning apparatus. 2,469,778, May 10.
Morin, Louis H., executor and assignee: *See*—
Marinsky, David.
Morris, Rupert C., Berkeley, and R. M. Horowitz, Los Angeles, assignors to Shell Development Company, San Francisco, Calif. Sulfolanyl carbamates. 2,469,838, May 10.
Morrison, Howard, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Pulser circuit. 2,469,977, May 10.
Morway, Arnold J., Clark, and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Soluble cutting oil base. 2,469,741, May 10.
Moseley, James T. W.: *See*—
Armstrong, James F., and Moseley.
Moser, Frank H., assignor to The Standard Ultramarine Company, Huntington, W. Va. Producing metal phthalocyanines and their derivatives. 2,469,663, May 10.
Mohun, John L., Chicago, Ill. Serving tray. 2,469,777, May 10.
Mrosinski, John L., Danbury, Conn. Wieldable implement self-restoring to carried position. 2,469,978, May 10.
Mueller Co., assignee: *See*—
Mueller, Frank H., and Smith.
Mueller, Frank H., and J. J. Smith, assignors to Mueller Co., Decatur, Ill. Drilling machine. 2,470,044, May 10.
Mundy, John D., Los Angeles, Calif. Fishhook remover. 2,469,600, May 10.
Munson, Alexander L., Port Washington, and R. C. Follett, Garden City, N. Y. Apparatus and method of maintaining the freshness of counter displayed vegetables. 2,469,979, May 10.
Munson, Charles E., assignor to Ciba Pharmaceutical Products, Inc., Summit, N. J. Disposable dispensing device. 2,469,390, May 10.
Murch, Charles J., Franklin, Maine. Carbon arc control. 2,469,664, May 10.
Murphy Automatic Pinsetter Co., Inc., assignee: *See*—
Murphy, John F.
Murphy, Eugene, Vancouver, British Columbia, Canada. Bookrests and the like. 2,469,511, May 10.
Murphy, John F., Middleboro, assignor to Murphy Automatic Pinsetter Co., Inc., Cambridge, Mass. Pin dismatic discharging mechanism for bowling alleys. 2,469,886, May 10.
Mursch, John, Teaneck, N. J. Golf tee. 2,469,928, May 10.
Mysbrall, Frank H., Stoneham, assignor to The Palmer Electric & Manufacturing Co., Wakefield, Mass. Sander. 2,469,980, May 10.
Nachod, Frederick C., Haddonfield, N. J., and W. Wood, Philadelphia, Pa., assignors to The Permutit Company, New York, N. Y. Cation exchange materials. 2,469,472, May 10.
Nagy, John J., Arlington, Va. Condenser construction. 2,470,045, May 10.
Napier, James W., Macon, Ga.; M. H. Napier, executrix of said J. W. Napier, deceased. Electric incubator. 2,470,046, May 10.
Napier, Margaret H., executrix: *See*—
Napier, James W.
National Aluminate Corporation, assignee: *See*—
Bird, Paul G., and Jacoby.
National Folding Box Company, Incorporated, assignee: *See*—
Conway, James F.
Williamson, Marshall I.
National Lead Company, assignee: *See*—
Wainer, Eugene, and Salomon.
Naugle, John J., New York, N. Y. Siliceous magnesium-containing purifying medium and producing it. 2,469,512, May 10.
Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Lauritsen, Charles C.
Nelson, Arthur E., University City, Mo. Pivotal bracket. 2,469,981, May 10.
Nelson, Harry, assignor to Lorentzen Hardware Mf'g Corp., New York, N. Y. Venetian blind fitting. 2,469,639, May 10.

Nemet, Anthony, and M. Berindel, London, England, assignors to The Hartford National Bank & Trust Company, Hartford, Conn., as trustees. X-ray mass chest apparatus control. 2,469,982, May 10.
Neuber, Herbert K., assignee: *See*—
Weathers, Paul.
Newbold, Park L., Cedar Rapids, Iowa. Grass shears. 2,469,983, May 10.
Newell, Charles W., Moline, Ill. Firing and loading safety for automatic guns. 2,469,400, May 10.
Newhouse, Ernest J., Los Angeles, Calif. Expansion sleever. 2,469,742, May 10.
Newton, John S., Lansdowne, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Locomotive reversing gearing. 2,469,743, May 10.
Nicorvo, Edwin J., South Amboy, N. J. Portable string of sound producing devices. 2,470,047, May 10.
Noblitt-Sparks Industries, Inc., assignee: *See*—
Booth, Earl C., and Jones.
Noel, Edward B., Cleveland Heights, and P. B. Davis, East Cleveland, Ohio, assignors to General Electric Company. Electric lamp unit. 2,469,607, May 10.
Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Can closing machine. 2,469,401, May 10.
Norma-Hoffmann Bearings Corporation, assignee: *See*—
Hilton, John L.
Norton, Frank R., assignor to Bendix Aviation Corporation, Towson, Md. Television receiver. 2,470,045, May 10.
Nowalk, Robert F., Philadelphia, Pa. Vehicle governor. 2,469,779, May 10.
Nulsen, Marvin E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibrator test circuit. 2,470,049, May 10.
Nystrom, Karl F., Nashotah, and V. L. Green, Milwaukee, Wis. Railway car truck. 2,469,513, May 10.
Oakley, Olibert F.: *See*—
Johnson, Malcolm S., and Oakley.
Oberle, Theodore L.: *See*—
Edlund, Daniel L., Oberle, and Strauss.
O'Donnell, Edward M., Galva, Iowa. Combination telescoping tractor and horse-drawn hitch. 2,469,514, May 10.
Oehler, William P.: *See*—
White, Charles H., Oehler, and Youngberg.
Oetzel, John G., Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill. Brake anchor. 2,469,402, May 10.
Ohl, Russell S., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Point contact negative resistance devices. 2,469,569, May 10.
Olander, Karl E.: *See*—
Redin, Erie G., and Olander.
Olcott, Eugene L., Schenectady, N. Y., assignor to General Electric Company. Forgeable high-temperature alloys. 2,469,887, May 10.
O'Rourke, Edward J., Ozone Park, N. Y. Lubricating and packing shaft. 2,469,515, May 10.
Orosco, Gilbert H., Euclid, and J. A. Henricks, assignors to Gilron Products Company, Cleveland, Ohio. Lubricating metal surfaces during cold working. 2,460,473, May 10.
Orth, Herbert P., Upper Darby, Pa. Metal flashing. 2,469,840, May 10.
Osterberg, Harold, and R. E. Matter, Buffalo, N. Y., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass. Apparatus for coating articles. 2,469,920, May 10.
Ours, John H., Arlington, Va. Screen for gutters. 2,469,841, May 10.
Owens-Illinois Glass Company, assignee: *See*—
Fraser, Lewis H. D.
Packard Motor Car Company, assignee: *See*—
Storey, Edwin F.
Palmer Electric & Manufacturing Co., assignee: *See*—
Mylrall, Frank H.
Pankonin, William G., Chicago, Ill. Stapling device. 2,469,984, May 10.
Pankonin, William G., Chicago, Ill. Feed mechanism for stapling machines. 2,469,985, May 10.
Pantex Manufacturing Corporation, assignee: *See*—
Monsarrat, Nicholas.
Papa, Domenick: *See*—
Schwenk, Erwin, and Papa.
Paquin, Joseph N., Euclid, and E. P. Bock, Cleveland Heights, assignors to The Weatherhead Company, Cleveland, Ohio. Dehydrator. 2,469,842, May 10.
Parish, Willard E., assignor to Crouse-Hinds Company, Syracuse, N. Y. Adjustable actuating member. 2,469,570, May 10.
Parker, Joseph B., Syracuse, N. Y. Three axis attitude and direction indicator. 2,469,403, May 10.
Parrott, Robert D.: *See*—
Wise, Raleigh J., and Parrott.
Patmore, De Forest C., assignor to E. Long Limited, Orillia, Ontario, Canada. Radial adjusting sprocket. 2,469,605, May 10.
Patnode, Winton I., Schenectady, N. Y., assignor to General Electric Company. Organo-polysiloxanes. 2,469,888, May 10.
Patnode, Winton I., Schenectady, N. Y., assignor to General Electric Company. Linear methylpolysiloxanes. 2,469,890, May 10.
Patrick, Joseph C., Morrisville, Pa., assignor to Thiokol Corporation, Trenton, N. J. Polyacetal polysulfide polymers. 2,469,404, May 10.
Payne, Arthur W., assignor to Bundy Tubing Company, Detroit, Mich. Apparatus for bending tubing into serpentine coils and sweep mechanism and stop therefor. 2,469,405, May 10.
Payne, Arthur W., and A. M. Wallace, assignors to Bundy Tubing Company, Detroit, Mich. Apparatus for bending tubing into serpentine coils and sweep mechanism and index therefor. 2,469,406, May 10.
Payne, L. M., Company, assignee: *See*—
Payne, Lambert M.
Payne, Lambert M., assignor to L. M. Payne Company, Detroit, Mich. Auxiliary control device for thermostatic valves. 2,469,930, May 10.
Payne, Victor D., Jr., assignee: *See*—
House, Samuel G.
Pearson, Emil S., Portland, Oreg. Flexible locking coupling. 2,469,516, May 10.
Pearson, Reuben A.: *See*—
Ralston, Hurley D., and Pearson.
Pecker, Joseph S., Los Angeles, Calif. Instrument for rotary wing aircraft. 2,469,780, May 10.
Peerless Wire Goods Co., Inc., assignee: *See*—
Schilling, Ernest W., and Brambiett.
Pell, Eric, Shorewood, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Dynamoelectric machine controller. 2,469,440, May 10.
Pennsylvania Salt Manufacturing Company, assignee: *See*—
Sprauer, Jerome W.
People in the territory of the United States, Dedicated to the free use of the: *See*—
Buechler, Roy H.
Permutit Company, The, assignee: *See*—
Nachod, Frederick C., and Wood.
Perry, Daniel D., Bainbridge, assignor to Bendix Aviation Corporation, New York, N. Y. Gasket. 2,469,474, May 10.
Peters, Jerry M., Walker, Mo. Lens holder for projector enlargers and cameras. 2,469,781, May 10.
Petersen, Charles A.: *See*—
Applegate, Walter N., and Petersen.
Petrucelli, Edwina S., Kirkland, Wash. Transparent protective garment for infants. 2,469,700, May 10.
Petskeyes, Charles H., Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill. Sewing-machine loop taker. 2,469,517, May 10.
Petterson, Gustav E., Florham Park, assignor to Continental Electric Company, Inc., Newark, N. J. Drain arrangement for enclosures such as enclosures of explosion-proof motors or the like. 2,470,050, May 10.
Pfouts, James B., assignee: *See*—
Feather, Donivan C.
Phair, Harry W., Lyndhurst, N. J., assignor to Fairchild Camera and Instrument Corporation. Universal gyroscope-suspension system. 2,469,782, May 10.
Phair, Robert S.: *See*—
Calender, Edwin M., Phair, and Van Sciver.
Philco Corporation, assignee: *See*—
Bradley, William E., and Tellier.
Sunstein, David E.
Philips Laboratories, Inc., assignee: *See*—
Beers, John R.
Phillimore, Charles E., assignor to Bell & Howell Company, Chicago, Ill. Device for inspecting feed perforated strips. 2,469,608, May 10.
Phillips, Oliver V., Denver, Colo. Flight position indicators for aircraft. 2,469,571, May 10.
Phyfe, James D., Indianapolis, Ind., assignor to Radio Corporation of America. Sound distributing system for drive-in theaters. 2,469,986, May 10.
Pierce, John R., Millburn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron transit time tube. 2,469,843, May 10.
Plisner, Richard A., Waupun, assignor to Weaber Stamping Corporation, West Bend, Wis. Roller jack for automobile roofs. 2,469,987, May 10.
Pincock, Douglas, assignee: *See*—
Truckenmiller, Lyman A.
Pipia, Giuseppe, and J. Lee, New York, N. Y. Clothesline clamping device. 2,469,783, May 10.
Pitisci, Joseph S., Miami Springs, Fla., assignor to Wright Aeronautical Corporation. Locking plate. 2,469,441, May 10.
Polk, Louis F., assignor to The Sheffield Corporation, Dayton, Ohio. Grinding machine with automatic feed crush dressing roll. 2,469,988, May 10.
Polleys, Herbert R., New Haven, Conn., assignor to Wellman Company, Medford, Mass. Sole cutting machine. 2,469,518, May 10.
Pontius, George W., III: *See*—
Ulrich, Bernhard, Jr., and Pontius, III.
Porter, Charles B. A., and C. P. Seymour, Hillingdon, assignors to H. S. Hallewell, Hayes, Middlesex, England. Forming means for profile grinding wheels. 2,469,844, May 10.
Powers, Augustin J., Jr.: *See*—
Powers, Frank T., and A. J., and Wattier.
Powers, Donald H., Winchester, and E. H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Treatment of textile materials. 2,469,407, May 10.

Powers, Donald H., Winchester, and E. H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Treatment of textile material. 2,469,408, May 10.
Powers, Donald H., Winchester, and E. H. Rossin, Melrose, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Treatment of textile materials. 2,469,409, May 10.
Powers, Frank T., Glen Cove, A. J. Powers, Jr., Roslyn Heights, N. Y., and F. E. Wattier, St. Lambert, Quebec, Canada, assignors to Powers Photo Engraving Company, Glen Cove, N. Y. Color separation camera. 2,469,891, May 10.
Powers Photo Engraving Company, assignee: *See*—
Powers, Frank T., and A. J., and Wattier.
Pratt, Charles T., Solvay, N. Y. Trailer tire deflation signal. 2,469,931, May 10.
Pratt, Lawrence E., Riverdale, Ill. Reversible friction clutch wrench. 2,469,572, May 10.
Pugliese, James V., assignee: *See*—
Coby, George.
Pure Oil Company, The, assignee: *See*—
Alcorn, Irwin W., and Bond.
Bond, Donald C.
Thacker, Carlisle M.
Pyzel, Robert, New York, N. Y., assignor to The M. W. Kellogg Company, Jersey City, N. J. Forming chemical reaction products of metal oxides. 2,469,989, May 10.
Quayle, Joshua C., Helsby, and P. Jones, Kelsall, near Chester, assignors to British Insulated Callender's Cables Limited, London, England. Feeding high-frequency electric currents to the electrodes of dielectric heating apparatus. 2,469,990, May 10.
Quilter, John R. C., Woking, England. Parachute. 2,469,573, May 10.
Quilter, John R. C., Woking, England. Detachable connector for tensile members. 2,469,574, May 10.
Quinn, William, New York, N. Y. Rabbit or animal toilet. 2,469,784, May 10.
Quiroga, Juan J.: *See*—
Carvajal, Roberto, and Quiroga.
Rabjohn, Norman: *See*—
Flory, Paul J., and Rabjohn.
Racine, George A. J.: *See*—
Wickman, Heimer W., and Racine.
Radio Corporation of America, assignee: *See*—
Gillespie, Henderson C.
Phyfe, James D.
Rogers, Gordon F.
Roys, Henry E.
Shenk, Eugene R.
Ralston, Hurley D., Oak Park, and R. A. Pearson, Aurora, assignors to Sears, Roebuck and Co., Chicago, Ill. Tramway. 2,469,575, May 10.
Ramskill, Eugene A.: *See*—
Burgess, David S., Ramskill, and Miller.
Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Electromagnetic switching system. 2,469,609, May 10.
Riz-Ammann, Hermann, Thun, Switzerland; I. Riz-Ammann, sole heiress of said H. Riz-Ammann. Antiskid chain. 2,469,666, May 10.
Riz-Ammann, Ida, sole heiress: *See*—
Riz-Ammann, Thun.
Razek, Joseph, Llanereh, assignor to Cochrane Corporation, Philadelphia, Pa. Telemetering system for transmitting indications of movements. 2,469,744, May 10.
Redin, Eric G., and K. E. Olander, assignors to Aktiebolaget Manus, Norrkoping, Sweden. Machine milking plant. 2,469,519, May 10.
Redmon, Bryan C., Amherst, Mass., assignor to American Cyanamid Company, New York, N. Y. Preparation of acrylic acid. 2,469,701, May 10.
Reese, John, and W. C. Troendle, assignors to Thayer Company, Gardner, Mass. Folding carriage. 2,469,475, May 10.
Reichenbach, Howard F., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Bimetallic drain fitting. 2,469,991, May 10.
Reib, Samuel, Hempstead, and Seymour Tesler, New York, N. Y. Cigarette lighter. 2,469,442, May 10.
Reiter, Lambert, Minneapolis, Minn. Anchor line or stringer holder. 2,469,443, May 10.
Rempel, Dietrich G., assignor to Rempel Enterprises, Akron, Ohio. Hollow article and method and apparatus for producing the same. 2,469,892, May 10.
Rempel Enterprises, assignee: *See*—
Rempel, Dietrich G.
Renoll, Mary W., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Rubbery copolymers of (trifluoromethyl) vinyl aromatic compounds. 2,469,845, May 10.
Rentschler, Harvey C., East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ultraviolet lamp. 2,469,410, May 10.
Republic Aviation Corporation, assignee: *See*—
King, Carl C.
Rhodes, Harold B., Los Angeles, Calif. Piano. 2,469,667, May 10.
Ricardo, Harry R., assignee: *See*—
Alcock, John F.
Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Frequency controlled transducer. 2,469,785, May 10.
Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Electric motor control device. 2,469,786, May 10.
Riehs, Carl, Ludwigshafen-on-the-Rhine, Germany; vested in the Attorney General of the United States. Soaking hides with a sulfonated phenol-formaldehyde condensation product. 2,469,787, May 10.
Ritter, John G., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor for food mixers or the like. 2,469,932, May 10.
Ritter, Saidee M., assignor of one-third to E. N. Haynor and two-thirds to A. E. Coppinman, Los Angeles, Calif. Hair curler. 2,469,576, May 10.
Robbins, Charles F., assignor to Markem Machine Company, Keene, N. H. Machine for marking wire, cable, rods, and the like. 2,470,075, May 10.
Robbins, Jesse J., assignor to Stylofede Corporation, Glendale, Calif. Mechanical pencil. 2,469,411, May 10.
Roberts, Richard W., Jr., assignor to Crawford Manufacturing Co., Inc., Richmond, Va. Furniture slip cover. 2,469,520, May 10.
Robertson, Anthony E., Roselle, N. J., assignor to Standard Oil Development Company. Stabilizing aromatic amines. 2,469,745, May 10.
Robertson, James A.: *See*—
Alderson, Witty L., Jr., and Robertson.
Robertson, Lawrence E., East Weymouth, Mass. Multichamber container. 2,469,856, May 10.
Robson, Duer C., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Locking device. 2,469,993, May 10.
Robson, William S., Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J. Stitch separating machine. 2,469,477, May 10.
Rocha, Rafael, Yamport City, Oreg. Nondetrudable safety lock. 2,469,610, May 10.
Rockwell, Lyle C., Elgin, assignor to Acme Visible Records, Inc., Chicago, Ill. Cabinet door pull and catch. 2,469,893, May 10.
Rocky Mountain Gas Equipment Company, The, assignee: *See*—
Dresen, James P.
Rodrigues, Jose, Fall River, Mass. Truss construction. 2,469,577, May 10.
Roebken, Carl B., Washington, D. C. Therapeutic lamp. 2,469,412, May 10.
Roedel, George F.: *See*—
Marsden, James, and Roedel.
Rogers, George W.: *See*—
Watson, Harvey P., and Rogers.
Rogers, Gordon F., New Hyde Park, N. Y., assignor to Radio Corporation of America. Cathode-ray beam deflection circuit. 2,469,895, May 10.
Rogers, Thomas H., Jr., assignor to Wingfoot Corporation, Akron, Ohio. Improving the surface of synthetic rubber sponge. 2,469,894, May 10.
Rohdin, Howard A., Glen Ridge, N. J. Coloring package for oleomargarine. 2,469,521, May 10.
Roller, Paul S., Hyattsville, Md., assignor to the United States of America as represented by the Secretary of the Interior. Preparing barium aluminate. 2,469,413, May 10.
Rome Plow Company, assignee: *See*—
McKay, Augusta P.
Ronning, Martin, St. Louis Park, and K. M. Keith, Minneapolis, assignors, by mesne assignments, to Minneapolis-Moline Company, Hopkins, Minn. Baler wire cutting and binding means. 2,469,578, May 10.
Rose, Andrew G.: *See*—
Webb, Jervis B., and Rose.
Rose, Kenneth E., Columbus, Ohio, assignor, by mesne assignments, to United Aircraft Corporation, East Hartford, Conn. Pattern materials. 2,469,611, May 10.
Rosenthal Adolph H., assignor to Scophony Corporation of America, New York, N. Y. Television cabinet with removable screen controlling focusing system. 2,469,992, May 10.
Rossin, Elmer H.: *See*—
Powers, Donald H., and Rossin.
Rotax Limited, assignee: *See*—
Tatlow, Percy.
Roth, Jay M., Euclid, and W. C. Mahler, assignors to Thompson Products, Inc., Cleveland, Ohio. Pump bearing and seal assembly lubrication. 2,469,846, May 10.
Roys, Henry E., Indianapolis, Ind., assignor to Radio Corporation of America. Magnetic sound recording and reproducing transducer. 2,469,444, May 10.
Rozankowski, Leon J.: *See*—
Hamilton, James O., and Rozankowski.
Rudel, Harry W.: *See*—
McNab, John G., and Rudel.
Ruderman, Jack, New York, N. Y. Jewelry clip. 2,469,994, May 10.
Ruge, Arthur C., Cambridge, Mass., assignor to The Baldwin Locomotive Works. Electrical impedance filament and the making same. 2,470,051, May 10.
Rumscheidt, Gottfried E., and W. L. Johannes de Nie, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Producing filamentary reaction products of rubbery polymers with sulfur dioxide. 2,469,847, May 10.
Rundell, Raymond R.: *See*—
Walton, Joseph C., and Rundell.

Rundell, Rupert E., Rockville Centre, and G. E. Hagquist, Brooklyn, N. Y., assignors to American Machine and Foundry Company. Ball return mechanism for bowling pin setting machines. 2,470,052, May 10.

Russell, William L., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Gamma-ray logging. 2,469,461, May 10.

Russell, William L., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Neutron well logging. 2,469,462, May 10.

Russell, William L., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Neutron logging of wells. 2,469,463, May 10.

Rust, John B., West Orange, N. J., assignor to Montclair Research Corporation. Polymerization products and making same. 2,469,788, May 10.

Ruud, Otto S., Oslo, Norway. Ski binding. 2,469,478, May 10.

Ruzek, Joseph, New Orleans, La. Slidable jaw wrench with terminal adjusting nut. 2,469,769, May 10.

St. Regis Paper Company, assignee: *See*—
Dorrington, Neill E., and Dyker.

Salisbury, Leroy F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation for fluorohydrocarbons. 2,469,848, May 10.

Salisbury, Raymond R., Ann Arbor, Mich. Convertible stepladder. 2,470,053, May 10.

Salomon, Allen N.: *See*—
Wainer, Eugene, and Salomon.

Sanchis, Jose, Newark, N. J. Filling device with receptacle operated outlet valve. 2,469,746, May 10.

Sather, Kenneth E.: *See*—
Spangler, Caleb K., and Sather.

Sauerland, Joseph, West New York, N. J., assignor to Hardman, Peck & Company, New York, N. Y. Piano soundboard. 2,469,522, May 10.

Scarlett, Arthur A., and H. N. James, assignors to International Harvester Company of Canada Limited, Hamilton, Ontario, Canada. Lift mechanism for disk plows. 2,469,579, May 10.

Schaef, Harold M., Chicago, Ill. Adjustable pedestal stool. 2,469,896, May 10.

Schaul, Martin C., London, England. Production of food preparations from potatoes and similar farinaceous tubers. 2,469,995, May 10.

Schechter, William H., Lawrence, Kans. Chlorate candles as oxygen yielding compositions. 2,469,414, May 10.

Schering Corporation, assignee: *See*—
Schwenk, Erwin, and Papa.

Schildmeier, Henry C., Indianapolis, Ind. Tire wheel creeper. 2,470,054, May 10.

Schilling, Ernest W., and A. M. Bramblett, assignors to Peerless Wire Goods Co., Inc., La Fayette, Ind. Method and apparatus for resistance welding of aluminum. 2,469,897, May 10.

Schluma, Otto W., assignor to Whitin Machine Works, Whitinsville, Mass. Sliver condensing device. 2,470,055, May 10.

Schmerber, Raoul J., Uccle, assignor to La Soudure Electrique Autogene, Societe Anonyme, Brussels, Belgium. Automatic machine for electric arc welding. 2,469,790, May 10.

Schmidt, Henry N.: *See*—
Heilman, Karl H., and Schmidt.

Schneider, Victor P., Green Bay, Wis. Attachment for windshield wipers. 2,469,791, May 10.

Schoch, Fred C., Oak Park, Ill. Space heating device. 2,469,898, May 10.

Schroeder, Charles S., Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Load hook connection. 2,469,612, May 10.

Schwars, Harvey F., London, England. Electromagnetic pickup. 2,469,933, May 10.

Schwegler, Clare C., and F. M. Tennant, assignors to The Dow Chemical Company, Midland, Mich. Production of alkyl halides. 2,469,702, May 10.

Schwenk, Erwin, Montclair, N. J., and D. Papa, Brooklyn, N. Y., assignors to Schering Corporation, Bloomfield, N. J. Hydroxyaryl alicyclic carboxylic acids. 2,469,416, May 10.

Scophony Corporation of America, assignee: *See*—
Rosenthal, Adolph H.

Scovill Manufacturing Company, assignee: *See*—
Spender, Donald L.

Scranton, Charles J., La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Rotary baler. 2,469,580, May 10.

Seibel, Charles M., Kenmore, assignor to Bell Aircraft Corporation, Wheatfield, N. Y. Rotor blade. 2,470,050, May 10.

Self Winding Clock Company, Inc., assignee: *See*—
Maers, Henry.

Sellars, John C., assignor to East Lancashire Chemical Company Limited, Manchester, England. Magnetic testing apparatus. 2,469,476, May 10.

Seymour, Clifford P.: *See*—
Porter, Charles R. A., and Seymour.

Scott, Albert B.: *See*—
Ward, William C., and Scott.

Scott, William M., Jr., Byrn Mawr, assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Bus bar housing. 2,469,445, May 10.

Sears, Roebuck and Co., assignee: *See*—
Ralston, Hurley D., and Pearson.

Selbert, Howard F.: *See*—
Tabor, Joseph M., Selbert, and Frohring.

Shay, Albert R., Manton, Ohio. Electric soldering iron. 2,469,479, May 10.

Sheffield Corporation, The, assignee: *See*—
Polk, Louis F.
Trame, Joseph A., Jr.

Shell Development Company, assignee: *See*—
Morris, Rupert C., and Horowitz.
Ruscheidt, Gottfried E., and de Nie.

Shenk, Eugene R., Brooklyn, N. Y., assignor to Radio Corporation of America. Amplitude modulator. 2,469,747, May 10.

Shill, Sidney C., Los Angeles, Calif. Piano. 2,469,068, May 10.

Siegel, Sally A., Chicago, Ill. Figure-free maternity suspender. 2,469,793, May 10.

Sikorsky, Igor I., Bridgeport, assignor to United Aircraft Corporation, East Hartford, Conn. Rotor blade. 2,469,480, May 10.

Sills, Earl H., Schenectady, N. Y., assignor to General Electric Company. Motor control system. 2,469,899, May 10.

Silver, Frank F., assignor to Wingfoot Corporation, Akron, Ohio. Splicing butyl rubber. 2,469,840, May 10.

Silver, Walter H., and J. I. Cantral, assignors to Deere & Company, Moline, Ill. Tractor mounted plow and gauge wheel. 2,469,996, May 10.

Simkins, Leon L., assignor to The Wigginton Company, Kalamasoo, Mich. Short circuit detector. 2,469,703, May 10.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Cutter chain. 2,469,523, May 10.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Cutter chain. 2,469,524, May 10.

Simpson, Leonard R., Birmingham, Ala. Wheel balance weight. 2,469,997, May 10.

Singer Manufacturing Company, The, assignee: *See*—
Fuge, Harry B.
Kessler, Charles A.

Sizer, Elmer M. A.: *See*—
Grosjean, Harry W., and Sizer.

Skrob, Frank J., Okanogan, Wash. Dental cement apparatus. 2,469,525, May 10.

Sloan, George A., Milwaukee, Wis. Brake pressure regulator. 2,469,794, May 10.

Sloat, John E., Columbia, assignor to Insulation Products Company, Williamantic, Conn. Cutting and printing machine. 2,469,526, May 10.

Sloan, Paul R., Bridgeport, Conn. Rear blinker lamp for automobiles. 2,469,581, May 10.

Smith, Carl K.: *See*—
Wilkinson, Watkins W., and Smith.

Smith, Edwin A., assignor to Willard-Anderson Company, Danville, Ill. Compressor. 2,469,998, May 10.

Smith, George H.: *See*—
Hannen, Odd A., and Smith.

Smith, John J.: *See*—
Mueller, Frank H., and Smith.

Smith, Winthrope C., Westfield, N. J., assignor to Standard Oil Development Company. Esters of aselaic acid as plasticizers for rubberlike polymers. 2,469,748, May 10.

Smyers, William H., Westfield, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Insulated conductor. 2,469,416, May 10.

Snyder, Oscar H., San Francisco, Calif. Garment hanger. 2,469,481, May 10.

Societe Francaise Radio Electrique, assignee: *See*—
Danzin, Andre.

Societes Reunies Everite-Sitube, assignee: *See*—
Contenson, Jean L. A.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Brockman, Frank G., and Wescott, 2nd.
Hansford, Rowland C., and Caesar.
McCracken, John H., and Crandall.

Solomon, Julius L., assignor to Welding Research, Inc., Chicago, Ill. Electronic control for welding machines. 2,469,934, May 10.

Spangler, Caleb K., and K. E. Sather, Havre, Mont. Painter's kit. 2,469,749, May 10.

Speakman Company, assignee: *See*—
Fraser, James.

Speare's, Alden, Sons Co., The, assignee: *See*—
Thompson, Willis F.

Spender, Donald L., assignor to Scovill Manufacturing Company, Waterbury, Conn. Tamperproof screw closure. 2,470,057, May 10.

Sperry Corporation, The, assignee: *See*—
Tawney, Gereld L.

Spielman, Emeric M., New York, N. Y. Electric musical instrument. 2,469,850, May 10.

Spiller, William R., and L. L. West, Dayton, assignors to Harris-Seybold Company, Cleveland, Ohio. Drill sharpener. 2,469,900, May 10.

Spraner, Jerome W., Roslyn, assignor to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Production of calcium hypochlorite. 2,469,901, May 10.

Sproul, Byron P., Royal Oak, Mich. Polarizing filter attachment for cameras. 2,469,795, May 10.

Stalker, Edward A., Bay City, Mich. Aircraft wings having boundary layer control. 2,469,902, May 10.

Standard Oil Development Company, assignee: *See*—
Baldwin, Francis P.
Gidley, Philip T.
Gross, George W.
Heinrich, Raymond L.
Hockberger, William G.
Holmes, August.
Kearby, Kenneth K.
McNab, John G., and Rudel.
Norway, Arnold J., and Zimmer.
Robertson, Anthony E.
Smith, Winthrope C.
Sweeney, William J.
Voorhies, Alexis, Jr.

Standard Steel Spring Company, assignee: *See*—
Lindsay, Edward C., and Anderson.

Standard Ultramarine Company, assignee: *See*—
Moser, Frank H.

Stanolind Oil and Gas Company, assignee: *See*—
Fearon, Robert E.
Russell, William L.

Stavsborgs Aktiebolag, assignee: *See*—
Thiman, Gunnar.

Stecher, Henry D., Lakewood, and E. F. Jackman, deceased, Lakewood, Ohio, by H. E. Jackman, administratrix, Lansing, Mich., said Stecher assignor to The Weatherhead Company, Cleveland, Ohio. Tube coupling. 2,469,851, May 10.

Stefan, Jane H., assignee: *See*—
Stefan, Stanley B.

Stefan, Stanley B., assignor of fifty per cent to J. H. Stefan, Hamtramck, Mich. Novelty package. 2,470,058, May 10.

Stein, Hames H.: *See*—
Gibbs, Clifford J., and Stein.

Stein, Samuel, New York, N. Y. Torsional vibration pickup. 2,469,417, May 10.

Steinback, Ralph T.: *See*—
Bowman, John R., and Steinback.

Stiffemire, Robert J., Dickinson, Ala., Saw filing stand. 2,469,527, May 10.

Stobb, Anton, Westfield, and A. J. Albrecht, West New York, N. J., assignors to R. Hoe & Co., Inc., New York, N. Y. Inking mechanism for printing machines. 2,469,796, May 10.

Stober, Kenneth E., assignor to The Dow Chemical Company, Midland, Mich. Mixing head for extrusion machines. 2,469,999, May 10.

Stober, Kenneth E., assignor to The Dow Chemical Company, Midland, Mich. Producing uniformly colored extruded articles from vinyl aromatic resins. 2,470,001, May 10.

Stone, Herbert G., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Continuous process of producing beta lactones at reduced pressure. 2,469,704, May 10.

Storey, Edwin F., Grosse Pointe Farms, assignor to Packard Motor Car Company, Detroit, Mich. Crankshaft bearing lubrication. 2,469,669, May 10.

Strauss, Frank A., New Brighton, Staten Island, assignor to E. F. Drew & Co., Inc., New York, N. Y. Mixed esters of fatty acids. 2,469,446, May 10.

Strauss, Jerome: *See*—
Edlund, Daniel L., Oberle, and Strauss.

Strehan, George E.: *See*—
Donahue, John S., and Strehan.

Striplin, Marcus M., Jr., Florence, Ala., assignor to Tennessee Valley Authority. Producing silicon. 2,469,418, May 10.

Stritter, Karl A., Nahant, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Manufacture of turn shoes. 2,469,482, May 10.

Strong, Basil P., Atwater, Ohio. Mounting for antifriction bearings. 2,469,483, May 10.

Strong, Emerson, Hempstead, assignor to The Fred Gretsch Manufacturing Company, Brooklyn, N. Y. Musical stringed instrument. 2,469,582, May 10.

Strutt, Maximilliaan J. O., and A. van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Operating photoelectric devices. 2,469,852, May 10.

Stylofede Corporation, assignee: *See*—
Robbins, Jesse J.

Suhber, Leonard S., Upper Darby, Pa. Snap gauge. 2,469,613, May 10.

Submarine Signal Company, assignee: *See*—
Danforth, George L.

Suma, Arthur R., Sr., Chicago, Ill. Burglar alarm for windows and doors. 2,469,528, May 10.

Sunstein, David E., Elkins Park, Pa., assignor to Philco Corporation. Magnetic transducer adapted to compensate for twisting of record wire. 2,469,750, May 10.

Sutherland Paper Company, assignee: *See*—
Burbank, Wendell T.

Suverkrop, Lew, Bakersfield, Calif. Adjustable plumb bob. 2,469,583, May 10.

Svars, Jerry: *See*—
Kaiser, Emil, and Svars.

Svenska, A. B., Maskinerarken, assignee: *See*—
Dalin, David, and Hagby.

Swanski, Joseph, Worcester, Mass. Collapsible window ventilator. 2,469,903, May 10.

Swanson, Alfred J., Hollywood, Calif. Adjusting means for cartridge type door control hinges. 2,469,447, May 10.

Sweeney, George H., Los Angeles, Calif. Tire chain tong. 2,469,614, May 10.

Sweeney, William J., Summit, N. J., assignor to Standard Oil Development Company. Cold starting motor fuel. 2,469,751, May 10.

Sweet, Monroe H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Graininess meter having transverse and oscillatory movement of the specimen. 2,469,935, May 10.

Swensson, Malte: *See*—
Kerr, Kingdon, and Swensson.

Swift, Elmer M.: *See*—
Davis, Elmer M.

Szuba, Edward A., Lincoln Park, Mich. Gauge support. 2,469,904, May 10.

Tabbert, Paul C., Bridgman, Mich. Rotary pump. 2,469,936, May 10.

Tabor, Joseph M., East Islip, N. Y., H. F. Selbert, Mason, Mich., and P. R. Frohring, Bainbridge, Md., assignors to General Biochemicals, Inc., Chagrin Falls, Ohio. Powdered soap product. 2,469,758, May 10.

Tachar, John M., Dearborn, Mich. Artificial limb. 2,469,937, May 10.

Tarnow, Nathan, assignor to Charles E. Lifka, doing business as Tomic Sales and Engineering Company, Detroit, Mich. Cable clamp. 2,469,938, May 10.

Tartaglia, Louis G.: *See*—
Evans, Wayne S., and Tartaglia.

Tatlow, Percy, assignor to Rotax Limited, London, England. Epicyclic mechanism. 2,469,905, May 10.

Tawney, Gereld L., Hempstead, N. Y., assignor to The Sperry Corporation. Energy directing apparatus. 2,469,419, May 10.

Tellier, Joseph C.: *See*—
Bradley, William E., and Tellier.

Templeton, William E., Mansfield, Ohio. Tractor shovel attachment. 2,469,615, May 10.

Tennant, Frank M.: *See*—
Schwegler, Clare C., and Tennant.

Tennessee Valley Authority, assignee: *See*—
Striplin, Marcus M., Jr.

Terry, Thomas A., assignor to C. & M. Envelope Company, New York, N. Y. Multisection envelope and blank for forming the same. 2,469,853, May 10.

Tesler, Seymour: *See*—
Rein, Samuel.

Tewksbury, Lyndon B., Jr., Potsdam, N. Y., and L. H. Howland, Waterbury, Conn., assignors to United States Rubber Company, New York, N. Y. Reclaiming vulcanized rubber scrap. 2,469,529, May 10.

Texaco Development Corporation, assignee: *See*—
Gibbs, Clifford J., and Stein.

Texas Company, The, assignee: *See*—
Barber, Everett M.
Kluge, Herman D., and Knowles.

Thacker, Carlisle M., Highland Park, assignor to The Pure Oil Company, Chicago, Ill. Dehydrogenation of hydrocarbons. 2,469,420, May 10.

Thayer Company, assignee: *See*—
Reese, John, and Troendle.

Thielker, Henry J., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for testing telephone calling dials. 2,470,002, May 10.

Thiman, Gunnar, assignor to Stavsborgs Aktiebolag, Stockholm, Sweden. Vibrator grinding mill. 2,469,484, May 10.

Thiokol Corporation, assignee: *See*—
Patrick, Joseph C.

Thomas, Harold E. R., Crick, near Rugby, England. Time consuming or delay action mechanism. 2,470,003, May 10.

Thomas, Joseph C., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Portable housing unit. 2,469,752, May 10.

Thompson, Charles L., Oakland, Calif. Low lift attachment for hydraulic jacks. 2,469,670, May 10.

Thompson Products, Inc., assignee: *See*—
Roth, Jay M., and Mahler.

Thompson, William J., Edgewood, R. I., assignor to C. & M. Manufacturing Co. Shipping and display container for jewelry. 2,469,530, May 10.

Thompson, Willis F., Portland, Maine, assignor to The Alden Speare's Sons Co. Knife sharpener. 2,469,797, May 10.

Thurston, Jack T., Riverside, and R. B. Warner, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Alkylene oxide condensation products of dimerized fatty acid alkylol amides. 2,470,081, May 10.

Tidd, Edwin R., Mount Prospect, assignor to Bell & Gossett Company, Morton Grove, Ill. Air eliminator. 2,469,616, May 10.

Tierney, John T., Union, N. J. Setting mechanism for calculating machines. 2,469,754, May 10.

Times Facsimile Corporation, assignee: *See*—
Cooley, Austin G.

Tippett, William R., near Greensboro, assignor of one-half to R. H. Dunn, Greensboro, N. C. Valve for watering troughs. 2,469,617, May 10.

Tomic Sales and Engineering Company, assignee: *See*—
Tarnow, Nathan.
Toth, Anthony and G., Detroit, Mich. Shield device. 2,469,581, May 10.
Toth, George: *See*—
Toth, Anthony, and G.
Toy Fop Corporation, The, assignee: *See*—
Barricini, Jack.
Trichanin, Gottlieb, Basel, Switzerland. Ice and snow skats. 2,469,798, May 10.
Trame, Joseph A., Jr., assignor to The Sheffield Corporation, Dayton, Ohio. Gauging device. 2,470,004, May 10.
Troendle, William C.: *See*—
Reese, John, and Troendle.
Truckenmiller, Lyman A., Sonora, assignor of sixty per cent to Douglas Pincock, Santa Barbara, Calif. Wrist watch strap. 2,469,532, May 10.
Trumpour, James N., assignee: *See*—
Jackson, James G.
Tuve, Richard L., Silver Spring, Md. Heat-action explosive pyrotechnic marker. 2,469,421, May 10.
Tyre, Alexander T., Newton Stewart, Scotland, assignor to Imperial Chemical Industries Limited. Gas-producing charges suitable for the generation of gas pressure for the operation of mechanical devices and for blasting operations. 2,470,062, May 10.
Twin Disc Clutch Company, assignee: *See*—
Aschauer, George E.
Ulrich, Bernhard, Jr., and G. W. Pontius, III, assignors to Bendix Aviation Corporation, South Bend, Ind. Engine starter gearing. 2,469,854, May 10.
Union Switch and Signal Company, The, assignee: *See*—
Glison, Robert M., and Martin.
United Aircraft Corporation, assignee: *See*—
Baresch, Charles A.
Buck, Richard S., and Ledwith.
Cooper, Kenneth C.
Dunnells, Norman A., and Gorton.
Kalitinsky, Andrew.
Ledwith, Walter A.
Meitzler, Donald E.
Rose, Kenneth E.
Sikorsky, Igor I.
United Shoe Machinery Corporation, assignee: *See*—
Collins, George H.
Jorgensen, Bernhardt.
McKeon, William D.
Robson, William S.
Stritter, Karl A.
United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Carter, James M.
United States Rubber Company, assignee: *See*—
Child, Everett S.
Tewksbury, Lyndon B., Jr., and Howland.
University of Tennessee Research Corporation, The, assignee: *See*—
Dulaney, Anna D.
Valle, Charles, Caracas, Venezuela. Automatic transmission for motor vehicles. 2,469,799, May 10.
Valley Welding & Boiler Co., assignee: *See*—
Curtiss, Charles B.
Vanadium Corporation of America, assignee: *See*—
Edlund, Daniel L., Oberle, and Strauss.
Van der Ziel, Aldert: *See*—
Strutt, Maximiliaan J. O., and van der Ziel.
Vanity Fair Mills, Inc., assignee: *See*—
Amidon, Roy C.
Van Sciver, Herbert D.: *See*—
Callender, Edwin M., Phair, and Van Sciver.
Vesper, Louis J., Los Angeles, Calif. Replacement handle. 2,469,705, May 10.
Victor Adding Machine Co., assignee: *See*—
Hooe, Hunter E.
Vilter, Ernest F., Milwaukee, Wis. Fine roller. 2,470,005, May 10.
Vogel, Oliver G., Oak Park, Ill., assignor to Hotpoint Inc. Electric heater. 2,469,800, May 10.
Vogel, Oliver G., Oak Park, and L. Ziffrin, Westchester, Ill., assignors to Hotpoint, Inc. Electric heater. 2,469,801, May 10.
Voinovich, Sweeney, Bridgeville, Pa. Combined boat and filter. 2,469,802, May 10.
Voorhies, Alexis, Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Synthesis of hydrocarbons from carbon monoxide and hydrogen with an iron type catalyst. 2,469,755, May 10.
Wainer, Eugene, Niagara Falls, and A. N. Salomon, Malone, assignors, by mesne assignments, to National Lead Company, New York, N. Y. Dielectric composition and making same. 2,469,584, May 10.
Walt, Bertrand H., New Rochelle, N. Y. Bituminous mix. 2,469,585, May 10.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Driving mechanism for axminster tube frame systems. 2,469,736, May 10.
Wallace, Arthur M.: *See*—
Payne, Arthur W., and Wallace.
Wallace, Burgess P., Brooklyn, assignor to Whitehead Brothers Company, New York, N. Y. Mold composition. 2,469,907, May 10.
Wallace, Burgess P., Brooklyn, assignor to Whitehead Brothers Company, New York, N. Y. Synthetic mold composition and making same. 2,469,908, May 10.
Wallace, Frederick J., assignor to American Cystoscope Makers, Inc., New York, N. Y. Urethral dilator. 2,469,906, May 10.
Wallace, Raymond C., Pawtucket, R. I. Tool for cleaning concave cylindrical surfaces. 2,469,586, May 10.
Wallerstein Company, Inc., assignee: *See*—
Wallerstein, James S., and Alba.
Wallerstein, James S., and R. T. Alba, assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y. Stabilized fermented beverages and manufacturing same. 2,470,006, May 10.
Walton, Joseph C., and R. R. Rundell, Miami, Fla. Electric wall socket. 2,469,939, May 10.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Clapp, Roger E.
Ward, William C., and A. B. Scott, assignors to Eaton Laboratories, Inc., Norwich, N. Y. Vaginal suppository. 2,469,618, May 10.
Warde, Walter T., assignor to Foster and Kleiser Company, San Francisco, Calif. Stenciling with sectional screens. 2,469,671, May 10.
Warner, Douglas K., Sarasota, Fla. Aircraft whose lift is increased by power means. 2,469,619, May 10.
Warner Electric Brake Manufacturing Company, assignee: *See*—
Oetzel, John G.
Warner, Ruth B.: *See*—
Thurston, Jack T., and Warner.
Warren, George T., and R. A. Jordan, Gunthorpes, Antigua, British West Indies, assignors to The Dorr Company, New York, N. Y. Clarification of sugar cane juice. 2,470,076, May 10.
Wartinen, William A., San Francisco, Calif. Calculator. 2,469,672, May 10.
Watson, Gilbert L., II, Chestertown, Md. Pivoted inner jaw wrench. 2,470,007, May 10.
Watson, Harvey P., and G. W. Rogers, Louisville, Ky. Safety device. 2,470,059, May 10.
Watson, Orla E., Kansas City, Mo. Pilot or master valve. 2,469,757, May 10.
Watson, Randolph E., assignee: *See*—
Charbeneau, Ralph C.
Wattier, Francis E.: *See*—
Powers, Frank T., and A. J., and Wattier.
Weatherhead Company, The, assignee: *See*—
Paquin, Joseph N., and Bock.
Stecher, Henry D., and Jackman.
Weathers, Paul, Haddon Heights, N. J., assignor to H. K. Neuber, Philadelphia, Pa. Compensated, controlled-feedback, amplitude modulated oscillator. 2,469,803, May 10.
Weaver, Galen K., assignor to The McCaskey Register Company, Alliance, Ohio. Bill compartment. 2,469,485, May 10.
Weaver, Richard E., Ronks, Pa. Hinge. 2,469,804, May 10.
Webb, Jervis B., Bloomfield Hills, and A. G. Rose, assignors to Jervis B. Webb Company, Detroit, Mich. Four-wheel trolley bracket. 2,470,060, May 10.
Webb, Jervis B., Company, assignee: *See*—
Webb, Jervis B., and Rose.
Weinig, Arthur J., Golden, Colo. Selective flotation of chromite ores. 2,469,422, May 10.
Welding & Manufacturing Company, Inc., assignee: *See*—
Coble, Ernest L.
Welding Research, Inc., assignee: *See*—
Solomon, Julius L.
Wellcome, Hubert E., Pleasantville, N. Y. Projection of twisted wires. 2,469,533, May 10.
Wellman Company, assignee: *See*—
Polleys, Herbert R.
Wesbar Stamping Corporation, assignee: *See*—
Brel, Daniel L.
Pilsner, Richard A.
Wescott, John W., 2d: *See*—
Brockman, Frank G., and Wescott, 2d.
Wessels, Henry E., assignor to G. L. Fish, Spokane, Wash. Lawn sprinkler. 2,469,534, May 10.
West, Lloyd L.: *See*—
Spiller, William R., and West.
Western Electric Company, Incorporated, assignee: *See*—
Hamilton, James O., and Rozankowski.
Kinard, Robert K.
Logan, Alexander.
Mageoch, Nelson H.
McCain, Cecil C.
Robson, Duer C.
Thielker, Henry J.
Western Union Telegraph Company, The, assignee: *See*—
Wise, Raleigh J., and Parrott.
Westinghouse Electric Corporation, assignee: *See*—
Eberhart, Arthur H.
Flagle, Charles D.
Idle, James G.
McCloy, Graham S.
Newton, John S.
Rentschler, Harvey C.
Ritter, John G.
Westronics Inc., assignee: *See*—
Basham, Raymond B.
Wheeler, John D., assignor to American Metalcraft Corporation, Detroit, Mich. Wagon. 2,470,061, May 10.

Whitbeck, Roland A., Lorain, Ohio, assignor to Gilron Products Company. Precoated material and dry lubricating coating composition therefor. 2,470,062, May 10.
White, Charles H., W. P. Oehler, and C. H. Youngberg, assignors to Deere & Company, Moline, Ill. Disk harrow latch unit. 2,470,008, May 10.
Whitehead Brothers Company, assignee: *See*—
Wallace, Burgess P.
Whitin Machine Works, assignee: *See*—
Schlums, Otto W.
Whitmore, Paul G., Pine Bluff, Ark. Variable-rate electric meter. 2,469,673, May 10.
Wickman, Helmer W., and G. A. J. Racine, assignors to Heywood-Wakefield Company, Gardner, Mass. Antitip construction for baby carriages. 2,469,909, May 10.
Wigginton Company, The, assignee: *See*—
Simkins, Leon L.
Wiggs, James W.: *See*—
Hensel, Frank R., Wiggs, and Heil.
Wilcock, Donald F., and E. G. Chace, Schenectady, N. Y., assignors to General Electric Company. Vacuum pump. 2,469,889, May 10.
Wilhelm, Loomis G., Henryetta, Okla., assignor to Lock Joint Pipe Company, East Orange, N. J. Pipe. 2,470,009, May 10.
Wilkinson, Watkins W., and C. K. Smith, Corpus Christi, Tex. Clothesline post. 2,469,805, May 10.
Willard-Anderson Company, assignee: *See*—
Smith, Edwin A.
Williams, Sidney D., Warren, Ohio. Melting iron in electric furnaces. 2,470,010, May 10.
Williams, William A.: *See*—
Ingraham, Joseph H., and Williams.
Williamson, Marshall I., New Haven, Conn., assignor, by mesne assignments, to National Folding Box Company, Incorporated. Container. 2,469,535, May 10.
Wimpfheimer, Harry E., New York, N. Y. Embossing die. 2,469,620, May 10.
Winchel, Henry T., Roscoe, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Modulator system. 2,470,063, May 10.
Winesett, Franklin P., Camas, Wash., assignor to Crown Zellerbach Corporation, San Francisco, Calif. Making shopping bags. 2,469,536, May 10.
Wingfoot Corporation, assignee: *See*—
Cutright, Robert S.
Flory, Paul J., and Rabjohn.
Hardman, Albert F.
Johnson, Joseph P.
Lichty, Joy G.
Milone, Charles R.
Rogers, Thomas H., Jr.
Silver, Frank F.
Thomas, Joseph C.
Winter, Arthur, Weehawken, and V. Haggerty, Tenafly, N. J. Combination footstool and table. 2,470,011, May 10.
Winther, Anthony, Kenosha, Wis., assignor to M. P. Winther, Waukegan, Ill., trustee. Electronic tension control apparatus. 2,469,706, May 10.
Winther, Martin P., assignee: *See*—
Winther, Anthony.
Wise, Raleigh J., Dunellen, and R. D. Parrott, West New York, N. J., assignors to The Western Union Telegraph Company, New York, N. Y. Facsimile apparatus. 2,469,423, May 10.
Witchger, Eugene J., assignor to The Lufkin Rule Co., Saginaw, Mich. Tape rule. 2,469,674, May 10.
Wittel, Otto, assignor to Eastman Kodak Company, Rochester, N. Y. Impact fuse. 2,469,587, May 10.
Wittenmyer, Carlos, Mount Clemens, Mich. Decimal rounding off mechanism. 2,469,675, May 10.
Witter, Nora B., Binghamton, N. Y. Garment of the bifurcated nether type. 2,469,486, May 10.
Witthoft, Charles H., Detroit, assignor of one-half to J. F. Gohn, Grosse Ile, Mich. Antifriction bearing. 2,469,676, May 10.
Witthoft, Charles H., Detroit, assignor of one-half to J. F. Gohn, Grosse Ile, Mich. Combination radial and thrust bearing. 2,469,677, May 10.
Wobrer, Henry, assignor to Johnson Service Company, Milwaukee, Wis. Humidostatic element. 2,469,537, May 10.
Wolff, Julius, Amstenrade, Netherlands; vested in the Attorney General of the United States. Apparatus for stripping and drying artificial sausage skins. 2,469,621, May 10.
Wood, George, Haselton, and J. Mahon, Cold Aston, Cheltenham, England. Drying grain. 2,469,424, May 10.
Wood, Seth, Pawtucket, R. I. Yarn guiding block for weaving shuttles. 2,470,064, May 10.
Wood, William: *See*—
Nachod, Frederick, and Wood.
Woodard, Phebe H., executrix, assignee: *See*—
Woodard, William E., and Filander.
Woodard, William E., deceased, Forest Hills, N. Y., P. H. Woodard, executrix, Forest Hills, N. Y., and A. H. Filander, Baltimore, Md.; said Filander assignor to Lima-Hamilton Corporation, and said P. H. Woodard assignor to P. H. Woodard. Tube securing means for locomotive and other boilers. 2,469,487, May 10.
Woods, Robert J., Grand Island, assignor to Bell Aircraft Corporation, Wheatfield, N. Y. Flutter dampener. 2,469,488, May 10.
Worthington Pump and Machinery Corporation, assignee: *See*—
Burrus, Paul B.
Wright Aeronautical Corporation, assignee: *See*—
Lundquist, Wilton G.
Pitisci, Joseph S.
Wyman, Edwin T., Brookline, Mass. Combination steam and gas turbine. 2,469,678, May 10.
Wyman, Edwin T., Brookline, Mass. Gas turbine. 2,469,679, May 10.
Yale & Towne Manufacturing Company, The, assignee: *See*—
Framhein, Herbert J.
Schroeder, Charles S.
Yonkers, Edward H., Chicago, Ill. Indicating, controlling, and recording instrument. 2,469,940, May 10.
Young, Dorris S., Wilsonville, Oreg. Pipe coupling. 2,469,538, May 10.
Young, L. A., Spring and Wire Corporation, assignee: *See*—
Morgan, Roland J.
Youngberg, Charles H.: *See*—
White, Charles H., Oehler, and Youngberg.
Ystrom, Johan B.: *See*—
Jones, Lyman L., and Ystrom.
Zachae, Gottfried C., Norwich, Conn. Electrical testing device for attachment to flashlights. 2,469,910, May 10.
Ziffrin, Louis: *See*— :
Vogel, Oliver G., and Ziffrin.
Zimmer, John C.: *See*—
Norway, Arnold J., and Zimmer.
Zion, Bernard, New York, N. Y. Dial telephone lock. 2,469,806, May 10.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Chlorine dioxide, Producing. T. G. Holst. Re. 23,111, May 10.
Facsimile machine, Inside scanning. W. S. Tandler and D. S. Walker. Re. 23,113, May 10.
Faucet, Mixing. C. V. Di Pietro. Re. 23,109, May 10.
Recording machine, Coin-operated voice. E. M. Squire. Re. 23,112, May 10.
Refrigeration. R. L. Hallock. Re. 23,110, May 10.

LIST OF PLANT INVENTIONS

Hybrid mallow plant. E. Hemming. 835, May 10.

LIST OF DESIGN INVENTIONS

Ash tray. R. W. Hoag. 153,687, May 10.
Ash tray. W. P. Mader. 153,714–16, May 10.
Boot, Ski. R. Rominger. 153,731, May 10.
Bracelet, Expansible watch. A. Albanese. 153,657, May 10.
Brief case. R. H. Arbib. 153,658, May 10.
Brooch or similar article. A. Katz. 153,691–3, May 10.
Brooch or similar article. A. Katz. 153,696, May 10.
Brooch or similar article. A. Katz. 153,698–702, May 10.
Cabinet, Phonograph. P. M. Fuller. 153,675, May 10.
Carrier for vacuum cleaner and accessories or the like, Mobile. J. L. and M. G. Zver. 153,744, May 10.
Case or a similar article, Luggage. L. Horwitz. 153,688, May 10.
Chair, High. R. Di Giorgio. 153,672, May 10.
Chair, Reclining. J. R. Staudt, and R. E. Goddard. 153,735, May 10.
Compact key and money clip or the like, Combined. G. E. Georganta. 153,677, May 10.
Earring attachment device. C. B. Haegert. 153,681, May 10.
Earring or similar article. A. Katz. 153,694–5, May 10.
Fixture, Fluorescent lighting. C. C. Braun. 153,665, May 10.
Flashlight. E. L. Schofield. 153,733, May 10.
Fork or other article of flatware. I. A. Lipman. 153,711, May 10.
Forming device, Doughnut. D. F. Jones. 153,690, May 10.
Frame, Handbag. L. S. David. 153,669, May 10.
Frame, Portable grandstand. J. F. Roney. 153,732, May 10.
Freezer and dispenser for frozen foods, Combined. W. von Lindeck. 153,737, May 10.
Handbag. L. Kaufman. 153,703, May 10.
Handle. P. Derham. 153,670–1, May 10.
Holder, Combined cake of soap and spool. V. Silson. 153,734, May 10.
Holder, Emblem, for automobile radiator guard. L. Bustin. 153,667, May 10.
Holder, Paper napkin. P. B. Hamilton. 153,683, May 10.
Housing for an outboard motor, Drive shaft. E. C. Kiekhaefer. 153,704, May 10.
Instrument, Writing. F. E. Gruber. 153,679, May 10.
Jacket. J. L. Asteroff. 153,662, May 10.
Lamp or similar article. A. M. Johnson. 153,680, May 10.
Lamp, Portable electric. A. C. Haggstrom. 153,682, May 10.
Loader, Vacuum leaf. M. A. Elliotte. 153,673, May 10.
Motor having a power head, Outboard. E. C. Kiekhaefer. 153,705, May 10.
Nozzle, Hose. A. L. Henkel. 153,685, May 10.
Opener, Can. H. Odencrants. 153,722, May 10.
Pen, Ball point fountain. R. J. Lohr and L. J. Campbell. 153,713, May 10.
Pin clip or similar article. A. Katz. 153,697, May 10.
Rack, Clothing display. G. Hinkle. 153,686, May 10.
Sharpener, Scissors. R. C. Lathom. 153,706, May 10.
Shoe, House. J. B. Reinhart, Jr., and J. B. Reubel. 153,723–9, May 10.
Sink, Cabinet. N. Lewis. 153,710, May 10.
Socket for use with clip and light bulb. R. K. Grubb. 153,676, May 10.
Spoon or other article of flatware. L. V. M. Helander. 153,684, May 10.
Spoon or other article of flatware. W. S. Warren. 153,740–1, May 10.
Spoon or similar article. N. Bowlen. 153,664, May 10.
Spoon or similar article of flatware. M. Bernstein. 153,663, May 10.
Spoon, Stirring, scraping, and beating. G. J. Erker. 153,674, May 10.
Spoon, Trolling. J. S. Gardemeyer. 153,676, May 10.
Stand for kitchen utensils, Collapsible. J. Weber. 153,742, May 10.
Switch, Flourescent starter. A. A. Richardson. 153,730, May 10.
Table. B. G. Zolot. 153,743, May 10.
Table or similar article. D. A. Wallance. 153,738–9, May 10.
Textile fabric. W. Mitschke. 153,717–21, May 10.
Toy animal figure. M. C. Levich. 153,709, May 10.
Toy duck or similar article. L. Leaf. 153,708, May 10.
Toy fish or similar article. L. Leaf. 153,707, May 10.
Tool, Slide fastener repair. K. Stern. 153,736, May 10.
Tray for bathtub use, Vanity. C. M. Craighead. 153,668, May 10.
Valise or similar article. R. H. Arbib. 153,659–61, May 10.
Wallpaper or the like. W. Burton and D. W. Liebes. 153,666, May 10.
Washing machine. L. H. Haase. 153,680, May 10.
Washing machine. J. M. Little. 153,712, May 10.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive and polishing head. A. P. and H. R. Beam. 2,469,429, May 10.
Accumulator with tubular electrodes, Electrical. M. Malki, B. Matzkin, and A. L. Goldman. 2,469,508, May 10.
Acrylic acid, Preparation of. B. C. Redmon. 2,469,701, May 10.
Actuating member, Adjustable. W. E. Parish. 2,469,570, May 10.
Adapter for converting kerosene lamps into electric lamps. J. N. Bailey. 2,469,491, May 10.
Adapter, Precision expanding. F. I. Ernest. 2,469,873, May 10.
Adapter, Safety window lock. W. E. Frietache. 2,469,551, May 10.
Addition agent for gasoline. J. O. McNab and H. W. Rudel. 2,469,737, May 10.
Adjusting means for cartridge type door control hinges. A. J. Swanson. 2,469,447, May 10.
Aircraft whose lift is increased by power means. D. K. Warner. 2,469,619, May 10.
Aircraft wings having boundary layer control. E. A. Stalker. 2,469,902, May 10.
Airplane construction. A. J. Buttler. 2,469,591, May 10.
Alarm for windows and doors, Burglar. A. R. Suma, Sr. 2,469,528, May 10.
Alkaline solutions of vegetable globulins, Production of viscous aqueous. W. A. Caldwell. 2,469,452, May 10.
Alkylation of thiophene. R. C. Hansford and P. D. Caesar. 2,469,823, May 10.
Alkylene oxide condensation products of dimerized fatty acid alkylol amides. J. T. Thurston and R. B. Warner. 2,470,081, May 10.
Alkyl halides, Production of. C. C. Sebwegler and F. M. Tennant. 2,469,702, May 10.
Alkylhalosilanes, Production of. L. De Pree, A. J. Barry, and D. E. Hook. 2,469,355, May 10.
Alloy composition, Cobalt base. H. S. Cooper. 2,469,715, May 10.
Alloys. D. L. Edlund, T. L. Oberle, and J. Strauss. 2,469,718, May 10.
Alloys, Forgeable high-temperature. E. L. Olcott. 2,469,887, May 10.
Amplifier, Harmonic class C. A. S. Harris. 2,469,508, May 10.
Anchor, Brake. J. G. Oetzel. 2,469,402, May 10.
Anchor line or stringer holder. L. Reiter. 2,469,443, May 10.
Animal trap. C. W. Crumrine. 2,469,454, May 10.
Anion active resins and producing same. J. R. Dudley and L. A. Lundberg. 2,469,683, May 10.
Anions from liquids, Removing. L. A. Lundberg and J. R. Dudley. 2,469,692, May 10.
Anions from liquids, Removing. L. A. Lundberg. 2,469,694, May 10.
Antenna. R. E. Clapp. 2,470,010, May 10.
Antifriction bearing. C. H. Witthoft. 2,469,676, May 10.
Antigen for use in the diagnosis of malaria and product thereof, Producing an. A. D. Dulaney. 2,469,456–7, May 10.
Antiskid chain. H. Ritz-Ammann. 2,469,666, May 10.
Apparatus and method for filling gas storage cylinders. O. A. Hansen and G. H. Smith. 2,469,434, May 10.
Apparatus and method of maintaining the freshness of counter displayed vegetables. A. L. Munson and R. C. Follett. 2,469,979, May 10.
Apparatus and process for making filaments. E. E. Lovig. 2,470,039, May 10.
Apparatus for bending tubing into serpentine coils and sweep mechanism and index therefor. A. W. Payne and A. M. Wallace. 2,469,406, May 10.
Apparatus for bending tubing into serpentine coils and sweep mechanism and stop therefor. A. W. Payne. 2,469,405, May 10.
Apparatus for coating articles. H. Osterberg and R. E. Matter. 2,469,829, May 10.
Apparatus for drying having safety and sequence controls. N. Monsarrat. 2,470,043, May 10.
Apparatus for forming metal tapes into tubular conductors. A. Logan. 2,469,565, May 10.
Apparatus for forming retreading strips for tires. W. G. Corson. 2,469,633, May 10.
Apparatus for handling motion-picture film. J. G. Capstaff. 2,469,915, May 10.
Apparatus for melting chocolate and other confections. H. Ashworth and F. W. Doblin. 2,469,709, May 10.
Apparatus for molding building blocks. A. H. Hawes. 2,469,590, May 10.
Apparatus for packaging material. N. E. Dorrington and J. A. Dyker. 2,469,954, May 10.
Apparatus for removing icicles from the eaves of buildings. B. F. Liston. 2,469,971, May 10.
Apparatus for rolling flanges on tubes. E. F. Lohmann. 2,469,775, May 10.
Apparatus for slicing ham on the bone. H. J. Hoenselaar. 2,470,076, May 10.
Apparatus for stripping and drying artificial sausage skins. J. Wolff. 2,469,621, May 10.
Apparatus for testing adjustable resistances. J. O. Hamilton and L. J. Rozankowski. 2,469,465, May 10.
Apparatus for testing telephone calling dials. H. J. Thielker. 2,470,002, May 10.
Apparatus for treating skins. G. Dempsey. 2,469,636, May 10.
Applicator, Hair oil. M. E. Conwell. 2,469,763, May 10.
Aromatic amines, Stabilizing. A. E. Robertson. 2,469,745, May 10.
Article of footwear, Impact absorbing. C. T. Lee. 2,469,969, May 10.
Artificial limb. J. M. Tachar. 2,469,937, May 10.
Assembly for turbines, Bearing and seal. W. A. Ledwith. 2,469,734, May 10.
Attachment for air rifles, Cartridge firing. R. H. Dixon. 2,469,870, May 10.
Attachment for automobiles, Load handling. D. L. Brei. 2,469,945, May 10.
Attachment for bed structures, Obstetrical and fracture. R. R. Freund. 2,470,026, May 10.
Attachment for cameras, Polarizing filter. B. P. Sproul. 2,469,795, May 10.
Attachment for hydraulic jacks, Low lift. C. L. Thompson. 2,469,870, May 10.
Attachment for industrial trucks. J. Breslav. 2,469,812, May 10.
Attachment for windshield wipers. V. P. Schneider. 2,469,791, May 10.
Automatic print washer. S. Hornstein. 2,469,825, May 10.
Axle box. J. L. Hilton. 2,470,071, May 10.
Bags, Making shopping. F. P. Winesett. 2,469,536, May 10.
Baler, Rotary. C. J. Scranton. 2,469,580, May 10.
Banjo head tightener. E. J. Handloser. 2,469,643, May 10.
Bar: *See*—
Combination length bar.
Barium aluminate, Preparing. P. S. Roller. 2,469,413, May 10.
Base, Chewing gum. W. P. Cohoe. 2,469,861, May 10.
Battery handle connector. W. N. Allyn. 2,469,857, May 10.
Bearing: *See*—
Antifriction bearing.
Combination radial and thrust bearing.
Bender with abutment roller adjustably mounted on vertically inclined bracket, Pivoted. A. E. Lemay. 2,470,036, May 10.
Beta-cyano vinyl acetic acid esters. C. R. Milone. 2,469,836, May 10.
Beta lactones, Continuous process of producing. H. J. Hagemeyer, Jr., and D. C. Cooper. 2,469,890, May 10.
Beverages and manufacuring same, Stabilized fermented. J. S. Wallerstein and R. T. Alba. 2,470,006, May 10.
2,470,006, May 10.
Bib. F. H. McMartin. 2,469,835, May 10.
Bill compartment. G. K. Weaver. 2,469,485, May 10.
Binder, Loose-leaf. C. Z. Hubbell. 2,469,922, May 10.
Bituminous mix. B. H. Walt. 2,469,585, May 10.
Blade form for supercharger impellers. N. A. Dunnells and R. E. Gorton. 2,469,458, May 10.
Blade, Rotor. C. M. Seibel. 2,470,056, May 10.
Blade, Rotor. I. I. Sikorsky. 2,469,480, May 10.
Bleed valve. L. O. Keefer. 2,469,505, May 10.
Block for weaving shuttles, Yarn guiding. S. Wood. 2,470,064, May 10.
Block puzzle, Mortised. J. D. Boyle. 2,469,364, May 10.
Blowgun. E. A. Grewe. 2,469,642, May 10.
Board: *See*—
Ironing board.
Boat and filter, Combined. S. Voinovich. 2,469,802, May 10.
Bobbin holder. E. R. Blount. 2,469,590, May 10.
Boiler or the like having extended heat transfer surfaces, Steam. D. Dalin and G. V. Hagby. 2,469,635, May 10.
Bonding teeth to dental plates. W. Giese. 2,469,822, May 10.
Bookrests and the like. E. Murphy. 2,469,511, May 10.
Boron compounds, Preparation of. D. T. Hurd. 2,469,879, May 10.
Bottle, Baby's nursing. G. Allen and R. Dahl. 2,469,480, May 10.

Bottoming machine, Glass tube. G. Coby. 2,469,681, May 10.
Bowl, Stock watering. H. E. Bremer. 2,469,946, May 10.
Bowling ball cleaner. E. G. Bune. 2,469,948, May 10.
Box: *See*—
Axle box. Folding box.
Boxes, Method of and machine for making unitary setup covered. H. J. Goss. 2,469,641, May 10.
Bracket: *See*—
Condenser bracket. Pivotal bracket.
Four-wheel trolley bracket.
Brake for vehicles, Internally expanding. J. S. Irving. 2,469,826, May 10.
Brake pressure regulator. G. A. Sloan. 2,469,794, May 10.
Braking mechanism, Hydraulic. E. B. Cornwell. 2,469,632, May 10.
Brassière. A. Alt. 2,469,623, May 10.
Brassière. G. Kris. 2,469,654, May 10.
Building construction. R. G. Le Tourneau. 2,469,603, May 10.
Burner: *See*—
Gas burner.
Butyl rubber, Splicing. F. F. Sliver. 2,469,849, May 10.
Cabinet with removable screen controlling focusing system, Television. A. H. Rosenthal. 2,469,932, May 10.
Cable clamp. N. Tarnow. 2,469,936, May 10.
Cable composition, Electrical. P. T. Gidley. 2,469,721, May 10.
Calcium hypochlorite, Production of. J. W. Sprauer. 2,469,901, May 10.
Calculating machine. J. R. Bowman and E. T. Steinback. 2,469,628, May 10.
Calculator. W. A. Wartinen. 2,469,872, May 10.
Camera, Color separation. F. T. Powers, A. J. Powers, Jr., and F. E. Wattler. 2,469,891, May 10.
Can closing machine. E. E. J. Nordquist. 2,469,401, May 10.
Candles as oxygen yielding compositions, Chlorate. W. H. Schechter. 2,469,414, May 10.
Canister and distributor therefor. D. S. Burgess, E. A. Ramskill, and R. R. Miller. 2,469,367, May 10.
Canopy construction. C. C. King. 2,469,436, May 10.
Cap: *See*—
Lens-mount focusing cap.
Carbon arc control. C. J. Murch. 2,469,664, May 10.
Carburetor. C. W. Brown. 2,470,014, May 10.
Carriage, Folding. J. Reese and W. C. Troendle. 2,469,475, May 10.
Carrier for kite strings, Article. T. L. Baskin, Jr. 2,469,449, May 10.
Carrousel. J. H. and M. E. Decker. 2,469,498, May 10.
Casing head. G. D. Johnson. 2,469,772, May 10.
Cathode-ray beam deflection circuit. G. F. Rogers. 2,469,895, May 10.
Cation exchange materials. F. C. Nachod and W. Wood. 2,469,472, May 10.
Cell and operating same, Electrolytic. F. S. Low. 2,470,073, May 10.
Cellulose triacetate, Precipitation of. C. J. Maim and C. L. Crane. 2,469,395, May 10.
Cementing earth bores. I. W. Alcorn and D. C. Bond. 2,469,353, May 10.
Center of gravity and weight indicator. H. B. Davies. 2,470,069, May 10.
Centrifugal separator. H. W. Fawcett. 2,469,956, May 10.
Chain: *See*—
Antiskid chain. Cutter chain.
Chair and ladder, Combination. J. Furlin. 2,469,720, May 10.
Charging individual capsules with a compressed gas. G. S. McCloy. 2,469,975, May 10.
Check feeding machine. P. J. Clark. 2,470,017, May 10.
Chuck, Suction. E. O. Eriksson. 2,469,817, May 10.
Circuit: *See*—
Cathode-ray beam deflection circuit. Pulser circuit.
Vibrator test circuit.
Circuit apparatus, Railway track. R. M. Glison and P. N. Martin. 2,469,900, May 10.
Circuit breaker, Gas blast. E. Eichenberger. 2,469,459, May 10.
Circuit breaker, Screw-in. R. Ball. 2,469,492, May 10.
Circuits, Oscillator. W. E. Bradley and J. C. Tellier. 2,469,811, May 10.
Clamp: *See*—
Cable clamp. Take-up clamp.
Pipe support clamp.
Clamp for welding, Aligning. D. C. Holt. 2,469,965, May 10.
Clamping device, Clothesline. G. Pipia and J. Lee. 2,469,783, May 10.
Cleaner: *See*—
Bowling ball cleaner.
Clip: *See*—
Jewelry clip.
Clock motor and system, Electric. H. Maers. 2,469,834, May 10.
Clothesline post. W. W. Wilkinson and C. K. Smith. 2,469,805, May 10.
Clothes tree. G. Buahko. 2,469,494, May 10.
Column frame. J. S. Donahue and G. E. Strehan. 2,469,455, May 10.
Comb and nail file, Combined. A. M. Hillery. 2,469,769, May 10.
Comb, Fountain. J. H. Francis. 2,470,024, May 10.
Combination length bar. K. E. E. Hallin. 2,469,502, May 10.
Combination radial and thrust bearing. C. H. Witthoft. 2,469,677, May 10.
Combination tool. H. M. Haberman. 2,469,877, May 10.
Communications copy and schedule holder. L. E. Clark. 2,469,369, May 10.
Communion set, Dual cross. D. Goudreau. 2,469,552, May 10.
Compositions for intravenous treatment of genito-urinary infections and essential hypertension. A. T. Babienco. 2,469,759, May 10.
Compressor. E. A. Smith. 2,469,998, May 10.
Condenser bracket. P. B. Burrus. 2,469,451, May 10.
Condenser construction. J. J. Nagy. 2,470,045, May 10.
Condensing device, Sliver. O. W. Schlums. 2,470,055, May 10.
Conductor, Insulated. W. H. Smyers. 2,469,416, May 10.
Confection with support therefor. J. Barricini. 2,469,589, May 10.
Connector: *See*—
Battery handle connector. Electrical connector.
Connector. S. P. Becker. 2,469,542, May 10.
Connector. E. S. Child. 2,469,495, May 10.
Connector for tensile members, Detachable. J. R. C. Quilter. 2,469,574, May 10.
Construction for baby carriages, Antitip. H. W. Wickman and G. A. J. Racine. 2,469,909, May 10.
Container: *See*—
Exterior bomb container. Multichamber container.
Container. M. I. Williamson. 2,469,535, May 10.
Container for jewelry, Shipping and display. W. J. Thompson. 2,469,530, May 10.
Continuous drier. A. A. Locke. 2,469,882, May 10.
Continuous process of producing beta lactones at reduced pressure. H. G. Stone. 2,469,704, May 10.
Control apparatus, Electronic tension. A. Winther. 2,469,706, May 10.
Control device. W. D. Cockrell. 2,469,860, May 10.
Control device for thermostatic valves, Auxiliary. L. M. Payne. 2,469,930, May 10.
Control for axminster loom tube frame conveyor systems. R. F. Dion. 2,469,717, May 10.
Control for free-piston units, Spill port. K. C. Cooper. 2,469,714, May 10.
Control for free-piston units, Starting. D. E. Meitsler. 2,469,739, May 10.
Control for fuel supply systems. J. F. Armstrong and J. T. W. Moseley. 2,469,942, May 10.
Control for pulse transmission systems, Automatic frequency. G. W. Fyler. 2,469,875, May 10.
Control for refrigerators, Automatic. S. G. House. 2,469,648, May 10.
Control for spill ports in free-piston units. R. S. Buck and W. A. Ledwith. 2,469,712, May 10.
Control for welding machines, Electronic. J. L. Solomon. 2,469,934, May 10.
Control of variable pitch airscrews for aircraft. J. Martin. 2,469,900, May 10.
Control system, Condition. B. O. Christenson. 2,469,496, May 10.
Controller, Electric demand. H. W. Harper. 2,469,645, May 10.
Conversion unit for fire finders. W. Heckman. 2,469,387, May 10.
Cooking apparatus. A. T. Foster. 2,469,595, May 10.
Copolymers of butadiene and alkyl esters of alpha, beta dichloroacrylic acid. J. G. Lichty. 2,469,833, May 10.
Corset stay. J. L. Gowen. 2,469,722, May 10.
Counter actuating and resetting mechanism. W. Leathers. 2,469,655, May 10.
Counterboring device. T. M. Bondhus. 2,469,543, May 10. 2,469,543, May 10.
Coupling: *See*—
Flexible locking coupling. Tube coupling.
Pipe coupling.
Cover: *See*—
Furniture slip cover. Slip cover.
Motor vehicle cover.
Crankshaft bearing lubrication. E. F. Storey. 2,469,669, May 10.
Creeper, Tire wheel. H. C. Schildmeier. 2,470,054, May 10.
Cutter chain. L. E. Simmons. 2,469,523–4, May 10.
Cutting and printing machine. J. E. Sloat. 2,469,526, May 10.
Cutting machine, Sole. H. R. Polleys. 2,469,518, May 10.
Cyclopentano perhydrophenanthrene compounds. E. Kaiser and J. Svara. 2,469,967, May 10.
Dampener, Flutter. R. J. Woods. 2,469,488, May 10.
Decimal rounding off mechanism. C. Wittenmyer. 2,469,675, May 10.
Debydrator. J. N. Paquin and E. P. Bock. 2,469,842, May 10.
Deicing apparatus for compressors. C. D. Flagle. 2,469,375, May 10.
Deluge valve. L. M. Lewis. 2,469,831, May 10.
Dental cement apparatus. F. J. Skrob. 2,469,525, May 10.
Depositing reactive solutions to form an insecticide, Sequentially. A. Dinsley. 2,469,433, May 10.
Desiccator, Regenerable. A. A. Hirsch. 2,469,435, May 10.

Detector, Short circuit. L. L. Simkins. 2,469,703, May 10.
Detergent composition, Synthetic. G. E. Barker. 2,469,493, May 10.
Device for crimping tubular articles. F. M. Anthony. 2,469,426, May 10.
Device for inspecting feed perforated stripe. C. E. Phillimore. 2,469,608, May 10.
Device for molding and coating pipes and like articles. J. L. A. Contenson. 2,470,066, May 10.
Dial, Telephone calling. C. C. McCain. 2,469,974, May 10.
Dial telephone lock. B. Zion. 2,469,806, May 10.
Diaphragm pump. C. A. Erickson. 2,469,818, May 10.
Diaphragm support member, Loud-speaker. H. S. Knowles. 2,469,773, May 10.
Dielectric composition and making same. E. Wainer and A. N. Salomon. 2,469,584, May 10.
Die: *See*—
Embossing die.
Dilator, Urethral. F. J. Wallace. 2,469,906, May 10.
Dinitroparaffins, Preparation of. J. H. McCracken and G. S. Crandall. 2,469,396, May 10.
Dispensing apparatus, Toilet paper. M. Habuda. 2,470,030, May 10.
Dispensing device, Disposable. C. E. Munson. 2,469,399, May 10.
Divan mover. F. H. Carter. 2,469,547, May 10.
Door latch. A. H. Bowlser, Jr. 2,469,430, May 10.
Door latch. G. A. Lee. 2,469,601, May 10.
Door pull and catch, Cabinet. L. C. Rockwell. 2,469,893, May 10.
Drain arrangement for enclosures such as enclosures of explosion-proof motors or the like. G. E. Petterson. 2,470,050, May 10.
Dress, Adjustable house. M. L. Harris. 2,470,031, May 10.
Dresser, Grinding wheel. G. Eaton. 2,469,871, May 10.
Drier: *See*—
Continuous drier.
Drilling machine. F. H. Mueller and J. J. Smith. 2,470,044, May 10.
Drum agitator. J. H. Ingraham and W. A. Williams. 2,469,557, May 10.
Drying apparatus, Material. J. E. Kennedy. 2,469,562, May 10.
Drying grain. G. Wood and J. Mahon. 2,469,424, May 10.
Dye compounds containing a butadiene-1,3 grouping, Monoazo. J. B. Dickey. 2,469,652, May 10.
Dyeing with metallized dyes. H. E. Millson and S. Mooradian. 2,470,060, May 10.
Dyestuffs, Vat. R. N. Heslop, F. Irving, and A. Livingston. 2,470,032, May 10.
Dynamoelectric machine. H. B. Fuge. 2,469,820, May 10.
Dynamoelectric machine. C. W. H. Minchin. 2,469,662, May 10.
Electric contact formed of a ruthenium composition. F. R. Hensel, J. W. Wiggs, and V. E. Hell. 2,470,034, May 10.
Electric heater. O. G. Vogel. 2,469,800, May 10.
Electric heater. O. G. Vogel and L. Ziffrin. 2,469,801, May 10.
Electric soldering iron. A. R. Shay. 2,469,479, May 10.
Electrical connector. M. E. Mesek. 2,469,397, May 10.
Electrode assembly. G. V. Calabrese. 2,470,066, May 10.
Electrodeposition of nickel. R. A. Hoffman. 2,469,727, May 10.
Electron discharge apparatus. P. L. Hartman. 2,469,964, May 10.
Electron transit time tube. J. R. Pierce. 2,469,843, May 10.
Electronic apparatus for determining moisture content in materials. M. L. McBrayer. 2,469,736, May 10.
Eliminator, Air. E. B. Tidd. 2,469,616, May 10.
Embossing die. H. E. Wimpfheimer. 2,469,620, May 10.
Emulsion polymerisation of butadienes. C. E. Barnes. 2,470,065, May 10.
Emulsion polymers, Coagulation of. J. P. Johnson. 2,469,827, May 10.
Endoscope handle. M. V. Bhajekar. 2,470,013, May 10.
Energy directing apparatus. G. L. Tawney. 2,469,419, May 10.
Engine: *See*—
Internal-combustion engine. Rotary vane engine.
Engine construction with removable cylinders, Opposed piston. C. A. Jacobson. 2,469,651, May 10.
Envelope and blank for forming the same, Multisection. T. A. Terry. 2,469,853, May 10.
Epicyclic mechanism. P. Tatlow. 2,469,905, May 10.
Equalizer for standoff insulators, High potential. J. F. Frese. 2,469,380, May 10.
Esters of azelaic acid as plasticisers for rubberlike polymers. W. C. Smith. 2,469,748, May 10.
Esters of fatty acids, Mixed. F. A. Strauss. 2,469,446, May 10.
Evaporator unit. B. C. Johnson. 2,469,828, May 10.
Expansion sleever. E. J. Newhouse. 2,469,742, May 10.
Exterior bomb container. H. J. Biondi. 2,469,363, May 10.
Extruded articles from vinyl aromatic resins, Producing uniformly colored. K. E. Stober. 2,470,001, May 10.
Faceplate for wood lathes. G. Braun. 2,469,630, May 10.
Facsimile apparatus. R. J. Wise and R. D. Parrott. 2,469,423, May 10.
Fairing assembly for turbine bearings. C. A. Baresch. 2,469,711, May 10.
Feed mechanism for stapling machines. W. G. Pankonin. 2,469,985, May 10.
Feeding high-frequency electric currents to the electrodes of dielectric heating apparatus. J. C. Quayle and P. Jones. 2,469,990, May 10.
Filament and making same, Electrical impedance. A. C. Ruge. 2,470,051, May 10.
Filamentary reaction products of rubbery polymers with sulfur dioxide, Producing. G. E. Rumscheidt and W. L. Johannes de Nie. 2,469,947, May 10.
Filaments, Production of extremely thin. F. G. Brockman and J. W. Wescott, 2d. 2,469,947, May 10.
File, Paper. W. A. Anderson. 2,469,540, May 10.
Filling device with receptacle operated outlet valve. J. Sanchis. 2,469,746, May 10.
Fire alarm, Portable. T. Gogniat. 2,469,501, May 10.
Firebox, Collapsible. C. P. Molla. 2,469,885, May 10.
Fitting, Bimetallic drain. H. F. Reichenbach. 2,469,991, May 10.
Fitting, Venetian blind. H. Nelson. 2,469,839, May 10.
Flameproofing combustible cellulosic material and product resulting therefrom. A. McLean and S. F. Marrian. 2,470,042, May 10.
Flash welding, Method and apparatus for. F. Albrecht. 2,469,707, May 10.
Flexible locking coupling. E. S. Pearson. 2,469,516, May 10.
Flotation of chromite ores, Selective. A. J. Weinig. 2,469,422, May 10.
Fluid pump automatic air bleed valve. N. Basbark. 2,469,362, May 10.
Fluorohydrocarbons, Preparation of. L. F. Salisbury. 2,469,848, May 10.
Focusing apparatus for enlargers. J. H. Eagle. 2,469,685, May 10.
Folding box. J. F. Conway. 2,469,497, May 10.
Folding clothes rack. W. N. Applegate and C. A. Petersen. 2,469,911, May 10.
Folding machine. E. D. Coston. 2,469,813, May 10.
Folding machine. H. D. Lawrie. 2,470,072, May 10.
Food preparations from potatoes and similar farinaceous tubers, Production of. M. C. Schaul. 2,469,995, May 10.
Foot plate device, Orthopedic. R. Anderson. 2,469,361, May 10.
Footstool and table, Combination. A. Winter and V. Haggerty. 2,470,011, May 10.
Forming chemical reaction products of metal oxides. R. Fysel. 2,469,989, May 10.
Forming means for profile grinding wheels. C. B. A. Porter and C. P. Seymour. 2,469,844, May 10.
Forming stockings and the like, Method of and apparatus for. H. C. Gillespie. 2,469,640, May 10.
Four-wheel trolley bracket. J. E. Webb and A. G. Rose. 2,470,060, May 10.
Frame: *See*—
Column frame. Umbrella frame.
Pool ball spotting frame.
Froth flotation of sulfide ores with phenyl-imido-amyl-dithiocarbonate. R. Carvajal and J. J. Quiroga. 2,469,368, May 10.
Fumigating apparatus. K. D. Crooks. 2,469,814, May 10.
Furnace: *See*—
Magazine downdraft furnace.
Furnace with lift and swing aside roof, Arc. W. E. Moore. 2,469,740, May 10.
Furniture foot, Self-aligning. A. A. Andersen. 2,469,425, May 10.
Furniture slip cover. R. W. Roberts, Jr. 2,469,520, May 10.
Fuse. C. C. Lauritsen. 2,469,351–2, May 10.
Fuse, Impact. O. Wittel. 2,469,587, May 10.
Garment, Children's sleeping. L. W. Jacobson. 2,469,556, May 10.
Garment for infants, Transparent protective. E. S. Petrucelli. 2,469,700, May 10.
Garment hanger. R. A. Kelsey. 2,470,079, May 10.
Garment hanger. O. H. Snyder. 2,469,461, May 10.
Garment of the bifurcated nether type. N. B. Witter. 2,469,486, May 10.
Gas burner. J. P. Dresen. 2,469,499, May 10.
Gas-producing charges suitable for the generation of gas pressure for the operation of mechanical devices and for blasting operations. A. T. Tyre. 2,470,082, May 10.
Gas tank drain lock. A. M. Malluk. 2,469,973, May 10.
Gasket. D. D. Perry. 2,469,474, May 10.
Gauge: *See*—
Snap gauge.
Gauge support. J. J. Fetsko, Jr. 2,469,574, May 10.
Gauge support. E. A. Szuba. 2,469,904, May 10.
Gauging device. J. A. Trame, Jr. 2,470,004, May 10.
Gauging switch. M. W. Eaton. 2,469,686, May 10.
Gear: *See*—
X-ray mass chest apparatus control gear.
Gear with roller bodies, Stepless variable change-speed. J. Kopp. 2,469,658, May 10.
Gearing, Engine starter. J. E. Buxton, F. T. Christian, and R. E. Demure. 2,469,792, May 10.

Gearing, Engine starter. B. Ulrich, Jr., and G. W. Pontius, III. 2,469,854, May 10.
Gearing, Locomotive reversing. J. S. Newton. 2,469,743, May 10.
Glass, Infrared transmitting. W. H. Armistead. 2,469,490, May 10.
Glasses having a low coefficient of expansion. A. Dauzin. 2,469,867, May 10.
Glyceride oils, Reacting. I. M. Colbeth. 2,469,371, May 10.
Golf tee. J. Mursch. 2,469,926, May 10.
Governor, Vehicle. R. F. Nowalk. 2,469,779, May 10.
Grade indicator. A. P. Gubrud. 2,470,029, May 10.
Gravity feed centrifugal pump. J. H. V. Finney. 2,469,874, May 10.
Grid, Knockdown cooking. R. J. Morgan. 2,469,698, May 10.
Grille assembly for an air-conditioning apparatus. A. H. Eberhart. 2,469,955, May 10.
Grinding and polishing machine. P. d'V. d'Avancourt. 2,470,021, May 10.
Grinding machine. K. W. J. Hjelmblad. 2,469,770, May 10.
Grinding machine, Gear. M. R. Anderson. 2,469,807, May 10.
Grinding machine with automatic feed crush dressing roll. L. F. Polk. 2,469,988, May 10.
Guard, Bumper. E. D. Dall. 2,469,816, May 10.
Guard for rotary machine tools, Protective. H. A. Arnhart. 2,469,624, May 10.
Gyroscope-suspension system, Universal. H. W. Phair. 2,469,782, May 10.
Hair curler. S. M. Ritter. 2,469,576, May 10.
Hammock support. L. Carl. 2,469,950, May 10.
Hand tool. C. O. Crow. 2,469,865, May 10.
Handle: *See*—
Endoscope handle. Replacement handle.
Hanger: *See*—
Garment hanger.
Head for extrusion machines, Mixing. K. E. Stober. 2,469,999, May 10.
Heat exchange method for the drop-wise condensation of vapors. J. B. Hunter. 2,469,729, May 10.
Heat exchanger. J. F. Alcock. 2,469,758, May 10.
Heater: *See*—
Electric heater.
Heater. L. P. Herrington. 2,469,466, May 10.
Heating and drying device for footwear, Electric. F. M. Judd. 2,469,468, May 10.
Heating device, Space. F. C. Schoch. 2,469,898, May 10.
Heating, sizing, or forming quartz tubes and profiles, Method of and apparatus for. G. Guigas. 2,469,597, May 10.
Heating unit. H. W. Grosjean and E. M. A. Sixer. 2,469,963, May 10.
Heating unit, Electric. C. B. Curtiss. 2,469,634, May 10.
Helmet, Protecting. C. E. Bowers. 2,469,810, May 10.
High vacuum getter. J. R. Beers. 2,469,626, May 10.
Hinge. R. E. Weaver. 2,469,604, May 10.
Hoist, jack, and wire stretcher, Combination. F. W. Coffing. 2,470,019, May 10.
Hoist-lower control. G. L. Danforth. 2,469,594, May 10.
Hoist, Steam cargo. W. C. Markey. 2,469,567, May 10.
Holder: *See*—
Anchor line or stringer holder.
Bobbin holder.
Communications copy and schedule holder.
Nursing bottle holder.
Paintbrush holder.
Sash holder.
Spud wrench holder.
Holder for flatirons. C. A. Crusell. 2,469,866, May 10.
Holder for projector enlargers and cameras, Lens. J. M. Peters. 2,469,781, May 10.
Holder with four-pin cup, Lipstick. H. Broder. 2,469,631, May 10.
Hollow article and method and apparatus for producing the same. D. G. Rempel. 2,469,892, May 10.
Housing, Bus bar. W. M. Scott, Jr. 2,469,445, May 10.
Housing unit, Portable. J. C. Thomas. 2,469,752, May 10.
Humidostatic element. H. Wohrer. 2,469,537, May 10.
Husking roll with resilient section, Corn harvester. R. C. Fergason. 2,469,687, May 10.
Hydrazonitriles from azines of butyle ketones, Preparation of. W. L. Alderson, Jr., and J. A. Robertson. 2,469,858, May 10.
Hydrocarbon fractionating. G. W. Gross. 2,469,724, May 10.
Hydrocarbons, Dehydrogenation of. C. M. Thacker. 2,469,420, May 10.
Hydrophilic substance water repellent, Rendering. A. J. Barry. 2,469,825, May 10.
Hydrotherapeutic device, Facial. T. W. Jeppson. 2,469,771, May 10.
Hydroxy alkyl cellulose, Manufacture of. D. R. Erickson. 2,469,764, May 10.
Hydroxyaryl alicyclic carboxylic acids. E. Schwenk and D. Papa. 2,469,415, May 10.
Implement self-restoring to carried position, Wieldable. J. L. Mrozinski. 2,469,978, May 10.
Improving the surface of synthetic rubber sponge. T. H. Rogers, Jr. 2,469,894, May 10.
Increasing adhesivity of asphalt to mineral aggregate consisting of mollusk shells. A. Holmes. 2,469,728, May 10.
Incubator, Electric. J. W. Napier. 2,470,046, May 10.
Indicator: *See*—
Center of gravity and weight indicator.
Three axis attitude and direction indicator.
Grade indicator.
Indicator. K. H. Hellman, and H. N. Schmidt. 2,469,380, May 10.
Indicator and lockout welding current. E. M. Callender, R. S. Phair, and H. D. Van Sciver. 2,470,067, May 10.
Indicator plug. W. B. Jutte. 2,469,580, May 10.
Indicators for aircraft, Flight position. O. V. Phillips. 2,469,571, May 10.
Inhibiting foaming in steam boilers. P. G. Bird, and A. L. Jacoby. 2,469,450, May 10.
Insolubilization of water-soluble hydroxyl-containing polymeric materials. A. E. Broderick. 2,469,431, May 10.
Instrument, Electric musical. E. M. Spielman. 2,469,850, May 10.
Instrument for rotary wing aircraft. J. S. Pecker. 2,469,780, May 10.
Instrument for vehicle wheels, Gauging. W. and G. F. Bagge. 2,469,541, May 10.
Instrument, Indicating, controlling, and recording. E. H. Yonkers. 2,469,940, May 10.
Instrument, Musical stringed. E. Strong. 2,469,582, May 10.
Insulating materials and making, Heat. L. H. D. Fraser. 2,469,379, May 10.
Insulator for line wires. J. L. Grupen. 2,469,384, May 10.
Internal-combustion engine. E. M. Barber. 2,469,448, May 10.
Iron: *See*—
Electric soldering iron.
Ironing board. E. C. Booth and F. Jones. 2,469,809, May 10.
Jack: *See*—
Ladder jack.
Jack for automobile roofs, Roller. R. A. Pilsner. 2,469,987, May 10.
Jewelry clip. J. Roderman. 2,469,994, May 10.
Jig, Dowelling. G. D. Long. 2,470,038, May 10.
Joint: *See*—
Universal joint.
Joint and blade tension means, Scissors. D. C. Feather. 2,469,373, May 10.
Kit, Painter's. C. K. Spangler, and K. E. Sather. 2,469,749, May 10.
Knit goods and the like, and methods. L. W. Gottschalck, 2,469,961, May 10.
Knitting machine. R. C. Amidon. 2,469,880, May 10.
Lactone of 2 methyl 3 hydroxy 4 carboxy 5 hydroxymethyl pyridine, Preparing the. D. Heyl. 2,469,554, May 10.
Ladder. H. A. Johns. 2,469,559, May 10.
Ladder jack. E. L. Coble. 2,469,593, May 10.
Laminating by means of an isoolefin-diolefin interpolymer tie ply. F. P. Baldwin. 2,469,710, May 10.
Lamp: *See*—
Therapeutic lamp. Ultraviolet lamp.
Lamp for automobiles, Rear blinker. P. R. Slosar. 2,469,581, May 10.
Lamp system and operation, Electric discharge. H. K. Bourne. 2,469,357, May 10.
Lamp unit, Electric. E. B. Noel and P. B. Davis. 2,469,607, May 10.
Lapping machine. R. K. Kinard. 2,469,563, May 10.
Latch: *See*—
Door latch.
Latch unit, Disk harrow. C. H. White, W. P. Oehler, and C. H. Youngberg. 2,470,008, May 10.
Lawn mower blades, Sharpening. P. R. Hutchinson. 2,469,730, May 10.
Lens-mount focusing cap. C. M. Lee. 2,469,691, May 10.
Lift mechanism for disk plows. A. A. Scarlett and H. N. Jones. 2,469,579, May 10.
Lifting and adjusting mechanism, Tractor-drawn implement turn responsive. R. D. Acton. 2,469,622, May 10.
Lifting portions of vehicles, Method of and mechanism for. F. W. Coffing. 2,470,018, May 10.
Lighter. F. Heydle. 2,469,768, May 10.
Lighter, Cigarette. L. W. Kolter, Sr., and W. G. 2,469,507, May 10.
Lighter, Cigarette. S. Rein, and S. Tesler. 2,469,442, May 10.
Linkage for pallet trucks, Wheel lifting. H. J. Frambein. 2,469,638, May 10.
Load hook connection. C. S. Schroeder. 2,469,612, May 10.
Lock: *See*—
Dial telephone lock.
Gas tank drain lock.
Nondetrudable safety lock.
Locking device. J. W. Byer. 2,469,592, May 10.
Locking device. D. C. Robson. 2,469,993, May 10.
Logging, Gamma-ray. W. L. Russell. 2,469,461, May 10.
Logging, Neutron well. W. L. Russell. 2,469,462, May 10.
Logging of wells, Neutron. W. L. Russell. 2,469,463, May 10.
Loop taker, Sewing machine. C. H. Petskeyes. 2,469,517, May 10.
Lubricating and packing shaft. E. J. O'Rourke. 2,469,515, May 10.
Lubricating metal surfaces during cold working. G. H. Orozco, and J. A. Henricks. 2,469,473, May 10.

Machine controller, Dynamoelectric. E. Pell. 2,469,440, May 10.
Machine for electric-arc welding, Automatic. R. J. Schmerber. 2,469,790, May 10.
Machine for elongated packages, Tying. B. H. Bunn. 2,469,544, May 10.
Machine for marking wire, cable, rods, and the like. C. F. Robbins. 2,470,075, May 10.
Machine for operating on shoes. G. H. Collins. 2,469,453, May 10.
Machine for removing shoes from lasts. W. D. McKeon. 2,469,471, May 10.
Machine for shaping uppers over lasts. B. Jorgensen. 2,469,467, May 10.
Machine for solving simultaneous equations, Calculating. J. R. Bowman. 2,469,627, May 10.
Machine for welding thermoplastic films. R. D. Lowry, and W. R. Church. 2,469,972, May 10.
Machine milking plant. E. G. Redin, and K. E. Glander. 2,469,519, May 10.
Machine tool. F. J. Henkel. 2,469,920, May 10.
Magazine downdraft furnace. E. M. Franklin. 2,469,639, May 10.
Material and dry lubricating coating composition therefor, Precoated. R. A. Whitbeck. 2,470,062, May 10.
Measuring device, Handwheel load. A. J. Galko. 2,469,361, May 10.
Measuring frequency, Method and system for. J. P. Kinzer. 2,469,829, May 10.
Mechanical movement. J. D. Dry. 2,469,500, May 10.
Mechanism for axminster tube frame systems, Driving. W. H. Wakefield. 2,469,750, May 10.
Mechanism for bowling alleys, Pin discharging. J. F. Murphy. 2,469,886, May 10.
Mechanism for bowling pin setting machines, Ball return. R. E. Rundell, and G. E. Hagquist. 2,470,052, May 10.
Mechanism for draft riggings, Shock absorbing. G. E. Dath. 2,469,549, May 10.
Mechanism for printing machines, Inking. A. Stohb, and A. J. Albrecht. 2,469,796, May 10.
Mechanism for sequential contact switches. E. A. Miller. 2,469,976, May 10.
Mechanism for tractor drawn devices, Connecting and operating. A. P. McKay. 2,469,005, May 10.
Melting iron in electric furnaces. S. D. Williams. 2,470,010, May 10.
Metal flashing. H. P. Orth. 2,469,840, May 10.
Metal phthalocyanines and their derivatives, Producing. F. H. Moser. 2,469,663, May 10.
Metal sheets, Making apertured. D. C. Gresham. 2,469,689, May 10.
Meter: *See*—
Variable-rate electric meter.
Meter having transverse and oscillatory movement of the specimen, Graininess. M. H. Sweet. 2,469,935, May 10.
Metering assembly, Electrical. J. S. Liddle. 2,470,037, May 10.
Methylol dithionaphthoates. A. F. Hardman. 2,469,824, May 10.
Methylpolysiloxanes, Linear. W. I. Patnode. 2,469,890, May 10.
Methyl silicone elastomers, Preparation of. J. Maraden and G. F. Roedel. 2,469,883, May 10.
Micrometer, Combination. R. Layton. 2,469,926, May 10.
Milk, Quick frozen homogenized. F. L. Crowley. 2,470,020 May 10.
Mill: *See*—
Vibrator grinding mill.
Mixtures of alkyl aryl sulfonates. L. H. Flett. 2,469,876–8, May 10.
Modulating system. J. C. Ferguson, and A. T. Mayle, Jr. 2,470,023, May 10.
Modulator, Amplitude. E. R. Shenk. 2,469,747, May 10.
Modulator, Pulse-time. H. Goldberg. 2,470,027, May 10.
Modulator system. H. T. Winchel. 2,470,063, May 10.
Mold composition. B. F. Wallace. 2,469,907, May 10.
Mold composition and making same, Synthetic. B. F. Wallace. 2,469,908, May 10.
Motor control device, Electric. F. Rieber. 2,469,786, May 10.
Motor control system. E. H. Sills. 2,469,899, May 10.
Motor control system, Thyratron. B. Cooper. 2,469,862, May 10.
Motor for food mixers or the like, Electric. J. G. Ritter. 2,469,932, May 10.
Motor fuel, Cold starting. W. J. Sweeney. 2,469,751, May 10.
Motor vehicle cover. R. H. Fowler. 2,469,958, May 10.
Mounting for antifriction bearings. B. P. Strong. 2,469,483, May 10.
Mounting for field coil supports. T. S. McElrath. 2,469,661, May 10.
Mounting means for spinning rings. H. Mäder. 2,469,658, May 10.
Multichamber container. L. E. Robertson. 2,469,856, May 10.
Multiple push-button switch. S. G. Isserstedt. 2,469,650, May 10.
Negative resistance devices, Point contact. R. S. Ohl. 2,469,569, May 10.
Nicotine silicates, Production of heavy metal. F. E. Dearborn. 2,469,868, May 10.
Nicotine silicates, Production of water repellent heavy metal. F. E. Dearborn. 2,469,869, May 10.
Nitroaminobenzene ester compounds. J. G. McNally and J. B. Dickey. 2,469,695, May 10.
Nondetrudable safety lock. R. Rocha. 2,469,610, May 10.
Nursing bottle holder. R. C. Charbeneau. 2,469,850, May 10.
Oil base, Soluble cutting. A. J. Morway and J. C. Zimmer. 2,469,741, May 10.
Oil, Production of. D. C. Bond. 2,469,354, May 10.
Oil production, Synthetic lubrication. R. L. Heinrich. 2,469,725, May 10.
Oil with aerogel catalysts, Cracking. K. K. Kearby. 2,469,735, May 10.
Ophthalmoscope, Multiple lens hand type. J. E. Held. 2,469,388, May 10.
Organo-polysiloxanes. W. I. Patnode. 2,469,888, May 10.
Oscillator, Compensated, controlled-feedback, amplitude modulated. P. Weathers. 2,469,803, May 10.
Oxidation inhibitors. H. D. Kluge and E. C. Knowles. 2,469,469, May 10.
Package for oleomargarine, Coloring. H. A. Rohdin. 2,469,521, May 10.
Package, Novelty. S. B. Stefan. 2,470,058, May 10.
Paintbrush holder. B. B. and L. B. Craft. 2,469,864, May 10.
Parachute. J. R. C. Quilter. 2,469,573, May 10.
Pattern materials. K. E. Rose. 2,469,611, May 10.
Pencil, Mechanical. J. F. Robbins. 2,469,411, May 10.
Perambulator, Collapsible. J. D. Macklin and E. W. Bergmann. 2,470,040, May 10.
Phenylethyl sulfones. J. K. Fincke. 2,470,077, May 10.
Photoelectric devices, Operating. M. J. O. Strutt and A. van der Ziel. 2,469,852, May 10.
Piano. H. B. Rhodes. 2,469,667, May 10.
Piano. S. C. Shill. 2,469,668, May 10.
Piano action. B. F. Miessner. 2,469,568, May 10.
Piano soundboard. J. Sauerland. 2,469,522, May 10.
Pickup, Electromagnetic. H. F. Schwarz. 2,469,833, May 10.
Pickup, Torsional vibration. S. Stein. 2,469,417, May 10.
Pilot or master valve. O. E. Watson. 2,469,757, May 10.
Pipe. L. G. Wilhelm. 2,470,009, May 10.
Pipe coupling. D. S. Young. 2,469,588, May 10.
Pipe support clamp. P. C. Cantrell. 2,469,949, May 10.
Piston ring. E. E. Frazier. 2,469,958, May 10.
Pivotal bracket. A. E. Nelson. 2,469,981, May 10.
Pivoted inner jaw wrench. G. L. Watson, II. 2,470,007, May 10.
Plate, Locking. J. S. Pitisci. 2,469,441, May 10.
Plating machine. N. H. Mageoch. 2,469,470, May 10.
Plow and gauge wheel, Tractor mounted. W. H. Silver and J. I. Cantral. 2,469,996, May 10.
Plug: *See*—
Indicator plug. Spark plug.

Polishing machine. E. C. Lindsay and E. L. Anderson. 2,469,735, May 10.
Polyacetal polysulfide polymers. J. C. Patrick. 2,469,404, May 10.
Polyacrylamide, Preparing water-soluble. L. M. Minsk and W. O. Kenyon. 2,469,596, May 10.
Polymerization products and making same. J. B. Rust. 2,469,788, May 10.
Pool ball spotting frame. R. A. Jones. 2,469,652, May 10.
Portable support. B. Ames. 2,469,359, May 10.
Poultry, Defeathering. E. M. Davis. 2,469,953, May 10.
Powder and making same, Dusting. J. E. Fenn. 2,469,957, May 10.
Preserving perishables. W. A. Bridgeman. 2,469,914, May 10.
Pressure reducing valve. T. B. Ford, Jr. 2,469,719, May 10.
Proctoscope. M. H. Kowan. 2,469,880, May 10.
Projection of twisted wires. H. E. Wellcome. 2,469,533, May 10.
Propeller. J. Fischer. 2,469,910, May 10.
Protector: *See*—
Stocking protector.
Protein compositions, Forming. J. R. Calhoun and T. M. Buzzo. 2,469,546, May 10.
Pulse generation. J. F. Gordon. 2,470,028, May 10.
Pulser circuit. H. Morrison. 2,469,977, May 10.
Pump: *See*—
Diaphragm pump. Rotary pump.
Gravity feed centrifugal pump. Vacuum pump.
Pump bearing and seal assembly lubrication. J. M. Roth and W. C. Mahler. 2,469,840, May 10.
Pyrotechnic marker, Heat-action explosive. R. L. Tuve. 2,469,421, May 10.
Quinone-resorcinol tanning agent and process. J. S. Kirk. 2,469,437–8, May 10.
Rack: *See*—
Folding clothes rack. Tie rack.
Stove rack.
Rack structure, Dish supporting. J. G. Idle. 2,469,966, May 10.
Radioactivity measurement. R. E. Fearon. 2,469,460, May 10.
Radio communication system for a plurality of stations, Selective. F. B. Hitchcock. 2,469,555, May 10.
Radio control system. H. H. Abbott, H. M. Bascom, and P. B. Fairlamb. 2,469,539, May 10.

Radio receiver system, Directional. W. P. Lear. 2,469,970, May 10.
Radio receiver tuning indicator, including a wide angle viewing lens. J. Bergmans, J. G. Kronomer, and M. Leenwin. 2,470,012, May 10.
Railway, Superspeed elevated. W. C. Cox. 2,469,432, May 10.
Ray-emission apparatus. G. G. Ellner. 2,469,872, May 10.
Receiver, Television. F. B. Norton. 2,470,048, May 10.
Rectifier. I. Levin. 2,469,393, May 10.
Reel: *See*—
Self-advancing winding reel.
Regulator: *See*—
Brake pressure regulator.
Release device for parachute harnesses, Quick. J. W. Horning. 2,469,391, May 10.
Remover, Fishhook. J. D. Mundy. 2,469,699, May 10.
Removing random fluctuations from intensity measurements, Method and apparatus for. C. J. Gibbs and J. H. Stein. 2,469,383, May 10.
Replacement handle. L. J. Vesper. 2,469,705, May 10.
Resins and producing the same, Anion active. J. R. Dudley. 2,469,684, May 10.
Resins prepared from alkylene polyamines and hydroxy-substituted aliphatic polyhalides, Anion active. L. A. Lundberg. 2,469,693, May 10.
Reversible friction clutch wrench. L. E. Pratt. 2,469,572, May 10.
Revolving Christmas tree stand. A. N. Masone. 2,469,884, May 10.
Rheostat with switch. J. G. Kunz, Jr. 2,469,924, May 10.
Rims for tires, Demountable. H. B. Boyer. 2,469,629, May 10.
Ring: *See*—
Piston ring.
Rocker arm, Engine. J. M. Leake. 2,469,564, May 10.
Rocket device. C. C. Lauritsen. 2,469,350, May 10.
Roller, Flue. E. F. Viliter. 2,470,005, May 10.
Rotary pump. P. C. Tabbert. 2,469,936, May 10.
Rotary vane engine. W. W. Martinmaas, Jr. 2,469,610, May 10.
Rotor, Induction motor. L. E. Aske. 2,469,808, May 10.
Rowboat, Manually operated. W. E. Hogreff. 2,469,646, May 10.
Rubber base materials, Nonslipping. R. W. Cuthill. 2,469,372, May 10.
Rubber compositions, Vulcanization of. P. J. Flory and N. Rabjohn. 2,469,819, May 10.
Rubbery copolymers of (trifluoromethyl) vinyl aromatic compounds. M. W. Renoll. 2,469,545, May 10.
Rule, Tape. E. J. Witchger. 2,469,674, May 10.
Safety device. H. P. Watson and G. W. Rogers. 2,470,059, May 10.
Safety for automatic guns, Firing and loading. C. W. Newell. 2,469,400, May 10.
Sandal with pivoted-ring strap receivers. V. C. Alexander. 2,469,708, May 10.
Sander. F. H. Myshrall. 2,469,980, May 10.
Sash holder. A. P. Gratkowski. 2,469,464, May 10.
Saw filing stand. R. J. Stiffemire. 2,469,627, May 10.
Scaffold. T. G. Di Santi. 2,469,716, May 10.
Scalper, Horisontal rotary. A. Axell. 2,469,943, May 10.
Screen for gutters. J. H. Ours. 2,469,841, May 10.
Screw closure, Tamperproof. D. L. Spender. 2,470,057, May 10.
Seal. G. R. Aschauer. 2,469,588, May 10.
Seat for barber chairs, Child's. E. L. Connelly. 2,469,548, May 10.
Self-advancing winding reel. R. Hellbach. 2,469,767, May 10.
Self-energising electrolytic water correction device. E. M. Butler. 2,469,545, May 10.
Separating gases from liquid fuel. R. R. Curtis. 2,469,917, May 10.
Separator: *See*—
Centrifugal separator.
Setting mechanism for calculating machines. J. T. Tierney. 2,469,754, May 10.
Sewing-machine table. C. A. Kessler. 2,469,968, May 10.
Sharpener, Drill. W. R. Spiller and L. L. West. 2,469,900, May 10.
Sharpener, Knife. J. A. De Cicco. 2,470,022, May 10.
Sharpener, Knife. W. F. Thompson. 2,469,797, May 10.
Sharpener, Pencil. W. J. Brooks. 2,469,858, May 10.
Sharpener, Pencil point. A. Cornish-Bess. 2,469,952, May 10.
Shears, Grass. P. L. Newbold. 2,469,983, May 10.
Shield device. A. and G. Toth. 2,469,531, May 10.
Shield device, Sectional. J. Kosinski. 2,469,774, May 10.
Shock strut. F. E. Bachman. 2,469,912, May 10.
Shoe, Force-lasted. J. S. Kamborian. 2,469,561, May 10.
Shoe, Slip lasted platform. L. B. Hollander. 2,469,647, May 10.
Shoes, Manufacture of turn. K. A. Stritter. 2,469,482, May 10.
Shoval attachment, Tractor. W. E. Templeton. 2,469,615, May 10.
Shutter with built-in synchronizer, Automatic. C. C. Fuerst. 2,469,688, May 10.
Signal: *See*—
Trailer tire deflation signal.
Signal for motion-picture projectors, Audible reel. J. G. Jackson. 2,469,731, May 10.
Signal level control, Video. L. F. Mayle. 2,469,606, May 10.
Signaling device for cycles and the like. J. P. Bauters. 2,469,944, May 10.
Signaling device for mailboxes. L. C. Jaskala. 2,469,558, May 10.
Siliceous magnesium-containing purifying medium and producing it. J. J. Naugle. 2,469,512, May 10.
Silicon, Producing. M. M. Striplin, Jr. 2,469,418, May 10.
Skate, Ice and snow. G. Trachslin. 2,469,798, May 10.
Ski binding. O. S. Ruud. 2,469,479, May 10.
Ski retainer. H. R. Lynn. 2,469,604, May 10.
Skirt, Crinoline. I. Cohen. 2,469,855, May 10.
Slip cover. E. Gould. 2,469,876, May 10.
Snap gauge. L. S. Subber. 2,469,613, May 10.
Soaking hides with a sulfonated phenol-formaldehyde condensation product. C. Richs. 2,469,787, May 10.
Soap product, Powdered. J. M. Tabor, H. F. Seibert, and P. R. Frohring. 2,469,753, May 10.
Socket, Electric wall. J. C. Welton and R. R. Rundell. 2,469,939, May 10.
Soil composition, Stabilized natural. C. G. Hammond. 2,469,356, May 10.
Soldering method and apparatus, Can. L. L. Jones and J. B. Yatrom. 2,469,392, May 10.
Sound distributing system for drive-in theaters. J. D. Phyfe. 2,469,986, May 10.
Spacer and guide for stenographic machines, Key lever. H. E. Hooe. 2,469,390, May 10.
Spark plug. F. R. Hensel. 2,470,033, May 10.
Spray drier apparatus. J. M. Hall. 2,469,553, May 10.
Spring. P. G. Groom. 2,469,596, May 10.
Spring. E. Latshaw. 2,469,925, May 10.
Spring suspension for vehicle trucks. J. J. Low. 2,469,566, May 10.
Sprinkler, Automatic. L. M. Lewis. 2,469,832, May 10.
Sprinkler, Lawn. H. E. Wessels. 2,469,534, May 10.
Sprocket, Radial adjusting. D. C. Patmore. 2,469,665, May 10.
Spud wrench holder. A. N. Hanson. 2,469,386, May 10.
Square. C. Hudkins. 2,470,035, May 10.
Stake releasing means for vehicle log bunks. W. A. Berry. 2,469,760, May 10.
Stand: *See*—
Revolving Christmas tree stand.
Saw filing stand.
Stapling device. W. G. Pankonin. 2,469,984, May 10.
Stenciling with sectional screens. W. T. Warde. 2,469,671, May 10.
Stepladder, Convertible. R. R. Salisbury. 2,470,053, May 10.
Stirring device. W. W. Hunter and I. McNab. 2,469,649, May 10.
Stitch separating machine. W. S. Robson. 2,469,477, May 10.
Stocking protector. J. M. Conley. 2,469,863, May 10.
Stool, Adjustable pedestal. H. M. Schaef. 2,469,896, May 10.
Stove rack. G. A. McGee. 2,469,776, May 10.
Strap, Wrist watch. L. A. Truckenmiller. 2,469,532, May 10.
Stretcher, Wire. E. G. Geisendorff. 2,469,766, May 10.
String of sound producing devices, Portable. E. J. Nicorvo. 2,470,047, May 10.
Strip feed mechanism, Intermittent. A. S. Howell. 2,469,503, May 10.
Sugar cane juice, Clarification of. G. T. Warren and R. A. Jordan. 2,470,076, May 10.
Sulfolyranyl carbamates. R. C. Morris and R. M. Horowitz. 2,469,838, May 10.
Support: *See*—
Gauge support.
Hammock support.
Portable support.
Support having spacing frame, Mirror. C. R. Jones. 2,469,923, May 10.
Supporting means for railroad cars, Brake beam. M. S. Johnson and G. F. Oakley. 2,469,504, May 10.
Suppository, Vaginal. W. C. Ward and A. B. Scott. 2,469,618, May 10.
Suspender, Figure-free maternity. S. A. Siegel. 2,469,793, May 10.
Suspension means for vehicles, Pneumatic. R. Goulrand. 2,469,962, May 10.
Switch: *See*—
Gauging switch.
Multiple push-button switch.
Switch contact. C. H. Hannon and A. L. Jenny. 2,469,878, May 10.
Switching system, Electromagnetic. W. A. Ray. 2,469,600, May 10.
Synthesis of hydrocarbons from carbon monoxide and hydrogen with an iron type catalyst. A. Voorhies, Jr. 2,469,755, May 10.
Tab device, Selective information. W. W. Cline. 2,469,762, May 10.
Table: *See*—
Sewing-machine table.
Take-up clamp. J. F. Fair. 2,469,550, May 10.

Tanning product and process. H. C. Beachell. 2,469,428, May 10.
Telemetering system for transmitting indications of movements. J. Razek. 2,469,744, May 10.
Telescoping tractor and horse-drawn hitch, Combination. E. M. O'Donnell. 2,469,514, May 10.
Testing apparatus, Magnetic. J. C. Sellars. 2,469,476, May 10.
Testing device for attachment to flashlights, Electrical. G. C. Zachae. 2,468,910, May 10.
Testing device, Razor blade. E. D. Hallock. 2,469,385, May 10.
Tethering device for airplanes. J. Martin. 2,469,659, May 10.
Textile materials, Treatment of. D. H. Powers and E. H. Rossin. 2,469,407-9, May 10.
Therapeutic lamp. C. B. Roebken. 2,469,412, May 10.
Three axis attitude and direction indicator. J. B. Parker. 2,469,403, May 10.
Tie rack. H. M. Canner. 2,470,015, May 10.
Time consuming or delay action mechanism. H. E. R. Thomas. 2,470,003, May 10.
Tire, Cushioned. H. C. Lord. 2,469,394, May 10.
Tire removing apparatus, Frame mounted axially collapsing type. W. Greene. 2,469,723, May 10.
Toboggan. E. B. Fish. 2,469,765, May 10.
Toilet, Rabbit or animal. W. Quinn. 2,469,784, May 10.
Tong, Tire chain. G. H. Sweeney. 2,469,614, May 10.
Tool: *See*—
Combination tool.
Hand tool.
Machine tool.
Tool for cleaning concave cylindrical surfaces. R. C. Wallace. 2,469,586, May 10.
Tool for dressing grinding wheels. O. M. Braaten. 2,469,365, May 10.
Toolholder and adapter chuck for motor-driven tools. E. G. Galbraith. 2,469,821, May 10.
Top stop, Removable. D. Marinsky. 2,469,509, May 10.
Toy, Moving picture. E. M. Leigh. 2,469,602, May 10.
Trailer, Folding wheel. K. Kerr and M. Swensson, 2,469,506, May 10.
Trailer tire deflation signal. C. T. Pratt. 2,469,931, May 10.
Tramway. H. D. Ralston and R. A. Pearson. 2,469,576, May 10.
Transducer adapted to compensate for twisting of record wire, Magnetic. D. E. Sunstein. 2,469,750, May 10.
Transducer, Frequency controlled. F. Rieber. 2,469,785, May 10.
Transducer, Magnetic sound recording and reproducing. H. E. Roys. 2,469,444, May 10.
Transmission for motor vehicles, Automatic. C. Valle. 2,469,799, May 10.
Transmission gear shifting mechanism, Headstock. H. E. Laubach, R. C. Johnson, and V. J. Kramer. 2,469,881, May 10.
Transmission through grounded conducting structures and the like, Radio-frequency. K. L. Bell. 2,470,000, May 10.
Transmitter, Cam controlled pulse. E. Bodmer. 2,469,761, May 10.
Trap: *See*—
Animal trap.
Tray for automobiles, Vertically adjustable. J. W. Linda and J. M. Hill. 2,469,657, May 10.
Tray, Serving. J. L. Mohnn. 2,469,777, May 10.
Treating wood. R. H. Baechler. 2,469,427, May 10.
Tri-isobutylene, Desulfurization of. W. G. Hockberger. 2,469,726, May 10.
Truck, Railway car. K. F. Nystrom and V. L. Green. 2,469,513, May 10.
Truss construction. J. Rodrigues. 2,469,577, May 10.
Tube: *See*—
Electron transit time tube.
Tube apparatus, Electronic flash. R. B. Basham. 2,469,913, May 10.
Tube coupling. H. D. Stecher and E. F. Jackman. 2,469,851, May 10.
Tube securing means for locomotive and other boilers. W. E. Woodard and A. H. Filander. 2,469,487, May 10.
Tuning control and band switching arrangement. H. T. Abrams. 2,469,941, May 10.
Tuning device for pianofortes. J. Meissner. 2,469,738, May 10.
Tuning fork and control system. A. G. Cooley. 2,469,951, May 10.
Turbine, Combination steam and gas. E. T. Wyman. 2,469,678, May 10.
Turbine cooling. A. Kalitinsky. 2,469,732, May 10.
Turbine, Gas. W. G. Lundquist. 2,469,439, May 10.
Turbine, Gas. E. T. Wyman. 2,469,679, May 10.
2-bis(5-cyclipyrrole)azamethine dyes. E. B. Knott. 2,469,830, May 10.
2-chlorobenzothiazoles, Preparation of. N. S. Moon. 2,469,697, May 10.
2,5 dimethylfuran and acetonylacetone, Manufacture of. I. M. Helibron and E. R. H. Jones. 2,470,070, May 10.
Ultraviolet lamp. H. C. Rentschler. 2,469,410, May 10.
Umbrella frame. W. S. Evans and L. G. Tartaglia. 2,469,637, May 10.
Universal joint. S. L. C. Coleman. 2,469,713, May 10.
Unsaturated products, Producing. I. M. Colbeth. 2,469,370, May 10.
Uranium tetrabromide, Producing. J. M. Carter. 2,469,916, May 10.
Vacuum pump. D. F. Wilcock and E. G. Chace. 2,469,880, May 10.
Valve: *See*—
Bleed valve.
Deluge valve.
Fluid pump automatic air bleed valve.
Pilot or master valve.
Pressure reducing valve.
Valve. G. F. Hoge. 2,469,921, May 10.
Valve construction for grounded aviation trainers. S. A. Douglas. 2,469,918, May 10.
Valve for watering troughs. W. R. Tippett. 2,469,617, May 10.
Valve having accessible pressure equalising means, Mixing. J. Fraser. 2,470,025, May 10.
Valve structure. J. W. Marsh. 2,470,041, May 10.
Vaporizer. P. H. Lienert. 2,469,656, May 10.
Variable-rate electric meter. P. G. Whitmore. 2,469,673, May 10.
Ventilator, Collapsible window. J. Swanski. 2,469,903, May 10.
Vibrator grinding mill. G. Thiman. 2,469,484, May 10.
Vibrator test circuit. M. E. Nulsen. 2,470,049, May 10.
View finder, Infinity sight. P. and M. N. Mainardi. 2,469,927, May 10.
Vise with quick positioning jaws. S. W. Jordan. 2,469,600, May 10.
Vulcanised rubber scrap, Reclaiming. L. B. Tewksbury, Jr., and L. H. Howland. 2,469,529, May 10.
Wagon. J. D. Wheeler. 2,470,001, May 10.
Warming and conditioning apparatus, Combined frankfurter and roll. N. G. Morici. 2,469,778, May 10.
Washer: *See*—
Automatic print washer.
Water correction device, Electrolytic. E. M. Butler. 2,469,680, May 10.
Wave translating system. M. E. Mohr. 2,469,837, May 10.
Weight, Wheel balance. L. R. Simpson. 2,469,997, May 10.
Welding device. M. J. Manning. 2,470,074, May 10.
Welding equipment. C. T. Gayley. 2,469,382, May 10.
Welding machine, Box. R. S. Cutright. 2,469,815, May 10.
Welding of aluminum, Method and apparatus for resistance. E. W. Schilling and A. M. Bramblett. 2,469,897, May 10.
Wheel and making the same, Abrasive. E. Meyer. 2,469,308, May 10.
Wire cutting and bolding means, Baler. M. Ronning and K. M. Keith. 2,469,578, May 10.
Work positioner. J. F. Harrison. 2,469,044, May 10.
Wrapping and labeling receptacles. W. T. Burbank. 2,469,366, May 10.
Wrench: *See*—
Pivoted inner jaw wrench.
Reversible friction clutch wrench.
Wrench with terminal adjusting nut, Slidable jaw. J. Rusek. 2,469,789, May 10.
X-ray mass chest apparatus control gear. A. Nemet and M. Berindei. 2,469,982, May 10.

CLASSIFICATION OF PATENTS

ISSUED MAY 10, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Condition of Applications Under Examination at Close of Business April 29, 1949

Total number of patent applications awaiting action, 147,599. Date of oldest new application, June 3, 1947; date of oldest amended application, October 5, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandy; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	12-18-47	7-26-47	2910
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying Presses; Tobacco; Textile Wringers	9-16-47	4-26-47	2749
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	9-10-48	9-3-48	965
4. BISHOP, WALTER C., Power Driven Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	11-5-47	7-5-47	3235
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	3-15-48	7-25-47	1467
6. SURLE, H., Carbon Chemistry (part)	4-28-48	5-6-48	1864
7. HANLIN, GEORGE, Optics; Photographic Apparatus	8-2-48	5-13-48	1516
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	7-21-47	5-14-47	4611
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	1-14-48	6-26-47	2158
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	7-10-48	6-17-48	1577
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	4-27-48	8-5-47	1944

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE ASSERT

No. 5521. Decided March 1, 1949

[— F.2d —; 81 USPQ 112]

1. PATENTABILITY—PATENT AND APPLICATION—COMBINING PATENTED CLAIMS WITH PRIOR ART.

Where appellant's patent is limited to one species and the copending later filed application contains claims which are broader than the patent claims and claims which differ as to species from the patent claims, *Held* that it is proper to hold the claims of the later filed application unpatentable in view of the prior art and of the claims of appellant's issued patent.

2. SAME — PARTICULAR SUBJECT MATTER — LUBRICATING COMPOSITION.

Certain claims to a lubricating composition *Held* properly rejected on the claims of appellant's patent in view of the prior art.

APPEAL from the Patent Office. Serial No. 416,608.

AFFIRMED.

Oberlin & Limbach (*Oscar C. Limbach* of counsel) for Asseff.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims numbered 1, 2, 3, 4, 6, 14, 15, 16, and 21 of appellant's application for patent broadly entitled "Lubricating Composition." No claim was allowed.

The application, which was filed October 25, 1941, recites that it "is a continuation in part of my copending application Serial No. 404,361, filed July 28, 1941," and it appears that that application matured into Patent 2,261,047 (one of the references cited here) issued October 28, 1941—three days after the instant application was filed.

The subject matter of the claims which are involved is stated in the brief for appellant to be a "lubricating composition which contains a major amount of a hydrocarbon oil such as a mineral lubricating oil and a minor amount of a material which we shall refer to for convenience hereinafter as the *addition agent*." [Italics quoted.] The brief of the Solicitor for the Patent Office concurs with that statement and adds, "The addition agent may be a stable oil-soluble compound which contains an organic radical derived from a cyclic alcohol and at least three other elements which are identified in claim 21 as being either zinc or cadmium, arsenic or phosphorus and sulphur or selenium."

Claims 1 to 4, inclusive, and 21 are generic. We here quote claims 1 and 21, the latter seemingly being the broadest of the several claims, as is stated in the brief for appellant:

1. A lubricating composition comprising a major amount of a hydrocarbon oil and a minor amount of a compound produced by preparing the zinc salt of an acidic reaction product obtained by reacting a compound of the class consisting of the sulphides and selenides of phosphorus with a cycloaliphatic alcohol.

21. A lubricating composition comprising a major amount of a hydrocarbon oil and a minor amount of a stable oil-solnble compound which contains:

(a) an organic radicle derived from a cyclic alcohol;
(b) an element of the class consisting of zinc and cadmium;
(c) an element of the class consisting of arsenic and phosphorus; and
(d) an element of the class consisting of sulphur and selenium.

By reference, claims 2, 3, and 4 are made dependent on claim 1. Claim 2 recites that the alcohol named in claim 1 "is an alkylated cycloaliphatic alcohol"; claim 3 that "the alcohol contains the cyclohexane nucleus"; and claim 4 that "the alcohol is an alkylated cyclohexanol."

Claim 6 is illustrative of the species group of claims. It reads:

6. A lubricating composition comprising a major amount of a hydrocarbon oil and a minor amount of the zinc salt of an acidic reaction product obtained by reacting phosphorus trisulphide with a cycloaliphatic alcohol.

Claim 14 names "an alkylated cyclohexanol" instead of "a cycloaliphatic alcohol" named in claim 6 and recites that substantially all of the alkyl groups in such cyclohexanol "have less than six carbon atoms." Claim 15 recites "less than four carbon atoms." Claim 16 defines reacting the phosphorus trisulphide "with a methyl-cyclohexnnol."

All of the claims before us were rejected below as lacking invention over cited art, and claim 21 was additionally rejected upon the ground of indefiniteness.

In addition to appellant's Patent 2,261,047, hereinbefore referred to, there were cited two other patents; viz: Sullivan, 2,174,019, September 26, 1939; Prutton, 2,242,260, May 20, 1941.

Of the Sullivan patent, which is for a lubricant, the Board said:

Sullivan has been cited to illustrate close relationship between sulphur and selenium. On page 2, column 1, lines 47–48, triphenyl phosphine sulphide and triphenyl phosphine selenide are listed as alternatives for use in a formula, and in the examples there listed they are alternatives, along with oxygen, as corrosion inhibitors.

Vol. 622 • No. 3 Tuesday, May 17, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Attention may be directed at this point to the recital in claim 1, supra, to the effect that sulphides and selenides are named as ingredients of the compound to be reacted with cycloaliphatic alcohol for producing the acidic reaction product used in preparing the minor element of zinc salt. By this, and from the specification, we understand appellant to teach, as the patent to Sullivan teaches, that sulphur and selenium are equivalents as used in the art of producing lubricants. We note that appellant's specification recites:

> In the past, it has not been found possible to compound addition agents which would reduce corrosive tendencies, and the tendency to produce acidic materials during oxidation, without increasing the tendency to form deleterious deposits. By the use of the addition agents of this invention, however, the corrosive tendency and the formation of acidic materials are reduced while, at the same time, reducing the tendency to form harmful deposits.

The Prutton patent is also for a lubricating composition one of the elements of which is an agent added to mineral lubricating oil. The addition agent in the patent specification is stated to be "of the type produced by reacting an organic composition with certain reagents which contain either separately in combined or elemental form, or in combination, phosphorus and sulphur. The addition agent thus produced may, in most cases, be described as an organic composition containing both the elements, phosphorus and sulphur." Several kinds of alcohol are named as specific examples of oxygen-bearing compounds, which compounds, as we understand it, constitute the base composition of the addition agent. There also are listed numerous reagents among which, under the heading "C. Phosphorus and sulphur compounds," are found "Phosphorus trisulphide—P_4S_6 (or P_2S_3)" and "Phosphorus pentasulphide—P_2S_5 (or P_4S_{10})." Under the heading "D. Reagents containing elements equivalent to phosphorus and/or sulphur. 1. Compounds of phosphorus and equivalents of sulphur, e. g. Se, for example" are found "P_2Se_3" and "P_2Se_5."

So, in the Prutton specification we find the specific teaching of the use of both phosphorus trisulphide and phosphorus pentasulphide. Also we find there the teaching of the equivalency of sulphur and selenium, as used in the art under consideration.

It is noted that the terms "phosphorus trisulphide" and "phosphorus selenium" are not used in the claims of the Prutton patent, nor are the formulae used, but it is supposed that the chemical terms which are used cover them. In any event, the teaching of the specification is a part of the prior art independent of the claims.

Appellant's patent does not contain claims as broad as appealed claims 1, 2, 3, 4, and 21; and claims 6, 14, 15, and 16 differ as to species from the patent claims. In each of the patent claims (except number 6 which has no bearing upon the issues here involved) "phosphorus pentasulphide" is designated as the element with which other elements are reacted to produce the zinc product named in the claims, while in appealed claims 6, 14, 15, and 16 here involved "phosphorus trisulphide" is so designated. Another difference is that in the patent only sulphur, or sulphide of phosphorus, is named; while claims 1, 2, 3, 4, and 21 name selenium, or selenides. Still another difference found as to claim 21 is that it names zinc and cadmium, while the patent names only zinc. Cadmium is not named in any of the other claims.

[1] The brief on behalf of appellant declares that there are only three points of law which require our consideration and states them as follows:

> (a) Are the present claims properly rejected as unpatentable over Asseff's prior patent on the ground of double patenting;
> (b) May Asseff's prior patent be combined with the Prutton and Sullivan patents in spelling out an anticipation of any of the claims on appeal; and
> (c) Is claim 21 definite and in compliance with R. S. 4888?

It seems to us most logical to consider the second point first, taking up first the generic claims.

Specifically those claims (1, 2, 3, 4, and 21) were rejected (the latter primarily) on applicant's patent because the broadening of the claims of that patent to include selenides as well as sulphides was regarded as obvious to those skilled in the art and as disclosing nothing patentable over the patent in the light of the teaching of the equivalency of sulphur and selenium as taught by either Sullivan or Prutton.

It is pointed out by the Solicitor for the Patent Office that this court long ago in the case of *In re Slepion*, 18 CCPA (Patents) 1393, 49 F.2d 835, 9 USPQ 307, 412 O. G. 288, (wherein we cited authorities, including the decision in the case of *In re Ishericood*, 46 App. D. C. 507, 1917 C. D. 226, 245 O. G. 847, cited by the Primary Examiner in the instant case) held that an applicant is not entitled to claims for a second form of his invention unless such claims involve an inventive difference over the claim embraced in his patent for the first form.

In the case of *In re Borge*, 25 CCPA (Patents) 1058, 96 F.2d 314, 37 USPQ 546, 496 O. G. 270, we held it to be settled law that in cases such as this "it is proper to hold the claims of a later filed application unpatentable *in view of the prior art and of the claims of the applicant's issued patent*." [Italics new here.]

We there cited *In re Ishericood*, supra; *In re Swon*, 18 CCPA (Patents) 935, 46 F.2d 572, 407 O. G. 295; and *In re Slepion*, supra.

There is, in our opinion, a strong analogy between the instant case and that of *In re Lincoln et al.*, 31 CCPA (Patents) 1222, 143 F.2d 965, 62 USPQ 288, 568 O. G. 382. In that case the application taught the use of a relatively pure olefin treated with a sulphur compound as an addition agent for a lubricant, certain of the claims specifically naming particular sulphur compounds. All the claims were rejected by the tribunals of the Patent Office upon a prior patent to the applicants in view of the disclosures in patents to others. In affirming the decision of the Board, we said, inter alia:

> • • • the use of sulphur compounds was clearly suggested by the prior art cited and relied upon, and it would not be inventive over what appellants already had been granted in the way of a patent to add to their process of making the lubricants, a material which was old in the art and which, after all, supplied the sulphur need, the importance of which was taught in appellants' patent.

It was urged, in substance, on behalf of appellant before the tribunals of the Patent Office, and it is urged before us, that at the time appellant filed his application which eventuated in his patent his experiments and tests had not extended beyond the use of sulphur, or sulphides, and so he was not then in position to allege and claim selenium, or selenides, and it is insisted (numerous decisions being cited and discussed) that appellant is entitled now to receive the protection afforded by generic claims. Of this the Examiner said:

> Assuming that at the time the parent application was filed applicant had explored only the sulfur compounds and that subsequent investigation, upon which the present application is seemingly based, included the selenium compounds, it is strange that none of the test data secured in connection with the latter type of compounds was incorporated in the present specification. The test data appearing in Tables A to E, pages 12 to 16 is all based on results obtained with the zinc salt of the reaction product of alkylated cyclohexanols with P_2S_5, to which subject matter the claims of applicant's patent are directed. The expansion of the patent disclosure to include selenium derivatives is regarded as an obvious one such as would be apparent to one skilled in the art and fails to represent a patentable advance. See *In re Wietzel et al.*, 1930 C. D. 937; 400 O. G. 463 [17 CCPA (Patents) 1079].

Pertinent also is the following comment of the Board of Appeals:

> Appellant relies upon a number of decisions in support of the proposition that where a species or improvement patent is granted, it is proper to allow in a copending case generic claims covering the patented invention, citing, among others, the Lippert decision, 40 USPQ 579 [a decision rendered January 25, 1939, by Examiners in Chief of the Patent Office], wherein a patent was granted on a species of the invention and generic claims were sought in a copending application directed to a different species. The Board of Appeals held that in a case of this kind involving two species, the generic claims may appear in either application in the event they are inserted in the application last to issue before the issuance of the first case. The Examiner cites Appeal No. 3,056, Vol. 28 J. P. O. S., page 452, June 1946 [not elsewhere reported], which differentiates from the facts in *Ex parte Lippert* by pointing out the fact that in the Lippert decision the patent was for an improvement over the subject matter of the generic case under consideration, whereas in the set of facts presented in Appeal No. 3,056 the instant application was admitted to be a continuation in part of the patent for the improvement. Reference was made to *Ex parte Lilienfeld*, 22 J. P. O. S. 307–308, wherein a Markush claim excluded from its membership compounds covered in applicant's earlier patents, such Markush claim being held proper so long as no included member was found in prior art. Accordingly, it was held in Appeal No. 3,056 that in a case of this type, involving an amplified chemical disclosure embodied in a later filed copending application, asserting claims which include earlier patented species, and where it is possible to claim a new species or a Markush group limited to exclude the patent species, it is not permissible to allow in the later filed case a claim which would extend the monopoly of the patented species.
>
> We find that this application is a continuation in part of appellant's copending Patent No. 2,261,047 and that the situation here closely corresponds to that presented in Appeal No. 3,056. We are of the opinion that the same principle governs and that generic claims 1 to 4 and 21 were properly rejected as being unpatentable over the claims of Patent 2,261,047.

With respect to the presence of cadmium in claim 21, a matter not referred to by the Board, the Examiner, in a letter of June 11, 1945, responding to an affidavit of appellant filed after the appeal to the Board had been taken, said:

> • • • Applicant points out that the present application discloses both zinc and cadmium salts whereas the parent application is limited to zinc salts. However, only claim 21 is generic to both zinc and cadmium salts and no evidence is of record that cadmium salts produce a result different in kind from that obtained with the zinc salts. The fact that applicant prepared the cadmium salts prior to the filing of the present application in accordance with the procedure related in Example A is immaterial. The affidavit states that the cadmium salt was soluble in mineral oil but no test data is given.

In rejecting claims 6, 14, 15, and 16 which cover a species wherein only phosphorus trisulphide (P_2S_3) was named as the reacting sulphur compound, the Examiner expressed the opinion that it had not been shown "that P_2S_3 produces a result patentably distinct from that obtained with P_2S_5." Also he rejected them upon the disclosure of the Prutton patent hereinbefore detailed. The Board approved the rejection, saying as to the first ground stated:

> Appellant presented an affidavit tending to show improved results with the use of the reagent containing the trisulphide over that obtainable with a reagent containing the pentasulfide, in that it was effective in forming a positive film for protection of the bearing. However, this evidence was discounted by the Examiner on the ground that the comparison was based upon the use of acidic reaction products rather than upon the zinc salts of such products, which is the subject matter of the claims.

We are not convinced that there was any error as to the ground so discussed, but elaboration of it is deemed unnecessary in view of what we regard as a proper rejection upon the disclosure of the Prutton patent.

Appellant's second question of law quoted, supra, is answered in the affirmative.

Turning to question (c), supra, which inquires whether the appealed claims are properly rejectable over Asseff's prior patent on the ground of double patenting, it seems proper to say, first, that it is not clear to us that the rejection below was based solely upon double patenting, although there is one paragraph in the decision of the Board which indicates that it may have deemed the generic group (1 to 4 and 21) to have been properly rejected by the Examiner as being unpatentable over the claims of appellant's patent alone. As to both groups of the appealed claims, however, the Examiner's rejection is based upon appellant's patent in view of other cited art—the Sullivan and Prutton patents in the case of claims 1, 2, 3, 4, and 21 and the Prutton patent only in the case of claims 6, 14, 15, and 16. As we view the case, it was unnecessary to its decision to pass specifically upon the question of double patenting, because it is clear to us that, under the authorities hereinbefore cited, none of the appealed claims is patentable over appellant's own patent in view of the prior art relied upon.

For the reasons stated by the Examiner hereinabove recited it is not thought that the inclusion of cadmium in claim 21 adds anything to the patentability of that claim. In view of our conclusion upon the basis of questions so far discussed, it is unnecessary to pass upon the Examiner's rejection of that claim on the ground of indefiniteness.

An interesting portion of the brief filed on behalf of appellant relates to the right of an applicant who has received a patent for certain species claims to obtain a second patent containing generic claims and claims for another species upon a copending application. Numerous authorities are cited and discussed, among them being the decision by Judge Learned Hand in the well-known case of *Traitel*

Marble Co. v. *U. T. Hungerford Brass & Copper Co.*, 22 F.2d 259, in which there are citations of many decisions including that in the case of *Thomson-Houston Electric Co.* v. *The Ohio Brass Co.*, 80 Fed. 712 (which is often referred to in the patent practice), the opinion being by Judge Wm. H. Taft (later Chief Justice) while he was a United States Judge of the Circuit Court of Appeals for the Sixth Circuit.

In both these cases the courts followed the decision of the Supreme Court in the case of *Miller* v. *Eagle Manufacturing Co.*, 151 U. S. 186, 66 O. G. 845, wherein it was held, in effect, that where two applications of a party are copending it is a matter of indifference which of the patents issued first, provided that the claims are for separate inventions. One of the headnotes of the Miller case, supra, reads:

> A second patent may be granted to an inventor for an improvement on the invention protected by the first, *but this can be done only when the new invention is distinct from, and independent of, the former one.* [Italics supplied.]

If the generic claims here on appeal presented matter patentable over the patent claims of appellant when viewed in connection with the other patents cited as references, the fact that they are embraced in a second application, which is a continuation-in-part of the first application, would not militate against their allowance, the respective applications having been copending, but unhappily for appellant we are unable to agree that such patentability exists.

Also, if the species claims here involved presented matter patentable over the species claims of appellant's patent in view of the Prutton patent, they might be allowable, but here again we are not convinced that such situation exists.

For the reasons indicated the decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

ADAM ET AL. *v.* ROTH

No. 5585. Decided March 1, 1949

[— F.2d —; — USPQ —]

1. INTERFERENCE—REDUCTION TO PRACTICE—CORROBORATION.

No rule of patent law is more firmly established than that which holds that an applicant, however truthful he may be deemed to be by the tribunals of the Patent Office and by the courts, cannot establish reduction to practice by his testimony alone.

2. SAME—SAME—TESTS.

Where appellants contend that the involved invention is of such a simple nature that the mere construction of a device embodying it constitutes its completion and that tests are not needed to meet the requirement of reduction to practice, but it appears that the first device made by appellants so failed to meet the requirements of successful use that it was abandoned, *Held* that of itself would indicate that the second device required full testing.

3. SAME—PRIORITY—ALBUM FOR RECORD DISKS.

Held that the decision of the Board of Interference Examiners awarding priority of the single count relating to albums for holding phonograph record disks, to appellee, is affirmed.

APPEAL from the Patent Office. Interference No. 81,336.

AFFIRMED.

Thomas A. Banning, Jr., for Adam et al.

Roberts B. Larson for Roth.

GARRETT, *C. J.*:

This is an appeal from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority to the party Roth in an interference proceeding involving a single count which relates to albums for holding phonograph record disks. The count reads:

> In an album for record discs centrally apertured to receive the centering post of the turntable of a phonograph, a back cover, a front cover, a retaining post issuing from said back cover and adapted to be received in the central aperture of each of the several record discs of a stack and keep them disposed relative to each other with their central aperture in register, and latch means on the front cover for cooperation with said retaining post releasably to latch the covers together and to hold such record discs strung on said retaining post between said covers.

In view of the issues involved no extraneous explanation or analysis of the count is necessary.

Roth is the senior party, his application having been filed November 11, 1942. That of Adam and Adam, hereinafter usually referred to as appellants, was filed some ten months later on September 15, 1943.

Both the respective parties took testimony but the Board did not consider the evidence presented on behalf of Roth, because it found the evidence on behalf of appellants insufficient to establish a reduction of the invention to practice prior to the filing date of Roth and insufficient also to establish diligence on the part of appellants during the critical period.

The interference was declared February 3, 1944.

It appears that the son, Folger Adam, Jr., was in the military service and received wounds, during the engagement at the Marshall Islands, about February 12, 1944, from which he died on February 23, 1944, prior to the filing of preliminary statement. The statement, apparently filed March 13, 1944, was made by the father on behalf of himself and son. It alleged conception, the making of a drawing and disclosure to others on or about September 1, 1941, and the completion and successful use of a full sized device (which, it was claimed, "constituted a complete reduction to practice") during March 1942. Diligence was alleged also "at all times since the original conception."

The witnesses called and examined on behalf of appellants were the senior Mr. Adam; his wife, Mrs. Hazel C. Adam; a daughter, Mrs. Marjorie A. Fisher, who was living in the home of her parents during 1941 and up to July 1, 1942; and Mr. Herbert P. Stutz, who was in the employ of Folger Adam Company, a manufacturer of prison locks, as machinist foreman, in 1941 and 1942 and at the time of testifying in November 1945. He then testified that he was 26 years old; that he had been connected with the Adam Company for 15 years, and that "every once in a while" Mr. Adam had him "make different things for him"—that is, special things other than prison locks. The record of appellants contains also certain exhibits which were introduced in evidence. Exhibit 2 is stated to be the album completed in March 1942.

As we understand the Board's decision, it awarded appellants conception as early as in September 1941, the time claimed in the preliminary statement, and also "in the early part of 1942." It stated:

> The testimony of Adam Sr., as corroborated by Stutz is deemed to establish that an album was constructed according to the drawing, Adam Ex. 1 in September of 1941 and that another album, Adam Exhibit 2 was constructed in the early part of 1942.

The Board held, however, that there was no reduction to practice of the appellants' device prior to the filing date of Roth, saying:

> It appears from the testimony that the first album underwent a number of changes because of difficulty in gluing the stud washer to the inside face of the album cover and eventually it was discarded and Exhibit 2 built. Thus, even though it was alleged to have been used to carry records, it is not believed that its practicability was sufficiently demonstrated to amount to a reduction to practice.

The Board quoted literally all the pertinent testimony of Mr. Stutz, Mrs. Adam, and Mrs. Fisher, who were the only persons called as corroborating witnesses on the matter of the use of the albums—i. e., reduction to practice. We shall follow the Board's example in this respect to some extent, but before quoting their testimony we reproduce such of the testimony of Mr. Adam, Sr., as is pertinent upon the question of actual use of the albums for holding records:

> Q. Then what did you do, if anything, with this record album, Exhibit Number Two, after you had put the fixture in the front cover, as you have just explained?
> A. We took the sample in to my patent attorney, Mr. Thomas A. Banning, in Chicago, and instructed him to apply for a patent.
> Q. No; but I mean, after you had made up the sample, did you ever make any use of it in your home, prior to that time?
> A. Yes, sir, we tested it, to see that it was a practical method of handling records; protecting them.
> Q. When did you do that?
> A. As soon as it was completed.
> Q. That would be about when?
> A. That would be in March, 1942.
> Q. Did you set any records on that stud and close up the album on it?
> A. Oh, yes, we had done that on the first sample we built, in September, 1941.
> Q. What was the result of the test that you made on this Exhibit Number Two, in March of 1942?
> A. It was perfectly satisfactory. The only point that my son and I disagreed on and argued about was that of the thread, and the amount of rotation necessary on the wing nut to effect the engagement.
> Q. What do you mean by disagreement or argument about this matter?
> A. Well, I felt that the engagement between the stud and the nut should be made with only a partial turn of the wing nut. My son thought it was unimportant how many times you turned it.
> Q. So that was simply a matter of degree of rotation, was it not?
> A. That is exactly true.
> Q. Did you use this particular record album, Exhibit Number Two, more than once to hold records as you have just explained?
> A. Yes, sir, we had records in it continually. In fact, when I delivered it to our patent attorney, it had two or three records in it. Perhaps he knows what became of them.
> Mr. Banning [counsel for appellants]: Objection. I will say this: They were not symphonies.

Elsewhere the witness testified as to loading the album made in September 1941 with records, but in view of the fact that that album was discarded and cannot, under the facts of this case, be considered upon the matter of reduction to practice that testimony need not be reproduced here. It might be of importance upon the question of conception if that were in question, but in the brief for Roth it is conceded, "for the purpose of this appeal," that "the invention embodied in the counts was conceived by Folger Adam Sr. and his son, Folger Adam Jr., about September 1, 1941." This, we may state, is prior to any date which could be awarded Roth for conception upon the record as it stands, Roth's earliest claim, in his preliminary statement, of the beginning of any activity being in October 1941.

If the testimony of Mr. Adam, Sr., upon the matter of using the album, Exhibit Number 2, were properly corroborated, even though it is somewhat meager of itself, it would seem that appellants should prevail, but unfortunately for them no such corroboration is found in the record.

The witness Stutz was able to corroborate him upon certain phases of the matter but the entire testimony of this witness relating to the use of the album for holding records is embraced in the following:

> Q. Did you ever see them [referring to the parts which he had made in conformity with a drawing produced by Mr. Adam, Sr.] being used with records on them after they were assembled into the album?
> A. I saw this once, I think, afterwards.
> Witness indicates Adam Exhibit Number Two.
> Q. Did you ever see any records in this album, Exhibit Number Two?
> A. I don't recall any records being in the album.

The following is from the testimony of Mrs. Adam:

> Q. A few minutes ago you referred to this album which is lying on the desk, marked Adam Exhibit Two. When is the first time that you recall having seen that, or anything similar to that?
> A. I think there was one before that that they were working on.
> Q. Did you see that?
> A. I am quite sure that I did. They worked on it, and probably worked it to pieces. I think they had to try two or three.
> Q. Do you remember about when it was that you saw that first one?
> A. I would say it was in the spring of 1941.
> Q. The spring of 1941. Well, anyway, was it before Folger Adam, Junior, went back to college in the fall of 1941?
> A. Yes, it was.
> Q. Have you ever seen this Exhibit Number Two, do you remember, before coming into this room today?
> A. Yes, sir.
> Q. When did you see it?
> A. Well, when they were working on it. I think that was in 1941.
> Q. Where was it that you saw the Exhibit Number Two?
> A. At home. That is the only place I have ever seen it: at 310 Sherman Street.
> Q. Did you notice at that time how it was built, or used, or worked?
> A. No, I did not.
> Q. You did not examine the details?
> A. No, I did not.
> Q. But you do remember that it looked like the exhibit which is on the table here?
> A. Yes, sir.
> Q. And do you remember whether or not you ever heard them pass any comments as to the workability of it, or whether it would work satisfactorily, or could be made to work satisfactorily, or anything of that sort?
> A. No. No, I do not.

The testimony of the daughter, Mrs. Fisher, like that of her mother, indicates that she had no familiarity with mechanical matters, and, as stated, in substance, by the Board was not able to explain the structure in a manner which showed that it was within the requirements of the count. We think it unnecessary to quote her testimony literally.

The inability of the witness to explain the structure would not be of any particular importance before us because of concessions made on the part of the party Roth, but the inability, or at least the failure, of any witness to corroborate Mr. Adam, Sr., upon the matter of use of Exhibit 2 for holding records is fatal to appellants' case so far as actual reduction to practice is concerned.

[1] No rule of patent law is more firmly established than that which holds that an applicant, however truthful he may be deemed to be by the tribunals of the Patent Office and by the courts, cannot establish reduction to practice by his testimony alone. As expressed by the Board in its decision here appealed from:

> * * * an applicant must be fully corroborated as to the successful testing of a device embodying all of the limitations of the count or counts in order to establish a reduction to practice * * *. Obviously witnesses who do not know the construction of the device being tested as in the present case cannot supply the essential corroboration. (*Castricone v. McCabe*, 520 O. G. 269, 1940 C. D. 536, 27 CCPA (Patents) 1198, [111 F.2d 653, 45 USPQ 426]; *George v. Kersel*, 518 O. G. 776, 1940 C. D. 401, 27 CCPA (Patents) 1063, [111 F.2d 148, 45 USPQ 151]; *Muessner et al. v. Hoschke et al.* [sic Miessner v. Hoschke] 545 O. G. 443, 1942 C. D. 103, 76 App. D. C. 343, [131 F.2d 865, 55 USPQ 221]).

[2] One of the contentions on behalf of appellants before us is that the involved invention is of such a simple nature that the mere construction of a device embodying it constitutes its completion and that tests are not needed to meet the requirement of reduction to practice.

We are unable to agree with this contention. The first device made by appellants, although conceded by appellee to have demonstrated conception of the idea, so failed to meet the requirements of successful use that it was abandoned. That of itself would indicate that the second device required full testing. It is somewhat rare to find a device or method or composition which meets the test of invention where no actual reduction to practice must be shown. We do not think the device here involved does so.

The question of diligence need not be dwelt upon, because it is perfectly clear that there was no activity by appellants during a time just prior to Roth's filing date, November 11, 1942, until their own filing date, September 15, 1943, which indicated the slightest diligence. The date when the matter was placed in the hands of appellants' attorney for the preparation of an application is not shown. No excuse for the delay in filing is offered other than statements by Mr. Adam, Sr., that he was engaged in war work.

[3] The decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE ASHBAUGH

No. 5535. Decided March 1, 1949

[— F.2d —; — USPQ —]

1. PATENTABILITY—PROCESS—FUNCTION OF APPARATUS.
   Where appellant's application nowhere contains a description of a method which is divorced from the mere operating of the machine which depends upon an elaborate hydraulically and electrically controlled means, *Held* that no error exists in rejecting method claims as reciting nothing more than the mode of operation of appellant's device.
2. SAME—SAME—SAME.
   Though mechanical operations may be covered by process claims, claims which recite the mere function of an apparatus have been consistently rejected by the tribunals of the Patent Office, which rejections have been affirmed by this court.
3. SAME—SAME—OPERATION BY OTHER MEANS.
   Where appellant contends that the involved process can be carried out by various devices, but the suggested modifications of appellant's apparatus are merely alternatives in parts of his device that do not change the essential character of that apparatus, *Held* that appellant has not shown that the method is capable of being performed by other apparatus or means different from his device.
4. SAME—PARTICULAR SUBJECT MATTER—PROCESS OF CONTINUOUS EXTRUSION MOLDING.
   Certain claims to a process of continuous extrusion molding of plastic material *Held* properly rejected as reciting nothing more than the mode of operation of appellant's device.

APPEAL from the Patent Office. Serial No. 495,553.

AFFIRMED.

Albert Grobstein for Ashbaugh.

W. W. Cochran (*Clarence W. Moore* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This appeal is from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner, rejecting method claims 15 to 20, inclusive, of an application for a patent for a method and apparatus for injection of plastics in a continuous strip. Eight apparatus claims were allowed.

The involved claims were rejected by the Primary Examiner as reciting nothing more than the mode of operation of appellant's device, and because in the opinion of the Examiner they do not recite a method of treating material, such as falls within the meaning of the statutes. The Board of Appeals affirmed the decision of the Examiner on the first ground of rejection and reversed it on the second ground.

Claim 15 is considered illustrative of the subject matter defined by the involved claims and reads as follows:

> 15. A process of continuous extrusion molding of plastic material by intermittent applications of pressure upon the plastic material to obtain a continuous extruded length that includes, applying a first source of relatively constant extrusion pressure upon a body of plastic material in an extrusion chamber to force the material therefrom, introducing a fresh charge of plastic material into a feeding chamber that communicates with the extrusion chamber while continuously maintaining the first extrusion pressure upon the body of the plastic material in the extrusion chamber to continue extrusion thereof, and applying a second source of relatively constant extrusion pressure of a value equal to the first source upon the fresh charge of plastic material to move the fresh charge into communication with the extrusion chamber while the first pressure is still applied upon the material to maintain constant pressure upon the body of plastic material in the extrusion chamber to cause continued extrusion therefrom and concomitant recharging of the extrusion chamber from the fresh charge of plastic material when the first source is recovering for another operation.

The invention relates to an injection apparatus particularly adapted for continuously ejecting plastic material from an injection cylinder so that continuous length strips are produced. A rather complex device is disclosed comprising a horizontal extrusion chamber on the forward end of which is an extrusion die. There are two reciprocal plungers motivated by hydraulic motors for applying pressure upon the plastic material in the extrusion chamber and extruding the material through the die. One of the plungers functions in a cylindrical feed channel which opens into the extrusion chamber at an angle of about 45 degrees with relation to the second plunger which is aligned in its annular channel with the extrusion chamber. A feed hopper into which the granular plastic is placed feeds the material into the channel of the first plunger when the bottom end of that plunger is so positioned that the mouth of the hopper is open. The channel through which the second horizontal plunger functions is a reciprocal sleeve which operates in a backward and forward movement by means of hydraulic motors. The sleeve when in a forward position completely cuts off the feed channel in which the first plunger operates, as the second plunger continues the pressure upon the extrusion chamber.

While the sleeve is in a closed position, the first plunger is retracted beyond the mouth of the feed hopper so that a fresh charge of the plastic material enters the feed channel. When the fresh charge has been delivered, the sleeve is retracted so as to open the mouth of the feed channel. The pressure on the plastic material throughout the extrusion chamber and die is constant by reason of the action of the plungers.

[1] The Examiner, in rejecting the method claims as reciting nothing more than the mode of operation of applicant's device, relied upon the case of *In re Ernst et al.*, 21 CCPA (Patents) 1235, 71 F.2d 169, 22 USPQ 28, 449 O. G. 507. The Board of Appeals held that the facts in the instant case appear to be quite similar to those in the case of *In re Ernst*, supra, and quoted from the holding therein as follows:

> Nowhere in appellants' specification is it pointed out how their process could be carried out except by means of apparatus for which they have been allowed claims, and we agree with the decision of the Board of Appeals wherein it is stated that "* * * it is not apparent how the alleged method could be performed independently of this specific apparatus or one having exactly equivalent corresponding elements."

We find no error in the decision of the Board.

A careful examination of the application shows that no method of any kind is expressed therein other than statements in the objects of the invention that it is to provide a method as well as an apparatus for extruding continuous length plastic articles or strips.

Counsel for appellant stresses in his brief that the objects of appellant's invention include both method and apparatus. It is quite true that in the application, as hereinbefore stated, method is mentioned, but we find nowhere therein a description of a method which is divorced from the mere operating of the machine which depends upon an elaborate hydraulically and electrically controlled means.

[2] It is not disputed, as stated in the brief for appellant, that mechanical operations may be covered by process claims. As pointed out in the brief of the Solicitor, that question has been well settled in the case of *Expanded Metal Company v. Bradford*, 214 U. S. 366. Furthermore, claims which recite the mere function of an apparatus have been consistently rejected by the tribunals of the Patent Office, which rejections have been affirmed by this court. Typical of such decisions are the cases of *In re Nichols*, 36 CCPA (Patents) —, — F.2d —, 80 USPQ 143, 602 O. G. 347; *In re Solakian et al.*, 33 CCPA (Patents) 1054, 155 F.2d 404, 69 USPQ 514, 590 O. G. 514; *In re Cornell*, 32 CCPA (Patents) 1161, 150 F.2d 569, 66 USPQ 230, 581, O. G. 512; *In re Mead*, 29 CCPA (Patents) 1001, 127 F.2d 302, 53 USPQ 380, 542 O. G. 390; *In re Wadman*, 25 CCPA (Patents) 936, 94 F.2d 993, 36 USPQ 542; *In re Francis H. Weeks*, 18 CCPA (Patents) 1234, 48 F.2d 662, 9 USPQ 166, 411 O. G. 7; and *In re Ernst et al.*, supra.

[3] In view of those cases, in order that appellant may prevail, it is necessary for him to show that the method described in the involved claims is capable of being performed by other apparatus or means different from that of his device.

Counsel for appellant contends that the involved process can be carried out by various devices. In support of that contention, he states that the pressure applied by the second plunger can be obtained by the application of hydraulic or pneumatic pressure upon the plunger or that such pressure could be directly applied to the plastic material in the cylinder wherein the plunger operates, thereby completely eliminating the plunger. In that event he reasons that the plastic material could be moved forward by direct application of such pressure through controlling the delivery of the material into the cylinder at a constant rate or volume. He also contends that the second plunger can be operated mechanically at a constant rate of forward motion using a common rack and gear mechanism or by means of a cam. He states that that plunger could be moved in a forward direction at a constant rate for applying pressure on the plastic material at the same rate by having one end of the plunger formed into a large screw and rotated within a cooperating internally threaded member so as to move the plunger forward at a constant rate. Counsel for

appellant further states that the first plunger through which the fresh charges of material are pressed into the injection chamber could be operated either pneumatically or hydraulically, and that such pressure could be applied directly upon the material in the cylinder through which the first plunger operates so as to maintain a constant pressure in the same manner as that accomplished by the plunger. It is also stated that the sleeve through which the second plunger functions could be entirely eliminated and a butterfly or gate type of valve could be placed in the lower end of the feeding cylinder and the plastic material could be fed into the hopper by means of a rotating screw rather than by gravity, as illustrated.

We see nothing in the suggested modification of appellant's apparatus that substantially changes the essential character of that apparatus. Counsel for appellant is suggesting merely alternatives in parts of his device.

[4] For the reasons stated herein, the decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

CARLTON *v.* ROBIE

No. 5490. Decided February 1, 1949

[— F.2d —; 81 USPQ 201]

1. INTERFERENCE—PRIORITY—BURDEN OF PROOF.
   Appellant being the junior party, upon him rests the burden of establishing priority of invention by a preponderance of the evidence.
2. SAME—REDUCTION TO PRACTICE—PRIOR APPLICATION.
   Held that appellee is entitled to the benefit of a prior joint application as his date of conception and constructive reduction to practice of the invention in issue.
3. SAME—PRIORITY—HEAT RESISTANT ABRASIVE ARTICLE.
   Held that the decision of the Board of Interference Examiners awarding priority of invention of the two counts in issue relating to a bonded heat-resistant abrasive article, to appellee, is affirmed.

APPEAL from the Patent Office. Interference No. 81,220.

AFFIRMED.

Harold J. Kinney (*Richard K. Stevens* and *Carpenter, Abbott, Coulter & Kinney* of counsel) for Carlton.

William H. Webb, Donald A. Gardiner, and *Stebbins, Blenko & Webb* for Robie.

JOHNSON, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Interference Examiners awarding priority of invention of the subject matter of two counts to appellee.

The interference involves the application of appellant, Serial No. 261,069, filed March 10, 1939, and the application of appellee, Serial No. 487,621, filed May 19, 1943.

Appellee also relies in this interference on two earlier, four-party applications filed jointly by him with Benner, Ball, and Rossow; namely, application No. 336,212, filed May 20, 1940, and application No. 137,796, filed April 19, 1937.

This interference is a companion of Interference No. 80,225, Patent Appeal Nos. 5485, 5486, decided concurrently herewith. Appellant is a party to the companion case, while the appellee is involved therein as one of the joint applicants.

In Interference No. 80,225, the common assignee of the applicants Robie and Ball on May 25, 1943, filed a motion seeking the declaration of an interference between the involved applications, and urged that appellee be given the benefit of the earlier applications, hereinbefore referred to, which were filed by appellee, Ball, Benner, and Rossow. The appellant urged that if such interference should be declared, appellee should not be given the benefit of said earlier applications. The Primary Examiner granted appellee's motion on September 18, 1943. Appellant requested a reconsideration of that decision by the Primary Examiner. The Primary Examiner adhered to his ruling therein in a further decision on November 10, 1943. Pursuant to said rulings, the present interference was declared, and appellee was given the benefit of the said earlier filed applications.

The subject matter here in issue is defined in the two counts which compose the issue:

1. A bonded heat-resistant abrasive article of the coated abrasive type comprising abrasive particles bonded to a flexible backing by a binder comprising a uniform mixture of casein and a sodium silicate cement.
2. A bonded heat-resistant abrasive article of the coated abrasive type comprising abrasive particles bonded to a flexible backing by a binder comprising a uniform mixture of casein and a sodium silicate cement.
3. A bonded heat-resistant abrasive article of the coated abrasive type comprising abrasive particles bonded to a flexible backing by a binder comprising casein and sodium silicate.

[1] Appellant took testimony. Appellee took no testimony, but filed affidavits containing disclaimers by Ball, Benner, and Rossow of the subject matter involved in this interference. Both parties have filed briefs, and were represented at final hearings. Appellant being the junior party, upon him rests the burden of establishing priority of invention by a preponderance of the evidence.

Appellant does not question that the invention defined in the counts is disclosed in appellee's application and the two earlier applications upon which he relies. We therefore deem it sufficient to state that we agree with the Primary Examiner and the Board of Interference Examiners that it is disclosed in those applications.

[2] Appellant contends that appellee is not entitled to rely on the filing date of the 1937 Robie et al. application as the date of conception and a constructive reduction to practice of the subject matter here in issue, and in support of this contention cites *In re Roberts*, 49 App. D. C. 250, 263 Fed. 646. We have carefully considered the similar question presented in the companion interference, No. 80,225, Patent Appeal Nos. 5485, 5486, and for the same reasons that are given on that issue in our decision therein, we hold, as did the Primary Examiner and the Board, that appellee is entitled to the benefit of the filing date of April 19, 1937, as his date of conception and constructive reduction to practice of the invention in issue.

Appellant cannot prevail unless he establishes that he conceived the invention prior to April 19, 1937, and that he exercised reasonable diligence in reducing the invention to practice during the period beginning just prior to April 19, 1937, and ending March 10, 1939.

Appellant contends that the evidence establishes conception prior to April 19, 1937, and he calls special attention to the following stipulation:

> • • • that if Bert S. Cross were called as a witness; he would testify that work on silicate bonded abrasive articles of the coated abrasive or sandpaper type was carried out in the glue bond laboratory of Minnesota Mining & Manufacturing Company, during each of the years 1936, 1937 and 1938, and that he initiated discussions with patent counsel for the filing of a patent application on silicate bonded sandpaper, specifically including sandpaper bonded with a uniform mixture of casein and sodium silicate at least as early as the month of November 1938.
>
> And that a memo report dated January 13, 1937, from the files of said Bert S. Cross, bearing a typewritten signature of B. J. Oakes, makes reference to sodium silicate, casein adhesive for sandpaper, indicating interest in mixes of casein and sodium silicate as a bond for sandpaper at that time.
>
> It is further stipulated that the memo of January 13, 1937, is a memo relating to a patent meeting which was called for the purpose of considering what action might be taken in connection with the seeking of patent protection.

This stipulation showing that "work on silicate bonded abrasive articles of the coated abrasive or sandpaper type" was carried out during each of the years 1936, 1937, and 1938 does not show that work on the use of a mixture of casein and sodium silicate was carried out at those times. Further, the stipulation that discussions were initiated with patent counsel for the filing of a patent application on silicate bonded sandpaper specifically including sandpaper "bonded with a uniform mixture of casein and sodium silicate at least as early as the month of November 1938" falls far short of establishing conception prior to April 19, 1937.

The second paragraph of the stipulation hereinbefore set out simply states, "• • • indicating interest in mixes of casein and sodium silicate as a bond for sandpaper at that time," which does not clearly show a conception of the invention in issue. The reference to "sodium silicate, casein adhesive for sandpaper" does not show that such mixture was contemplated as the bonding material for bonding the grains to a flexible backing.

The last paragraph of the stipulation, supra, refers to a "patent meeting which was called for the purpose of considering what action might be taken in connection with the seeking of patent protection," but it does not disclose what the patent protection was sought for, and it does not disclose that it referred to this particular invention.

[3] We have carefully examined all of the evidence, but we do not find that it establishes a conception of the invention here in issue prior to April 19, 1937.

For the reasons hereinbefore set out, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE CUSTER

No. 5510. Decided March 1, 1949

[— F.2d —; 81 USPQ 99]

1. PATENTABILITY—APPARATUS—UNDUE BREADTH.
   Where the alignment of the propeller disc and wing concavity is fundamental in producing the result which would make appellant's combination patentable over aircraft structures known to the art, *Held* that because the claim fails to clearly state this essential element, it is too broad.
2. CLAIMS—CONSTRUCTION—LIMITATION NOT EXPRESSED.
   It is well understood that applicants for patent may not have read into their claims limitations not expressed therein although emphasized in their applications.
3. SAME—SAME—SAME.
   Held that this court will not reverse a decision of the Board by reading into a claim a limitation not expressed in the claim and not considered by the Board.
4. PATENTABILITY—APPARATUS—AGGREGATION.
   Since the claim is indefinite in describing the essential relation which gives appellant's aircraft patentability over the prior art, *Held* that it fails to describe a combination, and the elements which are recited, merely recite an aggregation.
5. WORDS AND PHRASES—"CHANNEL WING."
   Held that "channel wing" means a wing structure of a single channel-like configuration.
6. PATENTABILITY—APPARATUS—UNDUE BREADTH.
   Where patently, the channel defined in the claim could not be of just any size and still obtain the novel and unusual results of appellant's invention, and where the claim supplies no limiting criteria which will assist in limiting the claim to the order of dimension required to secure the results, *Held* that the claim is too broad.
7. SAME—PARTICULAR SUBJECT MATTER—AEROPLANE.
   Certain claims for an aeroplane *Held* properly rejected as lacking invention over the prior art, aggregative and as lacking clarity.

APPEAL from the Patent Office. Serial No. 439,257.

AFFIRMED.

Garvey & O'Connell (*B. F. Garvey* and *J. A. O'Connell* of counsel) for Custer.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JOHNSON, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 5, 6, and 7 in appellant's application for a patent for an invention of "new and useful improvements in an aeroplane." Each of the appealed claims were rejected as lacking invention over the prior art, while claims 5 and 7 were also rejected as being aggregative, and claim 5 was additionally rejected as lacking clarity. Claims 17 and 18 were rejected by the Primary Examiner as being unpatentable in view of the prior art; however, the Board, while affirming the Examiner's rejection of those claims, recommended their allowance if amended in the manner suggested in the Board's decision. The recommended amendment was made by appellant, and claims 17 and 18 are not before us on appeal.

The references cited by the Examiner and the Board art: Henter et al., 1,868,832, July 26, 1932;

Stipa, 1,873,505, August 23, 1932; Henter, 2,194,596, March 26, 1940; Stipa (French), 796,984, February 3, 1936.

The appealed claims read as follows:

5. An aeroplane including a fuselage, wings on the fuselage, each of the wings being provided with a channel arranged in the direction of flight of the aeroplane, the channels opening upwardly and extending from the front to the rear edges of the wing and propellers carried by the fuselage and positioned to operate adjacent the aft ends of the wing channels the distance between each propeller disc and the aft end of its corresponding channel being less than one-sixth of the diameter of the disc.

6. An aeroplane including a fuselage, a channel wing opening upwardly, carried by each side of the fuselage the depth of the channel being constant from the front to the rear edges of the wing, and means for creating low air pressure areas in the wing concavities whereby static lift is effected.

7. An aeroplane including a fuselage, concave wings carried by the fuselage, landing control means carried by said wings, certain of the controls being within and the others beyond the lateral extent of said wing concavities, and means for creating low air pressure areas in the wing concavities.

Appellant's invention consists of the combination of a standard fuselage and empennage with concave, channel, or scoop-like air foil type wings opening upward and provided with parallel aligned ailerons supported by spars traversing the upper opening of the concave channel wing; aileron equipped wing tips laterally extending from the outer extremity of the channel wings in the plane of the spars before mentioned; and, a propeller supported from each side of the fuselage positioned adjacent the rear edge of the channel wing surfaces so that the lower semi-circle of the disc of rotation of each propeller coincides with the arc of the rear surface of the channel wings.

The effect of the propellers pulling the air through the channel formed by the inner surface of the concave wings is said to be the production of such a low pressure area within the channel area that the lift coefficient of the wings is augmented to an unexpected degree. The aileron or flap landing control affixed to the spar above the channel opening, and lowerable into the channel area, assists in reducing air speed without sacrificing lift. The increased lift factor together with the landing control means permits the use of the full force of the engine in landing and taking off, the propeller producing lift at the expense of forward motion without sacrificing stability.

The advantages claimed for the invention may be summarized as: a retention of maximum speed, an increase in the dynamic as well as static stability, decreased landing speed, and, an augmented lift coefficient. The invention permits safe take-off and landing by high speed aircraft on short runways such as battleship decks, aircraft carriers, and small airfields without using added appurtenances, increasing the wing area, decreasing the maximum speed, or jeopardising the stability factor.

The Henter et al. patent, No. 1,868,832, provides for "a depression on the upper side of a sustaining wing which depression ends into a circularly depressed trailing edge before the corresponding air screw, thereby shielding the air screw against the air flowing on the lower side of the wing." There is also in that patent provision for "slots arranged in the surface on the upper side of the aerofoil, said slots being connected by ducts with said depressions," such that "air from the upper side of the aerofoil flows through said slots and ducts to said airscrews."

The results obtained by Henter et al., as stated substantially in the language of the patent specification, are:

1. The suction induced by the air screws affects a larger portion of the upper wing surface than with the air screw above a straight, undepressed trailing edge. The new kinetic energy induced upon the boundary layer prevents this layer from setting up a reverse flow.

2. The arrangement of the depressions with their corresponding air screws behind enables also suction of air through slots and ducts from such points on the upper side of the aerofoil, where the flow is liable to break away. Such air is then discharged rearwards by the air screws and the reverse flow of the boundary layer near the slot or opening inlets cannot occur.

3. A controllable flap is provided behind the air screws that is capable of directing the discharge flow of the air screws as well as the wing downwards to obtain temporarily a high lift coefficient, for instance for landing.

The Henter patent, 2,194,596, merely incorporates the disclosure of Henter et al. in various aircraft types.

The Stipa domestic patent provides for a tube mounted in a fuselage, and a propeller positioned in front of, or within, the tube, but in any case limited by "at least a part of said tube being situated behind said propeller." The propeller and tube cooperate to secure a Venturi effect, transforming the dynamic pressure into static pressure in the diverging portion of the tube, the reaction thereby increasing the propelling action of the screw. Openings are provided in the upper surface of the fuselage or wing leading into the tube. The effects secured by the invention are a decrease in the resistance of the air to the flight, and an increase in the lifting power of the aircraft.

The French patent to Stipa is an adaptation of the earlier Stipa patent, described in the preceding paragraph, the essential difference consisting in situating a Venturi tube on each side of the fuselage rather than a single tube in the fuselage as heretofore. Both Stipa references disclose movable flaps at the rear of each channel, and ailerons at the wing tips.

In rejecting claim 5 as aggregative and lacking clarity, the Examiner stated that the claim revealed no cooperative or useful relation between the propellers and the channel wings. The claim, he held, does not limit the relationship of propeller and channel wing to one of alignment, but would admit of a relation where the propeller was below the wing, out of alignment with the channel area. The Board agreed with that finding.

In meeting that finding, appellant's counsel refers to the statements in the claim that the channel opens upwardly and extends from the front to the rear edges of the wing, and that the propellers are carried by the fuselage and positioned to operate adjacent the aft ends of the wing channels. He then says that "This art has been extant for more than 75 years, during which time many patents have been granted, including the combination of wings and propellers. In all instances the proximity of the propellers to the wings is such as to, in theory at least, effect an operative structure." We scarcely think counsel intends to admit the combination of channel wing and aligned propeller for which he is seeking a patent is old to the art. He further interprets the Examiner and Board as referring to the distance between the disc of rotation of the propeller and the rear surface of the channel wing, whereas the Examiner and Board are actually referring to the alignment of the lower half of the disc of rotation of the propeller with the arc-like configuration of the rear edge of the channel wing so that the vital effect of the invention; viz., inducing a flow of air through the channel, is secured.

[1] Since the alignment of the propeller disc and wing concavity is fundamental in producing the result which would make appellant's combination patentable over aircraft structures known to the art, his failure specifically to set out the relationship of alignment in claim 5 is fatal to the claim. The use of "adjacent" in the claim as the limiting word describing the relation of propeller to wing channel would allow a relation where the propeller would be beside the channel laterally, or at a variety of positions other than the one essential position of alignment with the channel. We agree with the Examiner and the Board that claim 5 lacks the requisite clarity to identify and limit the combination to that propeller-wing channel relationship which is the basis of its patentability. The appellant's claim is too broad because it fails clearly to state this essential element. *In re Vincent J. Burnelli*, 17 CCPA (Patents) 918, 38 F.2d 891, 396 O. G. 8. [2] Nor are we able to limit the normal meaning of "adjacent" by reference to the specification and drawing of appellant's application, for it is well understood that applicants for patents may not have read into their claims limitations not expressed therein although emphasized in their application. *Martin v. Chapman and Littleford*, 21 CCPA (Patents) 1187, 71 F.2d 174, 22 USPQ 50, 448 O. G. 765. [3] This court likewise will not reverse a decision of the Board by reading into a claim a limitation not expressed in the claim and not considered by the Board. *In re Freeman*, 35 CCPA (Patents) 1127, 168 F.2d 81, 77 USPQ 596, 613 O. G. 801.

[4] Since claim 5 is indefinite in describing the essential relation which gives the appellant's aircraft patentability over the prior art, it likewise fails to describe a combination, and the elements which are recited, being shorn of the limitation vital to their patentability as a combination, merely recite an aggregation. It is therefore unnecessary to consider the additional ground of rejection cited below; viz., lack of patentability over the prior art, as the claim is fatally defective on the grounds hereinbefore considered.

[5] Claim 6 was rejected by the Examiner as lacking invention over each of Henter and Henter et al. The Board held that the provision for a channel of constant depth from front to rear does not sufficiently distinguish the claim from the references, and adds that the provision would admit of a very shallow concavity since the word "channel" contains no size limitations. The Board states that "channel wing" would embrace early well-known aircraft which used corrugated wing surfaces. As to this, appellant's claim refers to "channel wing" and the specification and drawings support the presumption that what is meant here is a wing structure of a single channel-like configuration. This would not embrace a wing whose surface contained many small corrugations or channels.

[6] The combination of the terms, however, fails adequately to cure the latent defect of limiting the channel to some order of dimension. Patently, the channel could not be of just any size and still obtain the novel and unusual results of the appellant's invention. Claim 6 supplies no limiting criteria which will assist in limiting the claim to the order of dimension required to secure the results of the invention. Obviously, "means for creating low pressure areas in the wing concavities whereby static lift is effected" is a functional description which, when coupled to the broad and indefinite antecedent description fails to distinguish the combination in a patentable way. Without limiting data within the claim, it could easily cover "depressions" in the wing as set forth in the Henter et al. patent. We agree with the Examiner and the Board that claim 6 does not sufficiently distinguish appellant's invention from the Henter and Henter et al. references. Furthermore, the claim is too broad, fails to set out important limitations as to dimension, and on this basis is likewise defective. *In re Vincent J. Burnelli*, supra.

Appellant strenuously opposes the rejection of claim 6 on the ground set out by the Examiner and the Board. He refers to the Board's decision qualifying its action on claims 17 and 18 of the application to permit allowance if and when amended to state "the depth of the channels is substantially constant from the front edge to the rear edge of the wing," and insists that since this limitation first appeared in claim 6, its application to claims 17 and 18 alone had the vital effect of curing otherwise unacceptable claims. We cannot agree. Claims 17 and 18, as amended, read as follows (amending clause italicized):

17. An aeroplane including a fuselage equipped with a wing on each side of the fuselage, each of the wings being provided with an upwardly opening channel, the channel extending from the front to the rear edge of the wing, *the depth of each channel being substantially constant from the fore to the aft edge of the wing* a propeller mounted on said aeroplane, the plane of rotation of the propeller disc being substantially in the transverse plane defined by the rear edge of the channel, the rear edge of the channel substantially coinciding with the lower half of the periphery of the propeller disc.

18. An aircraft having a lifting surface, said lifting surface being provided with an upwardly opening channel, the channel extending from the front to the rear edge of the surface, *the depth of each channel being substantially constant from the fore to the aft edge of the wing* a propeller mounted on said surface, the plane of rotation of the propeller disc being substantially in the transverse plane defined by the rear edge of the channel, the rear edge of the channel generally coinciding with the lower half of the periphery of the propeller disc.

It will be seen that claims 17 and 18 describe in detail the invention, including the essential aspect of the coincidence of the disc of rotation of the propeller and the configuration of the channel in the plane defined by the rear edge of the channel.

Claims 17 and 18, then, possess the data requisite to identify the essential relationship of alignment of the channel concavity with the propeller disc. The terminology of claim 6 is fatal in failing to include such criteria. For these reasons we agree with the tribunals below that claim 6 is not allowable.

Claim 7 was rejected by the Examiner because it fails to specify any cooperative relationship between the "landing control means" and "means for creating low air pressure areas in the wing concavities." For this reason the Examiner considered the claim aggregative. The Board agreed with the position of the Examiner, adding the explanation that as "directional controls," the "ailerons" would presumably be normally operative under "dead propeller" conditions as well as otherwise, so long as the air speed was sufficient for maneuverability. The appellant contends that the Board is in error, specifically, in overlooking the following statements in the record:

> With the present invention, instead of cutting off the engine for landing, the full horsepower is utilized, the propeller, during this period, producing lift at the expense of forward motion. • • • • • • •
>
> Consequently the engine, instead of being employed only for the take off and propulsion in flight, is likewise used to the extent of its horsepower for landing.

Counsel then contends that in view of those statements there is a "clear interdependence of function" between the "landing control means" and the "means for creating low air pressure areas in the wing concavities."

[7] The full scope of claim 7 must be considered, however, and we find it defective for the reasons set out for claim 6. The combination of terms used fails to supply any reference for limiting the channel wing in the order of dimension in its concave portions. As we have pointed out above, such inadequacy is fatal. The claim with this defect present fails to set forth any patentable cooperative relationship, as stated by the Examiner, and recites merely an aggregation. Moreover, the claim because of such defect fails to distinguish appellant's invention in a patentable way over the Henter and Stipa references all of which provide for controls which operate within and without the area of channel-like depressions.

For the foregoing reasons, the decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE DOVE

No. 5519. Decided March 1, 1949

[— F.2d —; 81 USPQ 109]

1. PATENTABILITY—INVENTION—COMBINING REFERENCES. Where appellant's device is an aggregation of expedients old to the art producing a result which does not exceed the contribution normally to be expected as the sum of the results obtained from each part, *Held* that no inventive contribution to the art is involved.

2. SAME—PARTICULAR SUBJECT MATTER—OVERHEAD DOOR CONSTRUCTION. Certain claims to an overhead door construction *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 426,078.

AFFIRMED.

M. E. Jones for Dove.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JOHNSON, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office sustaining the decision of the Primary Examiner rejecting, as unpatentable over the prior art, claims 10 and 11, which are all of the claims in appellant's application for a patent for an overhead door construction, particularly adapted for use as a garage door.

Claim 11 is illustrative and reads as follows:

> 11. In an overhead door construction of the type having supporting channel members for the door extending at right angles thereto and for counterweights for the door, and fulcrumed on rotatable sleeves intermediate their ends upon side supporting ground engaging frames to rotate to move the door from a vertical closed position to an overhead horizontal open position; the combination of an arcuate upstanding flange on one of the frames provided with a notch, a pawl shaped like a bell-crank pivoted on one side of a supporting channel member in the path of the flange to engage in the notch when the door is in an open position to prevent rotation of the supporting member to move the door to a closed position, a link connected with the pawl and extending angularly to a point adjacent the forward edge of the door in open position, a pivoted lever connected with the link and mounted on the door, and a handle connected with the lever to draw the link and disconnect the pawl from the notch when it is desired to close the door.

The references relied on are: Armitage, 781,986, Feb. 7, 1905; Larscheid et al., 1,162,936, Dec. 7, 1915; Fontaine, 1,262,765, Apr. 16, 1918; Bird, 2,177,275, Oct. 24, 1939.

It is not necessary to state a description of the above claim as it is self-explanatory of the disclosed apparatus.

The references disclose that in the Bird patent a garage door is supported by means of arms which are mounted on pivots. The door has a latch held by a spring so that it projects outwardly from the door. When the door is open, the latch engages the door and prevents it from closing. A cord which is attached to the latch is used for opening the door so that when a pull is given the cord, the latch is drawn inwardly. The Armitage patent discloses a supporting frame adjacent the pivoted member which is provided with a series of notches, the pivoted member carrying a pivoted arm provided at one end with a latch which may enter any one of the notches. To the other end of the latch arm is attached a cord, and when a pull is given that cord, the latch will be disengaged and also turn the pivoted member. The illustrated form is a transom.

The Larscheid et al. patent discloses a center pivot hinge for swinging window sashes, the sash being provided with a spring-held lock and cooperating lock segment which lock the sash in desired positions and which can be released by means of a pull cord.

The Fontaine reference discloses a locking and releasing mechanism for pivoted mirror frames, the frame being locked in desired positions by means of a lever pivotally mounted so that its end is linked to a pawl which in turn is pivoted and which engages teeth in a curved segment member of the mirror frame.

It will be readily seen that the operation of the structure defined in the Bird patent and that defined by the two appealed claims is essentially the same. In both structures the door is supported by comparatively long arms for movement about horizontal pivots from vertical door closing position to horizontal open position. The door in each case is biased so that when released it will move to open position. There is provided in each structure a latch member which is movable with the door and which engages a fixed member to hold the door in open position, and the latch member is connected with the door closing cord so that when that cord is pulled to move the door towards closed position, the latch will be released. Likewise, the particular door frame structure disclosed by the appellant, while different from that used by Bird, is not novel to the art. Springs and weights are well known equivalents as door counter-balancing means: the Bird patent makes explicit reference to them as such. Various other components recited in appellant's claims are commonplace in the art: viz., channel members, sleeves, arms, ground engaging frames. The means provided by appellant for releasing the door is also a mere assembly of devices disclosed in the Armitage, Larscheid et al. and Fontaine references: link, lever, pull cord, handle, pawl and notch. A mechanic confronted with the problem of engaging and releasing an upswinging door at the overhead position would be led by his knowledge and skill in the art to select such means and arrange them in some usable combination.

[1] We fully agree with the Primary Examiner and the Board that no inventive contribution to the art is involved in appellant's device by shifting the position of Bird's swinging catch to the pivot point of the door, as tought by Armitage (as well as by the Fontaine and Larscheid et al. patents). Moreover, in each of the Armitage, Fontaine, and Larscheid et al. patents, there is clearly anticipated the latch features recited in the claims here involved. The component parts of the latching and releasing device are not a patentable combination, but rather an aggregation of expedients old to the art which are brought together to produce a result which does not exceed the contribution normally to be expected as the sum of the results obtained from each part. As held by the Supreme Court of the United States in the case of *Lincoln Engineering Co.* v. *Stewart-Warner Corporation*, 303 U. S. 545, 58 S. Ct. 662, 82 L. Ed. 1008, 490 O. G. 3, "The mere aggregation of a number of old parts or elements which, in the aggregation, perform or produce no new or different function or operation than that theretofore performed or produced by them, is not patentable invention. And the improvement of one part of an old combination gives no right to claim that improvement in combination with other old parts which perform no new function in the combination."

Appellant insists that his device is a patentable combination rather than a mere aggregation and cites the case of *In re William Price et al.*, 17 CCPA (Patents) 736, 36 F.2d 432, 4 USPQ 85, 393 O. G. 253, as being comparable to the instant case. In the Price case, this court had before it an application disclosing a rotor comprised of a solid shaft and a rotor body carried by the shaft, the body carrying numerous air chambers, lubricant chambers, reservoirs, and inlets and outlets serving the chambers. The Patent Office tribunals had rejected the claim there in issue upon a combination of references. An essential element of Price's invention was a solid rotor, and his structure was designed to cooperate with a solid rotor shaft to produce the result of the invention. None of the references cited in that case disclosed a solid rotor shaft, and appellant there pointed out effectively that the substitution of analogous parts of the references in the manner cited by the Board in rejecting his claim would not produce appellant's device. This court then said:

> The solid shaft feature of the claim does not appear in any of the references cited. Its only suggested equivalent is an element • • • referred to • • • as "the part bearing in the bushing." It does not seem to us, from our understanding of the functioning of the machine, that this element is the mechanical equivalent of the shaft of the claim."

Appellant here in his brief quotes this court as then saying in the Price case:

> A claim is not anticipated when the complete structure set out in the claim is not shown by any of the prior art patents, nor does it appear that the structure of one can be so modified by substituting features or elements in the structure of the other as to produce the machine claimed.

What this court actually said there (17 CCPA (Patents) 736 at page 739) is as follows:

> We think it is correctly stated by appellants that the complete structure set out in the claim is not shown by any of the patents cited, nor does it appear that the structure of one can be so modified by substituting features or elements in the structure of the other as to produce the machine claimed by appellants.

The Price case, supra, is distinguishable from the instant case, in that each and every essential element of appellant's structure, or well-recognized equivalents therefor, is, as hereinbefore discussed, disclosed in the cited references.

Appellant cites also the case of *Hohlfeld* v. *Patterson* (District Court, E. D., Pa., 1914), 216 Fed. 183, where an interlocking device was involved. There in an infringement suit, the defendant, Patterson, relied on the defense that the complainant's patent was anticipated by the prior art. As to that allegation by the defendant, the district court held that the patents cited by defendant as prior art references anticipating complainant's device, addressed themselves "to joints or connections for fastening the side rails of beds" where rigidity of structure was an objective. Complainant's interlocking device was used for an entirely different purpose: viz., to provide detachable flexible ends for a hammock, and the prior art patents were not a proper basis for establishing anticipation. The instant case is easily distinguished from the situa-

tion described in *Hohlfeld* v. *Patterson*, supra, as appellant here has merely combined the disclosures, or their mechanical equivalents, of Bird, for a pivotally mounted overhead door construction, with the other references, for a locking and releasing latching device applied to pivotally mounted members, to obtain the same result; viz., a locking and releasing device applied to a pivotally mounted member in an overhead door construction.

Appellant calls our attention to *Simmons Co.* v. *Champion* (District Court, N. D., Ohio, 1929), 2 USPQ 168, as being "especially in point," and says that the district court there held "that the charge of mechanical skill does not apply when supplemented with an idea produced from original thinking." That case concerned an infringement action, where the defendant denied that the infringed patent to Travis in suit possessed invention over the prior art. The Travis patent related to a bed spring possessing a mechanism designed "to prevent sideway of the coil springs and to maintain the upper and lower bed spring frames in substantial alignment." In discussing the prior art references advanced by the defendant, the district court said:

> • • • *Travis and Jeffery were seeking to accomplish entirely different objects.* The Jeffery link was not of such a character, nor was it such a disclosure, as to be obvious to a mechanical eye seeking a different object. • • • *In my opinion, to go from Jeffery to Travis would require mechanical skill to be supplemented with an idea produced from original thinking.* [Italics ours.]

The appellant here apparently relied on the sentence italicized in the foregoing quotation when he stated in his brief that the district court there "held that the charge of mechanical skill does not apply when supplemented with an idea produced from original thinking." It will be seen from the quoted matter we have set out from the case that in the particular circumstances applying in *Simmons Co.* v. *Champion*, supra, Travis and Jeffery were attempting to accomplish entirely different objects, and the application of Jeffery's disclosure to Travis's device was not obvious to one skilled in the art. This is sharply distinguished from the instant case, as we have hereinbefore pointed out—here appellant is combining disclosures of prior art references to accomplish the same results to which they were addressed; locking and releasing mechanism applied to a pivotally mounted overhead door construction, through the use of the identical or equivalent mechanical expedients disclosed or long known to the art.

The final case advanced by appellant in support of his position is that of *Kulp et al.* v. *Bridgeport Hardware Mfg. Corporation* (District Court, Connecticut, 1927), 19 F.2d 659. Appellant quotes a head note to the case reading as follows:

> To negative invention in a novel combination, it is necessary to find in the prior art, not merely a construction which might be modified to make the patented device, but a suggestion, not only that the modification should be made, but also how to make it.

The patent alleged to be infringed in that case concerned a "one-hand valve-spring lifting tool, the jaws of which opened with a parallel movement upon moving the handle portions toward one another." The defendant alleged that the patent was invalid over the prior art. In considering the prior art references advanced by defendant in support of this allegation, the district court held substantially as quoted by appellant, and hereinbefore quoted, from the head note; however, the court additionally held

> • • • The claims in suit set forth a combination and arrangement of elements *not disclosed by the patents relied upon, taken either singly or combined*, and it is therefore entirely immaterial, with regard to the validity of this patent, whether all or some of the elements were old, or whether any of them were new. [Italics ours.]

The italicized portion of the foregoing quotation from that case emphasizes the factor distinguishing it from the instant case. Here the elements constituting appellant's structure are disclosed in the references either as used by appellant, or as well established and long recognized equivalents of those disclosures.

[2] For the reasons hereinbefore set out, we consider the device covered by appellant's claims to be unpatentable over the prior art, and we accordingly affirm the decision of the Board of Appeals.

AFFIRMED.

PATENT SUITS

Notices under 35 U. S. C. 70; sec. 4921, R. S.

1,774,016, A. P. Steckel, Metal rolling; 1,779,195, same, Method and apparatus for rolling thin sheetlike material, filed June 20, 1948, D. C., W. D. Pa., Doc. 5812, *The Union National Bank of Youngstown, O.* v. *Superior Steel Corp.* "Order of court Mar. 1, 1949." Doc. 5813, *The Union National Bank of Youngstown, O.* v. *Universal Cyclops Steel Corp.*

NOTICES

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,269,456, W. W. Hansen and R. H. Varian, Electron beam oscillator, decided Oct. 17, 1946, claims 1, 2, 3, 10, 11, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, and 28.

Pat. 2,278,158, W. C. Ware, Coated abrasive, decided Feb. 1, 1949, claims 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10.

Pat. 2,404,172, C. R. Hanna, Stabilizer apparatus, decided Apr. 5, 1949, claims 1, 2, and 3.

Pat. 2,412,308, J. F. Weiler, Production of vinyl chloride, decided Apr. 18, 1949, claims 1, 2, and 5.

Pat. 2,424,482, B. Mechur and W. Riedler, Shoulder pad and method of making the same, decided Apr. 15, 1949, claims 1, 3, 6, 10, 15, 16, and 17.

Pat. 2,448,265, F. A. Firestone and R. B. De Lano, Jr., Time marks for the sweep of cathode ray tubes, decided Apr. 21, 1949, claim 8.

Cancellation Notice

Verne H. Carter, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Grace Bros. Brewing Co., Second and Wilson Sts., Santa Rosa, Calif., to effect the cancellation of trade-mark registration of Verne H. Carter, 3994 San Pablo Ave., Emeryville, Calif., No. 317,850, dated October 9, 1934, and the notice of such proceeding sent by registered mail to the said Verne H. Carter at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Verne H. Carter, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

April 28, 1949.

Erratum

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946, of Registration No. 256,588 appearing in the OFFICIAL GAZETTE, of February 22, 1949, page 949, for "The Weppner Well Company, Cleveland, Ohio. Republished by Well & Company, Cleveland, Ohio," read *The Weppner Well Company, Cleveland, Ohio. Republished by Well & Company, Cleveland, Ohio.*

Disclaimers

2,406,117.—*Albert B. Welty, Jr.*, Mountainside, N. J. REFORMING. Patent dated Aug. 20, 1946. Disclaimer filed Apr. 15, 1949, by the assignee, *Standard Oil Development Company.*

Hereby disclaims from claims 1, 2, 3, 4, 8, and 9, and each of them, any process of the type defined in which the step of purging the catalyst with free hydrogen or free hydrogen-containing gas is not continued until hydrogen begins to appear in large quantities in the exit gas.

2,408,050.—*Louis A. de Rosa*, West Brighton, Staten Island, N. Y. METHOD OF AND MEANS FOR VISUALLY REPRODUCING SIGNALS. Patent dated Sept. 24, 1946. Disclaimer filed Apr. 19, 1949, by the assignee, *Federal Telephone and Radio Corporation.*

Hereby enters this disclaimer to claims 2, 11, and 16, in said specification.

2,429,631.—*Emile Labin*, New York, N. Y., and *Donald D. Grieg*, Forest Hills, N. Y. MULTICHANNEL PULSE MODULATOR SYSTEM. Patent dated Oct. 28, 1947. Disclaimer filed Apr. 10, 1949, by the assignee, *Federal Telephone and Radio Corporation.*

Hereby enters this disclaimer to claims 1, 2, and 3, in said specification.

2,447,494.—*Gerald Deakin*, New York, N. Y. TELEPHONE REGISTER CONTROL SYSTEM. Patent dated Aug. 24, 1948. Disclaimer filed Apr. 10, 1949, by the assignee, *International Standard Electric Corporation.*

Hereby enters this disclaimer to claims 5, 6, and 7, in said specification.

Classification Order No. 50

March 29, 1949

The following changes in the classification of inventions are hereby directed to take effect immediately:

IN THE MANUAL OF CLASSIFICATION:

ABOLISH SUBCLASSES

In *Class 250, Radiant Energy* (Division 54)

41.6—LIGHT SENSITIVE CIRCUITS

CHANGE SUBCLASS TITLE

In *Class 250, Radiant Energy* (Division 54)

Change the title of subclass 83 to read: *Detection or measurement of invisible rays.*

ESTABLISH SUBCLASSES

In *Class 95, Photography* (Division 67)

(H. K. SAALBACH, *Classifier*)

1.9 Electric photography

In *Class 250, Radiant Energy* (Division 54)

(H. K. SAALBACH, *Classifier*)

Ray energy

200 Photocells; circuits and apparatus (to follow subclass 83.6)
201 Photocell controls its optical system
202 Following a pattern (e. g., line or edge)
203 Following a point (e. g., star or instrument pointer)
204 Adjusting optical system to balance brightness in plural paths
205 Controlling light source intensity
206 Photocell controlled circuit
207 Electron multiplier
208 Plural cathodes, anodes, or photocells
209 Controlling same circuit
210 Bridge and push-pull circuits
211 Special photocell
212 Self generating type
213 Light amplifiers
214 Electron tube circuits
215 Combined with diverse type device
216 Optical or pre-photocell system
217 Specific light source or control of light source
218 Fluent material in optical path
219 Web, strand or record in optical path
220 Plural light sources, optical paths or photosensitive elements
221 Controlled by article, person or animal
222 Inanimate article
223 Conveyor or chute
224 Article and light ray relatively moved during sensing
225 Polarizing
226 Color (e. g., filter or spectroscope)
227 Light conducting rod
228 Integrating sphere
229 Light valve (e. g., iris diaphragm)
230 Reflection type (e. g., mirror galvanometer)
231 Actuated by physical quantity (e. g., controlled by gauge)
232 Light chopper type
233 Rotary
234 Means for moving optical system
235 Repetitious path
236 Rotary motion
237 Hoods, gratings, baffles, diaphragms, masks
238 Temperature control of photocell
239 Housings (in addition to cell casing)

In *Class 260, Chemistry, Carbon Compounds* (Division 6)

(H. PFEFFER, *Classifier*)

Natural resins and reaction products

97.6 Tallöil and reaction products thereof
97.7 Separation of constituents of tallöil
99.5 Purification and recovery
99.5 Polymerized

MISCELLANEOUS CHANGES

On page 15–2, second column, cancel the third unnumbered title "With work contacting carriage . . . nozzle", and substitute: *With mechanical agitating means.*

In *Class 250, Radiant Energy*

after subclass 83.6 and before newly established subclass 200, insert:

84–177 Follow subclasses 200–239

after subclass 177, insert:

178–199 No subclass
200–239 Follow subclass 83.6

PRINCIPAL DISPOSITION OF ART FROM ABOLISHED SUBCLASSES

Abolished		Disposition	
Class	*Subclass*	*Class*	*Subclass*
250	41.5	250	200 to 239

PRINCIPAL SOURCES OF PATENTS IN ESTABLISHED SUBCLASSES

Established		Source	
Class	*Subclass*	*Class*	*Subclass*
95	1.9	95	various
250	200 to 239	250	41.5
260	97.6	260	97.5
260	97.7	260	97.5
260	99.5	260	97+

IN THE DEFINITIONS:

27, Undertaking

in subclass 24, add:

Search Class—
132—STRICKEY, subclass 347, for injectors and ejectors which are disclosed to be used in treating a living body and in more general applications.

73, Measuring and Testing

in subclass 339, under "Search Class", insert:

250—RADIANT ENERGY, subclass 83+, for means for detecting and measuring invisible rays, such as infra red, and 200+ for photocell electric circuits and photocell apparatus.

in subclass 355, under "Search Class", add:

250—RADIANT ENERGY, subclass 83+, for means for detecting and measuring invisible rays, such as infra red, and 200+ for photocell electric circuits and photocell apparatus.

in subclass 381, change "379" to *380.*

74, Machine Elements and Mechanisms

in subclass 750 in "(1) Note", in the third sentence, change "bear" to *gear.*

in subclasses 790 and 791, change "Bearing" to *Gearing.*

84, Music

in subclass 1.18, cancel "(2) Note" and add:

Search Class—
179—TELEPHONY, subclass 100.1+, for sound recording or reproducing systems in which a sound is electrically reproduced from or recorded on a record. Indented subclass 100.3+ contains those patents in which the record is an optical or photographic one, as for example, sound-on-film.
250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus. Note that subclass 206+ contains photocell circuits, 219 contains photocells which respond to indicia on a web or record, while 232+ contains photocells which are associated with light choppers.

88, Optics

in subclass 14, under "Search Class", first occurrence, cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 42+, for testing instruments for various purposes utilising invisible radiant energy rays, such as an X-ray diffraction tester, indented subclass 83+ for detecting and measuring invisible rays, and subclass 200+ for apparatus having a photocell and its circuit or means to hold a sample in the optical path of the radiant energy which illuminates it.

cancel "Search Class", second occurrence; the reference to class 35 thereunder should be inserted in numerical order under "Search Class", first occurrence.

in subclass 22.5, under "Search Class", insert:

35—EDUCATION, subclasses 28.3 and 28.5, for color comparison charts not specialized to testing an unknown color by comparing it directly with a color on the chart.

cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclasses 83+, for devices for measuring the intensity of invisible radiation, such as infra red radiation, and subclass 200+ for photocell electric circuits or photocell apparatus. Note that indented subclass 226 contains those patents on which a photocell is combined with means, such as a spectroscope, for causing the photocell to respond to the color of the light which illuminates it.

in subclass 23, under "Search Class", cancel the reference to class 250, and substitute:

250—RADIANT ENERGY, subclass 83+, for devices for measuring the intensity of invisible radiation, such as infra red radiation, and 200+ for photocell electric circuits or photocell apparatus.

95, Photography

establish the following subclass definition:

1.9. Apparatus and processes under the class definition in which an electric current or potential is applied to the light sensitive medium, and sensitized elements and developers specific to such apparatus and processes.

To complete the search for this subject matter, Search Class—
204—CHEMISTRY, ELECTRICAL AND WAVE ENERGY, appropriate subclass, where the image is formed by electrolysis, electroosmosis, electrophoresis or by cathode sputtering. Note particularly subclass 15+ for electrolytic coating to produce an image or design, subclass 180+ for coating by electrophoresis and electroosmosis and subclass 192 for coating by cathode sputtering.

Search Class—
41—ORNAMENTATION, subclass 36, for means for applying an ornamental flock coating to a material.
91—COATING, subclass 8, for means for coating material with flock.
101—PRINTING, appropriate subclasses, for printing means in which ink is transferred to a sheet by means of electric fields.
117—COATING, PROCESSES AND MISCELLANEOUS PRODUCTS, subclass 17, for the application of particular matter to a base by the use of electric fields.
204—CHEMISTRY, ELECTRICAL AND WAVE ENERGY, see above.

106, Compositions, Coating or Plastic

in subclass 123, in "(4) Note", change "97.5" to *97.5+.*

128, Surgery

in subclass 347, add:

Search Class—
27—UNDERTAKING, subclass 24, for trocars, the sole disclosed purpose of which is to treat a corpse.

136, Batteries

in subclass 4, cancel the note and substitute:

Search Class—
73—MEASURING AND TESTING, subclasses 341 and 359+, for thermal battery mountings or thermal batteries combined with measuring circuits.
171—ELECTRICITY, GENERATION, subclass 125, for pyromagnetic electric devices.
250—RADIANT ENERGY, subclass 83+, for means for detecting or measuring invisible radiant rays, such as infra red rays.

in subclass 89, cancel the note, and substitute:

Search Class—
178—ELECTRICITY, GENERAL APPLICATIONS, subclass 36G, for selenium or analogous cells which are light sensitive and also act as rectifiers.
250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus.

160, Closures, Partitions and Panels, Flexible and Portable

in subclass 5, under "Note. Search Class", insert:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, especially subclass 202, where the photocell responds to a pattern or template by controlling an electric circuit to cause the photocell to trace or follow the pattern, and subclass 219 where the photocell is controlled by a pattern.
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclass 162+, for electric motor systems which are controlled by a pattern.

and under "Search Class", insert in numerical order:

250—RADIANT ENERGY, subclass 200+, for electro-optical pattern sensing means of general utility (see Note (1) above).
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 162+, for pattern controlled electric motor systems of general utility (see Note (1) above).

in subclass 5.2, under "Search Class", add:

250—RADIANT ENERGY, subclass 226, for photocells combined with means to cause the photocell to sense the color of objects or light.

in subclass 6, under "Search Class", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, for radio telegraphy not limited to facsimile telegraphy, and other radiant energy apparatus of general application. Subclass 200+ includes photocell electric circuits and photocell apparatus of general application. Indented subclass 206+ includes circuits controlled by a photocell, indented subclass 219 includes photocells which sense a record, and indented subclass 234+ contains photocells combined with optical systems having means for moving the optical system, as, for example, through a scanning path.

178, Telegraphy

in subclass 5, under "(1) Note", insert in numerical order:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, especially subclass 202, where the photocell responds to a pattern or template by controlling an electric circuit to cause the photocell to trace or follow the pattern, and subclass 219 where the photocell is controlled by a pattern.
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclass 162+, for electric motor systems which are controlled by a pattern.

and under "Search Class", insert in numerical order:

250—RADIANT ENERGY, subclass 200+, for electro-optical pattern sensing means of general utility (see Note (1) above).
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 162+, for pattern controlled electric motor systems of general utility (see Note (1) above).

in subclass 5.2, under "Search Class", add:

250—RADIANT ENERGY, subclass 226, for photocells combined with means to cause the photocell to sense the color of objects or light.

in subclass 6, under "Search Class", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, for radio telegraphy not limited to facsimile telegraphy, and other radiant energy apparatus of general application. Subclass 200+ includes photocell electric circuits and photocell apparatus of general application. Indented subclass 206+ includes circuits controlled by a photocell, indented subclass 219 includes photocells which sense a record, and indented subclass 234+ contains photocells combined with optical systems having means for moving the optical system, as, for example, through a scanning path.

179, Telephony

In subclass 100.3, under "Search Class", add in numerical order:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and apparatus. Indented subclass 206+ contains the photocell circuits while indented subclass 219 contains photocells which sense a record.

201, Resistances and Rheostats

In subclass 63 cancel Notes (1) and (2) and substitute:

Search Class—

73—MEASURING AND TESTING, subclasses 342 and 362, for current modifying thermometers.

175—ELECTRICITY, GENERAL APPLICATIONS, subclass 30+, for over voltage arresters similar in structure to resistance units. Class 175 takes related structures for arc forming purposes with or without means for arc extinguishing.

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus.

209, Classifying, Separating and Assorting Solids

In subclass 111, under "Search Class", after "energy rays" in the reference to class 250, insert:

and subclass 200+ for photocell electric circuits and photocell apparatus, particularly subclass 226 for photocells which respond to the color of light or objects and subclass 223 to photocells which sense objects traveling on a conveyer or chute.

240, Illumination

In subclass 46.05, under "Search Class", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus. Indented subclass 205 includes those photocells which control a shutter in the light path between light source and photocell.

246, Railway Switches and Signals

In subclass 29, under "Search Class" cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 7, for signalling systems in which intelligence is transmitted over a light or analogous beam, subclass 83+ for means for detecting or measuring invisible radiant energy, and subclass 200+ for photocell electric circuits and photocell apparatus.

250, Radiant Energy

In subclass 7, insert:

Search this class, subclass—

200+—for photocell electric circuits and photocell apparatus, particularly indented subclass 230 where the photocell is illuminated by a light ray which is reflected from a mirror which may be moved under the control of a speech intelligence and subclass 231 where the photocell is illuminated by a light ray which passes through a light valve.

In subclass 27, under "Search this class, subclass" cancel the reference to subclass 41.5 and insert in numerical order:

200+—for miscellaneous electric discharge circuits whose operation is controlled by a photosensitive device in the circuit, particularly subclass 201+, where the photocell controls its optical system, and subclass 214, where the photocell controls a vacuum tube circuit.

cancel the definition of subclass 41.5.

In subclass 42, under "(3) Search this class, subclass" cancel "41.5 for light sensitive . . . device is", and substitute:

200+—for photocell electric circuits and photocell apparatus wherein the light controlling the operation of the photocell is

In subclass 83, cancel the definition and notes, and substitute:

83. Subject matter under subclass 42 for detecting the presence of, or measuring the quantity or quality of, invisible radiant energy rays, and combinations utilizing such means.

(1) Note.—This subclass is limited to apparatus and systems where the ray energy is not within the visible spectrum (i. e., visible light) and includes the detection and measurement of infra-red rays, ultra-violet, X-rays, radio-active emanations, neutrons, and other invisible ray energy.

To complete the search for this subject matter, search this class, subclass—

65+—and the subclasses specified in the notes to the definitions of those subclasses where the detecting or measuring means include photographic means.

71+—and the subclasses specified in the notes to the definitions of those subclasses where the detecting or measuring means includes a fluorescent or phosphorescent device.

Search this class, subclass—

27.5—for the structure of electric space discharge devices which are designed to have the gas or vapor atmosphere ionized by invisible ray energy (e. g., Geiger-Mueller counter tube).

200+—for miscellaneous photocell circuits which include a photocell which is responsive to light within the visible spectrum, and apparatus used with photocells, (e. g., optical systems which transmit the light to the photocell). Where the photocell is responsive to ray energy within and/or without the visible spectrum, and the claims do not limit the subject matter to use with invisible ray energy, the patent is classified in subclass 200+ below.

Search Class—

73—MEASURING AND TESTING, subclass 339+, for devices for measuring the temperature of hot bodies. Note that indented subclass 355 provides for devices where the radiant heat is measured, subclass 259+ provides for the current generating type measuring device, and indented subclass 362 provides for the current modifying type measuring device.

88—OPTICS, subclass 14, is the generic subclass for processes and apparatus for testing optical properties (such as tests which measure the amount of light which is transmitted by an object, subclass 22.5, for methods and apparatus for determining temperature of bodies by measurement of the relative intensity of light radiation therefrom, or by color or incandescence radiation; and subclass 23 for all forms of apparatus for measuring the intensity of light.

95—PHOTOGRAPHY, subclass 10, for actinometers.

136—BATTERIES, subclass 4, for thermal batteries or thermal electric generator for detecting infrared rays, and subclass 89 for photo-electric batteries.

201—RESISTANCES AND RHEOSTATS, subclass 63 for the structure of photo-sensitive resistances and subclass 76 for the compositions of photo-sensitive resistances.

219—ELECTRIC HEATING, subclass 34, provides for infra-red generating apparatus.

In subclass 83.3, cancel "(3) Search this class, subclass 41.5, . . . and invisible spectrum", and substitute:

(3) **Search this class, subclass 200+**, for photocell electric circuits and photocell apparatus in which the light controlling the operation of the photocell is within the visible spectrum. See the search notes to superior subclass 83 for the line of division. Photocell circuits are found in subclass 206+, indented under subclass 200.

In subclass 165, cancel "(3) Search this class, subclass 41.5 . . . the circuit", and substitute:

(3) **Search this class, subclass 200+**, and the search notes thereto, for photocell circuits and photocell apparatus. See (7) Note to the definition of subclass 200 which lists the various classes containing photocells per se.

establish the following subclass definitions:

200. Subject matter under subclass 42 which includes a photocell.

(1) Note.—*Definition of terms*

A photocell is defined for the purpose of classification in these subclasses as an electrical device which responds to radiant energy (e. g., light) by varying its electrical characteristics or by generating an electric current. This definition therefore includes resistances, electric space discharge devices, batteries, inductances, condensers, bolometers and other electrical devices which have their electrical characteristics varied by radiant energy. For the purpose of classification in these subclasses "light" and "radiant energy" are used synonymously.

(2) Note.—*Circuits and apparatus included*

These are the generic subclasses for the following:

a. Electrical circuits whose operations are controlled by means of a photocell.

b. Photocells in combination with the optical means for controlling the radiant energy which illuminates the photocell.

c. Photocells in combination with the source of illumination for the photocell.

d. Apparatus which is limited to use with photocells and which is not otherwise classified. Examples of such apparatus are the photocell temperature control means in subclass 238 and the housings in subclass 239.

(3) Note.—*Signaling systems*

Electrical communication systems whose operation is controlled by means of a photocell are excluded from these subclasses.

For such systems, search class—

177—ELECTRIC SIGNALING, for miscellaneous signaling systems including a photo-cell. Note especially subclass 314 for burglar alarm systems which are controlled by means of a photocell.

178—TELEGRAPHY, subclasses 6+, for television or facsimile systems which include a photocell.

179—TELEPHONY, subclass 100.3+, for electrical sound recording and reproducing systems which include a photocell.

246—RAILWAY SWITCHES AND SIGNALS, subclass 29, for railway traffic control systems which are controlled by a photocell.

This class (**250**), subclass 7, for communication systems (telegraphy or telephony) in which the intelligence is transmitted over a light beam and which include a photocell.

332—MODULATORS, subclass 3, for modulators which are controlled by a photocell, where no significant optical system for controlling the light intensity upon the photocell is claimed. Where such optical system is claimed, the subject matter is classified in class 250, subclass 200+.

(4) Note.—*Photocell controlled cathode ray tube circuit*

Class 315, ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclasses 10+ provide for miscellaneous circuits for supplying electric current and/or potential to a cathode ray tube where the system includes a photocell to control the cathode ray tube. The systems included in subclass 10+ include systems having a photocell in the supply circuit of the cathode ray tube and systems where the cathode ray tube includes a photo-electric electrode.

Class 178, TELEGRAPHY, subclass 6+ provide for facsimile systems which include a photocell controlled cathode ray tube.

(5) Note.—*Photocell combined with diverse type device*

These subclasses include a photocell apparatus or photocell controlled circuit when combined with a diverse type apparatus only when the combination includes only the portion of the diverse type apparatus necessary to provide for the photocell apparatus or circuit. Such combinations will be found for the most part in subclass 215 of this class. Where structure of the device is claimed in addition to that necessary to provide for the photocell apparatus or photocell circuit, the device is excluded from these subclasses and will be found with the art that provides for the particular device with which the photocell is combined. Also, see (6) Note below with reference to photocell circuits which are limited to controlling specific devices, such as a signal, meter, etc. See (3) Note above for a reference to signaling systems which include a photocell. For some of the classes which provide for devices which include a photocell apparatus or circuit, see the classes listed under (9) Note below.

(6) Note.—*Photocell circuit with specific load device in the output circuit*

a. General statement:

These subclasses do not provide for photocell controlled circuits which have a particular load device, such as an electric motor, recited in the output circuit. Such systems are classified with the particular art. See the paragraphs below for some special exceptions to this general statement. For a partial list of the classes which provide for the excluded circuits, see the classes under (9) Note below.

b. Photocell controls its light source or optical system.

These subclasses do provide, in subclass 201+, for photocell circuits where the output circuit controls means which control the optical system of the photocell (e. g., rebalancing systems, apparatus having means for causing the photocell to move so as to trace the contour of a pattern, circuits having the illumination source for the photocell controlled by the photocell). Note that where the claims are limited to a photoelectric circuit having an electric lamp as the source of illumination for the photocell, the electric lamp being connected in the output circuit of the photocell circuit so that the lamp which illuminates the photocell is controlled by the photocell, no structure of the optical system between the lamp and photocell being claimed, the circuit is classified in class 315, ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 151.

c. Photocell with electronic tube or other current or potential modifying means in the output circuit.

These subclasses do provide for photocell circuits having means in the output circuit for modifying or amplifying the photocell current or voltage so as to produce the type of output control current or voltage desired. Examples of such means are the bridge circuits and electronic tube devices.

Photocell controlled systems for modulating a repetitious electrical wave (e. g., a carrier) with an intelligence are classified in class 332, MODULATORS, subclass 3, where no significant optical system for controlling the light impressed upon the photocell is claimed. If such optical system is claimed, the subject matter is classified in class 250, subclass 200+.

Where the device controlled in the output circuit is a cathode ray tube, or where the photocell is a part of a cathode ray tube, and the claims do not include any significant output circuit for the cathode ray tube, the circuit is classified in class 315, ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 10+. See (4) Note above.

Where the device controlled in the output circuit is an electronic tube of the gas or vapor type (including gas or vapor discharge lamps), and the claims do not include any significant output circuit for the electronic tube, the circuit is classified in class 315, ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 149+, especially in subclasses 156 and 157. Subclass 156 provides for the circuit where another electronic tube which is controlled by the photocell is interposed in the supply circuit of the gas or vapor type electronic tube, and subclass 157 where the electronic tube which is controlled is provided with a discharge control means (e. g., grid).

(7) Note.—*Photocells, per se.*

These subclasses do not include the structure of the photocell, per se. The photocells per se are classified according to the type of electrical device. For the classes and subclasses which provide for photocells and analogous devices, **search class—**

136—BATTERIES, subclass 4+, for photocells which generate electricity by virtue of the heating effect of radiant energy, and subclass 89 for photocells of the primary battery type which depend upon the presence of visible radiant energy for their operation.

175—ELECTRICITY, GENERAL APPLICATIONS, subclass 366, for selenium type rectifiers (which are analogous to selenium photocells).

200—ELECTRICITY, CIRCUIT MAKERS AND BREAKERS, subclass 136+, for thermally responsive switches.

201—RESISTANCES AND RHEOSTATS, subclass 63+, for resistances which change their resistance when illuminated, such as selenium cells. Indented subclass 76 contains the photo-sensitive resistance compositions.

This class (**250**), subclasses 150 and 153 for cathode ray tubes which include a photo-sensitive electrode and subclasses 165+ for photocells of the space discharge type.

(8) Note.—**To complete the search for this subject matter, search this class, subclass—**

83+—where the photocell has characteristics which cause it to respond principally to the invisible portion of the radiation spectrum or where the photocell is combined with means to insure that it will respond to the invisible portion of the radiation spectrum. Illustrative of such photocells are a Geiger-Mueller counter and a conventional photocell provided with an ultra violet ray filter, respectively. Where the photocell will respond to both visible and invisible radiant energy and is not provided with means for enhancing response to invisible radiant energy or diminishing response to visible radiant energy, classification is in subclass 200+.

Search Class—

315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 10+, for photocell controlled cathode ray tube circuits. See (4) and (6c) Notes, supra. Subclass 149+ provides for photocell circuits which control an electric lamp or an electronic tube of the gas or vapor type. See subclass 150 where the lamp or gas or vapor tube is itself a photocell, subclass 151 where the lamp which illuminates the photocell is in the output circuit of the photocell, (see (6) Note, b above), and subclasses 156 and 157 where the photocell controls the operation of a gas or vapor type electronic tube or lamp (see (6) Note, c above).

332—MODULATORS, subclass 3 for photocell controlled modulator circuits. See (3) Note and (6) Note, c above.

(9) Note.—For related subject matter search this class, subclass—

95—for X-ray generator systems provided with a photocell which measures and controls the total amount of X-ray discharge.

97—for X-ray generator systems provided with a photocell which measures and controls the rate of X-ray discharge.

Search Class—

73—MEASURING AND TESTING, subclass 339+, for means to measure the temperature of bodies. Note that indented subclass 355 provides for such means which respond to the radiant energy in the form of heat or infra-red (as distinguished from visible) radiation from the body whose temperature is being measured, subclass 359+ provides for such means (e. g., thermocouple) which generates an electric current, and subclass 862 provides for such means (e. g., bolometer) which modifies an electric current.

84—MUSIC, subclass 1.13, for musical instruments in which the sound is produced from electric currents which are generated or controlled by photocells or for the photocell subcombinations of such musical instruments, when restricted to such use.

88—OPTICS, subclass 14, where the photocell is part of a testing device which tests an optical property of a material, such as turbidity or color, subclass 22.5 where the photocell is part of an optical pyrometer, which measures the temperature of a body by sensing its visible (as distinguished from heat or infra-red) radiation and subclass 23 where the photocell is part of a photometer which measures the intensity of light.

95—PHOTOGRAPHY, subclass 11.5, for cameras provided with means to synchronize the operation of a camera shutter with a flash of a light, which means may include a photocell.

160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, subclass 5, for closures, partitions or panels which are automatically controlled by a photocell.

209—CLASSIFYING, SEPARATING AND ASSORTING SOLIDS, subclass 111, for devices containing a photocell which will classify, separate or assort objects in accordance with their optical properties or their appearance, such as glossiness or size.

240—ILLUMINATION, subclass 46.05, for illuminating means having a moveable screen which is automatically controlled by a photocell.

272—AMUSEMENT DEVICES, GAMES, subclass 101.1, for amusement devices having a photocell in which a light ray is projected at a target.

314—ELECTRIC LAMP AND DISCHARGE DEVICES, CONSUMABLE ELECTRODES, subclass 63, for arc lamps in which the feeding of the electrodes is controlled by a photocell.

315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 82+, for vehicle headlamp systems in which a photocell controls the headlamp as by dimming when the photocell is illuminated by the headlamps of another vehicle.

318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclass 18+, for electric motor follow-up systems, some of which have a photocell which detects the amount of unbalance in the follow-up system; subclass 162+ for electric motor systems in which a photocell senses a pattern and controls the motor in accordance with the sensing; subclass 313 for electric motor systems having a photocell which controls the motor so that it follows a rotating standard; and subclass 480 for other photocell controlled electric motor systems.

321—ELECTRICITY, CONVERSION SYSTEMS, subclass 46, for rectifying systems having rectifiers of the selenium type, analogous to selenium photocells.

322—ELECTRICITY, SINGLE GENERATOR SYSTEMS, subclass 26, for electric generator systems having a generator and a photocell which controls the generator or the driving means for the generator.

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 21, for voltage magnitude control systems having a photocell which automatically controls the system.

Sub. 3 Modulator controlled by photocell	3,6c,8

201. Subject matter under subclass 200 in which the photocell automatically controls the illumination which falls on the photocell.

(1) Note.—The control of the illumination may be effected by altering the source of light (e. g., intensity or position) or by altering the optical path between source of light and photocell (e. g., transparency of light transmitting medium or position of photocell).

Search this class, subclass—

206+—for photocell controlled circuits or devices which do not control the illumination of the photocell.

216+—for optical systems which control the illumination of a photocell.

202. Subject matter under subclass 201 having means for illuminating the photocell in accordance with the relative position of the photocell and a pattern, and having means for causing the photocell to follow the edge of the pattern under control of said illumination, or for causing the optical path between pattern and photocell to change, under the control of said illumination, so that the photocell follows the edge of the pattern image.

(1) Note.—The edge of the pattern may be either a thick or thin line or the line of demarcation between two areas of different optical properties. The photocell may follow the pattern either by moving spatially or by causing the pattern to move past the photocell while the photocell remains stationary.

(2) Note.—For a compilation of the many classes where photocell pattern controlled devices such as machine tools, Jacquard looms, etc., are found, see the search notes to class 178, subclass 5.

Search this class, subclass—

219—for optical systems having a pattern and a photocell which senses the pattern.

203. Subject matter under subclass 201 having means for illuminating the photocell in accordance with the relative position of the photo-electric cell and a point, and having means for causing the photo-electric cell to follow the point under the control of said illumination.

(1) Note.—The point may be a star, a search light at the end of a luminous glide path beam or a spot on an instrument.

(2) Note.—The photocell must follow the point, as seen through the associated optical system. However, the photocell itself, or the supporting structure, as a whole, need not follow the point, as in a guided missile which is guided towards a terrestrial target by heavenly bodies sensed by a self-carried photocell guiding apparatus.

Search Class—

318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclass 18+, for electric motor follow-up systems wherein the motor control includes a photocell responsive to a moving light point, and subclass 313 for a system having a rotating standard or other rotating object, a photocell which senses the rotation of said standard or object, and a motor which is controlled by the photocell to cause the photocell to follow the rotation of said standard or object.

346—RECORDERS, subclasses 31 and 32, for photocell systems which control a recorder in accordance with an instrument which operates, free of the mechanical burden of the recorder, in which the pointer of the instrument is sensed and followed by the photocell, which controls the system which drives the recorder and following means.

204. Subject matter under subclass 201 having two optical paths from a source or two sources of illumination to one or more photocells and having means for controlling one or more of the optical paths so that the ratio of light flux which traverses the different optical paths stays constant.

Search this class, subclass—

206+—for similar subject matter having plural photocells in an electric circuit which does not control the illumination reaching the photocells.

220—for photocell illuminating systems having plural light paths to one or more photocells.

205. Subject matter under subclass 201 having means for controlling the intensity of the light source which illuminates the photoelectric cell in accordance with the illumination which falls upon the photoelectric cell.

(1) Note.—There may or may not be means between the light source and the photoelectric cell, which variably divert or absorb the light which passes from the light source to the photoelectric cell.

(2) Note.—The light source whose intensity may be controlled may be an electric light, a gas flame, or any other source of light.

To complete the search for this subject matter, Search Class—

315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 151, where the source of illumination is an electric lamp or gas or vapor discharge device, the photocell controls the electrical condition or electrical characteristics of the source of illumination and there is no significant optical structure in the optical path between source of illumination and photocell.

206. Subject matter under subclass 200 in which the photocell controls an electrical or electro-mechanical system.

(1) Note.—In order to be classified in this and indented subclasses, the electrical or electro-mechanical system should be significant. It is significant if it is recited in the claims more specifically than by name only, or if it is disclosed as being non-conventional.

Search this class, subclass—

217—for the electrical system which supplies, energizes, or controls the light source, in combination with the photocell. The electrical system in this case precedes the photocell in line of control.

207. Subject matter under subclass 206 in which the photocell has plural electrodes, one or more of which is photoemissive, and in which secondary emission takes place.

(1) Note.—Secondary emission is the emission of electrons from a material when bombarded by primary electrons. The secondary emission may take place at the photoelectric cathode or at one or plural other electrodes.

208. Subject matter under subclass 206 in which the photocell has plural photosensitive or plural non-photosensitive electrodes or in which plural photocells control the electrical or electro-mechanical device.

Search this class, subclass—

204—for photocell systems having plural optical paths which terminate at plural photosensitive electrodes and in which the optical paths are controlled by the photosensitive electrodes to balance the light flux in the plural paths.

207—for photocell systems in which the photocell has plural electrodes, some of which act as secondary emitters.

209. Subject matter under subclass 208 in which the plural photosensitive electrodes, non-photosensitive electrodes or photocells are in a common electric circuit.

(1) Note.—Two photosensitive elements are not deemed to be in a common electric circuit merely because they are energized by a common power source.

210. Subject matter under subclass 206 in which the photocell is in a bridge circuit or in a push-pull circuit.

Search this class, subclass—

209—for bridge circuits having plural photocells, plural photosensitive electrodes or plural non-photosensitive electrodes.

211. Subject matter under subclass 206 in which the photocell has characteristics which are sufficiently unique to be stated in the claims.

(1) Note.—For a compilation of the classes which provide for photocells per se, see (7) Note to subclass 200 of this class.

212. Subject matter under subclass 211 in which the photocell transforms the incident light energy into electrical energy.

(1) Note.—Photocells found in this subclass are commonly known as photovoltaic or photronic cells. They are to be distinguished from photocells which do not generate electrical energy but merely control it.

(2) Note.—Selenium cells are made in both self-generating and variable resistance forms.

Search Class—

136—BATTERIES, subclasses 4+ and 89, for the structure of generating type photocells.

201—RESISTANCES AND RHEOSTATS, subclass 63+, for the structure of variable resistance type photocells.

218. Subject matter under subclass 211 in which the photocell has a fluorescent screen which is excited by electron bombardment under the control of the incident illumination, so that there is a correspondence between incident illumination and fluorescent screen light output.

(1) Note.—This subclass includes some patents in which the electrical supply for the light amplifier is pulsed, so that the light amplifier may be used as a stroboscope.

To complete the search for this subject matter, search this class, subclass—

83.3+—for light amplifiers which detect only special rays, such as neutron rays, gamma rays, infra-red rays, etc.; for example, the "Sniperscope". Where the light amplifier detects both light and special rays and is not provided with means to enhance response to special rays or diminish response to light rays, the subject matter is classified in this subclass (213).

214. Subject matter under subclass 206 having a space discharge tube electrically connected to the photocell.

To complete the search for this subject matter, Search Class—

315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclass 10+, for photocell circuits in which the photocell controls a cathode ray tube, or in which the photocell is part of a cathode ray tube, and subclass 140+ for photocell circuits in which the photocell controls a lamp or gas or vapor discharge device.

215. Subject matter under subclass 200 in which the photocell is built into a device specific to an art other than the photocell art, and in which the utility of the art device is not destroyed by removal of the photocell.

(1) Note.—As an example, a refrigerator which is provided with a photocell controlled defrosting device, in which the photocell senses excessive frost, is found in this subclass, if within the definition of superior subclass 200, since the photocell is (1) built into the refrigerator which (2) is an art device and which (3) has utility if the photoelectric cell is removed. Generally, the patents in this subclass are cross references as there are few art devices which are not elsewhere provided for.

216. Subject matter under subclass 200 having means for illuminating photoelectric cell.

(1) Note.—The means for illuminating the photoelectric cell should be significant, and if conventional and claimed by name only, is not found in this and indented subclasses.
(2) Note.—The means for illuminating the photocell need not be a specific light source, but may be the ambient illumination.

217. Subject matter under subclass 216 having a specific light source whose nature is significant to the combination, or having non-optical means for controlling the intensity of the light source.

(1) Note.—Specific light sources found in this subclass include; flames in furnaces, cathode ray tubes, manometric flames, incandescent work pieces, headlights of meeting automobiles, spectroscopic arcs, electric lights flickering according to line voltages, photoflash lamps and signal lamps.
(2) Note.—This subclass does not include specific light sources which are conventional, such as electric lamps or heavenly bodies, unless the light source is significant to the combination, as when the light source varies in intensity in accordance with a physical quantity being measured, such as ambient temperature, or when a particular band of solar radiation is used to illuminate the photoelectric cell.

Search this class, subclass—
201+—for a light source which illuminates and is controlled by a photocell. In indented subclass 203 are located photocells, which follow the movement of a specific light source by means of follow up means. In indented subclass 205 are located photocells which control the intensity of the light sources which illuminate them.
329+—for a photocell combined with a light source whose apparent (as contrasted with real) intensity is controlled optically.

218. Subject matter under subclass 216 having a fluent material in the optical path between light source and photocell.

(1) Note.—The fluent material need not be fluid but must flow, as for example, a pulverulent grain or powder.
(2) Note.—Since all photocell apparatus is situated in an ambient atmosphere, air is not normally considered a significant fluent material, even when it acts to cool by convection. However, if a characteristic of the air is measured or controls apparatus, air is considered significant.

Search this class, subclass—
238—for photocell apparatus provided with cooling means, which may include fluent material jackets.

219. Subject matter under subclass 216 having a web, strand, or record in the optical path between light source and photocell.

(1) Note.—The term record includes mathematical curves and graduated scales.
(2) Note.—For a compilation of the many classes where photocell pattern controlled devices such as machine tools, Jacquard looms, etc., are found, see the search notes to class 178, subclass 5.

Search this class, subclass—
202—for a photocell combined with a record, where the photocell senses and follows a pattern or line on the record.

Search Class—
84—MUSIC, subclass 1.18, for a photocell which senses a record upon which musical tones are recorded.
178—TELEGRAPHY, subclass 6+, for a photocell which senses a record which is to be transmitted over a communication circuit to a point where the record is to be reproduced; e. g., television.
179—TELEPHONY, subclass 100.3+, for a photocell which senses a record upon which sounds are recorded.

220. Subject matter under subclass 216 having plural light sources, plural photocells, or plural optical paths between one light source and one photocell.

(1) Note.—A light path which is moved, as in scanning, is not deemed to constitute plural light paths. A light path which stays in substantially the same place but changes in character with time is not deemed to constitute a plural path.

Search this class, subclass—
204—for similar subject matter where the photocell adjusts the photocell system so as to maintain the ratio of light flux in the plural paths constant.
206+—for electric circuits having plural photocells or photosensitive elements.

221. Subject matter under subclass 216 in which the optical path between the light source and the photocell is directly affected by an object which is movable with respect to, is not part of, and is not continuously associated with the photocell device.

(1) Note.—The ultimate object being sensed must directly affect the light beam, and not indirectly through the medium of a linkage, shutter or other instrumentality. Further, the object must be one which is independent of the photocell apparatus in the sense of being non-integral with it and having an independent existence of its own, regardless of the existence of the photocell apparatus.
(2) Note.—Examples of such objects are animate objects such as horses on a race track, human beings entering doors, animals in traps, or inanimate objects such as plants being cultivated, work pieces being gaged, paint samples being tested.

Search this class, subclass—
217—for similar subject matter where the article is incandescent and illuminates the photocell.
231—for similar subject matter where the article indirectly affects the photocell.

222. Subject matter under subclass 221 in which the object is an inanimate article.

223. Subject matter under subclass 222 having means for carrying the inanimate article into, or out of, or through, a location where the article will affect the optical path between the light source and the photocell.

(1) Note.—The conveyor may stop while the article is being sensed.
(2) Note.—Examples of conveyors are railroad cars on tracks and gravity operated chutes.

Search this class, subclass—
218—for similar subject matter, where the object is fluent or pulverulent and is conveyed to the sensing point.
219—for similar subject matter, where the object is a web which is conveyed to the sensing point by web conveying means.

224. Subject matter under subclass 222 having means for causing relative movement between the inanimate article and the light ray while the article is in the light path between light source and photocell.

(1) Note.—The motion referred to above is one above and beyond that required to bring the object into the testing or sensing station. During sensing, either the object, light source, photocell or some other part of the optical system may move.
(2) Note.—As an illustrative example, this subclass includes camera shutter photocell sensing devices, where the camera shutter opens and closes while in the light beam, and roller photocell sensing devices, where the roller is rotated while being sensed for size.

Search this class, subclass—
223—for similar subject matter where the inanimate article is moved through the sensing station by a conveyor.

225. Subject matter under subclass 216 having a polarizer in the optical path between light source and photocell.

Search Class—
88—OPTICS, subclass 65, for polarizers per se.

226. Subject matter under subclass 216 having optical means for acting unequally upon different frequencies of radiation in the optical path of light from a light source to the photocell.

(1) Note.—Examples of such optical means, found in this subclass, are diffraction gratings, dispersion prisms and visible light filters.

To complete the search for this subject matter, search this class, subclass—
83.3+—where the photocell is provided with means to enhance response to invisible radiant energy or diminish response to visible radiant energy; e. g., an ultra-violet filter.

Search this class, subclass—
211—for similar subject matter, where the photocell has inherent selective color sensitivity.
239—for photocells which are provided with cooling means to absorb infra-red rays.

227. Subject matter under subclass 216 having a light conducting transparent rod which forms part of the optical path between light source and photocell.

228. Subject matter under subclass 216 having an integrating sphere in the optical path between light source and photocell.

(1) Note.—An integrating sphere is a hollow body having an interior of highly light reflecting but also diffusing material, and having relatively small openings in the shell of the hollow body to admit light. It has the property of raising the interior illumination to a level which depends only upon the amount of light flux entering the openings and not upon the specularity or diffusion of that incident light flux.

229. Subject matter under subclass 216 having means in the optical path between light source and photocell for varying the amount of light which reaches the photocell.

(1) Note.—In this subclass, the means for varying the amount of light which reaches the photocell is always a part of, or is continuously associated with the photocell device, and is not an object which has an independent existence of its own. Devices found in this and indented subclass comprise, for example, keyboard operated shutters which variably permit a light source to illuminate a photocell, iris diaphragm and optical wedges.

Search this class, subclass—
221+—for similar subject matter in which the light path between light source and photocell is directly affected by an object which is not part of the photocell apparatus and has an independent existence of its own.
231—for similar subject matter comprising relatively stationary hoods, gratings, baffles or diaphragms.

230. Subject matter under subclass 229 in which the optical path between light source and photoelectric cell includes a reflective element, and in which the amount of reflection or the direction of reflection is varied so as to vary the intensity of the photocell illumination.

(1) Note.—Examples of such variable reflecting elements include mirrors which oscillate under the control of a physical quantity and compass cards which have variably reflective markings.

231. Subject matter under subclass 229 in which the means in the optical path between the light source and the photocell for varying the amount of light which reaches the photocell is varied in accordance with an external physical quantity.

(1) Note.—Examples of physical quantities are pressure, weight, force, deflection, length, position, time, voltage, power, magnetic direction, and temperature. The position or condition of a light valve element is not an external physical quantity.

Search this class, subclass—
230—for similar subject matter in which the physical quantity variably adjusts a reflective member which is in the optical path between light source and photocell.

232. Subject matter under subclass 229 having means for intermittently interrupting the optical path between the light source and photocell in a repetitious cyclic sequence.

(1) Note.—A camera shutter is generally not a light chopper of the type found in this class, since it opens and closes in a non-repetitious, non-cyclic manner.

233. Subject matter under subclass 232 in which the means for intermittently interrupting the optical path is a rotary element.

234. Subject matter under subclass 216 having means for moving an element of the optical system.

(1) Note.—Examples of such means are means for adjusting the photocell so that its axis is aligned with the optical axis, a hand crank for adjusting the photocell to sense in a desired direction, or a vehicle upon which the entire photocell apparatus is mounted.

Search this class, subclass—
218—for photocell sensing means in which a fluent material is moved through the optical path between light source and photocell.
219—for photocell sensing means in which a web is fed through the optical path.
223 and 224—for photocell sensing means in which an inanimate object is moved to or from or while in the optical path.
229+—for photocell sensing means having a light valve in the optical path, particularly indented subclass 231, where the light valve is adjusted in accordance with an external physical quantity and subclass 232+ where the light valve continuously moves to chop the light.

235. Subject matter under subclass 234 having means for cyclically moving an element of the optical system in a repetitious path.

(1) Note.—This subclass includes photocell devices having a vibratory scanner. An adjusting means is not deemed a means for providing a repetitious path, since there is no means for ensuring repetition or cycling. A hunting device which follows another element does not cycle, even though the followed element may, during its motion, fortuitously cycle.

236. Subject matter under subclass 235 in which the element of the optical system, which moves in a cyclic path, rotates.

Search Class—
178—TELEGRAPHY, subclass 7.6, for scanning devices, such as Nipkow disks, which are used in television.

237. Subject matter under subclass 216 having a hood, grating, baffle, diaphragm or mask associated with the optical path between light source and photocell.

Search this class, subclass—
229+—for similar subject matter where the means associated with the optical path between light source and photocell are adjustable.

238. Subject matter under subclass 200 having means for controlling the temperature of the photocell apparatus.

(1) Note.—If the temperature of non-photocell apparatus is controlled, search should not be made here, but rather in the non-photocell art concerned.

239. Subject matter under subclass 200 having a housing for the photocell apparatus.

260, Chemistry, Carbon Compounds

in subclass 97, cancel "(2) Note".

establish the following subclass definitions:

97.6. Processes under subclass 97.5 directed to the separation and recovery of the constituents of tallöil (e. g., higher fatty acids, resin acids and sterols).
97.7. Processes under subclass 97.5 directed to the purification and recovery of tallöil or sulfate black liquor and the resulting products.

99.5. Products under subclass 97 which are polymerized.

(1) Note.—This subclass contains, for example, polymerization products of rosin as well as polymerized rosin esters and salts and polymerized hydrogenated rosin and its reaction products.

in subclass 412.5 in "(4) Note", change "97.5" to 97.6.

in subclass 695 under "Search this class, subclass", insert in numerical order:

99.5—for the polymerization of natural resins and their reaction products.

in subclass 705 in "(1) Note", change "97.5" to 97.5+.

273, Amusement Devices, Games

in subclass 101.1, cancel the note and substitute:

Search Class—
240—ILLUMINATION, subclass 6.41, for devices which are combined with or simulate a firearm or other projector and which project a beam of light, either to assist in aiming or to show the point of aim.
250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus. Indented subclasses 234+ include photocells combined with means to move the optical system from light source to photocell, inclusive.

314, Electric Lamp and Discharge Devices, Consumable Electrodes

in subclass 63, under "(3) Search Classes", cancel the reference to class 250, and substitute:

250—RADIANT ENERGY, subclass 165+, for radiant energy sensitive discharge devices and subclass 200+ for photocell electric circuits and photocell apparatus, particularly subclass 205, where the photocell controls the light source which illuminates it.

315, Electric Lamp and Discharge Devices, Systems

in the class definition under "Search Class", in the reference to class 250, cancel the reference to subclass 41.5, and insert after subclass 87:

200+—is the generic place for photo-electric device circuits. Class 315 provides for systems wherein the ultimate load device in the system is either a lamp or gas or vapor discharge device, and the system includes means for controlling the operation of the load device by means of radiant energy. In Class 315, the load device may be a radiant energy sensitive device; that is, a lamp or discharge device whose operation is altered when subjected to radiant energy, or the system may include a radiant energy sensitive device such as a photocell which controls the operation of the load device.

in subclass 10, under "Search Class", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 150, for cathode ray tube structure having a photo-sensitive electrode, subclass 167 for mosaic photo-sensitive electrodes, and subclass 200+ for photocell circuits and apparatus. Indented subclass 217 includes cathode ray devices which illuminate photocells while indented subclass 213 contains cathode ray device of the image converter or light amplifier type.

in subclass 82, under "Search Class", cancel all matter and substitute:

240—ILLUMINATION, subclasses 7.1+ and 41+, for the structure of vehicle head lights and 46.01+ for light projectors having a light dimming screen.

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, in which the photocell may respond to light from the headlights of a vehicle.

in subclass 149, under "Search Class", in the reference to class 250, change "41.5" to *200+*, and after "83.3" insert + and cancel "and indented subclass".

in subclass 151, under "Search Class" insert:

250—RADIANT ENERGY, subclass 205, for a photocell which controls the source of light which illumtnates the photocell.

in subclass 156, add:

Search Class—
250—RADIANT ENERGY, subclass 206+, for miscellaneous electric circuits which are controlled by a photocell.

in subclass 157, add:

Search Class—
250—RADIANT ENERGY, subclass 206+, for miscellaneous electric circuits which are controlled by a photocell.

318, Electricity, Motive Power Systems

in subclass 313, under "Search Class", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, particularly indented subclass 201+, where the photocell controls its own optical system, as in a follow-up pattern tracer, and indented subclass 206+, where the photocell controls an electric circuit.

in subclass 480 under "Search Class", cancel the reference to class 250, and substitute:

250—RADIANT ENERGY, subclass 83.3+, for means for detecting or measuring invisible radiant energy such as ultra-violet rays, and subclass 200+ for photocells responsive to visible light combined with electric circuits or photocell apparatus.

322, Electricity, Single Generator Systems

in the class definition, under "G, c. Photo-electric generators", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, particularly indented subclass 206+, which contain photocells which energize or control an electric circuit; of these indented subclasses, 212 includes the self-generating (as distinguished from externally energized) type.

in subclass 26, under "Search Class", cancel the reference to class 250, and substitute:

250—RADIANT ENERGY, subclass 200+, for photocell electric circuits and photocell apparatus, particularly indented subclass 200+, where a photocell controls or energizes a circuit; of these indented subclasses, 212 includes photocells of the self-generating (as distinguished from externally energized) type.

323, Electricity, Voltage Magnitude and Phase Control Systems

in subclass 21, under "Search Class", cancel the reference to class 250, and substitute:

250—RADIANT ENERGY, subclass 83+, for means for detecting and measuring invisible ray energy (such as X-ray or infra-red) and subclass 200+ for photocell circuits and photocell apparatus, of which indented subclass 206+ includes photoelectrically controlled circuits.

332, Modulators

in the class definition, under "II. A. 5. Modulator With Specific Intelligence Source", cancel the reference to class 250 and substitute:

250—RADIANT ENERGY, subclass 200+, for miscellaneous modulators with a photoelectric intelligence source where significant optical means for controlling or guiding the light impressed on the photocell is claimed. Class 332 provides only for modulators with photoelectric intelligence sources where no optical structure is claimed. Under class 250, subclass 200, are indented subclass 206+, where the photocell is combined with significant circuit structure, and may or may not have significant optical structure, and subclass 216+ where the photocell is combined with significant optical structure. Subclass 83.3+ of class 250 provides for subject matter analogous to that in class 250, subclass 200+ where the ray energy for the photocell is X-rays, neutrons, ultra-violet light, etc.

under "VI Related Art. Signals, Indicators, Meters and Testing Involving Modulation, Search Class", in the reference to class 250 Radiant Energy, change "subclass 41.5" to read *subclass 200+*.

under "VII Index to Classes Referred to in Preceding Sections", under class 250, Radiant Energy, cancel "photocell controlled modulator, sub. 41.5, II, A. 6" and "photo-sensitive circuit, sub. 41.5, VI", and add (immediately following "Special ray controlled modulator, subs. 83.3+, II, A, 5") the following:

photocell controlled modulator, sub. 200+, II, A, 5.
photosensitive circuit, sub. 200+, VI.

in subclass 3, under "(1) Note", change "subclasses 41.5 and 83.3+" to *subclasses 83.3+ and 200+*.

343, Communications, Radiant Energy

in the main class definition, under "Search Class", in the reference to Class 250, change "subclass 41.5" to *subclass 200+*.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,453,401. LIVE JUMP ROLL. Patented Nov. 9, 1948. A live jump roll constructed as a portable unit may be installed in conveyor or article-handling systems in factories, plants, etc. The device is embodied in a power-driven roll mounted on a portable frame. A transverse member in base of frame carries an air cylinder for raising the roll. The piston in the cylinder engages the ends of a pair of levers supporting vertically movable posts upon which bearings for the roll are mounted. When air pressure is admitted to the cylinder, the action of the piston upon the levers raises the posts and elevates the roll into contact with the article to be moved. The operator has complete control by control buttons for the motor and a remote control for the air valve in the cylinder. (Owner) Hiram O. Beeching, P. O. Box 752, South Bend, Wash. Groups 35—62; 36—19. Reg. No. 19,488.

Pat. 2,454,467. BATTERY CONNECTOR AND FUSE. Patented Nov. 23, 1948. A combination fuse and binding post connector. Clips on spaced fuse blocks support a fuse. The block and cap piece are hinged together and provide a fused coupling between the binding post and lug. Springs attached to extension and cap hold the fuse blocks in alignment after being forced therein and until the holder is forcibly tilted back to its unloosened position. (Owner) C. Edward Storck, Jr., Lutherville, Md. Group 36—11. Reg. No. 19,489.

Pat. 2,452,718. CUTTING TORCH HOLDER. Patented Nov. 2, 1948. An adjustable attachment for standard torch heads for accurately guiding the torch in circles of any desired diameter which requires a single center punch mark to establish its location. An arcuate radius arm pivoted to a gear aligns with scale markings on bottom plate of housing. A center post extending downwardly from the gear has a foot member which extends inwardly toward the flame tip. To flame-cut a hole, the arm is swung outwardly until the indicating extremity aligns with the proper scale marking on the bottom plate and a center punch indentation is formed on the plate to be cut. (Owner) Harry Blythe, 1550 Lafayette St., Denver 6, Colo. Group 35—42. Reg. No. 19,490.

Pat. 2,419,818. MEASURING GAUGE FOR MACHINE TOOLS. Patented Apr. 29, 1947. A dial indicator for measuring cuts for lathes and other machines. The measuring gauge shaft rotates in a housing. A gear wheel attached to the shaft engages a lead screw on a machine. Pointer disks extending toward the measuring scale on the dial are adjustable by a thumb screw. A ring with a vernier scale encircles the dial end of indicator housing and may be locked in any position by a split ring and screw. This scale used in conjunction with the scale on the dial permits movement of the lathe carriage and cutting tool to be measured. When the lead screw is turning; the gauge functions as a threading indicator. When the lead screw is stationary, the gauge functions as a device for measuring length of cut. A manually operated knob at end of shaft prevents play between the gear wheel and driving means. (Owner) Walter E. Burton, 1032 Florida Ave., Akron 14, Ohio. Group 35—43. Reg. No. 19,491.

Pat. 2,456,266. DRUM GRINDING MILL WITH DISCHARGE OPENINGS IN THE LINER. Patented Dec. 14, 1948. When this drum is rotated, self-crushing of the ore is effected without the use of any foreign crushing media. Crushed particles fall through peripheral outlets in drum onto a spaced peripheral screen, which rotates with drum. Oversize particles are automatically returned to drum interior for re-grinding. The entire inner periphery of drum is surrounded by a resiliently mounted segmental liner, with the space between adjacent segments forming discharge outlets registering with drum outlets. When drum is rotated, the shelves of the segments lift material and dump it back onto other segments to provide crushing effect. The falling material striking the segments compresses the mounting (which consists of rubber) so that rebound of the segments will effect a secondary crushing blow. The segments are loosely connected to the drum so that rotation of drum will impart limited sliding movement to the segments to prevent clogging of the outlets. (Owner) G. B. & S. Mill, Inc., Suite 818, Larson Bldg., Yakima, Wash. Group 35—33. Reg. No. 19,492.

Pat. 2,451,190. STUD WELDING GUN. Patented Oct. 12, 1948. With this gun an accurate arc length may be consistently maintained when making successive stud welds regardless of non-uniformity of the surfaces to which the studs are to be welded. A tubular supporting leg carrying a base plate on its lower end is slidably mounted in gun frame and normally urged outwardly by a spring. When gun is moved to project a stud against the work, operator depresses a vertical rod with his thumb to free the leg so that it will automatically adjust itself to bring the base plate into operative position against the surface of the work as the stud holder is yieldably retracted a limited distance within gun. When retraction of stud holder is arrested by a dog engaging an adjustable stop, operator releases the rod to lock and maintain the leg in adjusted position during welding operation. Energization of a solenoid disengages dog from stop and retracts stud holder and stud to create the arc. De-energization of solenoid permits stud holder to project stud against the work. If desired, an arc shield may be used instead of the base plate. (Owner) Frank W. Anderson, P. O. Box 22, North Weymouth, Mass. Groups 35—42; 36—19. Reg. No. 19,493.

Pat. 2,453,825. TAILSTOCK LATHE FOR DRILLING. Patented Nov. 16, 1948. A tailstock attached to the bed of a metal-working lathe to drill an internal hole while the surface of the workpiece is being finished. The cuttings are disposed of through openings in a slidable sleeve which houses the drill shaft. Modification is given. (Owner) Samuel Bailey Wright. Correspondence to Mawhinney & Mawhinney, 444 Munsey Bldg., Washington 4, D. C. Group 35—43. Reg. No. 19,494.

Pat. 2,448,619. AUTOMATIC ELECTROMAGNETIC AUTOMOBILE DOOR EMERGENCY LATCH. Patented Sept. 7, 1948. A latching device for automobile doors automatically locks the doors when the car is moving. A control replaces the filler plug in the differential housing and automatically throws the switch to lock the doors when the car is in motion. The switch is operated by a cork block in close proximity to the ring gear. The device can be attached to any automobile without material alterations. (Owner) Edward L. Pratt, 210 North 4th St., Pekin, Ill. Groups 36—41; 38—31. Reg. No. 19,495.

Pat. 2,454,860. PORTABLE ELEVATOR FOR LOADING TRUCKS. Patented Nov. 30, 1948. A power-driven loading device constructed of light-weight metal is easily movable or may be clamped to a truck while loading. A base frame has front and rear retractable skids. An adjustable boom is secured to the top of a vertical frame over which an endless conveyor travels for elevating and distributing material to be loaded. Supporting members attached to the boom have rollers which engage channels in the vertical frame. Cables run on pulleys secured to the side channels of the central frame, and their ends are secured to manually rotatable drums. Rotation of the drums raises or lowers the supporting members and also the boom. (Owner) James R. Clark, P. O. Box 1106, Mobile 6, Ala. Group 35—62. Reg. No. 19,496.

Pat. 2,456,869. HYDRAULIC PULSATOR SYSTEM. Patented Dec. 21, 1948. Comprises a pair of cylinders within one of which is arranged a series of normally spring-expanded hollow cells, longitudinally displaceable within the cylinder. Second cylinder of the pair contains a series of like cells, devoid of springs so that a plunger will maintain them collapsed. Individual fluid supply lines are connected to each series of cells and to heads at opposite ends of a single fluid supply line connected to a reservoir. The expanded cells are normally filled with fluid so that when they are contracted by depressing a plunger the fluid is expelled into the other cells to expand them and thrust their plunger outwardly. (Owner) Clarence E. Fowler, 6315 Willoughby Ave., Hollywood 38, Calif. Group 35—61. Reg. No. 19,497.

Pat. 2,459,031. THREE-WAY RUPTURE TRUSS APPLIANCE. Patented Jan. 11, 1949. Adjustable truss appliance holds rupture in place without pushing it back into the body. The inner face of an oblong pad carrying a removable rubber hood is slightly concaved so that pad will fit directly over ruptured spot. An adjustable resilient belt is provided by connecting the opposed ends of a pair of cushioned bands to opposite sides of a rectangular link seated in a recess in the back of the pad, and adjustably connecting other ends of bands. An adjustable understrap has one end connected to the lower end of the link and opposite end connected to a buckle on the lower end of a resilient strip depending from lower edge of belt. (Owner) J. A. Kiser, Hungerford, Pa. Group 39—16. Reg. No. 19,498.

Pat. 2,260,901. ELECTRIC SWITCH. Patented Oct. 28, 1941. Electromagnetically operated switch effects automatic change-over from one set of contacts that closes one circuit to another set of contacts that closes another circuit after an interval of time. A movable contact-carrying switch on which a row of bridge contacts are mounted is supported on pivoted links to a movable portion of an electromagnet so that when in "off" position it may swing laterally. Contacts supported on a fixed member of the device may be selectively bridged to complete either of two electric circuits. When in normal position, the movable switch is attracted by the electromagnet and bridges the contact of one circuit. A thermostatic switch breaks the circuit of the magnet shifting the movable contact into "off" position to complete the second circuit, etc. (Owner) Bernard Hinks, Mar-y-dene, Ashmore Lake, Short Heath, Willenhall, Staffordshire, England. Group 36—19. Reg. No. 19,499.

Pat. 2,454,451. ELECTROMAGNETIC SWITCH. Patented Nov. 23, 1948. Motor-starting switch of simplified construction. Comprises a magnetic coil and a divided magnetic yoke, one part of which carries contacts which move against other contacts on the switch frame on energization of the coil. The yokes also move against each other to open the coil circuit or prevent its closing when the contacts are badly worn. One purpose of the construction is to eliminate the possibility of endangering a motor controlled by the switch. Other purposes are to reduce pressure on the contacts, as well as prevent arcing and burning and thus increase their life. (Owner) Bernard Hinks, Mar-y-dene, Ashmore Lake, Short Heath, Willenhall, Staffordshire, England. Group 36—19. Reg. No. 19,500.

Pat. 2,269,740. PROCESS FOR PRODUCING ORNAMENTAL MULTICOLORED RAISED DESIGN. Patented Jan. 13, 1942. An outline of any desired design is cut through a thin layer of white wax which has been spread over the surface of a metal plate. Molten crayon is then applied to the wax surface within the confines of the outline by a continuously heated tool, a different colored crayon being used for each adjacent portion of the design. (Owner) Benjamin Schwartz, 1601 Schenectady Ave., Brooklyn 3, N. Y. Group 39—53—61—71—72—93. Reg. No. 19,501.

Pat. 2,459,048. MOLD INJECTION HEAD. Patented Jan. 11, 1949. This patent presents a device which simultaneously injects materials of different color such as molten glass or metals and alloys into a mold. Reservoirs containing primary colors of the material are supported on a casting having radial chambers which communicate with the reservoirs and a central opening. Secondary colors may be produced by mixing the primary colors in branch passages provided for that purpose before the material reaches the central opening. In operation, the material passes downwardly into its respective channels where it is compressed and liquified (if necessary) by the slidable plungers before measured quantities of the material are extruded into the mold. (Owner) Benjamin Schwartz, 1601 Schenectady Ave., Brooklyn 3, N. Y. Groups 32—39—69; 33—52; 39—54—61—98. Reg. No. 19,502.

Pat. 2,443,769. TOOTHBRUSH STERILIZING TUBE. Patented June 22, 1948. A face plate carrying a number of individual toothbrush containers is secured to a base plate which includes a compartment for a germicidal preparation. A filling and draining bowl having communication with the base compartment is provided on the face plate. Sterilization of the brushes is accomplished by circulation of fumes which enter the containers through openings leading from the base. Spring-pressed closures are provided for each of the containers to insure a liquid- and gas-tight seal. (Owner) Eugene J. Huber, 3312 Washington Ave., New Orleans 13, La. Groups 39—17—22—81; 40. Reg. No. 19,503.

Pat. 2,453,473. STOVE FLUE COVER. Patented Nov. 9, 1948. Removable flue closure for stoves is hinged in a position to prevent soot from falling to floor when the flue is being cleaned. Substantially rectangular closure has offsets at each end which form shoulders and fit looped catches in stove wall. When flue is to be cleaned, the closure is taken off and inverted so that slots on the lower part of closure will fit notches in stove wall provided for this purpose. In this inverted position, the closure is slid downwardly until it rests on bottom edge of flue opening so that the closure is supported in a horizontal position

forming an apron. (Owner) Catherine H. Thieman, 417 Oneida St., Beaver Dam, Wis. Groups 33—62; 34—95. Reg. No. 19,504.

Pat. 2,458,602. SNOW PROTECTOR FOR SKIS. Patented Jan. 11, 1949. Protective attachment prevents ice and snow from building up between ski and shoe worn by skier. A plate in the shape of a shoe sole is screwed to the ski runner. A fleece-lined and waterproof upper attached to the plate encloses the skier's shoe and provides a heel portion which may be freely extended or collapsed in bellows fashion. Adjustable straps at toe and heel hold the protector firmly in place. (Owner) George Johnson, P. O. Box 642, Ironwood, Mich. Group 39—49. Reg. No. 19,505.

Pat. 2,447,199. TOGGLE LINK OPERATED HAND CLAMP. Patented Aug. 17, 1948. Tool to clamp sheet metal patterns on material to be marked for cutting and other purposes. Two elongated plates bolted in facing contact with each other are shaped to form fixed laterally projecting jaws and handle. An arm having an adjustable jaw and pivoted to complemental recesses cut in the plates is adapted for movement into and out of clamping relation with the fixed jaws. An auxiliary handle is pivoted at one end of the recesses to the arm by an L-shaped link. In operation, upon movement of the auxiliary handle toward the first handle, the links pull the arm upwardly to close the jaw against the work, or when moved in an opposite direction move the arm downwardly to release the movable jaw. (Owner) Edward F. Miller, 4859 West Haddon Ave., Chicago 51, Ill. Group 35—43. Reg. No. 19,506.

The following five patents are offered for license or sale by Samuel Reich, 15 Kermit Place, Brooklyn, N. Y.

Pat. 1,985,579. FOLDING EGG BOX. Patented Dec. 25, 1934. Rectangular cardboard blank is cut and scored to provide an egg carton. The blank includes T-shaped extensions on transverse partitions which interlock with the bottom wall and extend to provide spaced feet which are further braced by tongues cut from the bottom wall that bear against the extensions. A central insert interlocks with the slot of the transverse partitions and, being of greater height than the partitions, prevents the cover from caving. When the cover is swung closed, and the locking flap is engaged with the shoulders that extend inwardly from the front wall, a semi-rigid carton is provided. Group 26—61—62. Reg. No. 19,507.

Pat. 2,071,949. BOX. Patented Feb. 23, 1937. Tray or dish type box used in the sale of moist loose foods. Single blank is folded to provide a continuous bottom and side wall structure having leak-proof corner joints. Upstanding walls are joined by foldable corner webs. Flaps provided along the top edge of each wall are bent down and the central portion secured by staples or other fastening arrangement, preferably during manufacture. The webs are folded flat against the walls and received in the free ends of the flap to avoid accidental opening. Before use, the boxes may be stacked flat. Group 26—61—62. Reg. No. 19,508.

Pat. 2,097,893. CONTAINER. Patented Nov. 2, 1937. Paper cup includes a handle which nests with the cup. Blank is cut to provide two radial edges (one of which includes the handle) and outer and inner arcuate edges. The inner edge has a series of triangular tongues which form a segmental base when the cup is assembled. The blank is scored so that it may be folded to form a bead on rim of outer edge of cup and to provide a channel on the inner edge. The channel receives the depending edge of a disk, which, when the two radial edges are firmly glued together, forms a solid base and renders the cup leak-proof. Group 26—61—62. Reg. No. 19,509.

Pat. 2,117,502. FOLDABLE CONTAINER. Patented May 17, 1938. This patent presents a one-piece rectangular box which may be opened out full length to permit easy packing as well as disclose the contents. With the exception of a strap handle, the box is made of a single cardboard blank. Handle is made of cardboard reinforced with stitching and is held in place in slits provided in the box. Group 26—61—62. Reg. No. 19,510.

Pat. 2,165,906. FOLDING BOX. Patented July 11, 1939. One-piece foldable hexagonal box has two edges of its bottom connected on opposite sides to a series of side walls. The center of bottom wall is creased for folding, and collapses between the side walls. The box is completed by webs which connect the remaining sides of the bottom wall. The webs consist of an attaching section and a folding section. The attaching sections are coated with an adhesive so that they may be glued flat to the corresponding side walls when box is in open position. Group 26—61—62. Reg. No. 19,511.

Pat. 2,439,629. MULTIPLE THERMOCHEMICAL CUTTING ATTACHMENT. Patented Apr. 13, 1948. Attachment to be secured to the torch bar of a thermochemical cutting apparatus will hold a variable number of cutting torches in various adjusted positions to enable an operator to perform simultaneously several longitudinal cuts on large sections of work. Attachment consists of a tubular extension member (of similar separable sections) carrying a bracket on one end to be clamped to torch bar anywhere along its length, and a plurality of separate identical spacer members to be adjustably clamped to extension member anywhere along its length to hold torches. The bracket is designed so that it may be clamped to torch bar by simply tightening a thumb screw carried by bracket. The spacer members each carry a split clamp on one end to secure them to extension member. A torch is slidably retained in a transverse bearing at the outer free end of each spacer member in a manner so that torch may be vertically adjusted to various positions by turning a thumb nut. (Owner) Stewart N. Libby, 5523 West Cullom Ave., Chicago 41, Ill. Group 35—43. Reg. No. 19,512.

Pat. 2,451,634. INK FOUNTAIN FOR PAINTING PRESSES. Patented Oct. 19, 1948. In this patent the usual flexible steel blade adjacent a duct roller is mounted on a cross member pivoted to press frame. Threaded non-rotatable studs along the underside of the blade are provided for engaging internally threaded hollow pins in the cross member. These pins are restrained from axial movement so that they may be turned to variably adjust the blade along its length. Once the blade has been set in adjusted position for a particular job, the cross member and blade may be swung as a unit to open and close the ink duct without the necessity of re-adjusting the blade. An adjustable stop is provided on press frame to limit closing movement of cross member and blade. (Owner) Arthur W. Ranger. Correspondence to John Imirie, Munsey Bldg., 1329 E St., N. W., Washington 4, D. C. Group 35—55. Reg. No. 19,513.

Pat. 2,453,605. INDOOR GOLF PUTTING PRACTICE APPARATUS. Patented Nov. 9, 1948. Golf putting practice apparatus consists of a framework having a forwardly inclined top surface so that the front end may be slipped beneath a rug. A rear top board covered with fabric may be tiltably adjusted so that its front surface will lie flush with top of rug. A rope extending transversely through rear end of framework has weights on its free ends. These weighted ends of rope may be placed so that they extend outwardly and forwardly at an angle on opposite sides of framework to prevent misdirected balls from rolling about the room. (Owner) Leon C. Thomas, 715 Northridge St., Greensboro, N. C. Groups 39—49; 40. Reg. No. 19,514.

Dedicated Patents

The following three patents, bearing Reg. No. 2,713, Reg. No. 2,715, and Reg. No. 2,717 respectively, are removed from the listing of patents which are available for license or sale and are hereby dedicated by the Hercules Powder Company, of Wilmington, Del., to the public of the United States of America. The right is granted to "make, to use, and to sell to others to be used" these inventions, without compensation to the Hercules Powder Company.

Pat. 2,322,197. ROSIN BASE RESIN. Patented June 15, 1943.

Pat. 2,344,194. ROSIN BASE RESIN. Patented Mar. 14, 1944.

Pat. 2,347,923. VARNISH COMPOSITION. Patented May 2, 1944.

These patents have as their main objective the production of high grade coatings, such as varnishes, lacquers, and the like, in which all, or some, of the oil used is of the soft-drying type, such as linseed oil. The resultant coatings have all the desirable characteristics and are comparable with high grade coatings prepared with the fast drying oils, such as tung oil, etc. Group 28—11.

Correction

In the Register of Patents Available for Licensing or Sale section of the OFFICIAL GAZETTE for April 26, 1949, the following changes should be made in the listing of patents offered for license by Kinetic Chemicals, Inc.:

Reg. No. 19,384 of Pat. 2,024,095 should read Reg. No. 19,384½.

Reg. No. 19,385 of Pat. 2,047,210 should read Reg. No. 19,385½.

Reg. No. 19,386 of Pat. 2,058,453 should read Reg. No. 19,386½.

Reg. No. 19,387 should read—

Pat. 2,062,743. PRODUCTION OF FLUORINE-CONTAINING CARBON COMPOUNDS. Patented Dec. 1, 1936. Production of halogenated carbon compounds by reacting HF with a compound containing at least one cyclic carbon atom having attached thereto at least one hydrogen atom and at least one halogen atom other than fluorine. Group 28—89. Reg. No. 19,387½.

Reg. No. 19,388 of Pat. 2,068,005 should read Reg. No. 19,388½.

Reg. No. 19,389 of Pat. 2,084,950 should read Reg. No. 19,389½.

Reg. No. 19,390 of Pat. 2,146,725 should read Reg. No. 19,390½.

Reg. No. 10,391 of Pat. 2,140,884 should read Reg. No. 10,391½.

Reg. No. 19,392 of Pat. 2,149,039 should read Reg. No. 19,392½.

Reg. No. 19,393 of Pat. 2,192,143 should read Reg. No. 19,393½.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 17, 1949

[VOL. 622. NO. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 507,194. MAURICE LANDON, doing business under the name of Parfums Saint-Cyr, New York, N. Y., and Paris, France. Filed Aug. 10, 1946.

TOUJOURS OU JAMAIS

FOR PERFUMES, TOILET WATERS, COLOGNES, FACE POWDER, LIPSTICKS, AND ROUGE.
Claims use since 1926.

Ser. No. 507,196. MAURICE LANDON, doing business under the name of Parfums Saint-Cyr, New York, N. Y., and Paris, France. Filed Aug. 10, 1946.

HOMME DE PARIS

The word "Paris" is disclaimed apart from the mark.
FOR PERFUMES, TOILET WATERS, COLOGNES, FACE POWDER, LIPSTICKS, AND ROUGE.
Claims use since 1926.

Ser. No. 508,206. AVON PRODUCTS, INC., New York, N. Y. Filed Aug. 29, 1946.

DEVOTEDLY YOURS

FOR PERFUMES.
Claims use since June 20, 1946.

Ser. No. 515,200. BARKER, MOORE & MEIN COMPANY, Philadelphia, Pa. Filed Jan. 6, 1947.

CE-COX

The name "Cox" is disclaimed.
FOR COMPOUND FOR TREATING DISEASES OF POULTRY.
Claims use since Dec. 31, 1946.

Ser. No. 523,108. YOSEMITE CHEMICAL COMPANY, San Francisco, Calif. Filed May 27, 1947.

ANTI-RUST TWINS

The words "Anti-Rust" are disclaimed apart from the mark.
FOR CHEMICAL PREPARATIONS FOR THE REMOVAL AND PREVENTION OF RUST.
Claims use since Oct. 2, 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 517,465. ENJAY CONSTRUCTION COMPANY, Chicago, Ill. Filed Feb. 14, 1947.

The letter "T" and the words "T-Hangar That Tops Them All" are disclaimed.
FOR AIRPLANE HANGARS.
Claims use since Feb. 4, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 484,300. CARGAIR, INC., Los Angeles, Calif. Filed June 11, 1945.

CARGAIR

FOR TIE-DOWN EQUIPMENT—NAMELY, CARGO TIES, METAL BANDS, STRAPS, AND CLAMPS.
Claims use since May 5, 1945.

Ser. No. 513,095. MANUEL BERGMAN, doing business as C S Brass Manufacturing Co., New York, N. Y. Filed Nov. 23, 1946.

FOR BRASS PIPE FITTINGS—NAMELY, SLEEVE, NUT, UNION, THREE WAY T, TWO WAY ELBOW,

FEMALE CONNECTOR, MALE CONNECTOR, MALE ELBOW, FEMALE ELBOW, TWO WAY T, ADAPTER, T, PLUG, SLOTTED PLUG, PUSHING ELBOW, STREET L, COUPLING, CLOSE NIPPLE, REDUCER, LONG NIPPLE, CONNECTOR, INVERTED MALE CONNECTOR, INVERTED NUT, INVERTED MALE ELBOW, CARBURETOR NUT, PIPE ADAPTER, REDUCING ADAPTER, DOUBLE MALE COCK, DRAIN COCK, COMPRESSION COCK, S. A. E. COCK, DOUBLE FEMALE COCK, AND THREE WAY COCK.
Claims use since June 1935.

CLASS 19

VEHICLES

Ser. No. 506,708. THE UNION METAL MANUFACTURING COMPANY, Canton, Ohio. Filed Aug. 1, 1946.

UNION METAL

The word "Metal" is disclaimed.
FOR HEAVY DUTY CARGO TRAILERS AND TRAILER VEHICLE UNDER-CARRIAGES, SHIP MASTS, STEEL CARGO SHIP BOOMS, AND SHIP RUDDERS.
Claims use since 1941 on ship masts and steel cargo ship booms; and since 1944 on trailer and vehicle under-carriages and ship rudders.

Ser. No. 515,589. TIDEWATER EQUIPMENT CO., Brunswick, Ga. Filed Jan. 10, 1947.

DIXIE LOGGER

No claim is made for the word "Logger" apart from the mark as shown.
FOR PULPWOOD WAGONS AND RUBBER TIRED FOUR-WHEELED LOGGING CARTS.
Claims use since Oct. 1, 1946.

Ser. No. 516,567. PARK SQUARE MOTORS, INC., Brooklyn, N. Y. Filed Jan. 29, 1947.

The drawing is lined for the color gold.
FOR SECOND-HAND AUTOMOBILES.
Claims use since Dec. 16, 1946.

Ser. No. 519,306. GORDON A. WILLEY, doing business as The Nation's Cycle Center, Maywood, Ill. Filed Mar. 19, 1947.

NATION-BILT

The lining in the drawing is designated as for shading purposes only.
FOR MOTORCYCLE WINDSHIELDS, MOTORCYCLE BUMPERS, MOTORCYCLE FENDER PLATES, MOTORCYCLE FENDER RODS, AND MOTORCYCLE MIRRORS.
Claims use since July 10, 1946.

Ser. No. 523,296. TUXCO CORPORATION, Evanston, Ill. Filed May 29, 1947.

TUXCO

FOR BRAKE DRUMS FOR VEHICLES.
Claims use since May 2, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 492,106. STAR GLOW ELECTRIC PRODUCTS, INC., Chicago, Ill. Filed Nov. 23, 1945.

Applicant disclaims the words "Electric Products" and the word "Glow," apart from the other features of the mark.
FOR ELECTRIC HOT PLATES.
Claims use since Oct. 5, 1945.

Ser. No. 499,925. AUGUST S. TORRES, Kinderhook, N. Y. Filed Apr. 9, 1946.

The word "Roast" and the representation of the coffee bean are disclaimed apart from the mark.
FOR ELECTRIC COFFEE ROASTERS.
Claims use since Nov. 1, 1945.

Ser. No. 509,156. MASTER APPLIANCE MFG. CO., Racine, Wis. Filed Sept. 16, 1946.

Breeze Master

The word "Breeze" is disclaimed.
FOR ELECTRIC FANS.
Claims use since July 1, 1946.

Ser. No. 525,518. THE ADAMS & WESTLAKE COMPANY, Chicago, Ill. Filed July 2, 1947.

ADLAKE

FOR ELECTRIC LIGHTING FIXTURES—NAMELY, TROUGH LIGHTING FIXTURES, LOUVER LIGHTING FIXTURES, LOUVER BAGGAGE RACK AND LIGHTING FIXTURES, COMBINED BAGGAGE RACK AND LIGHTING FIXTURES; ELECTRIC LAMPS—NAMELY, CHANDELIERS, PENDANT LAMPS, CEILING LAMPS, BRACKET LAMPS, TABLE LAMPS, BERTH LAMPS, EXIT LAMPS, AND WALL LAMPS; ELECTRIC LANTERNS; ELECTRIC AIRCRAFT RUNNING LAMPS, ELECTRIC AIRCRAFT LANDING LAMPS, ELECTRIC INSTRUMENT BOARD LAMPS, ELECTRIC FUEL SIGNAL LAMPS; ELECTRIC ANCHOR AND IDENTIFICATION LAMPS; ELECTRIC LANDING FIELD OUTLINING LAMPS; ELECTRIC HIGHWAY CROSSING SIGNALS, ELECTRIC RAILWAY SIGNAL LAMPS; ELECTRIC TRAFFIC SIGNAL LAMPS; ELECTRIC SEMAPHORE LAMPS; ELECTRIC SWITCH LAMPS; ELECTRIC CLASSIFICATION LAMPS; ELECTRIC HEADLIGHTS; ELECTRIC SEARCHLIGHTS; ELECTRIC INDICATOR LIGHTS.
Claims use since September 1895.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 487,334. THE RAPIDS-STANDARD COMPANY, INC., Grand Rapids, Mich. Filed Aug. 20, 1945.

PRESS-VEYOR

FOR ELECTRICALLY OPERATED, HEAVY DUTY, PORTABLE, ENDLESS BELT CONVEYORS, DESIGNED PRIMARILY FOR USE ON INDUSTRIAL CONVEYING JOBS.
Claims use since Aug. 4, 1945.

Ser. No. 517,437. TAVARO S. A., Geneva, Switzerland. Filed Feb. 13, 1947.

TAVARO

FOR SEWING MACHINES AND PARTS THEREOF AND ACCESSORIES—NAMELY, BOBBINS, EMBROIDERY FRAMES, NEEDLES, PRESSER FOOT, GATHERING FOOT, QUILTING FOOT, HEMMING FOOT, FOOT HEMMER FELLING, DARNING FOOT, BRAIDING FOOT, DARNING PLATES, SCREW DRIVERS, DARNING FRAMES, TRANSMISSION BELTS, NEEDLE THREADERS, AND SPEED REDUCERS.
Claims use since 1940.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 522,301. LIME EQUIPMENT COMPANY, Lebanon, Pa. Filed May 12, 1947.

LIME EQUIPMENT COMPANY

The words "Lime Equipment Company" are disclaimed apart from the mark as shown.
FOR MACHINERY FOR THE MANUFACTURE OF LIME—NAMELY, PREHEATERS, COOLERS, DRYERS, AND ROTARY KILNS.
Claims use since Nov. 1, 1946.

CLASS 39

CLOTHING

Ser. No. 500,368. B. COHEN & CO., INC., New York, N. Y. Filed Apr. 17, 1946.

Cobé

FOR WOMEN'S LOUNGING ROBES.
Claims use since Mar. 1, 1946.

Ser. No. 517,205. I. SCHNEIERSON & SONS, INC., New York, N. Y. Filed Feb. 8, 1947.

Loom-Mates

FOR LADIES' AND CHILDREN'S CHEMISES, PANTIES, PAJAMAS, DRESSES, SLIPS, BLOOMERS, STEP-INS, AND NIGHTGOWNS AND LADIES' UNIFORMS FOR WORK PURPOSES AND BOYS' WASH SUITS.
Claims use since Feb. 5, 1947.

Ser. No. 526,757. THE ADLER COMPANY, Cincinnati, Ohio. Filed July 3, 1947. Under 10-year proviso.

EAGLE

FOR KNITTED SOCKS.
Claims use since Jan. 1, 1895.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 497,928. FRANCOIS LABORATORIES, INC., New York, N. Y. Filed Mar. 9, 1946.

Miss Coquette

FOR COLD WAVE PERMANENT KIT, CONTAINING A PERMANENT WAVE SOLUTION, SHAMPOO SOAP, CURLERS, PAPER CAP, TISSUES, ABSORBENT COTTON, NEUTRALIZING POWDER, AND INSTRUCTION BOOKLET.
Claims use since Feb. 7, 1946.

Ser. No. 516,196. THE KELLEY-KOETT MANUFACTURING COMPANY, Covington, Ky. Filed Jan. 28, 1947.

Photocron

FOR PHOTOFLUOROGRAPHIC X-RAY APPARATUS USED FOR MEDICAL PURPOSES, PARTS THEREFOR, APPURTENANCES AND APPLIANCES THEREFOR AND FOR USE IN CONNECTION THEREWITH—NAMELY, STANDS FOR X-RAY CAMERAS AND TUBES, TRANSFORMERS, RECTIFIERS, TIMERS, AND CONTROLS FOR X-RAY MACHINES, X-RAY PROTECTIVE EQUIPMENT, STEREOSCOPIC ATTACHMENTS FOR X-RAY CAMERAS, AUTOMATIC NUMBERING EQUIPMENT FOR X-RAY FILM, AND X-RAY FILM VIEWERS.
Claims use since September 1945.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 497,574. SIOUX FALLS RENDERING COMPANY, Sioux Falls, S. Dak. Filed Mar. 2, 1946. Under the act of February 20, 1905, as amended June 10, 1930.

SIOUX BRAND

The expression "Brand" is disclaimed apart from the mark.
FOR HOG FEEDS, INCLUDING 80% PROTEIN HOG SUPPLEMENT, 40% PROTEIN HOG CONCENTRATE, 19% PROTEIN PIG AND SOW MEAL; SOYBEAN OIL MEAL USED AS A FEED OR INGREDIENT OF FEED FOR HOGS, SHEEP, CATTLE, POULTRY, DOG FOOD, AND FUR BEARING ANIMALS; MEAT SCRAPS USED AS A FEED OR INGREDIENT OF FEED FOR HOGS, SHEEP, CATTLE, POULTRY, DOG FOOD, AND FUR BEARING ANIMALS; POULTRY FEEDS, INCLUDING TURKEY STARTER FEED, TURKEY GROWER FEED, EGG MASH FOR POULTRY, STARTER FEED FOR CHICKENS, GROWER FEED FOR CHICKENS, 26% PROTEIN GRAIN BALANCER FOR CHICKENS, 32% PROTEIN POULTRY CONCENTRATE; 80% PROTEIN CATTLE AND SHEEP FEED.
Claims use on hog feeds since July 1, 1937; on soybean oil meal since June 1, 1942; on meat scraps since June 1, 1933; on poultry feeds since Feb. 1, 1945; and on cattle and sheep feed since Oct. 1, 1944.

Ser. No. 517,935. AUGUST S. TORRES, Kinderhook, N. Y. Filed Feb. 21, 1947.

MINUTED COFFEE

Applicant disclaims the word "Coffee" apart from the mark as shown.
FOR COFFEE.
Claims use since May 1, 1945.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 544,914. SENECA COAL & IRON CORPORATION, New York, N. Y. Filed Dec. 19, 1947.

Applicant claims ownership of Registration No. 258,844.
FOR COAL.
Claims use since Aug. 1, 1937.

CLASS 2

RECEPTACLES

Ser. No. 528,733. M. I. NAKEN CO., Chicago, Ill. Filed July 16, 1947. Under section 2f of the act of 1946.

No claim is made to the exclusive use of the term "Tarnish Proof Silverware Chest" apart from the mark as shown.
FOR CHESTS FOR RECEIVING AND STORING TABLE FLATWARE.
Claims use since February 1928.

Ser. No. 548,470. BEEK AND COMPANY, INCORPORATED, New York, N. Y. Filed Jan. 31, 1948.

Priscilla

Applicant claims ownership of Registration No. 269,942.
FOR RUBBER TOILET TRAYS.
Claims use since Oct. 29, 1947.

Ser. No. 552,246. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill. Filed Mar. 18, 1948.

KLEENEX

Applicant claims ownership of Registrations Nos. 191,941, 297,536, 384,582, and 408,618.
FOR CABINETS FOR DISPENSING PAPER TISSUE SHEETS.
Claims use since 1930.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 533,092. E. J. WILKINS COMPANY, Gloversville, N. Y. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

Unifold

FOR POCKETBOOKS AND BILLFOLDS.
Claims use since May 15, 1937.

Ser. No. 533,093. E. J. WILKINS COMPANY, Gloversville, N. Y. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

Index-it

FOR BILLFOLDS.
Claims use since July 1, 1938.

Ser. No. 538,758. THE J. L. HUDSON COMPANY, Detroit, Mich. Filed Oct. 23, 1947. Under section 2f of the act of 1946.

STURDIBILT

Applicant claims ownership of Registration No. 416,376.
FOR WARDROBE TRUNKS, WARDROBE CASES, SUITCASES, OLADSTONE CASES, HAT AND SHOE CASES, LEATHER VANITY AND MAKE-UP CASES SOLD AS SUCH WITHOUT CONTENTS, OVERNIGHT BAGS, DUFFLE BAGS, HANDBAGS, AND BRIEF CASES.
Claims use since 1937.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 514,766. THE MATCHLESS METAL POLISH CO., Chicago, Ill. Filed Oct. 8, 1947; originally filed, act of 1905, Dec. 24, 1946. Under section 2f of the act of 1946.

MATCHLESS

FOR BUFFING AND POLISHING COMPOUND IN CAKE FORM FOR METALS, HARD RUBBER, CELLULOID, PLASTICS, AND WOOD.
Claims use since June 1887.

Ser. No. 548,974. MACDERMID INCORPORATED, Waterbury, Conn. Filed Feb. 6, 1948.

METEX

The vertical lining on the drawing indicates the color red. Applicant claims ownership of Registration No. 186,356.
FOR CHEMICALS FOR CLEANING METALS CONSISTING OF A MATERIAL CONTAINING POTASH, SODIUM HYDRATE, SODIUM SILICATE, SODIUM ALUMINATE AND SOAP, AND CHEMICALS FOR CLEANING TEXTILES CONSISTING OF A MATERIAL SIMILAR TO THE ABOVE BUT WITH THE SODIUM HYDRATE OMITTED, AND IN ADDITION LIQUID COMPOUNDS USED IN AND INCIDENTAL TO METAL FINISHING OPERATIONS FOR BRIGHTENING THE BASE METAL PREPARATORY TO ELECTROPLATING AND THE APPLICATION OF OTHER SURFACE COATINGS.
Claims use since Aug. 3, 1922.

Ser. No. 560,468. C. N. HUBBARD, Kansas City, Mo. Filed June 30, 1948.

The words "Super Spotter" are disclaimed. Applicant claims ownership of Registration No. 259,966.
FOR NON-EXPLOSIVE CLEANING COMPOUND FOR REMOVING SOILED SPOTS FROM FABRICS, FELT, LEATHER, AND OTHER CLOTHING MATERIALS, AND ALSO FOR GENERAL HOUSE CLEANING USE.
Claims use since Sept. 21, 1942.

Ser. No. 562,323. ELIZABETH MEEK CHILDS, doing business as Childsco Products Co., Macon, Ga. Filed July 28, 1948.

Childsco

FOR HAND SOAP, AND ALL-PURPOSE CLEANING PREPARATION.
Claims use since May 20, 1948.

Ser. No. 564,173. WESTVACO CHEMICAL CORPORATION, New York, N. Y., now by merger to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware. Filed Aug. 25, 1948.

FOSKLOR

Applicant claims ownership of Registration No. 338,671.
FOR CHLORINATED PHOSPHATIC DETERGENT USED AS A COMBINED DETERGENT AND GERMICIDE.
Claims use since Apr. 18, 1936.

Ser. No. 564,965. The BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Sept. 11, 1948.

Brunswick

FOR SANDPAPER.
Claims use since Feb. 7, 1945.

Ser. No. 565,472. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Sept. 20, 1948.

Brunsco

FOR LEATHER CLEANER AND LEATHER DRESSING.
Claims use since July 21, 1937.

Ser. No. 567,190. E. S. DICKERSON, JR., doing business as The Dickerson Company, Philadelphia, Pa. Filed Oct. 19, 1948.

"SORB-SALL"

FOR OIL, GREASE, AND MOISTURE ABSORBENT, USED LARGELY ON FLOORS.
Claims use since May 20, 1947.

CLASS 5

ADHESIVES

Ser. No. 544,674. COMPO SHOE MACHINERY CORPORATION, Boston, Mass. Filed Oct. 30, 1947. Under section 2f of the act of 1946.

The words "Adhesives make the better shoes" are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 394,013.
FOR ADHESIVE SHOE CEMENT.
Claims use since Aug. 30, 1940.

Ser. No. 550,431. PERKINS GLUE COMPANY, Lansdale, Pa. Filed Feb. 24, 1948.

No claim is made to the words "Perkins Glues" apart from the mark as shown, but without waiver of any common-law rights therein. Applicant claims ownership of Registrations Nos. 139,865, 277,445, and 339,893.
FOR UREA FORMALDEHYDE AND PHENOL FORMALDEHYDE RESINS AS USED FOR WOOD ADHESIVES, SAID RESINS BEING EITHER LIQUID OR DRY; CASEIN GLUES, VEGETABLE GLUES, ANIMAL GLUES, QUICK REPAIR ADHESIVE BEING A PUTTY-LIKE MATERIAL WITH PIGMENTS TO PRODUCE COLORS SIMILAR TO DIFFERENT SPECIES OF WOOD, BEING USED TO FILL VOIDS IN VENEER PRIOR TO FINISHING; AND DEXTRIN BASE ADHESIVES.
Claims use since July 24, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 527,843. REAL SILK HOSIERY MILLS, INC., Indianapolis, Ind. Filed July 5, 1947.

Gone

FOR LIQUID DEODORIZER FOR SUPPRESSING ODORS OF CLOTHING AND FABRICS AND IN ROOMS.
Claims use since July 10, 1945.

Ser. No. 528,009. THE EDWAL LABORATORIES, INC., Chicago, Ill. Filed July 5, 1947.

THERMO-SALT

The word "Salt" is disclaimed apart from the mark.
FOR INERT CHEMICAL TO BE ADDED TO PHOTOGRAPHIC SOLUTIONS IN ORDER TO PREVENT THE EMULSION FROM SWELLING AT HIGH TEMPERATURES.
Claims use since Jan. 1, 1939.

Ser. No. 530,171. R. T. COLLIER CORPORATION, Los Angeles, Calif. Filed Aug. 1, 1947.

FOR CHEMICAL PRODUCTS DERIVED FROM PETROLEUM—NAMELY, LIQUID ORGANIC HYDROPEROXIDE METHYL MERCAPTAN AND ETHYL MERCAPTAN.
Claims use since Apr. 14, 1947.

Ser. No. 532,430. DEARBORN SUPPLY COMPANY, Chicago, Ill. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

Parker-Belmont

Applicant claims ownership of Registration No. 160,107.
FOR FACE POWDER AND ROUGE SOLD IN PURSE-SIZE CONTAINERS.
Claims use since Dec. 27, 1920.

Ser. No. 537,179. MAURICE HANDMAN, doing business as Maurella Products Co., New York, N. Y. Filed Oct. 8, 1947.

FOR BUBBLE BATH.
Claims use since Oct. 1, 1939.

Ser. No. 539,312. GOLD MEDAL HAARLEM OIL CORPORATION, Jersey City, N. J. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

HAARLEM OIL

The words "Haarlem Oil" are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 138,184.
FOR HAARLEM OIL FOR KIDNEY, LIVER, BLADDER, RHEUMATIC, AND URIC-ACID TROUBLES.
Claims use since Jan. 31, 1908.

Ser. No. 539,639. MAIN R. BOCHER, doing business as Mainbocher, New York, N. Y. Filed Oct. 31, 1947.

WHITE GARDEN

The word "White" is disclaimed apart from the mark FOR PERFUMES AND TOILET WATERS.
Claims use since Oct. 16, 1947.

Ser. No. 544,675. COMPO SHOE MACHINERY CORPORATION, Boston, Mass. Filed Oct. 30, 1947. Under section 2f of the act of 1946.

COMPO
Cadhesives make the better shoes

The words "Adhesives Make the Better Shoes" are disclaimed. Applicant claims ownership of Registration No. 394,421.
FOR CHEMICAL PREPARATION USED AS SHOE CEMENT SOFTENER.
Claims use since Aug. 30, 1940.

Ser. No. 545,873. NATIONAL REMEDY COMPANY, INC., White Plains, N. Y. Filed Dec. 31, 1947.

COMMUNE BONUM
QUOD PETIS HIC EST

FOR MEDICINAL OIL, USED AS AN ANTISEPTIC, CARE OF SCALP, RELIEF OF COLDS, AND BRONCHIAL IRRITATION AND INSECT BITES.
Claims use since May 1, 1880.

Ser. No. 548,518. NAAMLOOZE VENNOOTSCHAP CHEMICALIENHANDEL ODOL COMPANY (ODOL MAATSCHAPPIJ), Amsterdam, Netherlands. Filed Jan. 31, 1948.

PITRALON ANTISEPTIC

Applicant claims ownership of Dutch Registration No. 70,564, dated Dec. 18, 1936.
FOR DISINFECTANTS.

Ser. No. 548,651. CHARLES C. HASKELL & Co., INC., Richmond, Va. Filed Feb. 3, 1948.

RUZAN

FOR DIURETIC, SEDATIVE, AND ANTI-CAPILLARY-FRAGILITY PREPARATION IN TABLET FORM CONTAINING THEOBROMINE, PHENOBARBITAL, ASCORBIC ACID, AND RUTIN.
Claims use since Jan. 22, 1948.

Ser. No. 549,843. JOHN H. BRECK, INC., Springfield, Mass. Filed Nov. 12, 1947. Under section 2f of the act of 1946.

BRECK BRILLIANT

Applicant claims ownership of Registration No. 432,929.
FOR PREPARATION FOR THE TREATMENT OF THE HAIR.
Claims use since December 1941.

Ser. No. 549,567. THE NESTLE-LEMUR COMPANY, Meriden, Conn. Filed Feb. 12, 1948. Under section 2f of the act of 1946.

Nestle

Applicant claims ownership of Registrations Nos. 279,383, 278,489, and 310,600.
FOR TOILET PREPARATIONS, PREPARATIONS FOR USE IN THE TREATMENT OF THE HAIR, AND COSMETICS—NAMELY, LOTIONS FOR BLEACHING HAIR, LOTIONS FOR SOFTENING HAIR, HAIR DYES, PREPARATIONS ADAPTED AND INTENDED FOR USE IN WAVING OR CURLING HAIR, LOTIONS AND ABSORBENT MATERIAL CONTAINING HAIR-TREATING SUBSTANCES IN SOLUBLE FORM, PREPARATIONS FOR RINSING HAIR AND EMPHASIZING THE COLOR THEREOF, SHAMPOO PREPARATION, CLEANSING CREAM FOR SCALP.
Claims use since 1930.

Ser. No. 551,609. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Mar. 10, 1948.

Distinguished Service

Applicant claims ownership of Registration No. 433,246.
FOR AFTER SHAVE LOTION AND TALC POWDER.
Claims use since Sept. 4, 1946.

Ser. No. 552,589. RUDOLPH HOLMBERG, doing business as Neptune Health Products, New York, N. Y. Filed Mar. 20, 1948.

ELODEX

FOR PREPARATION FOR AIDING IN THE RELIEF OF CONSTIPATION.
Claims use since Dec. 31, 1939.

Ser. No. 555,497. GENERAL DYESTUFF CORPORATION, New York, N. Y. Filed Apr. 24, 1948.

BLANCOPHOR

FOR FLUORESCENT DYESTUFFS WHICH CONVERT ULTRA VIOLET RAYS INTO VISIBLE WHITE LIGHT THUS INCREASING THE WHITE EFFECT OF TEXTILE FABRICS, SOAPS, WAXES, PLASTICS, PAPER, AND OTHER MATERIALS.
Claims use since Mar. 2, 1948.

Ser. No. 555,614. KENNETH O. MUMFORD, doing business as Chems, Gardena, Calif. Filed Apr. 26, 1948.

CHEMS

FOR BREATH DEODORIZER.
Claims use since June 10, 1947.

Ser. No. 555,633. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Apr. 26, 1948.

PEN-TRESAMIDE

Applicant claims ownership of Registration No. 500,418.
FOR ANTIBACTERIAL PREPARATION.
Claims use since Mar. 30, 1948.

Ser. No. 555,791. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Apr. 12, 1948.

BENYLIN

Applicant claims ownership of Registration No. 419,505.
FOR EXPECTORANT.
Claims use since Feb. 13, 1948.

Ser. No. 556,109. BERNARD LOGSDON, Killbuck, Ohio. Filed May 3, 1948.

OLD WOODSMAN

FOR OINTMENT.
Claims use since May 15, 1947.

Ser. No. 557,528. JOHN THOMAS HOPKINS, doing business as Hopkins Distributing Company, Longview, Tex. Filed May 21, 1948.

ATOM-CEPTIC

FOR POWDERED DOUCHE.
Claims use since Apr. 6, 1948.

Ser. No. 557,593. CHRYSON'S, LTD., Los Angeles, Calif. Filed May 22, 1948.

TEXTONE

Applicant claims ownership of Registration No. 341,897.
FOR SKIN LOTIONS AND SKIN CREAMS.
Claims use since June 23, 1936.

Ser. No. 557,719. J. & E. ATKINSON LIMITED, London, W. 1, England. Filed May 25, 1948. Under section 2f of the act of 1946.

ATKINSONS

Applicant claims ownership of registration No. 293,385.
FOR EAU DE COLOGNE AND LAVENDER WATER.
Claims use since 1872.

Ser. No. 557,720. J. & E. ATKINSON LIMITED, London, W. 1, England. Filed May 25, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 293,385.
FOR LAVENDER WATER.
Claims use since early in the year 1934.

Ser. No. 557,721. J. & E. ATKINSON LIMITED, London, W. 1, England. Filed May 25, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 293,385.
FOR EAU DE COLOGNE.
Claims use since 1933.

Ser. No. 558,191. WARNER COMPANY, Philadelphia, Pa. Filed May 29, 1948.

PHD

FOR SPECIALLY PREPARED HYDRATED LIME FOR INSECTICIDAL USE.
Claims use since April 1945.

Ser. No. 561,774. HARRY RINNMAN, doing business as Big Drip, St. Charles, Ill. Filed July 20, 1948.

BIG DRIP

FOR MOISTURE ABSORBING RECEPTACLE CONTAINING DEHYDRATING CHEMICALS FOR USE IN CLOTHES CLOSETS.
Claims use since July 12, 1948.

Ser. No. 569,130. FORD MOTOR COMPANY, Dearborn, Mich. Filed Nov. 20, 1948.

FoMoCo

FOR ANTIFREEZE ALCOHOL AND OTHER ANTIFREEZE LIQUIDS, COOLING SYSTEM CHEMICAL CLEANSER, EMULSION TYPE RUST INHIBITOR, SHOCK ABSORBER FLUID, HYDRAULIC BRAKE FLUID, AND WATER REPELLENT SOLUTION FOR FABRICS.
Claims use since Nov. 17, 1948.

Ser. No. 571,755. SUN OIL COMPANY, Philadelphia, Pa. Filed Jan. 6, 1949.

SOLGAS

FOR LIQUEFIED PETROLEUM GAS.
Claims use since Aug. 24, 1934.

CLASS 7

CORDAGE

Ser. No. 526,590. GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif. Filed July 5, 1947. Under section 2f of the act of 1946.

TWIST-EMS

Applicant claims ownership of Registration No. 380,887.
FOR PAPER TAPE WITH A WIRE CORE FOR USE IN TYING UP PLANTS, VEGETABLES, FLOWERS, AND PACKAGES.
Claims use since May 20, 1939.

Ser. No. 526,719. GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif. Filed July 5, 1947. Under section 2f of the act of 1946.

GERMAIN'S

FOR PAPER TAPE WITH WIRE CORE FOR USE IN TYING UP PLANTS, VEGETABLES, FLOWERS, AND PACKAGES.
Claims use since Jan. 15, 1924.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 519,791. PAUL L. ZEBAUGH, doing business as Nomesser Products Company, Minneapolis, Minn. Filed Jan. 19, 1948; originally filed, act of 1905, Mar. 25, 1947. Under section 2f of the act of 1946.

NO-MESS-ER

FOR ASH TRAYS MADE OF GLASS, POTTERY, OR PLASTIC.
Claims use since Aug. 1, 1936.

Ser. No. 537,310. THE IMCO MANUFACTURING CORPORATION, New York, N. Y. Filed Oct. 9, 1947. Under section 2f of the act of 1946.

BESTLITE

FOR PYROPHORIC LIGHTERS FOR CIGARS, CIGARETTES, AND PIPES; FLINT FOR LIGHTERS; WICKS FOR LIGHTERS.
Claims use since February 1941.

Ser. No. 547,963. BENNETT DESIGN AND ENGINEERING CO., Washington, D. C. Filed Jan. 26, 1948.

Trim-Tray

UA

The word "Tray" is disclaimed apart from the mark as shown.
FOR ASH TRAYS.
Claims use since Nov. 29, 1947.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 552,329. HERCULES POWDER COMPANY, Wilmington, Del. Filed Dec. 12, 1947. Under section 2f of the act of 1946.

COLLIER-C

Applicant claims ownership of Registration No. 388,347.
FOR DYNAMITE.
Claims use since Feb. 29, 1932.

Ser. No. 562,302. ATLAS POWDER COMPANY, Wilmington, Del. Filed July 28, 1948.

Applicant claims ownership of Registration No. 95,285.
FOR POWDER, DYNAMITE, AND BLASTING CAPS.
Claims use since July 12, 1935.

CLASS 10

FERTILIZERS

Ser. No. 562,978. BYCOLIFE FERTILIZER MANUFACTURING COMPANY, Clinton, S. C. Filed Aug. 2, 1948.

BYCOLIFE

FOR FERTILIZER AND MORE ESPECIALLY A FERTILIZER CONTAINING AN INSECTICIDE.
Claims use since July 2, 1938.

Ser. No. 564,257. NORSK HYDRO-ELEKTRISK KVAELSTOFAKTIESELSKAB, Oslo, Norway. Filed Aug. 20, 1948.

Applicant claims ownership of Registration No. 100,875, and Norwegian Registration No. 10,593, dated July 13, 1923.
FOR FERTILIZERS.
Claims use since July 13, 1923.

Ser. No. 564,626. INTERNATIONAL MINERALS & CHEMICAL CORPORATION, Chicago, Ill. Filed Sept. 3, 1948.

CARIBEE

Applicant claims ownership of Registration No. 250,062.
FOR FERTILIZERS.
Claims use since Feb. 17, 1927.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 526,686. CONCRETE ENGINEERS COMPANY, Glendale, Calif. Filed July 5, 1947.

The drawing is lined to indicate a gray background and black caps on the fence posts. The fence and the words "Trade" and "Mark" are disclaimed apart from the mark.
FOR CONCRETE STRUCTURES—NAMELY, CONCRETE FENCES AND PARTS THEREOF INCLUDING POSTS, FOOTINGS, POST CAPS, AND PREFORMED SLATS, PATIO CONSTRUCTION MATERIALS INCLUDING FLOORING BLOCKS, WALL BLOCKS AND BLOCKS FOR BUILDING BARBECUES, SHINGLES, BENCHES, BIRD BATHS, LAMP POSTS, AND CONCRETE STRUCTURAL OBJECTS INCLUDING BUILDING BLOCKS, WALL SECTIONS, SLABS, BLOCKS FOR BUILDING CRIBS, INCINERATORS, AND COLUMNS.
Claims use since May 14, 1947.

Ser. No. 538,725. THE DELANEY CO., Houston, Tex. Filed Oct. 23, 1947.

Applicant disclaims the word "Delaney" apart from the mark as shown.
FOR STRUCTURAL STEEL ELEMENTS FOR BUILDING PURPOSES—NAMELY, STEEL I-BEAMS, CHANNELS, ANGLES, T's, Z's, COLUMNS, JOISTS, GIRDERS, LATTICE BARS, STRUCTURAL STEEL SEATS, WIDE-FLANGE STEEL BEAMS AND COLUMNS, FILLED AND

UNFILLED STEEL TUBE AND PIPE COLUMNS, STEEL SHEETS USED FOR ROOFS AND WALLS, CHECKERED STEEL PLATES AND ORNAMENTAL IRON WORK FOR BUILDING CONSTRUCTION, AND PREFABRICATED STEEL STRUCTURES—NAMELY, TRUSSES AND TANK AND POWER LINE TOWERS.
Claims use since Feb. 1, 1946.

Ser. No. 541,504. BRICKSEAL REFRACTORY CO., Hoboken, N. J. Filed Nov. 18, 1947. Under section 2f of the act of 1946.

BRICKSEAL

Applicant claims ownership of Registration No. 419,693.
FOR REFRACTORY COATING FOR BRICK SURFACES.
Claims use since May 1939.

Ser. No. 541,907. AMERICAN LUMBER PRODUCTS, Louisville, Ky. Filed Nov. 21, 1947.

SUPER-AROMIZED

The word "Super" is disclaimed apart from the mark.
FOR AIR DRIED RED AROMATIC CEDAR LUMBER.
Claims use since Sept. 22, 1947.

Ser. No. 545,340. CONGOLEUM-NAIRN, INC., Kearny, N. J. Filed Dec. 24, 1947. Under section 2f of the act of 1946.

NAIRN

Applicant claims ownership of Registrations Nos. 105,920, 309,235, 334,121, 351,690, 351,813, and 428,522.
FOR PIGMENTED COMPOSITION TILES FOR INTERIOR FLOORS, THE SAID COMPOSITION HAVING A BINDER OF ASPHALT OR RESIN OR A COMBINATION THEREOF.
Claims use since July 15, 1947.

Ser. No. 545,757. STARLINE INC., Harvard, Ill. Filed Dec. 30, 1947. Under section 2f of the act of 1946.

UNIT ARCH

Applicant claims ownership of Registrations Nos. 421,267, 421,269, and 195,965.
FOR BARN STALLS.
Claims use since 1912.

Ser. No. 545,788. STARLINE INC., Harvard, Ill. Filed Dec. 30, 1947. Under section 2f of the act of 1946.

UNIT SYSTEM ARCH

Applicant claims ownership of Registrations Nos. 421,267, 421,269, and 195,965.
FOR BARN STALLS.
Claims use since 1912.

Ser. No. 546,299. HOLMES EUREKA LUMBER COMPANY, Eureka and San Francisco, Calif. Filed Jan. 6, 1948.

FOR LUMBER—NAMELY, FOUNDATION SILLS, STRUCTURAL TIMBERS, FENCE PICKETS, GARDEN STAKES, SHINGLES, SHAKES, SIDING, MOULDING, LATH, FLOORING, FENCE POSTS, AND TRIM; AND MILLWORK—NAMELY, WINDOW FRAMES, DOOR FRAMES, DOORS, GUTTERS, TRELLISES, AND PANELS.
Claims use since 1920.

Ser. No. 549,453. LEWIS ASPHALT ENGINEERING CORPORATION, New York, N. Y. Filed Feb. 11, 1948.

KARNAK

FOR ASPHALT ADHESIVE CEMENT FOR ASPHALT AND MASTIC TILE.
Claims use since May 26, 1920.

Ser. No. 549,986. TRIP-L-SEAL, INC., Washington, D. C. Filed Feb. 17, 1948.

TRIP-L-CRETE

Applicant claims ownership of Registration No. 377,951.
FOR PORTLAND PATCHING CEMENT.
Claims use since August 1947.

Ser. No. 552,304. E. J. LAVINO AND COMPANY, Philadelphia, Pa. Filed Aug. 8, 1947. Under section 2f of the act of 1946.

LAVINO

Applicant claims ownership of Registration No. 349,877.
FOR REFRACTORY BRICKS, REFRACTORY PLASTICS, AND REFRACTORY CEMENTS.
Claims use since 1919.

Ser. No. 554,145. PACIFIC COAST CEMENT COMPANY, Seattle, Wash. Filed Apr. 8, 1948.

FOR PORTLAND CEMENT AND HIGH-EARLY STRENGTH CEMENT.
Claims use since Feb. 22, 1929.

Ser. No. 555,848. SUTTON MANUFACTURERS, INC., Miami, Fla. Filed Apr. 29, 1948.

S M I

FOR DOORS, WALL, AND CEILING PANELING.
Claims use since Jan. 1, 1948.

Ser. No. 556,013. ARNOLD D. HOSLER, Quincy, Mich. Filed May 1, 1948.

Buckeye Bonded

FOR INSULATING WOOL.
Claims use since Apr. 16, 1948.

Ser. No. 556,279. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 5, 1948. Under section 2f of the act of 1946.

NOAH'S PITCH

FOR BITUMINOUS PLASTIC PATCHING COMPOSITIONS.
Claims use since July 1, 1931.

Ser. No. 556,468. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 7, 1948. Under section 2f of the act of 1946.

TRI-TONE

FOR ASBESTOS CEMENT SHINGLES.
Claims use since Aug. 1, 1940.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 510,686. H. D. HUDSON MANUFACTURING COMPANY, Chicago, Ill. Filed Mar. 5, 1948; originally filed, act of 1920, Oct. 11, 1946. Under section 2f of the act of 1946.

HUDSON

Applicant claims ownership of Registration No. 223,040.
FOR SINKS, HAYRACK FIXTURES INCLUDING RACK CLAMPS, STAKE IRONS AND RACK LOOPS, HANGERS, FITTINGS, BRACKETS, AND SUPPORTS FOR MOUNTING OVERHEAD TRACK, HYDRANTS, AND STOCK STANCHIONS.
Claims use since 1917.

Ser. No. 517,197. ORBIT VALVE COMPANY, Tulsa, Okla. Filed Feb. 7, 1948; originally filed, act of 1905, Feb. 8, 1947.

ORBIT VALVES

The word "Valves" is disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 325,804.
FOR NON-THERMOSTATIC VALVES ADAPTED TO BE CONNECTED INTO FLUID CONDUCTORS FOR CONTROLLING THE FLOW OF FLUID THERETHROUGH.
Claims use since Jan. 3, 1947.

Ser. No. 528,308. RICHARDS-WILCOX MANUFACTURING COMPANY, Aurora, Ill. Filed July 10, 1947. Under section 2f of the act of 1946.

Slidetite

Applicant claims ownership of Registration No. 220,608.
FOR SLIDING HANGERS FOR FOLDING DOORS AND OTHER MOVABLE CLOSURES, TRACKS, BRACKETS FOR TRACKS, HINGES, AND FLOOR GUIDES.
Claims use since June 1916.

Ser. No. 538,256. DWAN G. DIMIT, doing business as Bunny Products, Pasadena, Calif. Filed Oct. 18, 1947.

The word "Products" is disclaimed.
FOR PLUMBERS METAL NIPPLE TRAYS.
Claims use since June 30, 1947.

Ser. No. 538,423. LOGAN CO., Louisville, Ky. Filed Oct. 20, 1947.

Nite-Gard

The word "Gard" is disclaimed apart from the mark.
FOR WIRE PANEL TO BE ATTACHED TO THE TOP OF A FOLDING FIRE SCREEN TO MAKE THE SAME SPARK-PROOF.
Claims use since Aug. 15, 1947.

Ser. No. 541,698. THE PATENT BUTTON CO., Waterbury, Conn. Filed Nov. 19, 1947.

PATWIN

Applicant claims ownership of Registration No. 411,893.
FOR COMPLETE SLIDE FASTENERS AND ALSO SLIDE FASTENER PARTS AND ACCESSORIES—NAMELY, BOTTOM STOPS, TOP STOPS, AND TAPES WITH FASTENER ELEMENTS THEREON, BOTH ASSEMBLED AND NON-ASSEMBLED.
Claims use since July 8, 1947.

Ser. No. 541,927. FORRESTER-DORMAN COMPANY, Flushing, N. Y. Filed Nov. 21, 1947.

KLIKSEAL

FOR VALVES FOR BALLOONS AND OTHER INFLATABLE OBJECTS.
Claims use since Sept. 9, 1947.

Ser. No. 541,994. ANDERSON DIE CASTING & ENGINEERING CORPORATION, Los Angeles, Calif. Filed Nov. 22, 1947.

UNITILT

FOR TILTING DEVICES FOR VENETIAN BLINDS.
Claims use since July 10, 1947.

Ser. No. 542,261. ABCO METAL PRODUCTS, Hawthorne, Calif. Filed Nov. 25, 1947.

ABCO

FOR METAL COFFEE MAKERS.
Claims use since Apr. 1, 1946.

Ser. No. 543,270. CONTINENTAL SCREW COMPANY, New Bedford, Mass. Filed Dec. 4, 1947.

Lubricized

Applicant claims ownership of Registrations Nos. 177,255, 344,380, and 323,971.
FOR SCREWS OF THE FOLLOWING NATURE—WOOD, LAG, CAP, DRIVE, SIDE KNOB, MACHINE, LOCK CAP, WASHER HEAD, SOCKET HEAD, HARDENED THREAD-FORMING SHEET METAL, THUMB AND SET; BOLTS OF THE FOLLOWING NATURE—HOOK, SINK, STOVE, HANGER, FIN HEAD, METER, CARRIAGE, MACHINE, CLOSET, AND STEP; NUTS OF THE FOLLOWING NATURE—MACHINE SCREW (HEXAGON, SQUARE), STOVE BOLT, SEMI-FINISHED, WING, CAP (ACORN); THREADED RODS OF THE FOLLOWING NATURE—STOVE, CHAIR AND LADDER; RIVETS OF THE FOLLOWING NATURE—SOLID AND TUBULAR; AND ALSO ESCUTCHEON PINS AND KNURLED PINS.
Claims use since Jan. 1, 1936.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 560,768. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed July 6, 1948.

NICHILLITE

Applicant claims ownership of Registration No. 437,502.
FOR ALLOY IRON CASTINGS IN THE FORM OF UNFINISHED ROLLS FOR USE IN ROLLING MILLS OF ALL SORTS.
Claims use since Jan. 30, 1930.

Ser. No. 560,769. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed July 6, 1948.

STIRONITE

FOR CASTINGS OF FERROUS METAL IN THE FORM OF UNFINISHED ROLLS FOR USE IN ROLLING MILLS.
Claims use since Feb. 15, 1944.

Ser. No. 563,232. ARMCO STEEL CORPORATION, Middletown, Ohio. Filed Aug. 12, 1948.

ELC

FOR STAINLESS STEEL AND CHROMIUM STEEL SHEETS.
Claims use since July 12, 1948.

CLASS 15

OILS AND GREASES

Ser. No. 507,936. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947; originally filed, act of 1905, Aug. 23, 1946. Under section 2f of the act of 1946.

PURO

Applicant claims ownership of Registrations Nos. 59,388, 59,830, 60,867, 114,113, 135,503, 178,099, 243,822, 252,545, 252,546, 253,675, 270,318, 281,299, 281,300, 296,258, 305,980, and 318,661.
FOR GASOLINE, KEROSENE, GAS OILS, FUEL OILS, AND BURNING OILS FOR ILLUMINATING AND HEATING PURPOSES, AND LUBRICATING OILS AND GREASES.
Claims use since May 1905.

Ser. No. 534,186. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

PURE

Applicant claims ownership of Registrations Nos. 114,113, 135,503, and others.
FOR MOTOR FUEL OILS—NAMELY, GASOLINE AND DIESEL FUEL OILS, LUBRICATING OILS, AND BURNING OILS FOR ILLUMINATING AND HEATING PURPOSES.
Claims use since Feb. 1, 1935.

Ser. No. 550,168. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Feb. 19, 1948.

COZOL

FOR CONING OIL.
Claims use since Dec. 31, 1947.

Ser. No. 554,533. TIDE WATER ASSOCIATED OIL COMPANY, New York, N. Y. Filed Apr. 13, 1948.

TYCOL
AFTON

Applicant claims ownership of Registrations Nos. 197,753 and 248,570.
FOR LUBRICATING OIL.
Claims use since Jan. 15, 1948.

Ser. No. 557,840. FRANKLIN CHEMICAL COMPANY, INC., Franklin, Minn. Filed May 26, 1948.

KNUCKLE SAVER

FOR PENETRATING OILS.
Claims use since May 14, 1948.

Ser. No. 558,267. THE A P PARTS CORPORATION, Toledo, Ohio. Filed June 2, 1948.

dgf 123

FOR LUBRICANT COMPOSITIONS CONTAINING GRAPHITE.
Claims use since Feb. 21, 1948.

Ser. No. 559,139. FORD MOTOR COMPANY, Dearborn, Mich. Filed Nov. 20, 1948.

FoMoCo

FOR LUBRICATING GREASES AND LUBRICATING COMPOUNDS CONTAINING GRAPHITE.
Claims use since Nov. 17, 1948.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 521,282. R. C. OWEN COMPANY, Gallatin, Tenn. Filed Nov. 25, 1947; originally filed, act of 1905, Apr. 24, 1947. Under section 2f of the act of 1946.

HAMPTON'S
HOME
SPUN

The word "Spun" is disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 214,535.
FOR CHEWING TOBACCO.
Claims use since January 1900.

Ser. No. 521,284. R. C. OWEN COMPANY, Gallatin, Tenn. Filed Nov. 25, 1947; originally filed, act of 1905, Apr. 24, 1947. Under section 2f of the act of 1946.

AXTON'S
NATURAL
LEAF

The words "Natural Leaf" are disclaimed apart from the mark as shown.
FOR CHEWING TOBACCO.
Claims use since 1914.

Ser. No. 542,271. BAYUK CIGARS INCORPORATED, Philadelphia, Pa. Filed Nov. 25, 1947. Under section 1f of the act of 1946.

BAYUK

Applicant claims ownership of Registrations Nos. 214,530, 251,776, and 408,146.
FOR CIGARS.
Claims use since Nov. 1, 1912.

Ser. No. 543,439. MITCHELL GERTZ, doing business as Hollywood Pipe Tobacco Co., Los Angeles, Calif. Filed Dec. 5, 1947.

FRATERNITY
HOUSE

FOR PIPE TOBACCO.
Claims use since Nov. 17, 1947.

Ser. No. 548,551. E. WAEGEMANS & SON, INC., Bridgeport, Conn. Filed Jan. 31, 1948.

Applicant disclaims the trade name "E. Waegemans & Son, Inc." separately from the mark as shown. Applicant claims ownership of Registration No. 164,266.
FOR CIGARS.
Claims use since 1914.

Ser. No. 550,880. UNITED STATES TOBACCO COMPANY, Flemington, N. J., and New York, N. Y. Filed Feb. 28, 1948.

FOR SNUFF.
Claims use since Jan. 8, 1895.

CLASS 19
VEHICLES

Ser. No. 500,232. WARREN MCARTHUR CORPORATION, Bantam, Conn. Filed May 8, 1948; originally filed, act of 1920, Sept. 17, 1940. Under section 2f of the act of 1940.

WARREN McARTHUR

FOR SEATS FOR USE IN AIRCRAFT AND RAILROAD CARS.
Claims use since June 1942.

Ser. No. 514,742. DOHRMANN HOTEL SUPPLY CO., San Francisco, Calif. Filed Jan. 9, 1948; originally filed, act of 1905, Dec. 23, 1946.

The words "Handi" and "Dohrmann Hotel Supply Co." are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 420,504.
FOR METAL DISH TRUCKS AND METAL HAND TRUCKS.
Claims use since Sept. 6, 1946.

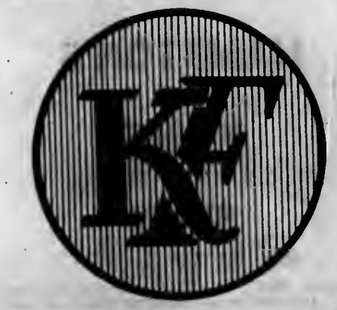
Ser. No. 514,743. BENJAMIN B. ODELL, doing business as Defiance Manufacturing Company, Los Angeles, Calif. Filed July 30, 1948; originally filed, act of 1905, Dec. 23, 1946.

DEFIANCE

FOR GASOLINE TANK CAPS.
Claims use since December 1945.

Ser. No. 516,851. KARRIER MOTORS LIMITED, Coventry, Warwickshire, England. Filed Mar. 15, 1948; originally filed, act of 1905, Feb. 3, 1947.

COB



Applicant claims ownership of British Registration No. 518,040, dated Nov. 22, 1930.
FOR PASSENGER ROAD VEHICLES—NAMELY, PASSENGER BUSES AND PASSENGER COACHES; COMMERCIAL ROAD VEHICLES—NAMELY, DUMP TRUCKS, GOODS-CARRYING TRUCKS, LIQUID-CARRYING TANK VEHICLES, AND THREE-WHEELED TRACTOR TRUCKS; AND CHASSIS FOR THE VEHICLES.

Ser. No. 518,765. KOCKUMS MEKANISKA VERKSTADS AKTIEBOLAG, Malmo, Sweden. Filed June 7, 1948; originally filed, act of 1905, Mar. 10, 1947.

No claim is made to the exclusive use of the word "Malmo". Applicant claims ownership of Swedish Registration No. 58,436, dated June 2, 1944.
FOR WAR, CARGO, AND PASSENGER SHIPS, BOATS AND VESSELS; SUBMARINES; CARGO AND PASSENGER LIGHTERS; LIFE AND CARGO RAFTS; ANIMAL DRAWN CARTS AND HOSE CARTS; PERAMBULATORS, RAILWAY CARS AND COACHES; COMBINED RAILWAY MOTOR AND PASSENGER CARS; TRAMWAY CARS; AUTOMOTIVE TRUCKS INCLUDING INDUSTRIAL TRUCKS FOR TRANSPORTATION ONLY; AIRPLANES AND STRUCTURAL PARTS THEREOF; AUTOMOBILES AND STRUCTURAL PARTS THEREOF; AND BICYCLES.

Ser. No. 530,318. KAISER-FRAZER CORPORATION, Willow Run, Mich. Filed Aug. 2, 1947.

The drawing is lined to indicate the color red.
FOR AUTOMOBILE SEAT AND TRIM PANEL COVERS, AUTOMOBILE WHEEL RIM RINGS, AUTOMOBILE PLASTIC WHITE WALL WHEEL RINGS, AUTOMOBILE WINDSHIELD WASHERS, AUTOMOBILE LICENSE FRAME UNITS, AUTOMOBILE REAR VIEW MIRRORS, AND AUTOMOBILE AIR CONDITIONERS AND DEFROSTERS.
Claims use since Nov. 30, 1946.

Ser. No. 535,179. PLOMB TOOL COMPANY, Los Angeles, Calif. Filed Sept. 20, 1947.

TOOLMOBILE

FOR LARGE TOOL CHEST ON WHEELS FOR USE IN GARAGES AND SHOPS.
Claims use since Dec. 13, 1946.

Ser. No. 537,204. LYON METAL PRODUCTS, INCORPORATED, Aurora, Ill. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

LYON

FOR SERVICE CARTS, BASKET TRUCKS, AND WHEELED CHAIR TRUCKS ESPECIALLY DESIGNED FOR RECEIVING CHAIRS OF REMOVAL AND STORAGE PURPOSES.
Claims use since Dec. 1, 1913.

Ser. No. 546,456. ARNOLD, SCHWINN & CO., Chicago, Ill. Filed Jan. 8, 1948.

SCHWINN ROYAL

The word "Schwinn" is disclaimed. Applicant claims ownership of Registrations Nos. 370,200, 428,626, 404,963, 407,574, 371,422, 414,174, and 428,627.
FOR BICYCLES.
Claims use since Dec. 10, 1947.

Ser. No. 546,793. SEDGWICK MACHINE WORKS, INC., New York, N. Y. Filed Jan. 12, 1948.

WHEEL-O-MATIC

The word "Wheel" is disclaimed.
FOR UTILITY TRAILERS OF THE TWO WHEEL TYPE AND STRUCTURAL PARTS THEREOF.
Claims use since Dec. 17, 1947.

Ser. No. 547,221. THE AMERICAN WELDING AND MANUFACTURING COMPANY, Warren, Ohio. Filed Jan. 16, 1948.

AMWELD

FOR BRAKE SLACK ADJUSTER FOR RAILWAY CARS.
Claims use since Apr. 18, 1947.

Ser. No. 547,813. AMERICAN STEEL FOUNDRIES, Chicago, Ill. Filed Jan. 23, 1948. Under section 2f of the act of 1946.

PEERLESS

Applicant claims ownership of Registration No. 325,570.
FOR RAILWAY DRAFT RIGGING, DRAFT GEARS, AND PARTS THEREOF—NAMELY, DRAFT GEAR HOUSINGS, WEDGES, SHOES, FOLLOWERS, AND EQUALIZERS.
Claims use since June 1, 1928.

Ser. No. 547,814. AMERICAN STEEL FOUNDRIES, Chicago, Ill. Filed Jan. 23, 1948. Under section 2f of the act of 1946.

RIDE CONTROL

FOR RAILWAY CAR TRUCKS AND PARTS THEREOF—NAMELY, SIDE FRAMES, BOLSTERS, SPRINGS, SPRING PLATES, FRICTION WEAR PLATES, AND FRICTION SHOES.
Claims use since Oct. 7, 1940.

Ser. No. 548,240. CRAWFORD MANUFACTURING CO., INC., Richmond, Va. Filed Jan. 29, 1948. Under section 2f of the act of 1946.

KLEAN KAR

Applicant claims ownership of Registration No. 379,188.
FOR AUTOMOBILE SEAT COVERS.
Claims use since March 1938.

Ser. No. 548,350. THE GABRIEL COMPANY, Cleveland, Ohio. Filed Jan. 30, 1948. Under section 2f of the act of 1946.

GABRIEL

Applicant claims ownership of Registrations Nos. 98,273 and 383,527.
FOR SHOCK ABSORBERS FOR MOTOR VEHICLES SUCH AS AUTOMOBILES AND TRUCKS.
Claims use since Sept. 1, 1911.

Ser. No. 550,217. CRAWFORD MANUFACTURING CO., INC., Richmond, Va. Filed Feb. 20, 1948. Under section 2f of the act of 1946.

CRAWFORD

Applicant claims ownership of Registration No. 163,045.
FOR AUTOMOBILE SEAT COVERS, AND AUTOMOBILE SCUFF PADS.
Claims use since 1920.

Ser. No. 554,150. PIPER AIRCRAFT CORPORATION, Lock Haven, Pa. Filed Apr. 8, 1948. Under section 2f of the act of 1946.

PIPER

Applicant claims ownership of Registrations Nos. 435,357 and 430,222.

FOR AIRPLANES AND STRUCTURAL PARTS THEREOF.

Claims use since November 1937.

Ser. No. 554,254. POLYSCOPE EQUIPMENT & APPLIANCE CO. INC., Brooklyn, N. Y. Filed Apr. 9, 1948.

The representation of the goods is disclaimed.

FOR AUTOMOBILE MIRRORS.

Claims use since Mar. 15, 1948.

Ser. No. 554,569. THE HEFFMAN MANUFACTURING COMPANY, Dayton, Ohio. Filed Apr. 14, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of Registrations Nos. 312,692 and 318,110.

FOR BICYCLES, AND STRUCTURAL PARTS THEREFOR.

Claims use since May 2, 1934.

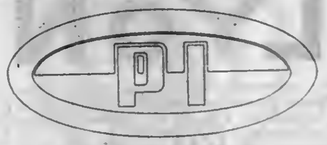
Ser. No. 555,033. RICHARD G. WILKINSON, doing business as Highway Truck Equipment Co., Buffalo, N. Y. Filed Apr. 19, 1948.

MONARCH

FOR FUEL TANKS FOR AUTOMOTIVE VEHICLES.

Claims use since Oct. 1, 1945.

Ser. No. 555,154. A. S. CAMPBELL CO., INC., doing business as Cello Products Company, Boston, Mass. Filed Apr. 21, 1948.



CELLO

Applicant claims ownership of Registrations Nos. 115,879 (renewed), and 131,965 (renewed).

FOR AUTOMOBILE PARTS AND EQUIPMENT, NOT INCLUDING ENGINES, SPECIFICALLY, LICENSE-PLATE FRAMES, BUMPER GUARDS, AND DOLLY TRUCKS FOR RECEIVING THE WHEEL OF A VEHICLE TO SUPPORT THE LATTER (FLAT TIRE TRUCKS).

Claims use on license-plate frames since 1934; on bomper guards since 1935; and on dolly trucks since on or about June 2, 1941.

Ser. No. 557,308. PARSONS INDUSTRIES, INC., Traverse City, Mich. Filed May 18, 1948.

FOR AIRCRAFT ROTOR BLADES.

Claims use since March 1948.

Ser. No. 559,243. CHARLES PECKAT MANUFACTURING CO., Maywood, Ill. Filed June 15, 1948.

Skyshield

FOR WINDSHIELD VISOR OR SUNSHADE FOR AUTOMOBILES.

Claims use since May 1, 1948.

Ser. No. 559,986. ATLAS SUPPLY COMPANY, Newark, N. J. Filed June 23, 1948.

ATLAS

FOR SHOCK ABSORBERS FOR AUTOMOBILES.

Claims use since Apr. 18, 1948.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 479,901. RAYTHEON MANUFACTURING COMPANY, Newton, Mass. Filed Sept. 5, 1947; originally filed, act of 1905, Feb. 16, 1945. Under section 2f of the act of 1946.

WELD POWER

FOR APPARATUS FOR SUPPLYING IMPULSES OF CURRENT TO ELECTRIC WELDING MACHINES.

Claims use since Mar. 1, 1940.

Ser. No. 513,852. SPERRY GYROSCOPE COMPANY, INC., Great Neck, N. Y., now by merger The Sperry Corporation, a corporation of Delaware. Filed Dec. 4, 1947; originally filed, act of 1905, Dec. 6, 1946. Under section 2f of the act of 1946 as to "Sperry."

SPERRY

FOR THERMIONIC TUBES—NAMELY, KLYSTRON TUBES AND TUNERS THEREFOR, MAGNETRON TUBES, AND GAS SWITCHING TUBES.

Claims use since Apr. 16, 1940.

Ser. No. 521,922. JOHN OSTER MANUFACTURING COMPANY, Racine, Wis. Filed Nov. 28, 1947; originally filed, act of 1905, May 5, 1947. Under section 2f of the act of 1946.

Oster Latherservice

FOR ELECTRIC LATHER MAKING AND DISPENSING APPARATUS FOR BARBERS.

Claims use since Apr. 10, 1940.

Ser. No. 527,649. A. O. SMITH CORPORATION, Milwaukee, Wis. Filed July 5, 1947. Under section 2f of the act of 1946.

FOR ELECTRIC WELDING APPARATUS—NAMELY, ARC WELDERS.

Claims use since Jan. 6, 1941.

Ser. No. 529,070. LOSEE PRODUCTS CO., Hebron, Ill. Filed July 21, 1947. Under section 2f of the act of 1946.

DAIRY-MAID

Applicant claims ownership of Registration No. 359,046.

FOR ELECTRIC WATER HEATERS.

Claims use since 1937.

Ser. No. 533,373. THE PORTABLE LIGHT CO., INC., New York, N. Y. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

RAY-LINE

FOR ELECTRICAL MARINE APPARATUS—NAMELY, SEARCHLIGHTS, HORNS, AND SIRENS AND PARTS THEREOF.

Claims use since January 1939.

Ser. No. 533,496. GENERAL RADIO COMPANY, Cambridge, Mass. Filed Aug. 21, 1947.

GENERAL RADIO CO.

The words "Radio Co." are disclaimed. Applicant claims ownership of Registrations Nos. 167,384, 171,090, 190,477, and 192,285.

FOR ELECTRICAL APPARATUS—NAMELY, AUDIO AND RADIO GENERATORS, OSCILLATORS, DETECTOR ASSEMBLIES AND CIRCUITS, RECTIFIERS AND AMPLIFIERS, DIRECT AND ALTERNATING CURRENT; VOLTAGE, CURRENT, AND ELECTRONIC POWER-SUPPLY SYSTEMS; VIBRATION PICK-UPS FOR GENERATING VOLTAGES IN RESPONSE TO MECHANICAL VIBRATIONS; AUDIO-FREQUENCY AND RADIO-FREQUENCY TRANSFORMERS; CONNECTORS, INSULATORS, BINDING POSTS, SWITCHES, CONTACTORS, CONTACT MEMBERS, KNOBS, SOCKETS, RHEOSTATS, POTENTIOMETERS FOR USE IN RADIO AND SIMILAR APPARATUS, RESISTORS, ATTENUATORS, AND VOLTAGE DIVIDERS; CAPACITORS, INDUCTORS, AND CHOKES; ELECTRIC AND ELECTRONIC CONTROL BOXES AND MOTOR-SPEED CONTROL CIRCUITS; RADIO AND OTHER DIALS FOR USE ON ELECTRICAL COMPONENTS AND INSTRUMENTS; ELECTRO-MECHANICAL HUMMER OSCILLATORS; PIEZO-ELECTRIC CRYSTALS; ELECTRIC FILTERS; TRANSMISSION-LINE PHASE, INSERTION AND TERMINAL UNITS; AND TUNED ELECTRIC CIRCUITS FOR SUPPRESSING HARMONICS AND OTHER FREQUENCY COMPONENTS, NOISE AND HUM.

Claims use since January 1916.

Ser. No. 533,500. GENERAL RADIO COMPANY, Cambridge, Mass. Filed Aug. 22, 1947.

Applicant claims ownership of Registrations Nos. 190,477 and 192,285.

FOR ELECTRICAL APPARATUS—NAMELY, AUDIO AND RADIO GENERATORS, OSCILLATORS, DETECTOR ASSEMBLIES AND CIRCUITS, RECTIFIERS AND AMPLIFIERS, DIRECT AND ALTERNATING CURRENT; VOLTAGE, CURRENT, AND ELECTRONIC POWER-SUPPLY SYSTEMS; VIBRATION PICK-UPS FOR GENERATING VOLTAGES IN RESPONSE TO MECHANICAL VIBRATIONS; AUDIO-FREQUENCY AND

RADIO-FREQUENCY TRANSFORMERS; CONNECTORS, INSULATORS, BINDING POSTS, SWITCHES, CONTACTORS, CONTACT MEMBERS, KNOBS, SOCKETS, RHEOSTATS, POTENTIOMETERS FOR USE IN RADIO AND SIMILAR APPARATUS, RESISTORS, ATTENUATORS, AND VOLTAGE DIVIDERS; CAPACITORS, INDUCTORS, AND CHOKES; ELECTRIC AND ELECTRONIC CONTROL BOXES AND MOTOR-SPEED CONTROL CIRCUITS; RADIO AND OTHER DIALS FOR USE ON ELECTRICAL COMPONENTS AND INSTRUMENTS; ELECTRO-MECHANICAL HUMMER OSCILLATORS; PIEZO-ELECTRIC CRYSTALS; ELECTRIC FILTERS; TRANSMISSION-LINE PHASE, INSERTION AND TERMINAL UNITS; AND TUNED ELECTRIC CIRCUITS FOR SUPPRESSING HARMONICS AND OTHER FREQUENCY COMPONENTS, NOISE AND HUM.
Claims use since Oct. 1, 1923.

Ser. No. 538,845. AMPLIFIER CORP. OF AMERICA, New York, N. Y. Filed Oct. 24, 1947.

MAGNERIBBON

FOR MAGNETIC TAPE FOR USE IN MAGNETIC SOUND RECORDING AND REPRODUCING APPARATUS.
Claims use since Oct. 17, 1947.

Ser. No. 539,883. MONARK BATTERY COMPANY, INC., Chicago, Ill. Filed July 17, 1947.

INVADER

Applicant claims ownership of Registration No. 310,055.
FOR STORAGE BATTERIES.
Claims use since Sept. 28, 1933.

Ser. No. 545,621. DINGS MAGNETIC SEPARATOR CO., Milwaukee, Wis. Filed Dec. 29, 1947. Under section 2f of the act of 1946.

DINGS

Applicant claims ownership of Registration Nos. 138,390, 177,846, and 390,697.
FOR MAGNETS, MAGNETIC CLUTCHES, MAGNETIC CHUCKS, MAGNETIC PULLEYS, AND MAGNETIC SEPARATORS.
Claims use since July 1, 1899.

Ser. No. 545,623. DINGS MAGNETIC SEPARATOR CO., Milwaukee, Wis. Filed Dec. 29, 1947.

PERMA

FOR MAGNETS AND MAGNETIC PULLEYS.
Claims use since Sept. 30, 1947.

Ser. No. 545,736. GENERAL CABLE CORPORATION, New York, N. Y. Filed Dec. 30, 1947.

NEOTEL

FOR INSULATED ELECTRICAL CONDUCTORS, SPECIFICALLY TELEPHONE DROP WIRE.
Claims use since Nov. 26, 1947.

Ser. No. 546,597. OLSON RADIO WAREHOUSE, INC., Akron, Ohio. Filed Jan. 9, 1948.

AKRAD

FOR ELECTRICAL APPARATUS—NAMELY, RADIO RECEIVING AND/OR TRANSMITTING SETS, PUBLIC ADDRESS AND INTEROFFICE COMMUNICATION SYSTEMS, ELECTRIC PHONOGRAPHS, CONDENSERS, TRANSFORMERS, RESISTORS, VOLUME CONTROLS, CHOKES, SPEAKERS, COILS, SWITCHES, ANTENNAS, AND MICROPHONES.
Claims use since May 1, 1947.

Ser. No. 548,507. MAGINNIS POWER TOOL CO., Mansfield, Ohio. Filed Feb. 2, 1948.

HI-LECTRIC

The word "Lectric" is disclaimed apart from the mark.
FOR ELECTRIC APPARATUS—NAMELY, GENERATORS, LINE CABLES, HAND PORTABLE SAWS, GRINDERS AND SURFACERS FOR USE ON CONCRETE; ELECTRICALLY DRIVEN, HAND PORTABLE ECCENTRIC DEVICES FOR USE IN VIBRATING CONCRETE; AND ELECTRIC PLUGS AND CONNECTORS.
Claims use since Apr. 4, 1947.

Ser. No. 549,874. BENDIX AVIATION CORPORATION, Detroit, Mich. Filed Feb. 17, 1948. Under section 2f of the act of 1946.

Bendix

Applicant claims ownership of Registrations Nos. 350,152, 357,382, and 380,129.
FOR RADIO TRANSMITTERS AND RECEIVERS, RADIO TUBES AND TELEVISION RECEIVERS.
Claims use on radio transmitters and receivers in its present form since March 1945; and on "Bendix" in block form and other forms since Jan. 8, 1936.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 530,979. SPORT PRODUCTS, INC., Cincinnati, Ohio. Filed Aug. 9, 1947. Under section 2f of the act of 1946.

Draper-Maynard

FOR ATHLETIC EQUIPMENT—NAMELY, BLOCKING PADS, SHOULDER PADS, HELMETS, NOSE GUARDS, SHOULDER PAD CUSHIONS, STRIKING BAGS, BOXING EAR AND FACE PROTECTORS, BASEBALL MITTS, LEG GUARDS, MASKS, BODY PROTECTORS, BAT BAGS, GLOVES, KNEE PADS, ELBOW PADS, SHIN GUARDS, BASKETBALLS, SOCCERBALLS, VOLLEYBALLS, FOOTBALLS, MEDICINE BALLS, SPEED BALLS, TETHER BALLS, SOFTBALLS, BASEBALLS, BASERALL RATS, SOFTBALL RATS, SLIDING PADS, THIGH GUARDS, GOLF CLUBS, GOLF BALLS, KIDNEY PADS, BOXER'S HAND WRAPS, BOXING GLOVES, AND TENNIS RACKETS.
Claims use since Oct. 1, 1900.

Ser. No. 543,356. THE ENTERPRISE MANUFACTURING COMPANY, Akron, Ohio. Filed Oct. 3, 1947. Under section 2f of the act of 1946.

EVANS

Applicant claims ownership of Registration No. 228,489.
FOR SPOONS FOR ARTIFICIAL FISHING BAIT.
Claims use since Feb. 1, 1926.

Ser. No. 543,358. THE ENTERPRISE MANUFACTURING COMPANY, Akron, Ohio. Filed Oct. 3, 1947. Under section 2f of the act of 1946.

SELF STRIKER

Applicant claims ownership of Registration No. 228,488.
FOR SPOONS FOR ARTIFICIAL FISHING BAIT.
Claims use since Feb. 1, 1926.

Ser. No. 546,355. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Jan. 7, 1948.

Sportsman

FOR BILLIARD TABLES AND BILLIARD CUES.
Claims use since Oct. 29, 1947.

Ser. No. 554,008. PARKER BROTHERS, INC., Salem, Mass. Filed Apr. 15, 1948.

WINGS

Applicant claims ownership of Registration No. 243,417.
FOR CARD GAME.
Claims use since Feb. 8, 1928.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 493,385. N. P. NELSON IRON WORKS, INC., Clifton, N. J. Filed Dec. 16, 1947; originally filed, act of 1905, Dec. 15, 1945. Under section 2f of the act of 1946.

NELSON

No claim is made to the representation of the goods apart from the mark as shown.
FOR BUCKET LOADERS, SNOW LOADERS, BELT CONVEYORS, TRACTORS, CRANES, CATCH BASIN CRANES, ORANGE PEEL BUCKETS.
Claims use since Oct. 1, 1922.

Ser. No. 500,226. KERR MANUFACTURING COMPANY, Detroit, Mich., by change of name from Kerr Dental Manufacturing Company. Filed Oct. 10, 1947; originally filed, act of 1905, Apr. 15, 1946.

GYROCAST

FOR MACHINES FOR INDUSTRIAL PRECISION CENTRIFUGAL CASTING.
Claims use since Jan. 29, 1940.

Ser. No. 532,302. HERMAN B. LAYMON, doing business as World's Products Company, Spencer, Ind. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

Laymon's

Applicant claims ownership of Registration No. 330,864.
FOR RAZOR BLADES.
Claims use since June 1, 1931.

Ser. No. 533,710. CUTTING SPECIALTIES, INCORPORATED, Detroit, Mich. Filed Sept. 8, 1947.

The representation of a human attired in running togs is purely fanciful.
FOR CIRCULAR METAL CUTTING SAWS, CIRCULAR WOOD CUTTING SAWS, WOOD CUTTING BAND RESAWS, WOOD CUTTING BAND SCROLL SAWS, SPRING TEMPER METAL CUTTING BAND SAWS, WOOD WORKING STICKER KNIVES, JOINTER KNIVES, PLANER KNIVES, SERRATED BACK HIGH SPEED STEEL KNIVES, SHAPER CUTTING TOOLS, WOOD WORKING FORMED KNIVES, WING CUTTERS, WOOD WORKING SASH CUTTER SET, CABINET CUTTER SET, MOLDING AND COPING CUTTERS, WOOD CUTTING TOOLS KNOWN AS PANEL RAISERS WHICH ARE USED FOR CUTTING GROOVES ON CUPBOARD PANELS, WOOD CUTTING TOOLS KNOWN AS SCREEN MAKING SETS WHICH ARE USED FOR GROOVING THE ENDS OF WOODEN FRAME PIECES TO ADAPT THE PIECES FOR JOINING TOGETHER TO FORM THE SCREEN FRAME, TUNGSTEN CARBIDE TIPPED KNIVES AND CUTTERS FOR BOTH WOOD AND METAL, ROTARY SHEAR KNIVES, AND HARDENED AND GROUND FLITTER SPACER DISCS.
Claims use since Mar. 2, 1947.

Ser. No. 534,050. MOSSBERG PRESSED STEEL CORPORATION, Attleboro, Mass. Filed Sept. 16, 1947.

NO-CREV

FOR ACCESSORIES FOR TEXTILE, WIRE, AND RUBBER MACHINERY—NAMELY, METAL SPOOLS AND REELS, METAL WARP BEAMS, AND METAL BOBBINS.
Claims use since May 15, 1947.

Ser. No. 535,194. SUN OIL COMPANY, Philadelphia, Pa. Filed Sept. 20, 1947.

SUNOCO

FOR TIRE IRONS; LUG WRENCHES; RUBBER TIRE MALLETS; AND TIRE SPREADERS.
Claims use since July 2, 1947.

Ser. No. 535,586. THE MURRAY COMPANY, Dallas, Tex. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

CARVER

Applicant claims ownership of Registration No. 324,996.
FOR LINTERS AND LINT CLEANING MACHINERY FOR COTTONSEED, HULLERS, SHAKERS, SEPARATORS, HULL BEATERS AND PURIFIERS FOR COTTONSEED AND OTHER OIL BEARING SEEDS AND NUTS, GIN AND LINTER SAWS, LINTER SAW FILING AND GUMMING MACHINES AND SAW MILLS.
Claims use on linters, shakers, separators, hull beaters, purifiers, and gin and linter saws since 1912; on hullers since 1915; on linter saw filing and gumming machines since 1923; on lint cleaning machinery since 1938; and on saw mills since 1902.

FOR WINES.
Claims use since Jan. 3, 1934.

Reg. No. 314,199. Registered June 19, 1934. WIDMER'S WINE CELLARS, INC., Naples, N. Y., a corporation of New York. Republished by registrant.

LAKESIDE

The letters of the word "Lakeside" are hatched for gold in the body of the letters and red on the margin of the letters.
FOR WINES.
Claims use since Jan. 13, 1934.

Reg. No. 314,200. Registered June 19, 1934. WIDMER'S WINE CELLARS, INC., Naples, N. Y., a corporation of New York. Republished by registrant.

The word "Neopolitan" is disclaimed apart from the mark. The letters of the word are cross-hatched for red and gold.
FOR WINES.
Claims use since 1903.

Reg. No. 319,095. Registered Nov. 13, 1934. MAISON F. CHAUVENET S. A., Nuits-St-Georges, France. Republished by R. C. Williams & Company, Inc., New York, N. Y., a corporation of New York.

WHITE FLAG

FOR WINES.
Claims use since April 1924.

Reg. No. 319,096. Registered Nov. 13, 1934. MAISON F. CHAUVENET S. A., Nuits-St-Georges, France. Republished by R. C. Williams & Company, Inc., New York, N. Y., a corporation of New York.

RED FLAG

FOR WINES.
Claims use since April 1924.

Reg. No. 319,695. Registered Dec. 4, 1934. DUBONNET WINE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

Dubonnet

FOR WINES.
Claims use since 1893.

Reg. No. 320,147. Registered Dec. 18, 1934. WIDMER'S WINE CELLARS, INC., Naples, N. Y., a corporation of New York. Republished by registrant.

VALLEY

Widmer's Wine Cellars Inc.

The letters of the word "Valley" are lined and hatched for red and gold. The words "Widmer's Wine Cellars Inc." are disclaimed apart from the mark.
FOR WINES.
Claims use since Jan. 11, 1934.

Reg. No. 320,149. Registered Dec. 18, 1934. MAISON F. CHAUVENET S. A., Nuits-St-Georges, France. Republished by R. C. Williams & Company, Inc., New York, N. Y., a corporation of New York.

FOR WINES.
Claims use since April 1924.

Reg. No. 320,150. Registered Dec. 18, 1934. MAISON F. CHAUVENET S. A., Nuits-St-Georges, France. Republished by R. C. Williams & Company, Inc., New York, N. Y., a corporation of New York.

FOR WINES.
Claims use since April 1924.

Reg. No. 323,225. Registered Apr. 9, 1935. WIDMER'S WINE CELLARS, INC., Naples, N. Y., a corporation of New York. Republished by registrant.

HARVEST

The drawing is lined for gold.
FOR WINES, AS FOLLOWS: ANGELICA, BURGUNDY, SWEET CATAWBA, CLARET, MUSCATEL, PORT, SHERRY, DRY SAUTERNE, HAUT SAUTERNE, REISLING, AND TOKAY.
Claims use since Oct. 29, 1934.

Reg. No. 329,117. Registered Oct. 15, 1935. WIDMER'S WINE CELLARS, INC., Naples, N. Y., a corporation of New York. Republished by registrant.

White Gold

FOR CARBONATED WINES.
Claims use since May 25, 1935.

Reg. No. 389,486. Registered Aug. 5, 1941. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

The words "American Aperitif Wine" are disclaimed apart from the mark as shown.
FOR AMERICAN APERITIF WINE.
Claims use since July 25, 1935.

Reg. No. 389,488. Registered Aug. 5, 1941. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

The words "Vino American Vermouth" are disclaimed apart from the mark as shown.
FOR AMERICAN VERMOUTH.
Claims use since Oct. 16, 1935.

Reg. No. 396,479. Registered July 21, 1942. CUCAMONGA WINERY, Cucamonga, Calif., a corporation of California. Republished by registrant.

The words "Vinum Bonum Est" and "Look For This Signature" are disclaimed apart from the mark as shown.
FOR WINES.
Claims use since June 30, 1941.

Reg. No. 406,428. Registered Apr. 4, 1944. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Ardin
Rio-Bella

The surname "Ardin" is disclaimed apart from the mark as shown.
FOR WINES.
Claims use since 1905.

Reg. No. 411,545. Registered Feb. 6, 1945. DUBONNET WINE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

FOR WINE APERITIF.
Claims use since 1942.

Reg. No. 418,814. Registered Jan. 8, 1946. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

BELLA COLLINA

FOR WINES.
Claims use since 1902.

Reg. No. 437,106. Registered Mar. 9, 1948. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England. Republished by Geo. G. Sandeman Sons & Co. Limited, London, England, a limited liability company of Great Britain.

ESMERALDA

FOR WINES.
Claims use since at least the year 1934.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 314,686. Registered July 3, 1934. SOCIETE E. NORMANDIN & Co., Chateauneuf, France, a firm organized under the laws of France. Republished by registrant.

NORMANDIN

E.NORMANDIN&C°

COGNAC

FRANCE

No claim is made to the wording shown in the drawing apart from the mark as shown.

FOR COGNAC BRANDY.

Claims use since 1844.

Reg. No. 339,709. Registered Oct. 20, 1936. AKTIESELSKABET DE DANSKE SPRITFABRIKKER, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

Maltese Cross

FOR ALL KINDS OF ALCOHOLIC LIQUORS—NAMELY, BRANDY, GIN, WHISKY, AQUAVITAE, RYE, RUM, COGNAC, ETHYL ALCOHOL, AND ALCOHOLIC EXTRACTS, ESSENCES, AND LEES USED IN THE MANUFACTURE OF DISTILLED LIQUORS.

Claims use since about 1881.

Reg. No. 351,219. Registered Oct. 19, 1937. DE DANSKE SPRITFABRIKKER AKTIESELSKAB, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

Aalborg.

FOR BRANDY KNOWN AS "AQUAVITAE" OR AKVAVIT."

Claims use since about 1846.

Reg. No. 438,071. Registered Apr. 6, 1948. DENEBEIM DISTILLING COMPANY, Kansas City, Mo. Republished by Berbiglia, Inc., Kansas City, Mo., a corporation of Missouri.

Old Library

The word "Old" is disclaimed apart from the mark as shown.

FOR WHISKEY.

Claims use since Mar. 21, 1947.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 237,330. Registered Jan. 10, 1928. DETTRA FLAG COMPANY, INC., Oaks, Pa., a corporation of Pennsylvania. Republished by registrant.

DETTRA FLAG PRODUCTS

The lining on the drawing represents the colors blue and red. No claim is made to the words "Flag Products" apart from the mark as shown.

FOR FLAGS, PENNANTS, BANNERS, BANNERETTES, AND FLAG ACCESSORIES—NAMELY, FLAG POLES, FLAG HOLDERS, FLAGPOLE HOLDERS, FLAG STANDS, FLAG CARRYING BELTS, FLAG CORDS AND TASSELS, BANNER HOLDERS, AND ORNAMENTS FOR FLAG POLES.

Claims use since on or about July 1, 1925.

Reg. No. 297,353. Registered Sept. 13, 1932. HENRY BECKER & SON, INC., Roseland, N. J., a corporation of New Jersey. Republished by registrant.

HENRY BECKER & SON, INC. EXCLUSIVELY GRADE A RAW NEW JERSEY ROSELAND, N.J.

The words "Exclusively Grade A," "Raw," "New Jersey," and "Roseland, N. J." and the representation of the bottle are disclaimed.

FOR MILK BOTTLE COVERS DESIGNED TO BE INSERTED OVER THE MOUTH AND NECK PORTION OF MILK BOTTLES TO PROTECT THE SAME AND KEEP THEM SANITARY.

Claims use since 1880.

PLANT PATENTS

GRANTED MAY 17, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

836

HONEY LOCUST TREE

John D. Siebenthaler, Dayton, Ohio, assignor to The Siebenthaler Co., Dayton, Ohio, a corporation of Ohio

Application October 14, 1947, Serial No. 779,796

1 Claim. (Cl. 47—59)

A new and distinct variety of honey locust tree, characterized as to novelty by its habit of quick growth, its size and shape, its dense foliage suitable for shade purposes, its fruitlessness and consequent lack of production of seed pods, and the absence of thorns, substantially as shown and described.

837

LILAC PLANT

Walter Bosworth Clarke, San Jose, Calif., assignor to W. B. Clarke & Co., San Jose, Calif., a partnership

Application August 14, 1947, Serial No. 768,584

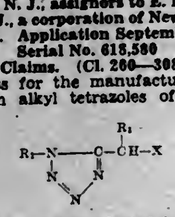
1 Claim. (Cl. 47—60)

A new and distinct variety of *Syringa vulgaris* plant substantially as shown and described, characterized as to novelty by its habit of prolific flowering; by the bluish purple color of its flowers, the variation of color at definite stages of development from bud to mature bloom; by the spacing of the double flowers in the uncrowded but intermingled compound thyrses; the dark color of the new growth of bark; and its free blooming on young plants.

PATENTS

GRANTED MAY 17, 1949

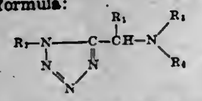
2,470,083
ETHERS OF OXIMINO ACID CHLORIDES
Walter H. Hartung, Baltimore, Md.
No Drawing. Application April 3, 1946, Serial No. 659,439
4 Claims. (Cl. 260—544)



1. An alpha-alkoximino acid chloride having the formula

where R and R_1 are members of the group consisting of alkyl and aralkyl.

2,470,084
SUBSTITUTED ALPHA-HALOGEN ALKYL TETRAZOLES AND PROCESS FOR OBTAINING THE SAME
Edward K. Harvill, Orange, and Robert M. Herbst, Short Hills, N. J.; assignors to E. Bilhuber, Inc., Orange, N. J., a corporation of New Jersey
No Drawing. Application September 25, 1945, Serial No. 618,580
5 Claims. (Cl. 260—308)



1. A process for the manufacture of substituted halogen alkyl tetrazoles of the general formula

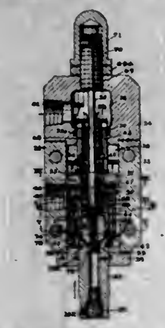
wherein R_1 is a member selected from the group consisting of hydrogen and alkyl, R_2 is a member selected from the group consisting of aryl, cycloalkyl, alkyl and aralkyl, and X is a member selected from the group consisting of chlorine and bromine which consists of causing a mono-N-substituted alpha-halogen acid amide of the general formula $R_2NH.C:O.CH(R_1).X$ wherein R_1, R_2 and X are as above defined, to react with a phosphorous halide at a temperature sufficiently low to prevent alpha-halogenation, and treating the product so formed with a compound of the group consisting of hydrazoic acid and sodium azide.

2,470,085
SUBSTITUTED AMINO ALKYL TETRAZOLES
Edward K. Harvill, Orange, and Robert M. Herbst, Short Hills, N. J., assignors to E. Bilhuber, Inc., Orange, N. J., a corporation of New Jersey
No Drawing. Application March 7, 1947, Serial No. 733,178
4 Claims. (Cl. 260—308)

1. Substituted amino alkyl tetrazoles having the general formula:

wherein R_1 is selected from the group consisting of hydrogen, alkyl, aryl and aralkyl; R_2 is selected from the group consisting of alkyl, aryl, aralkyl and cycloalkyl; and wherein the

is selected from among the following: (1) a radical wherein R_3 and R_4 are selected from the group consisting of hydrogen, alkyl, alkenyl, cycloalkyl, aryl and aralkyl, and (2) a radical wherein



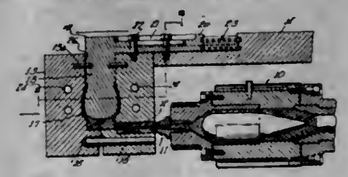
is included in a cyclic system selected from among the piperidine and morpholine groups.

2,470,086
HYDRAULIC APPARATUS
Cecil E. Adams, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application July 19, 1944, Serial No. 545,701
15 Claims. (Cl. 60—52)

2. A fluid pressure system comprising, in combination, a source of fluid under pressure; a fluid motor having a cylinder and piston; means for controlling the operation of said motor, said means including a body having a chamber and inlet, outlet and work ports communicating therewith; means connecting the inlet port with said fluid pressure source, the work ports with said fluid motor on opposite sides of said piston and the outlet ports to exhaust; means slidably disposed in said body, said slidable means having ports continuously communicating with the ports in said body, a port communicating with one outlet port being restricted, said slidable means having an additional port communicating with said inlet in one position only of said slidable means; means operated by said piston to move said slidable means to such position; means tending to urge said slidable means away from such position; means slidably engaging the first mentioned slidable means to control fluid flow between the ports in said first mentioned slidable means, one of said slidable means forming a passage extending from said additional port to one end of the second mentioned slidable means; means tending to retain the second mentioned slidable means in a position to establish communication between a selected work port and said inlet and the other work port and an outlet, fluid pressure admitted through said additional

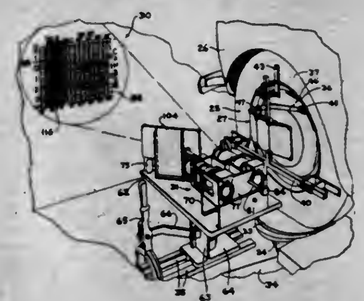
port and passage to said one end of the second mentioned slidable means serving to move said second mentioned slidable means to a position to connect the selected work port with said restricted outlet and the other work port with said inlet, one of said slidable means forming a restricted passage to conduct fluid from said selected work port to said one end of said second slidable means to retain the same in the last mentioned position.

2,470,087
EXPANSIBLE CHAMBER HYDRAULIC MOTOR WITH DISTRIBUTING VALVE IN PISTON
Cecil E. Adams, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application December 14, 1944, Serial No. 568,139
23 Claims. (Cl. 121—123)



19. In a hydraulic system, a source of fluid pressure; a fluid pressure energy translating device connected in said system, said device having a body with inlet and outlet ports and an internal chamber; a piston disposed for sliding movement in said chamber; valve means carried by said piston and movable relative thereto, means for utilizing fluid flowing from one end of said chamber to retain said valve means in a position to direct fluid under pressure to the other end of said chamber whereby said piston will be moved toward said one end of said chamber.

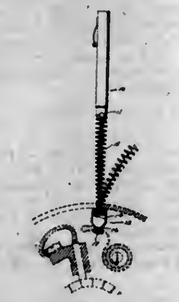
2,470,088
PURIFICATION OF CRUDE MONOFLUORODICHLOROMETHANE
Anthony F. Benning and Robert C. McHarness, Woodstown, N. J., and William S. Murray, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application February 25, 1947, Serial No. 730,744
16 Claims. (Cl. 260—653)



1. The process for purifying crude monofluorodichloromethane contaminated with a minor proportion of acidic substances including at least 0.1% of sulfur dioxide and not more than 2% of other acidic substances, which comprises passing a stream of the crude monofluorodichloromethane through and in intimate contact with an aqueous solution of sodium sulfite initially containing from about 10% to about 20% of sulfite and having a pH substantially above 7 but not above 10, and maintaining the pH of the solution between 7 and 10 by the periodic addition thereto of aqueous sodium hydroxide containing from 5% to 20% NaOH.

2,470,089
METHOD OF MOLDING PLASTIC SHOES
Jack J. Booth, Dallas, Tex.
Application September 28, 1944, Serial No. 556,183
3 Claims. (Cl. 18—59)

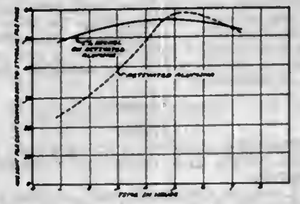
1. The method of forming a shoe having a combined and integral sole, heel, and upper, which consists of introducing into a mold at separate points quantities of plastic materials possessing varying characteristics but possessing the common property of uniting together and of molding the plastic into an unitary shoe structure including said sole, heel and upper; and forming openings in said upper at predetermined points during the forming operation.



2,470,090
DEVICE FOR OPTICALLY CHECKING DIRIGIBLE WHEELS
Tracy Carrigan, Herbert G. Holmes, and Clyde A. Shoemaker, Lansing, Mich., assignors to Food Machinery and Chemical Corporation, a corporation of Delaware
Application January 5, 1945, Serial No. 571,716
14 Claims. (Cl. 88—14)

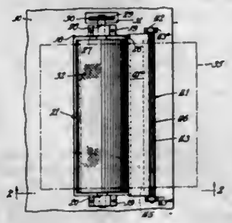
7. An apparatus for measuring an alignment characteristic of one of a pair of dirigible wheels, which comprises: a mirror mounted on said wheel and facing laterally therefrom; a base mounted for rectilinear movement laterally towards and away from said mirror in a direction having a fixed orientation relative to the line passing through the centers of said wheels; a screen spaced from said base and disposed approximately parallel with said direction; means providing a chart on said screen; and optical means on said base for projecting a pair of converging beams of light against said mirror, each beam having a fixed orientation relative to said direction, and causing reflections of said beams to

fall upon said screen whereby a cross-hair image is produced by one beam and a locator image is produced by the other beam, said chart embodying calibrations so that when said base is shifted in said direction to bring about a predetermined relation on said screen between said cross-hair and locator images, a proper spaced relation will have been accomplished between said base and said wheel mirror, as a result of which, with the wheel turned in a predetermined angular relation with said line, the location of said cross-hair image with respect to said calibrations will indicate quantitatively the amount of said alignment characteristic.



2,470,091
GENERATOR BRUSH TOOL
Robert K. Clark, United States Army, St. Paul, Minn.
Application April 10, 1948, Serial No. 661,046
1 Claim. (Cl. 29—228)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

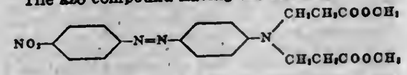
A tool for lifting the brush spring of a dynamo electric machine of the general character described, comprising a handle body having a tapered helical spring extended therefrom, said spring having a normally rectilinear axis, but being extensible and flexible under stress of a brush spring, and for swinging movement of the handle laterally of a generator case opening while a brush spring is supported by the tool, said spring having a brush-spring-engaging head at its extremity comprising a substantially L-shaped rigid body having its shank portion secured coaxially to the extremity of said spring, two parallel closely spaced lateral arms being formed at the outer extremity of the head and spaced from each other in a plane coincident with the axis of said shank to receive a convolution of a spring therebetween.



2,470,092
DEHYDROGENATION PROCESS
Ben Bennett Corson and George Arthur Webb, Pittsburgh, Pa., assignors, by mesne assignments, to Koppers Company, Incorporated, Pittsburgh, Pa., a corporation of Delaware
Application October 9, 1944, Serial No. 557,914
11 Claims. (Cl. 260—666.3)

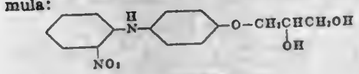
1. In a process for dehydrogenating hydrocarbons over a catalyst in the presence of water vapor, the step for reducing the water vapor induced catalyst induction period, comprising: passing the mixture of hydrocarbon and water vapor in the molecular ratio less than 1:4 into

contact with a dehydrogenation catalyst containing at least 75% alumina impregnated with 1% to 3% nickel by weight at a temperature of 500° to 750° C.



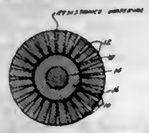
2,470,093
APPARATUS FOR APPLYING WAX TO THIN SHEETS
Havy Q. B. Crowder, Altadena, and Edward A. Bronson, Pasadena, Calif.
Application August 6, 1945, Serial No. 609,064
2 Claims. (Cl. 91—51)

1. Apparatus for applying a coating of wax to a very thin sheet of transparent cellulose acetate, embodying the combination with a heated reservoir for hot liquid wax, of a metal roller mounted for rotation partially in said liquid wax, and a thin highly porous seamless textile covering of sheer hosiery material on said roller, said covering serving as a medium for transferring a film of wax from the reservoir to the sheet when drawn over said roller while the roller is rotating.



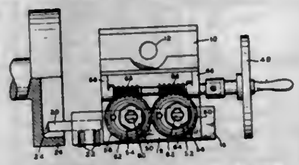
2,470,094
MONOAZO DYE
Joseph B. Dickey, Rochester, N. Y., and James G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application February 23, 1945, Serial No. 579,494
1 Claim. (Cl. 260—205)

The azo compound having the formula:

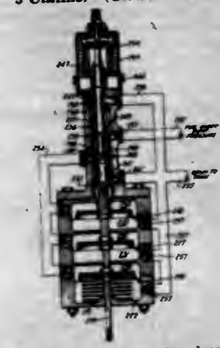


2,470,095
DIPHENYLAMINE COMPOUNDS
Joseph B. Dickey, Rochester, N. Y., and James G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 5, 1945, Serial No. 597,710
1 Claim. (Cl. 260—571)

The diphenylamine compound having the formula:

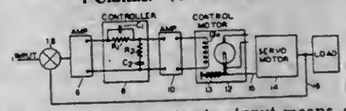


2,470,096
COMMUTATOR
Myron Y. Eck, Dayton, Ohio
Application December 12, 1945, Serial No. 634,479
13 Claims. (Cl. 171—321)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A commutator comprising a plurality of conducting bars arranged in spaced relationship with respect to one another, and means for electrically connecting each bar with an adjacent bar, said means comprising a molded high resistance element containing conductive material dispersed uniformly throughout insulating material, said element being in contact with each of said adjacent bars so as to provide a high resistance conducting path between said bars of substantially the same resistance at all normal operating temperatures of a motor or generator and of such a value as to suppress radio interference which would otherwise occur from commutation.

2,470,097
RADIUS FORMING DEVICE
Joseph G. Goulette, Newmarket, N. H.
Application September 27, 1945, Serial No. 619,002
4 Claims. (Cl. 82—11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a radius forming device, a base, a tool holder mounted for orbital movement on said base, a pair of sleeves rotatably mounted on said base each of said sleeves having a socket therein formed eccentrically with respect to its axis of rotation, a crank mounted in each of said sockets for adjustment in rotation whereby the eccentricity of said crank can be varied, and means for rotating said sleeves in synchronism with each other, said means comprising gears fixed to said sleeves and a worm meshing with said gears.

2,470,098
CHARGE FORMING DEVICE
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 20, 1944, Serial No. 564,287
3 Claims. (Cl. 261—39)

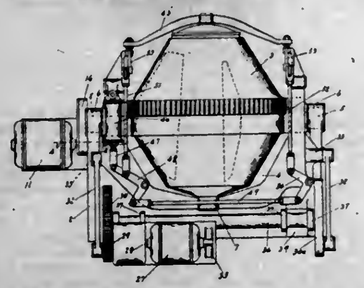
3. A pressure-feed carburetor having an air-intake passage provided with a main venturi made up of movable sections and a fixed boost venturi coacting with the main venturi, a fuel flow passage having a metering restriction therein, means for supplying fuel under pressure to said passage, a fuel valve controlling the admission of fuel to said passage to thereby regulate the metering head, means for regulating said valve including an air diaphragm subjected to the differential between air-intake pressure and Venturi suction and a fuel diaphragm subjected to the differential between metered and unmetered fuel, a pair of rotatable shafts mounting said Venturi sections, power means operatively connected to said shafts including an hydraulic servomotor having a pressure connection with the fuel passage anterior said valve, a servo valve for regulating the flow of fuel to said servomotor, and means responsive to changes in density of the ambient air for controlling said latter valve.

2,470,099
SERVO MECHANISM
Albert C. Hall, Boston, Mass., assignor, by mesne assignments, to Research Corporation, New York, N. Y., a corporation of New York
Application October 31, 1944, Serial No. 561,312
7 Claims. (Cl. 121—41)

2. A servomechanism having input means, output means, error-measuring means responsive to instantaneous differences between the input means and the output means for generating an error signal as a function of said differences, an amplifier through which the error signal is fed from the input means to the output means, and a compensating system comprising a high- and low-pass filter for operating on the signal to produce a phase-lag at low frequencies for the integral control and a phase-lead at frequencies above a predetermined frequency to partially

compensate for lag-producing elements of the servomechanism, the compensating system having a transfer-function represented by the product of terms of the form

$$\frac{1+\tau_1\alpha_1 s}{1+\tau_1 s} \text{ and } \frac{1+\tau_2 s}{1+\tau_2\alpha_2 s}$$



where s is a term representing frequency, and the τ and α terms are the time constants and attenuations of the lead and integral controls, respectively.

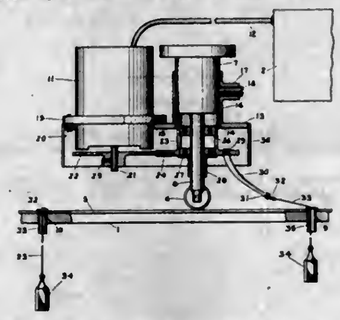
2,470,100

DOOR OPERATING MECHANISM FOR MIXERS

Ferdinand H. Heine, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a corporation

Original application August 31, 1944, Serial No. 552,101. Divided and this application July 17, 1945, Serial No. 605,502
4 Claims. (Cl. 259—161)

1. In a mixing machine, a mixing drum provided with an opening for passage of the material relative to the drum, a door for closing said opening, and means for effecting initial bodily planar movement of the door from the drum opening to separate the door from the drum, including a crosshead on which the door is supported, actuating rods connected at one end to said crosshead, pivoted rocker sleeves, one receiving each of the actuating rods, a lever for each of said rods, a moving member connecting each lever to its associated rod between the rocker sleeve and the crosshead, stops at the other ends of the actuating rods to limit longitudinal movement of said actuating rods, rest, guide and stop members coacting with the actuating rods to guide their longitudinal movement and limit swinging movement thereof in one direction, and means to rock said levers to initially shift the actuating rods longitudinally to cause the door to separate from the drum, and to rock the said sleeves to swing the rods and thereby the door, laterally respecting the drum opening so as not to obstruct the passing of material through the latter.



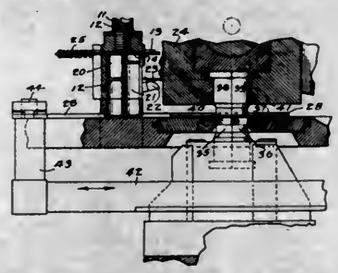
2,470,101

ACTUATING MEANS FOR SIMULATED RADIO COMPASS ON AVIATION TRAINERS

Frans O. Ibisch, United States Navy, Columbus, Wis.

Application May 5, 1945, Serial No. 592,152
5 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An apparatus for instructing instrument navigation of aircraft including an aerial chart having a plurality of openings representing short-wave radio transmitters, an indicator representing an aircraft movable relative to said chart, means operable by a student for moving the indicator, a device simulating a radio compass, a teletorque device having an electrical generator movable with the indicator, the radio compass device having a motor electrically connected to and synchronized with the teletorque generator whereby the reading of said compass device is adjusted by actuation of said generator, a freely-



rotatable gear carried by and axially alined with the indicator, a weighted line having connection with the gear and adapted to extend through any one of the chart openings for orienting said gear relative to the opening, and a second gear in constant mesh with the freely-rotatable gear and driven by the rotation thereof, the second gear having connection with the teletorque generator for varying the output of the same and actuating the radio compass device motor to determine the reading of said compass device.

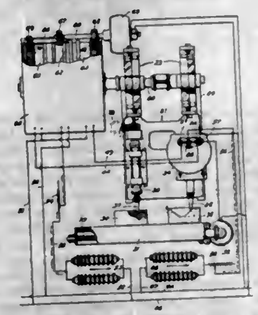
2,470,102

CONVERSION UNIT FOR COINING PRESSES

William Peter Kruse, San Francisco, and Joseph Wynn Steel, Alameda, Calif.

Application March 23, 1945, Serial No. 584,482
1 Claim. (Cl. 78—99)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A coining press including a single stock coin-blank magazine, a reciprocating feeding means for withdrawing a blank from said magazine successively on each forward and return stroke of said means, a pair of spaced receiving magazines into each of which said feeding means deposits a single blank on each of said strokes, blank



transfer means movable to one position on which said receiving magazines simultaneously deliver a pair of blanks, a pair of lower coining dies, a plunger, a pair of upper dies on said plunger, means moving said blank transfer means to another position for delivering said pair of blanks onto said lower coining dies on each cycle of operation for simultaneous coining of said blanks, a bell crank connected to said reciprocating feeding means for moving said feeding means forward to transfer a blank into one of said magazines and spring means for returning said feeding means for depositing a blank into the other of said receiving magazines and means on said plunger for engaging and operating said bell crank on the down stroke of said plunger whereby the movement of the bell crank deposits one blank on the down stroke of said plunger and said spring operates to deposit another blank on the upstroke of said plunger.

2,470,103

POWER-OPERATED DRIVING AND BRAKING MECHANISM

Emil R. Lochman, Milwaukee, Wis.

Application August 30, 1941, Serial No. 409,095
31 Claims. (Cl. 192—18)

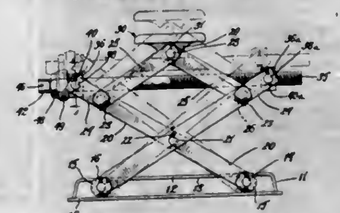
1. A device of the character described comprising a source of current including means for intermittent interruption thereof and an electromagnetic clutch supplied with said current and comprising electromagnetic means, clutch disks, and levers engaging said disks and having free end portions exposed to the magnetism of said means and spring pressed to vibrate between clutch engaging and disengaging positions subject to the intermittent electromagnetic flux.

2,470,104

BATTERY POST CLAMP

Harry R. Martin, Des Moines, Iowa

Application April 20, 1942, Serial No. 439,789
7 Claims. (Cl. 173—259)

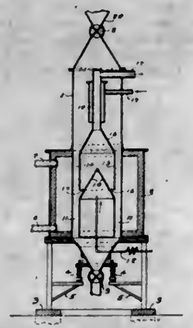


3. A battery post clamp comprising a frame having generally parallel members and a portion connecting said parallel members said latter portion engaging one side of a battery post when in operative position, guide structure on the adjacent faces of said parallel members, a jaw slidably received in said guide structure and engaging the opposite side of said battery post when in operative position, a plunger also slidably received in said guide structure, having in its side wall structure an elongated cut-out disposed in the direction of the depth of said plunger, which is also the direction of the depth of said frame, said cut-out being enlarged at its base end in the direction of the forward end of said plunger, and the top of said enlarged portion being inclined downwardly and forwardly from the forward wall of the unenlarged portion of said cut-out, a resilient connection connecting said jaw to said plunger, a crank having its crank pin journaled in one of said parallel frame members and having its crank shaft received in said cut-out, the arrangement being such that the point at which said crank pin is journaled in said frame member is more adjacent the unenlarged end of said cut-out, considering the depth direction only, than is the enlarged end of said cut-out, and a lever connected to said crank.

2,470,105

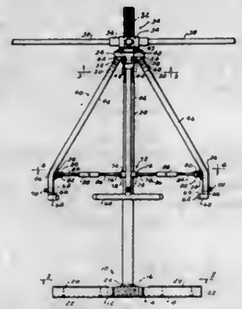
PORTABLE LIFTING JACK

Merrill M. Murphy, Marathon, N. Y., assignor to The Marathon Manufacturing Co., Marathon, N. Y., a corporation of New York



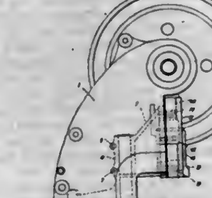
Application February 23, 1946, Serial No. 649,715
1 Claim. (Cl. 254—126)

A portable lifting jack, comprising a base plate adapted to be placed on a supporting surface, a lazy-tong structure comprising counterpart spaced lattices, each including a lower pair of crossed links, an upper pair of links having their upper extremities arranged alongside each other and their lower extremities arranged alongside the upper ends of said lower pair of links and parallel pivot pins connecting said upper extremities of said upper pair of links, said lower extremities of said upper pair of links with said upper ends of said lower pair of links and said crossed parts of said lower pair of links and holding said lattices in spaced relation, a pair of axles each secured to the lower ends of the corresponding lower pair of links parallel with said pivot pins, rollers supporting said axles and riding upon the upper surface of said base plate, a U-shaped retaining strap arranged between and parallel with said lattice and having a straight horizontal part arranged parallel with said base plate immediately above said axles and having depending ends secured to opposite extremities of said base plate beyond said axles, each link of said lower pair of links being extended upwardly beyond its pivotal connection with the corresponding link of said upper pair of links to provide link extensions projecting outwardly from said lazy-tong structure, a nut secured between the said extensions at one side of said lazy-tong structure, an apertured block pivotally secured bvetween the said extensions at the other side of said lazy-tong structure.



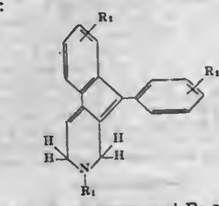
a screw having a threaded portion screwed into said nut and an unthreaded portion rotatable in the aperture of said block, a thrust bearing interposed between said screw and block whereby upon turning said screw said nut and block are moved toward and from each other to expand and contract said lazy-tong structure, a supporting head having apertured depending ears embracing the pivot pin connecting the upper ends of said upper pair of links, said screw being disposed immediately above said U-shaped strap and the pivot pins connecting said upper and lower pair of links, and said ears of said supporting head straddling said screw in the extreme collapsed condition of the jack.

2,470,106
PROCESS FOR REDUCING IRON ORES
Vernon F. Parry, Golden, Colo.
Original application April 20, 1945, Serial No. 589,450. Divided and this application October 7, 1946, Serial No. 701,634
1 Claim. (Cl. 75—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



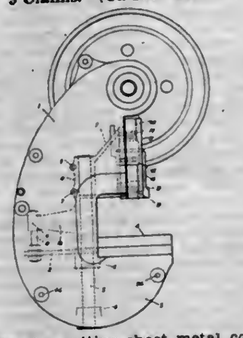
The endothermic chemical reaction process, which comprises stage heating a mixture of iron ore suitably sintered or briquetted and a non-caking solid carbonaceous material having gas forming and liquefiable constituents, along a vertically-ranging course sealed from the atmosphere through which it passes by gravity: by first feeding the mixture downwardly into an annular preheating zone of relatively large superficial area in said course while directing heated gases centrally upward through said annular zone in heat-transfer and physically separated relation to descending solids, next directing the descending solids into a second annular heating zone of lesser superficial area than the first said zone, subjecting the solids in said second zone to the heat-transfer action of heated gases contacting the central and the outer boundary of the said second annular heating zone such that the temperature of the mixed solids and reactants is raised to the range of 1800° to 2150° F., causing evolved gases to travel concurrently with said solids throughout substantially the vertical extent of said second zone, passing said evolved gases into said central area at the bottom of said second zone to permit their ascent in heat-transfer relation to the descending material, then directing the descending solids into a third annular heat-transfer zone and then causing relatively cool carrier gases to pass through descending solids in said third zone in a direction countercurrent to the solids movement therein to extract heat units and evolved gases therefrom.

2,470,107
COLLAPSIBLE TIRE REMOVER
Frank Piacenti, New York, N. Y.
Application September 18, 1945, Serial No. 617,160
1 Claim. (Cl. 157—1.2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



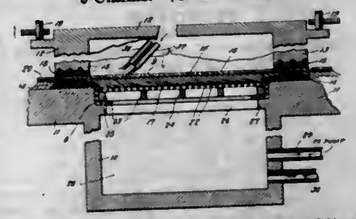
A foldable portable apparatus for breaking the beads of pneumatic tires loose from their rims, which comprises, in combination, a four-legged base for supporting the underside of the tire and rim assembly, two opposite legs being integral and the other two being detachable for laying alongside the first in transportation, a removable column extending upwardly from said base, pressure distributing means which consists of a thrust bearing retainer slidable vertically on said column, a thrust bearing in said retainer, circumferentially spaced hinge means carried by said thrust bearing retainer, a series of legs having the upper ends hinged to said hinge means and the lower ends swingable toward and away from said column, arcuate shoes removably secured to the lower ends of said legs, a brace support in the form of a collar slidable vertically on said column, circumferentially spaced hinge means on said brace support, hinge means on said legs near the lower end, braces for connecting the hinge means of the brace support to the hinge means at the lower ends of said legs, whereby said apparatus may be folded umbrella fashion, turnbuckles in said braces, whereby said swingable legs and the arcuate shoes may be adjusted radially so as to just miss the rim and engage the side wall of the tire, a pressure applying assembly which consists of a pressure applying nut threadedly engaging the upper end of said column above said thrust bearing retainer, and removable handles for rotating said nut.

2,470,108
HETEROCYCLIC AMINES
John Thomas Plati, Passaic, and Wilhelm Wenner, Montclair, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application January 11, 1947, Serial No. 721,672
3 Claims. (Cl. 260—297)
1. A 2-alkyl-9-(alkoxy-phenyl)-alkoxy-dihydro-1-pyridindene corresponding to the following formula and its salts:



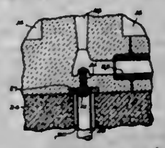
R_1 being an alkyl group and R_2 and R_3 being alkoxy groups.

2,470,109
HETEROCYCLIC AMINES
John T. Plati, Passaic, and Wilhelm Wenner, Montclair, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 30, 1947, Serial No. 745,110
22 Claims. (Cl. 260—290)
1. A compound selected from the group consisting of a 2-alkyl-9-phenyl-dihydro-1-pyridindene, the corresponding hydrogenated compounds, and the salts, said 2-alkyl-9-phenyl-dihydro-1-pyridindene being represented by the formula:



R_1 being an alkyl group, and R_2 and R_3 being a member of the group consisting of hydrogen, alkyl and alkoxy radicals.

2,470,110
PRESS FOR CUTTING SHEET METAL
Charles Joseph Rhodes, Wakefield, England
Application January 17, 1947, Serial No. 722,653
In Great Britain November 6, 1946
5 Claims. (Cl. 164—102)



1. A press for cutting sheet metal comprising an upright C-shaped frame, a work table supported by the lower part of said frame, a plurality of upright pillars supported by the lower part of said frame at points below said work table and extending above said work table, a bracket carried on said pillars above said work table, a plurality of upright part-cylindrical members rigidly secured to said bracket, and a ram having a plurality of grooves of part-circular cross-section formed therein, said grooves co-operating with and sliding on said part-cylindrical members to guide said ram for reciprocation.

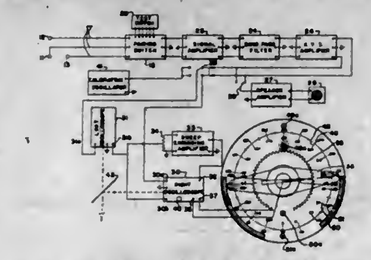
2,470,111
METHOD FOR BETTERING PELTS AND HIDES
George A. Rublssow, New York, N. Y.
Application March 24, 1945, Serial No. 584,565
3 Claims. (Cl. 117—119)

1. A method of preventing the shedding of hairs from pores of furs and of hairy hides of animals comprising: first applying a layer of rubber containing solution on the smooth side of said furs and said hairy hides, second providing a lower gas pressure on the hairy side of said furs and said hairy hides than the pressure on said smooth side, thereby forcibly introducing said solution into said pores, third curing said furs and said hairy hides thereby vulcanizing said solution.

2,470,112
CERAMIC NOZZLE FOR REGENERATIVE UNDERJET COKE OVENS
Walter Clarence Rueckel, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application June 26, 1944, Serial No. 542,161
4 Claims. (Cl. 202—142)

1. In an underjet coke oven, a distribution system for delivering a combustion-medium into the underfiring system of said coke oven, comprising: a header-pipe having a plurality of outlets therealong; pipe-connections at a region so remote from the active combustion zone of the underfiring system of the oven as to be unaffected by the heat of active combustion in the combustion zone, for delivering said combustion-medium from said header-pipe outlets to different points in conduit means of said coke-oven underfiring system; and a device normally operative solely for regulating the inflow of said combustion medium from said header-pipe through a said pipe-

connection, and in which said device comprises, a ceramic body that is of lesser cross-section than said pipe-connection and has a duct extending therethrough disposed for passing combustion-medium from said header-pipe into said conduit means of the coke-oven underfiring system and also has a surficial shoulder disposed for engagement by supporting means for said body, a bushing-like member having a threaded section on both its external and internal walls and also on the latter wall a surface adapted to register with said surficial supporting-shoulder of said ceramic body, and an externally threaded annulus that is disposed for rotation in said threaded section on the internal wall of the bushing-like member to hold said surficial shoulder of the ceramic body in registry with said internal surface of said member.



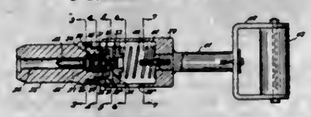
2,470,113
FURNITURE
Harry Sebel, London, England
Application April 3, 1946, Serial No. 659,291
In Great Britain January 28, 1946
2 Claims. (Cl. 155—194)

1. A chair of the stacking type comprising a pair of inverted U-shaped members forming the frame and legs of said chair, one of said members having its legs at a wider spacing than the other of said members and positioned outwardly of the respective legs of said other member and extending in crossing relation thereto, said legs at each side of said chair being rigidly joined at their points of crossing by connecting members the exterior dimensions of which are wholly confined within the spaces between said legs at the crossings thereof, and a laterally bent sheet of self-sustaining springy material attached at its opposite ends to the U-shaped members at the closed ends thereof and being free of attachment along its side edges, said sheet also being laterally spaced from the sides of the back-supporting portion of said frame to provide for passing the legs of narrower spacing of a similar chair between the lateral edges of said sheet and the sides of said back-supporting portion to permit stacking said chairs in vertically superposed relation.

2,470,114
OPTICAL SOUND BEARING SYSTEM
Robert M. Sherwood and Robert J. Urick, San Diego, and Leo P. Delsasso, Los Angeles, Calif.
Application July 12, 1946, Serial No. 683,194
10 Claims. (Cl. 177—352)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An impulse direction determining system comprising three energy pick-ups arranged at the apices of a right isosceles triangle, means for selecting alternative pairs of pick-ups in accordance with the direction of energy impulses received thereby, and optical means for determining the difference in time of arrival of an impulse at the selected pair of pick-ups.

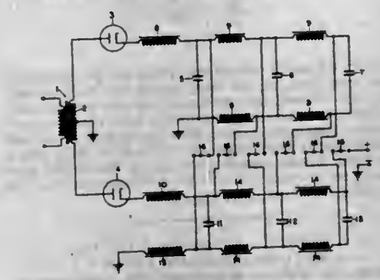
2,470,115
ORGANIC POLYSULFIDES
William D. Stewart, Yonkers, N. Y., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application June 13, 1945, Serial No. 599,310
5 Claims. (Cl. 260—17.5)



1. The method of producing a stable dispersion containing polyethylene polysulfide particles of a size no greater than about 1 to 3 microns in diameter dispersed in an aqueous medium which comprises preparing an aqueous reaction mixture containing in addition to the aqueous medium only an ethylene dihalide, a water-soluble polysulfide and a lignin sulfonate, and agitating the said reaction mixture while maintaining its temperature between room temperature and about 60° C.

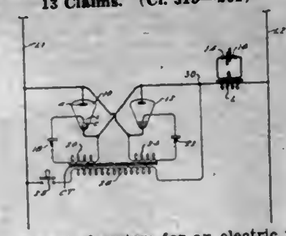
2,470,116
SEPARATION OF COMPOUNDS BY CRYSTALLIZATION
Wojciech Swietoslawski and John R. Anderson, Pittsburgh, Pa., assignors to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application October 19, 1946, Serial No. 704,534
4 Claims. (Cl. 260—674)

1. A method of separating the components of a binary eutectic composed of alpha- and beta-ethyl naphthalene comprising: melting the eutectic mixture with betanaphthol, cooling the melted mixture to a temperature to crystallize the beta-ethylnaphthalene as a solid solution, said temperature being above the eutectic temperature, separating the precipitated solid solution of beta-ethylnaphthalene and betanaphthol from the mother liquor, adding the separated crystals to another solid solution having a concentration of betaethylnaphthalene at least equal to the concentration of the betaethylnaphthalene in the solid solution separated, adding more betanaphthol to the solid solution and re-crystallizing the concentrated solid solution a sufficient number of times to enrich the precipitate in beta-ethylnaphthalene and to enrich the mother liquor in alphaethylnaphthalene, removing by extraction betanaphthol from the solid solution composed of betaethylnaphthalene and betanaphthol and from the mother liquor composed of betanaphthol and alphaethylnaphthalene, separating the enriched betaethylnaphthalene and the alpha-



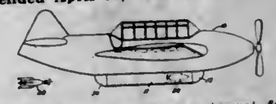
ethylnaphthalene from the extracted solid solution and mother liquor by crystallization, and returning eutectic recovered by the crystallization separation to the original melting step for further treatment.

2,470,117
GUN AND PROJECTILE THEREFOR
Stanley A. Temple, Cleveland, Ohio, assignor, by mesne assignments, to Portable Industries, Inc., Cleveland, Ohio, a corporation of Ohio
Application November 24, 1943, Serial No. 511,637
3 Claims. (Cl. 89—1)



1. In a gun having a barrel provided with an outwardly extending shoulder at the inner end of its bore and also having means for supporting a cartridge rearwardly of said shoulder and in line with the bore and also having means for firing said cartridge, a projectile having a head for disposition in said barrel bore and having an outwardly extending shearable flange connected to and surrounding said head at the rear end thereof for seating engagement against the barrel shoulder ahead of the cartridge, to thereby normally prevent advance of the projectile forwardly through the barrel bore, the rear end of said projectile head surrounded by said projectile flange being recessed to a depth less than the depth or thickness of said flange and to a diameter substantially equal to the diameter of the head, to thereby facilitate the shearing of the flange from the projectile head upon the firing of the cartridge.

2,470,118
VOLTAGE MULTIPLIER
John B. Trevor, Jr., Clinton, Md.
Application December 14, 1943, Serial No. 514,293
5 Claims. (Cl. 321—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

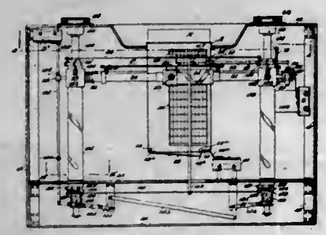


1. A voltage multiplier including a pair of rectifiers operatively connected to an alternating supply for alternate conduction in successive half cycles, a Marx storage capacity network fed by each rectifier, the capacitors of both networks being dynamically isolated from one another and means for discharging the capacitors in series periodically after charging of the networks on successive half cycles.

2,470,119
ELECTRICAL CONTROL SYSTEM
Gustav E. Undy, Detroit, Mich., assignor to Weltronic Company, Detroit, Mich., a corporation of Michigan
Application December 15, 1944, Serial No. 568,317
13 Claims. (Cl. 315—201)

1. In a control system for an electric valve of the immersed igniter mercury pool type, having principal electrodes, and disposed to abruptly change from a non-conductive to a conductive condition in response to the application of a critical potential to said igniter for controlling the flow of current between a source of supply and a load, the combination of an electrical translating device adapted to supply said critical potential, means including unidirectionally conductive means for coupling said translating device between said igniter and one of said principal electrodes, control means for controlling the energization of said translating device and having a first control position in which said translating device is enabled to supply said critical potential, and means responsive to a conductive condition of said valve for reducing the energization of said translating device to a potential not in excess of the potential between said principal electrodes.

2,470,120
METHOD OF BOMBING FROM FAST MOVING PLANES
Brooks Walker, Piedmont, Calif.
Application May 6, 1943, Serial No. 485,840
3 Claims. (Cl. 89—1.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

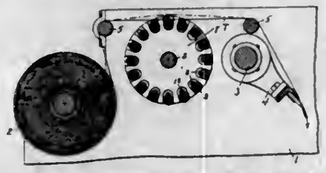


1. The method of bombing a target from an airplane in flight which comprises jet propelling a bomb from the airplane when substantially directly above the target with a horizontal velocity substantially equal and opposite to the horizontal velocity with which the airplane is passing over the target, said jet propelling means acting for a substantial period of time after said bomb leaves the support of said airplane.

2,470,121
AUTOMATICALLY CONTROLLED MARKER TO RECORD MOVEMENT AND MEANS TO PROVIDE RELATIVE VALUES
Asa W. Walker, Buffalo, N. Y.
Application July 1, 1944, Serial No. 543,178
21 Claims. (Cl. 346—62)

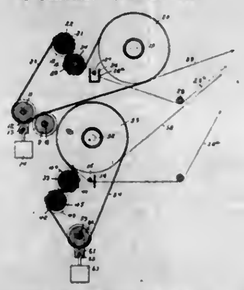
1. In an apparatus of the character described having a holder for a record element, and a

marker, one of which elements is shiftable for placing the marker in different operative locations relatively to the record element, and means for causing the marking of said record element by said marker in any of said different operative locations, the improvement comprising a motor-driven mechanism which advances said shiftable element to different positions in one direction relatively across the face of the record element, a second mechanism which advances said shiftable element in a second direction relatively



across the face of the record element, means operating when said shiftable element has advanced a predetermined distance in said first direction to reverse the travel of said shiftable element, means operating upon each reverse travel of said shiftable element to a predetermined position to actuate said second mechanism for advancing the shiftable element in said second direction, and means operating upon a predetermined advance of said shiftable element in said second direction to return the shiftable element to the initial position.

2,470,122
GARMENT CLASP
Arthur Weis, Chicago, Ill.
Application May 19, 1945, Serial No. 594,759
10 Claims. (Cl. 24—248)

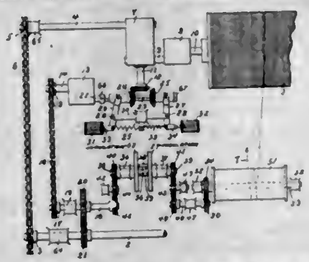


1. In a garment engaging clasp, the combination with a body member, of a transversely extending flange formed on said body member, a toggle actuator lever pivotally connected to said body member, a clamping member associated with said body member, said clamping member having a lower engaging edge to cooperate with said transversely extending flange to yieldingly grasp a garment therebetween, a floating pivotal connection between said toggle lever and clamping member, and spring means associated with said floating pivotal connection to establish yielding engagement of said clamping member engaging edge against said body flange responsive to displacing said toggle actuator lever.

2,470,123
THREAD TENSION MECHANISM
George O. Young, Robesonia, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Application December 26, 1946, Serial No. 718,487
1 Claim. (Cl. 66—86)

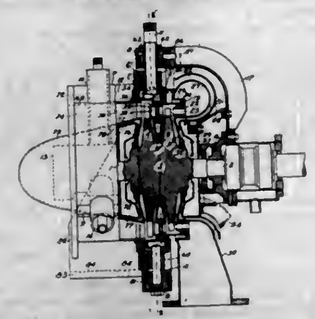
A thread take-up device comprising a rotatable shaft, discs on said shaft, a plurality of rods mounted on said discs parallel to said shaft, and means by which said rods may be individually adjusted to greater or lesser distances from said shaft, and said means including radial grooves in the discs into which the ends of said rods set, and cap screws passing through radial slots in said discs into the ends of said rods.

2,470,124
THREAD LETOFF FEEDING MECHANISM
George O. Young, Robesonia, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Application September 2, 1947, Serial No. 771,618
9 Claims. (Cl. 66—86)



1. In a thread let-off mechanism, in combination with a beam, an endless driving belt taking over the thread on the beam, means for driving said belt at a fixed linear speed, means for maintaining tension on said belt by virtue of all of which the thread leaves the beam at the same constant linear speed as that of the belt, and means to by-pass the belt with the thread that is unrolled from beneath the belt.

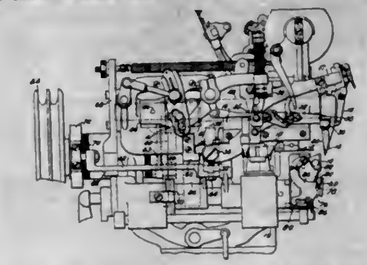
2,470,125
AUTOMATIC BEAM LETOFF
George O. Young, Robesonia, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Application September 2, 1947, Serial No. 771,620
7 Claims. (Cl. 66—86)



4. In a beam let-off for a knitting machine which has a beam and a first motion shaft; the improvement which comprises a power transmitting connection between said shaft and the beam, which connection includes an infinitely variable

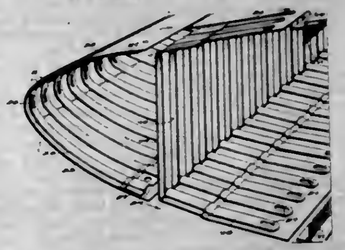
speed changing unit having an adjusting shaft; a pilot drum around which thread from the beam passes; and electro-magnetically operated means controlled by speed differentials between the first

motion shaft and the pilot drum for operating said adjusting shaft to effect a constant linear speed to be imparted to the thread leaving the beam.



2,470,126
TURBINE CONSTRUCTION
Hans A. Altorfer, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application December 5, 1942, Serial No. 467,964
18 Claims. (Cl. 60—41)

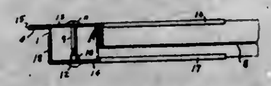
17. In a turbine structure having a rotor and a rotor enclosing casing including a coaxially arranged nozzle structure, means enclosing the inlet portion of said structure comprising an annular motive fluid conducting manifold, and at least one flexible wall coaxially uniting said manifold and nozzle structure for relative radial expansion and contraction.



2,470,127
ROUGH ROUNDING MACHINE
Corwin W. Baker, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 24, 1948, Serial No. 16,783
4 Claims. (Cl. 12—85)

1. In a rounding machine, a knife, a guide for positioning a shoe relatively to said knife to determine the sole-edge extension, said guide being arranged to engage the upper margin of the sole in the welt-crease, a bottom-rest constructed and arranged yieldingly to hold the shoe against said guide, an anvil against which said knife cuts and arranged to support the margin of the sole outwardly thereof from said guide, means for moving said bottom-rest and guide through a feeding stroke in one direction and a return stroke in the opposite direction, and

means for reciprocating said knife and anvil toward and away from each other at the beginning of the return and feeding strokes respectively of said guide and bottom-rest whereby the sole is trimmed and its pressure against said guide is relieved by said anvil during the return stroke of said guide.

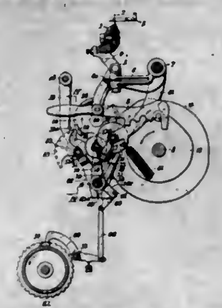


2,470,128
AIRPLANE WING LEADING EDGE CONSTRUCTION
Ray E. Barrick, Baltimore, and Ayers Morison, Brooklandville, Md., assignors to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application October 7, 1947, Serial No. 778,406
3 Claims. (Cl. 244—134)

1. An airplane wing construction including upper and lower sheet metal skins, a channel member extending spanwise of the wing secured to said upper and lower skins with the forward edges of said skins partially overlapping the sides of said channel member, said channel member having transverse corrugations formed therein, the rear end of the corrugations in the sides of said channel having apertures formed therein affording open communication with the interior of the wing, a nose portion removably secured to said channel member including a U-shaped smooth outer skin having the edges thereof abutting the edges of said upper and lower wing skins, a corrugated under skin for said nose portion secured thereto, the open ends of the corrugations of said under skin nesting in the corrugations of the sides of said channel member, orifice means formed in the corrugations of said under skin which afford communication between the interior of the said

U-shaped nose portion, through the passages formed by said corrugations, and the interior of said wing.

2,470,129
SCREEN
Robert E. Bemis and James C. McMillan, Houston, Tex.
Application October 12, 1945, Serial No. 621,980
3 Claims. (Cl. 160—327)



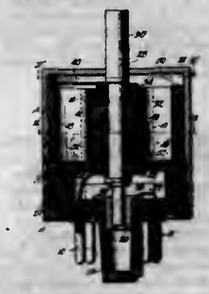
2. In a screen, a frame member formed of sheet material bent into approximately rectangular form in cross-section, one of the free margins of said sheet being formed with a longitudinal V-groove opposite the other margin, clamp bolts extending transversely through the frame member for drawing the sides of the frame member towards each other to seat said other margin into said groove and a screen sheet having a margin thereof clamped in said groove.

2,470,130
CAUSTIC RESISTANT ETHERIFIED PHENOL-FORMALDEHYDE RESINS
Howard L. Bender and Alford G. Farnham, Bloomfield, N. J., assignors to Bakelite Corporation, a corporation of New Jersey
No Drawing. Application February 7, 1945, Serial No. 576,702
6 Claims. (Cl. 260—14)

1. Process of treating a condensation product of from 1.2 to 2.0 mols of formaldehyde with a mol of a phenol reactant selected from the group consisting of phenol and methyl-substituted phenols, said phenol reactant containing at least 40 per cent of a phenol having open the positions on the ring that are ortho and para to the phenolic hydroxyl, in the presence of a catalyst selected from the group consisting of the oxides of zinc, magnesium and aluminum, which comprises etherifying under alkaline conditions above 50 per cent of the arylhydroxy groups present in the product by reacting the condensation product with one of the group consisting of methyl sulfate, ethyl sulfate, benzyl chloride and allyl chloride, and acidifying the etherified product with an acid selected from the group consisting of sulfuric, sulphonic, phosphoric and oxalic acids for imparting heat-harden ability to a caustic resistant condition.

2,470,131
LOOP REGULATING MECHANISM FOR STRAIGHT KNITTING MACHINES
Emil J. Berger and Howard K. West, Lansdale, Pa., assignors to Dexdale Hosiery Mills, Lansdale, Pa., a corporation of Pennsylvania
Application February 12, 1948, Serial No. 7,806
4 Claims. (Cl. 66—82)

1. Loop regulating mechanism for straight knitting machines having a loop regulating shaft with an affixed arm arranged to be actuated by a rotary cam on the cam shaft of the machine, a second arm on the loop regulating shaft contacted by an abutment on a press arm arranged to be actuated by a press cam on the cam shaft, and a lever on the press cam having a pivotal connection at its outer end with the corresponding end of a freely fulcrumed swing lever arranged to be actuated by coaction laterally with circumferentially spaced projections of a rotary cam on a separate cam shaft; wherein the pivotal



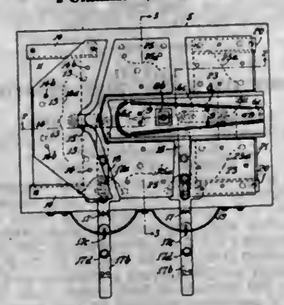
connection aforesaid comprises a pin which is rotatively adjustable in the end of one of the levers and which has an eccentric portion engaged in the end of the other lever.

2,470,132
WELL WASHING FLUID AND METHOD OF USING THE SAME
William E. Bergman, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application August 18, 1947, Serial No. 769,315
3 Claims. (Cl. 252—8.55)

1. The process of washing an oil or gas well containing a well drilling mud comprising the steps of replacing the drilling mud in the well with a well washing fluid substantially free of suspended solid material and comprising water, 1 to 5 per cent by weight of a water soluble salt of a carboxyalkyl cellulose ether and 1,000 to 25,000 P. P. M. of a metallic halide selected from the group consisting of alkali metal halides and alkaline earth metal halides.

2,470,133
MULTIPLE CRYSTAL HOLDER
Robert J. Bitner, Kansas City, Mo., assignor to Gasket Engineering Co., Inc., Kansas City, Mo., a corporation of Missouri
Application December 16, 1946, Serial No. 716,501
6 Claims. (Cl. 171—327)

1. In a multiple crystal holder, a body of insulating material provided with a plurality of wells

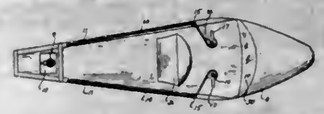


for the reception respectively of the crystal units; a contact plate of conducting material in each well respectively at one side thereof; a member of conducting material forming another side of each said well and being common to all thereof, said contact plate and the member of conducting material being in engagement with the crystal in the wells respectively at spaced apart points and an arm mounted for movement about an axis of rotation and into successive contact with the contact plates of the wells to selectively introduce the crystals into a circuit to utilize their respective frequencies, said arm and the block being always a part of the said circuit.

2,470,134
TEMPERATURE CONTROLLED OVEN FOR DUAL QUARTZ CRYSTALS
Robert J. Bitner, Kansas City, Mo., assignor to Gasket Engineering Co., Inc., Kansas City, Mo., a corporation of Missouri
Application December 16, 1946, Serial No. 716,502
6 Claims. (Cl. 171—327)

1. In a temperature controlled oven for crystals, a base having prongs thereon for mounting the oven in a supporting socket having appropriate electrical operating connections; a core having a cavity in each end thereof; a crystal on the base and in one of the cavities; a thermostat in the other cavity; and a heating coil wound on the said core.

2,470,135
ADJUSTABLE CUTTING AND MARKING DIE
Godfrey S. Bostock, Tixall, and Thomas G. Sharples, Stafford, England
Application January 4, 1946, Serial No. 639,132
In Great Britain October 5, 1945
4 Claims. (Cl. 69—2)

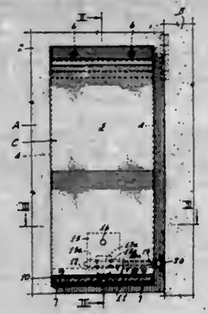


1. A die plate for center cutting and marking shoe uppers comprising, in combination, a base, a center cutting die removably mounted on said base, said die extending horizontally and being shaped to cut out the center of a shoe upper, a resiliently mounted horizontally movable toe portion marker, said toe marker being located at one end of said center cutting die and movable longitudinally thereof, a pair of resiliently mounted counter markers, one of said counter markers being located at each side of the other end of said center cutting die and movable in unison longitudinally thereof, and means for independently moving said toe portion marker and said counter portion markers relative to said center cutting die for adjusting said markers relative to the center cutting die for the center cutting and marking of shoe uppers of various sizes.

2,470,136
COMPOSITION FOR TREATING METALLIC WEAR SURFACES
Harry M. Bramberry, New Castle, Ind.
No Drawing. Application September 22, 1944, Serial No. 555,378
2 Claims. (Cl. 148—6.15)

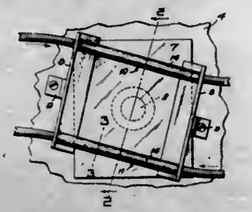
1. A new composition of matter for treating metallic wear surfaces which are subjected to the frictional load of another wear surface to improve the load-carrying characteristics thereof and establish compatibility with the second wear surface, which consists of an emulsion of finely divided graphite, a resin binder, a solvent for the resin binder in sufficient quantity to thin the same, phosphoric acid, an emulsifier, and water in such amount as to form a water in oil emulsion, the ratio of 100% phosphoric acid to the total of binder and graphite, by weight, having a value between .10 and .80 and the ratio of graphite to binder, by weight, being between 2:1 and 3:1.

2,470,137
STEERING MEANS FOR POWER-DRIVEN SURFBOARDS
Morris R. Brown, McMinnville, Oreg.
Application May 16, 1947, Serial No. 748,477
3 Claims. (Cl. 114—144)



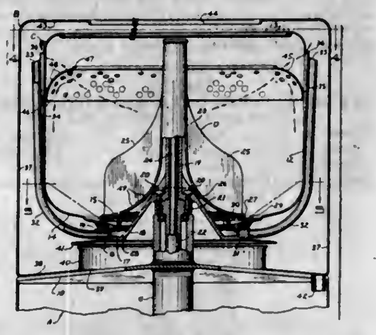
1. In a power-operated surf board comprising a hull, a deck closing the top of the hull and serving to support a person in prone position thereon, a power plant operatively mounted adjacent the stern of the hull and including a rudder, and a pair of cables connected at the rear ends thereof to the rudder and extending forwardly in substantial parallelism with the deck at the sides thereof, the improvement which includes a pair of outwardly-directed handles pivotally mounted and spaced apart upon the forward portion of said deck, said handles being spaced closely down upon the deck and individually secured directly to the forward ends of said cables.

2,470,138
TAMPERPROOF MAILBOX
Charles B. Browning, Vallejo, Calif.
Application June 27, 1947, Serial No. 757,393
1 Claim. (Cl. 232—22)



A mail box designed to be positioned on either a right-hand or a left-hand opening door and adjacent to a jamb on the hinged hide of the door; the mail box comprising a receptacle having a

mail-receiving slot at its top and a mail-discharge opening at its bottom; a plate hinged to the receptacle for closing the mail-discharge opening; a keeper anchored to the plate and having a pin-receiving eyelet; a pin guide secured to the receptacle and having a pair of eyelets arranged to register with and straddle the eyelet of the keeper when the plate is closed; a pin slidable in the eyelets of the guide and extending



through one side of the receptacle; the pin being moveable endwise for passing through the eyelets of the guide and keeper when the eyelets are in registration, and thus locking the plate against being opened; the other side of the box having an opening in registration with the eyelets of the guide and adapted to slidably receive the pin, whereby the pin may be placed on either side of the box so as to be adjacent to the jamb when the door is closed and thus be prevented from being withdrawn until the door is opened.

2,470,139
CAMERA SHUTTER
Arthur W. Campbell, Wheaton, Ill., assignor to the United States of America as represented by the Secretary of War
Application February 8, 1946, Serial No. 646,454
10 Claims. (Cl. 95—11)

1. In combination with a camera for taking photographs of detonating explosives and the like in a testing chamber having an opening in a wall thereof, a transparent member covering said opening, means mounting said camera exteriorly of said chamber with its lens directed toward said opening, a frame member mounted on a wall of the chamber adjacent said transparent member, and fuse means arranged on said frame and adapted to be detonated to apply a light resisting coating to said transparent member after a photograph is exposed, said coating consisting of combustion products by the detonation of said fuze means.

2,470,140
WASHING MACHINE HAVING ROTATABLE TUB WITH UPPER AND LOWER DISCHARGE MEANS
George P. Castner, Webster City, Iowa, assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Application December 21, 1945, Serial No. 636,304
5 Claims. (Cl. 68—23)

5. In a washing machine, a tub for containing liquid and material to be washed and mounted for spinning to discharge the liquid centrifugally, said tub having upwardly flared side walls which will cause the centrifugal liquid to move upwardly therealong for discharge from the upper end of the tub, said side walls curving inwardly at their lower ends and terminating in an annular recess adapted to receive liquid and sedimentary material during the washing operation, a circular flange extending inwardly over the outer part of the recess to produce a horizontal separation of liquid during the spinning of the tub whereby the main body of liquid adjacent thereto will be deflected upwardly and whereby the liquid and sediment below the inner edge of the flange will be restricted to the space in the recess below the level of the flange, means for preventing materials being washed from entering the recess with the sediment, and means for centrifugally discharging the contents of the recess independently of the main upward discharge of liquid from the tub.

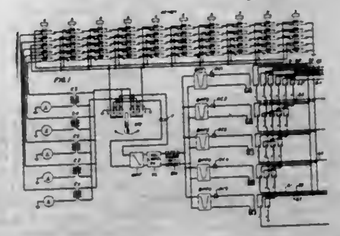
2,470,141
ADHESIVE WATERPROOF PLASTIC COMPOSITION
Lawrence C. Caves, Tulsa, Okla.
No Drawing. Application July 20, 1945, Serial No. 606,293
3 Claims. (Cl. 260—758)

1. An adherent plastic waterproof composition which stretches at 0° F. but at the same time maintains adhesion to a surface to which it has been applied when hot comprising asphalt having a softening point of about 160° to 220° F. and a penetration from 0 to 10 mm./10 at 77° F., rubber, residual asphalt having a viscosity at 210° F. of 300 to 500 seconds, a flash point from 300° to 650° F., a sediment content of not more than $\frac{1}{5}$ of one per cent, and free from moisture, and naphthenic oil having a viscosity as measured by Saybolt's viscosimeter of not below about 300 seconds at 210° F.

2,470,142
PRODUCTION OF CATALYSTS OF THE SILICA-ALUMINA TYPE
Charles C. Chapman, near Oklahoma City, Okla., and Hurshel V. Hendrix, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application November 20, 1943, Serial No. 511,184
4 Claims. (Cl. 252—451)

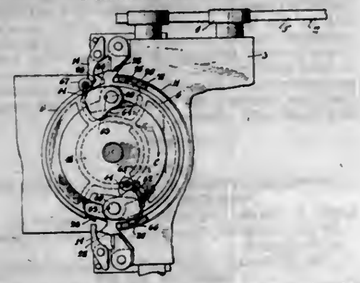
1. In a process for the preparation of a silica-alumina catalyst, which comprises forming a hydrous silica gel by adding a solution of sodium silicate to an aqueous acid solution, washing and partially drying said hydrous silica gel, washing said partially dried gel, thereafter subjecting the resulting washed gel to the action of an activating solution comprising aluminum sulfate, and subsequently washing and drying said activated gel, the improvement which comprises forming the hydrous silica gel by the addition of a solution of sodium silicate which has a concentration of approximately 22° Baumé gravity to a solution of sulfuric acid which has a concentration of approximately 21° Baumé gravity in the relative proportions of acids to silicate corresponding to about 250 to about 500 volumes of 21° Baumé sulfuric acid to about 400 volumes of 22° Baumé sodium silicate solution and maintaining the temperature during the mixing of the two solutions and setting of the gel below approximately 95° F., thereafter washing the hydrous silica gel until the pH of the effluent wash water is within the range of approximately 2.0 to approximately 2.15, drying the washed raw silica gel to a moisture content within the range of approximately 10 to approximately 16% by weight, washing said partially dried gel until the effluent wash water has a pH in excess of 3.0, subjecting said washed partially dried gel to the action of an aqueous activating solution comprising an 0.05 to 1.0 molar solution of aluminum sulfate, thereafter washing said activated gel until the pH of the effluent wash water is within the range of approximately 2.8 to approximately 3.4 and twice repeating said activation and washing treatments, the washing after the second activation being conducted until the effluent wash water has a pH within the range of approximately 3.0 to approximately 4.0 and the third washing after the third activation until the effluent wash water has a pH within the range of approximately 3.0 to approximately 4.7.

2,470,143
POCKET FLIGHT POSITION INDICATOR
John K. Christie, New City, N. Y.
Substituted for abandoned application Serial No. 527,767, March 23, 1944. This application October 17, 1946, Serial No. 703,765
5 Claims. (Cl. 35—12)



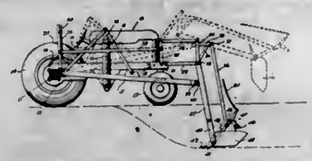
1. A flight position indicator having a pair of superimposed concentric discs formed with concentric aligned openings, the bottom one of which is formed with an indicia adapted to represent sky, earth and the horizon therebetween; and the other one of which is transparent and formed with a groove in which a section, imprinted with indicia to represent the pilot's view of the cockpit and windows thereof, through which the horizon may be viewed, is slidably disposed, and means for connecting said discs and section together so that the top disc may be rotated relative to the horizon while the section is simultaneously moved radially thereof, comprising a staple passing through an elongated slot formed in said section in an aligned position with said concentric openings and through said concentric openings forming an integral movable unit of said discs and section.

2,470,144
ISOMERIZATION AND ALKYLATION OF NORMAL PARAFFINS
Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application April 10, 1942, Serial No. 438,418
10 Claims. (Cl. 260—683.4)



1. The method of treating a normally liquid paraffinic naphtha fraction to improve the volatility and other properties thereof and to concomitantly produce isobutane, which comprises contacting the naphtha in liquid phase in the presence of a minor but effective amount of an added olefin at ordinary temperatures below about 150° F. with a mixed catalyst consisting essentially of a major proportion by weight of substantially anhydrous liquid HF and a minor but effective proportion by weight of BF_3 of the order of about 4–20 mol per cent on the basis of the mixed catalyst, and separately recovering the resultant normally liquid hydrocarbons and the produced isobutane from the reaction products.

2,470,145
MULTIFREQUENCY SIGNALING SYSTEM
Charles Clos, Middle Village, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application September 25, 1947, Serial No. 776,061
10 Claims. (Cl. 177—353)

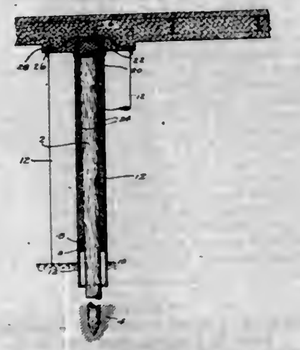


1. In a signaling system, in combination, sources of different electrical frequencies, means for sending a signal composed of a number of said frequencies, means for sending a signal composed of a different number of said frequencies, and a receiver responsive to all of the frequencies in each of said signals to register the same indication for each of said signals.

2,470,146
APPARATUS FOR CASTING STEREOTYPE PLATES
Curtis S. Crafts, Oak Park, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application July 15, 1944, Serial No. 545,065
4 Claims. (Cl. 22—2)

3. In a machine for casting semi-circular stereotype plates, in combination, a concave casting member for supporting a matrix, a convex core member cooperating therewith to provide a molding space between said members, means for rotating said convex core member, a pair of trunnions carried by said convex core member and projecting from one end thereof, double ended hooks operated by said trunnions, a cam carried at the outer end of each trunnion, a fixed head at one end of the machine, and cam operating means carried by said head for operative engagement with the respective cams, whereby said hooks are rocked alternately into and out of said molding space by their respective cams.

2,470,147
EXCAVATING MACHINE
Marvin H. Cramer, George, Iowa
Application December 19, 1947, Serial No. 792,777
4 Claims. (Cl. 214—138)

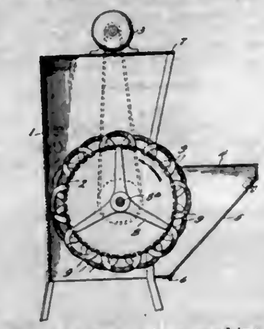


1. In a tractor having a hoisting machine including oscillatable hoisting arms, an apparatus for raising a scoop comprising pairs of bars pivotally connected together to form a parallelogram projecting forwardly from each side of the tractor, the adjacent ends of two of the bars of each parallelogram having pivotal connections with the contiguous side of the tractor frame, a boom swingable from the outer end of one parallelogram, a short rod swingable from the outer end of the other parallelogram, a horizontal bar connecting the lower end of the rod with the boom, the ends of the horizontal bar having hinged connections with the hoisting arms, a rod parallel with the boom, means attached to the adjacently disposed parallelogram connecting the upper ends of the boom and parallel rod for swingably supporting said rod, and means having pivotal connections with the lower ends of the boom and the rod, the pivotal connections between the lower end of the boom and the last mentioned means being carried by the scoop for connecting the scoop to the boom.

2,470,148
KEYBOARD FOR MUSICAL INSTRUMENTS
Galan W. Demuth, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1944, Serial No. 556,122
3 Claims. (Cl. 84—423)

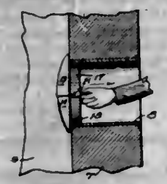
1. In a musical instrument having a keyboard, the combination of a plurality of key arms arranged laterally, a stationary key frame member, and a flat spring secured at one side thereof to said member and slotted at the opposite side thereof whereby to form a plurality of tongues, each of said tongues being rigidly secured to one of said arms whereby each of said arms is suspended from said member.

2,470,149
PILE
John H. Derby, Scarsdale, N. Y.
Application January 16, 1946, Serial No. 2,762
7 Claims. (Cl. 61—54)



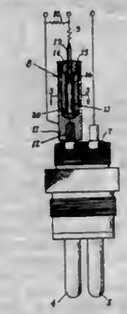
1. A non-rigid fireproof pile structure for piers and the like having, in combination, a core of elastic material, a prefabricated, semi-flexible, tubular asbestos-cement sheath, substantially uniformly spaced from said core, and a filling of relatively light concrete between said elastic core and said sheath.

2,470,150
FROTH FLOTATION OF OXIDE IRON ORE
Fred D. De Vaney, Hibbing, Minn., assignor to Erie Mining Company, Hibbing, Minn., a corporation of Minnesota
No Drawing. Application January 2, 1946, Serial No. 638,707
5 Claims. (Cl. 209—166)



1. Process of concentrating by anionic froth flotation the oxide iron of pulps of oxidic iron-bearing ores and ore-like materials including taconites containing silicious gangue, which comprises treating the pulp with a mineral acid of a strength and in an amount sufficient to clean the surfaces of the pulp particles, deliming the pulp, treating the delimed acid-treated pulp at a pulp density at least equivalent to 65% solids with an alkaline-acting alkali metal compound in an amount sufficient to raise the pH of the pulp to from 8.0 to 9.0, conditioning the alkalized pulp with a reagent charge consisting essentially of an aqueous dispersion of an anionically acting agent of the group consisting of alkali metal soaps of tallol and alkali metal resinates and an oily carrier, diluting the so-conditioned pulp with water, and subjecting the diluted conditioned pulp to froth flotation.

2,470,151
MACHINE FOR PICKING FEATHERS FROM FOWLS
Emmet B. Digby, Atlanta, Ga.
Application November 30, 1945, Serial No. 631,981
5 Claims. (Cl. 17—11.1)



1. A rod for a fowl picking machine formed of flexible material semi-circular in cross section at its center, the cross section increasing in depth towards the opposite ends of said rod, projections on the outer surface of the rod and extending substantially transversely of the rod, said projections being of varying height, and the highest of the projections being in the semi-circular section of said rod.

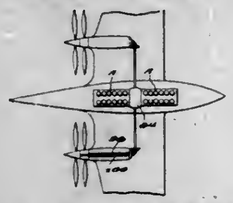
2,470,152
INSIDE FLUE STOP
Rebertha Dozier, Irvine, Ky.
Application December 13, 1946, Serial No. 716,121
4 Claims. (Cl. 126—319)

1. A flue stop adapted for closing the inner end of a stovepipe hole in a flue or chimney, said stop comprising a shell portion and a ring portion, said shell portion having a flat side to which said ring portion is secured and an opposite convex side, said shell portion being of substantially greater diameter than the ring portion and each of said portions being substantially circular, said shell portion and ring portion each being formed of pivotally connected substantially semi-circular sections, said stop being adapted to be folded for insertion through the stovepipe hole and into the interior of the flue or chimney to be turned in the flue or chimney for positioning the plane of the closure transversely to the axis of the stovepipe hole, and said closure being adapted to be thereafter extended for positioning said ring portion in the inner end of the stovepipe hole and with the marginal portion of the inner or flat side of the shell engaging the flue or chimney wall around said hole for closing the stovepipe hole at the inner end thereof, the adjacent edges of the sections of the shell portion being constructed and arranged to overlap when in extended position, and one of said shell sections being disposed above the other shell section and with the overlapped portion thereof overlying a portion of the lower shell section.

2,470,153
RESISTOR AND METHOD OF MAKING SAME
Anton M. Feller, Elizabeth, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application May 25, 1945, Serial No. 595,709
4 Claims. (Cl. 201—57)

1. The method of preparing a temperature compensating liquid containing resistor with a negative co-efficient of resistance with respect to temperature, which method comprises introducing glycerol into said resistor, sealing the same and then subjecting said resistor to prolonged heat of approximately 115 degrees centigrade and further subjecting said resistor to electrical conduction to stabilize the resistivity of the liquid therein contained.

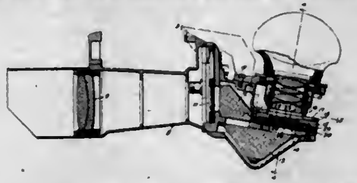
2,470,154
BOTTLE RACK
Mae H. Fitzgerald, Mineral Wells, Tex.
Application May 3, 1945, Serial No. 591,781
2 Claims. (Cl. 248—141)



1. In a bottle rack, a base, uprights mounted on said base, and a bottle supporting frame pivotally mounted between said uprights, said frame including two right angularly disposed base members having their extremities upwardly bent to form the sides of said frame, upper and lower peripheral rings secured to said bent extremities, the upper of said rings being split, a

boss formed at the top of said bottle frame member, a spring extending through said boss, hooks

adjacent the split in said upper ring and said spring being detachably secured to said hooks.

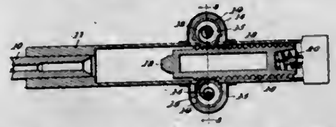


2,470,155
POWER PLANT ASSEMBLY
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, England
Application May 16, 1942, Serial No. 443,231
2 Claims. (Cl. 244—60)

1. In an aircraft having a fuselage and a wing on each side thereof, a propulsion arrangement, comprising, a pair of propellers carried by each wing, each pair being mounted for rotation about a common axis, power means for driving each pair of propellers, said power means comprising two identical power units, each unit comprising two internal combustion engines having a common crankcase terminating at one end in a facing, the ends of the crankshafts of said engines extending through the faced end, said power units being disposed in longitudinal alignment with the faced ends toward but spaced from one another, a gear housing disposed between said units and detachably secured to said facings, gearing within said gear housing and operatively connected with the crankshaft ends of each of said units, two pairs of shafts each connected with said gearing and each pair extending laterally from said gear housing, and means connecting each of said pairs of shafts to each of said pairs of propellers.

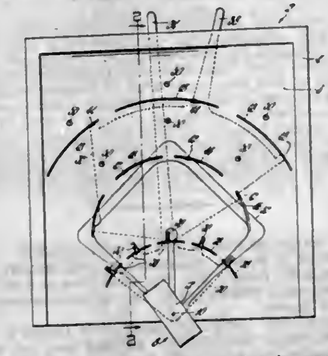
2,470,156
CONTRAST MEASURING APPARATUS HAVING RELATIVELY ROTATABLE POLARIZING ELEMENTS FOR OPTICAL SIGHTING INSTRUMENTS
Glenn A. Fry, Columbus, Ohio, assignor to the United States of America as represented by the Secretary of War
Application September 6, 1945, Serial No. 614,740
1 Claim. (Cl. 88—23)

A contrast meter attachment for an optical viewing instrument having an objective and an ocular defining a field of view, said attachment comprising a light transmitting element having a light-polarizing area extending over a portion only of the field of view of said instrument as seen through said ocular, an analyzer of polarizing material closely adjacent said element and adapted to extend over the entire field of view of said instrument as seen through said ocular, a frame mounting said analyzer for angular movement relatively to said element to vary the angular relation of the polarizing axes of said area and analyzer, and means for angularly moving said analyzer, said last-named means comprising



an extension on said frame having therein a slot extending radially of the optical axis, a lever pivoted on said instrument and having a pin upon its free end engaging said slot, and manually operable means connected to oscillate said lever to thereby proportionally vary the brightness of said area only, while leaving the remaining portion of the field of view unaffected.

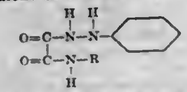
2,470,157
HAIR COMB DEVICE
Nate Gambino, Modesto, Calif.
Application May 7, 1946, Serial No. 667,857
4 Claims. (Cl. 132—11)



1. A comb device comprising a hollow, substantially flat, elongated body member, a plurality of comb teeth depending from one side of said body member, said teeth being relatively small in transverse width compared to the transverse width of the body member, the side wall of the body member adjacent the teeth terminating a short distance above the plane of the bottom wall of the body member and the bottom wall terminating a short distance from the plane of said side wall to thereby define openings between the root portions of adjacent comb teeth, said openings being inclined upwardly with respect to the plane of the bottom wall.

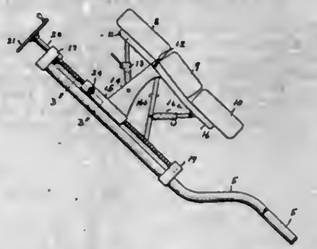
2,470,158
FIRING RATE CONTROL MECHANISM FOR AUTOMATIC FIREARMS
Antoine Gazda, Providence, R. I.
Application June 27, 1944, Serial No. 542,272
In Switzerland August 19, 1938
6 Claims. (Cl. 89—129)

1. In an automatic firearm, a barrel, a breech tube secured to said barrel, a breech block slidable in said breech tube, a pair of spiral recoil springs, a rack upon said breech block associated with each spring, a gear cooperating with each rack having one end of the associated recoil spring fixed thereto, a casing for each gear and associated spring fixed to said tube, a plate detachably connected to said gear whereby said plate may be replaced by another plate of different mass to vary the firing rate of the firearm, a fixable abutment extending axially through said gear to which the other end of each spring is connected, a lever connected to said abutment and means for connecting said lever selectively at any one of a plurality of spaced points upon said casing to vary the initial tension of the associated recoil spring.



2,470,159
GAME APPARATUS
Frederick L. Geary, Springfield, Mass.
Application January 23, 1948, Serial No. 3,935
3 Claims. (Cl. 273—88)

1. A game apparatus comprising in combination, a slotted game board, a rollable magnetized playing piece, a launcher having a forwardly inclined face for launching said playing piece onto said game board, a plurality of magnetized projections extending from beneath said game board through the slots in said game board, all adapted and arranged whereby said playing piece may be attracted to one of said magnetized projections upon and after launching from said launcher.



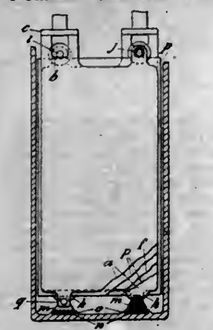
2,470,160
PHENYLSEMIOXAMAZIDE INSECTICIDAL COMPOSITIONS
Samuel I. Gertler, Washington, D. C., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application July 19, 1946, Serial No. 684,916
13 Claims. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

8. An insecticidal composition comprising a dust carrier, sticking agent, and an insecticidally active ingredient of the formula

in which R is selected from the group consisting of hydrogen and an aliphatic radical of not more than two carbon atoms, the carrier being present in an amount at least equal in weight to the said active ingredient.

2,470,161
TABLE CUSHION ADJUSTING MECHANISM
John A. Glasin, Galveston, Tex.
Application September 12, 1946, Serial No. 696,501
1 Claim. (Cl. 311—7)

In a table for treating patients, a base, a transverse cross rod on the rear end of the base, side bars whose rear ends are supported on said cross rod and whose forward ends are vertically movable, forward and intermediate transverse castings connecting said side bars, longitudinal, parallel shafts one of which is mounted to rotate in said castings, sleeves longitudinally movable on said shafts, side standards upstanding from said sleeves, a forward head cushion, an intermediate chest cushion and a rear abdomen cushion, forwardly and rearwardly extending bars pivoted to the upper ends of said standards and supporting said cushions, means for adjusting said respective bars vertically to vary the position of the cushions, said one of said shafts having an external, spiralled groove, a ball in the corresponding sleeve, a set screw threaded through said sleeve and operative against said ball to maintain the ball in the groove and means for rotating said shaft to move the standards and the assembly supported thereby forwardly or rearwardly relative to said side members.



2,470,162
ROCKET-PROPELLED DEVICE
Maurice H. Goehmann, Dearborn, Mich., assignor, by mesne assignments, to United States of America
Application December 27, 1943, Serial No. 515,653
3 Claims. (Cl. 102—49)

1. In a rocket-propelled device having a propelling rocket charge and a casing surrounding said charge, said casing having an open end through which the gases resulting from the burning of the charge exhaust to the atmosphere, concentric outer and inner elements disposed within said open end and being contoured to form a Venturi passage therebetween for said gases, said outer element having a coaxial portion and a coaxial rod element carried by said coaxial portion, said inner element being slidable on said rod element, and spring means urging said inner element into engagement with said

coaxial portion, said spring means being adapted to maintain said engagement during the development of pressures within said casing up to a predetermined maximum value and to permit said inner element to move axially and enlarge said passage upon the development of pressures above said predetermined value.

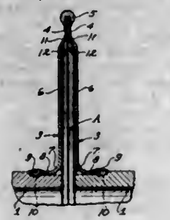
2,470,163
PLATE SUPPORT FOR ELECTRIC ACCUMULATORS
Robin Gray, Clifton Junction, near Manchester, England, assignor to The Electric Storage Battery Co., a corporation of New Jersey
Application November 29, 1944, Serial No. 565,692
In Great Britain November 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 12, 1963
5 Claims. (Cl. 136—79)

2. In an electric accumulator cell of the lead acid type, the arrangement in which the positive plates are suspended from the upper portion of the negative plates, and the negative plates are supported from the floor of the cell container, the support means for the negative plates including at least one longitudinally extending bar associated with the cell container floor and received between the end negative plates and spaced from the bottom edges of the positive plates, whereby the positive plates are free to grow downwardly, the intermediate negative plates resting on said bar, and means securing the end plates to said bar.

2,470,164
AUTOMATIC AIR GAUGE
Aubrey C. Hallmark, Naval Base, S. C.
Application December 18, 1947, Serial No. 792,485
6 Claims. (Cl. 137—69.5)

1. An automatic shut off air gauge comprising an elongated body having an air inlet channel and a chamber therein, an inlet valve controlling flow between said channel and chamber, an outlet valve for said chamber and having means whereby it can be opened by externally applied force, a member providing in one position mechanical contact between said valves so that opening of the outlet valve causes the inlet valve to open, shiftable means responsive to pressure within said chamber and connected to said member for moving said member out of said one position when a predetermined pressure in the chamber is attained, and variable biasing means operatively connected with said shiftable means.

2,470,165
REVOLVING ATTACHMENT FOR DINING TABLES
Boyd C. Hartzler, Sharonville, Ohio
Application April 2, 1946, Serial No. 659,011
1 Claim. (Cl. 311—32)

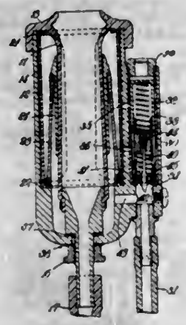


A revolving attachment for dining tables and the like, comprising in combination, a disc-like base adapted for positioning on a table, an upstanding pivot bolt rotatably positioned in the center of said base, a plurality of radially extending arms connected to said bolt, a rotatable roller mounted on the outer end of each of said arms, said rollers running on said base, a flange at the upper end of said bolt, a circular table top mounted upon said flange and running on said rollers, and an adjusting nut at the lower end of said bolt.

2,470,166
POLYMERIZATION OF ETHYLENE
Stanford J. Hetzel, Cheltenham, and Robert M. Kennedy, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Original application October 30, 1945, Serial No. 625,693. Divided and this application April 17, 1947, Serial No. 742,193
7 Claims. (Cl. 260—683.15)

1. A process for the polymerization of ethylene which comprises contacting ethylene under polymerizing conditions with a catalyst consisting essentially of silica gel, chromia and a metal selected from the group consisting of nickel and cobalt.

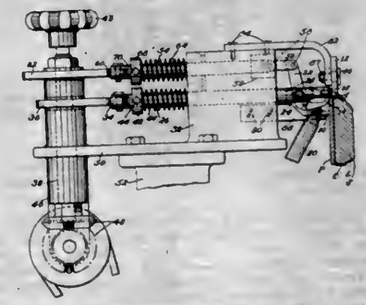
2,470,167
EXPANSION FLANGE
James C. Hobbs, Painesville, Ohio, and James C. Hobbs, II, Oil City, Pa.
Application August 31, 1945, Serial No. 613,808
5 Claims. (Cl. 285—90)



1. A flexible pipe connection comprising flexible, thin, metal plates clamped in face to face

contact and welded together at their outer peripheries by an annulus of weld metal C-shaped in transverse cross-section and having opposite, axially extending flanges at their inner peripheries to engage with and be connected to the outer surfaces of two adjacent pipe ends.

2,470,168
POLYMERIC 4-VINYLCYCLOHEXENE DIOXIDE COMPOSITIONS
Walter John Hornibrook, McMasterville, Quebec, Canada, assignor to Canadian Industries Limited, Montreal, Quebec, Canada, a corporation of Canada
No Drawing. Application February 20, 1948, Serial No. 9,970. In Canada May 30, 1947
13 Claims. (Cl. 260—17)



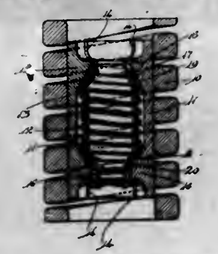
1. Process of preparing a polymeric composition which comprises forming a compatible mixture of 4-vinylcyclohexene dioxide and at least 5%, by weight of said 4-vinylcyclohexene dioxide, of a cellulose ester and maintaining said mixture at a temperature of 20° C.–110° C. in the presence of a polymerization catalyst until said 4-vinylcyclohexene dioxide is substantially completely polymerized.

2,470,169
MECHANICAL MILKING APPARATUS
Cyril George Howse, Farmoor, Botley, England
Application November 15, 1945, Serial No. 628,702
In Great Britain January 11, 1945
9 Claims. (Cl. 31—67)

1. A teat cup for a mechanical milking appliance comprising a cup shaped rigid housing of non-ferrous light alloy open at the upper end and having an outlet at its lower end to which a flexible milk flow tube is secured, means to maintain constant vacuum in said tube, said housing having two connectors to which flexible tubes are connected, means to supply alternating pressure to said connectors, a flexible liner for reception of one teat of a cow, a capping on said flexible liner, squeeze mechanism comprising a pair of contact blades pivoted on thrust blades pivoted on a frame surounding the liner, a secondary flexible sheath disposed between said squeeze mechanism and the housing and means to apply vacuum through said connectors to the spaces between the housing and the secondary sheath and between the secondary sheath and the flexible liner.

2,470,170
MACHINE FOR TURNING THE PLATFORM COVERS OF PLATFORM SHOES
Arthur R. Hubbard, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 11, 1945, Serial No. 598,871
12 Claims. (Cl. 12—1)

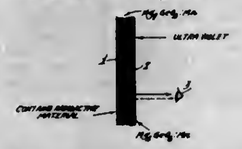
8. In a machine for turning the platform covers of platform shoes, a device for gripping the margin of a platform cover of a shoe, means for advancing and retracting the gripping device, means for closing and opening the gripping device in timed relation to the advancing and retracting movements to cause the gripping device to grasp the margin of the platform cover of the shoe at the beginning of each retracting movement and to remain closed during the retraction, and a tool carried by the gripping device and movable therewith as the gripping device advances and retracts to partially turn the platform cover and thereby bring the marginal portion of the platform cover into a position to be grasped by the gripping device.



2,470,171
POLYMERIZATION OF OLEFINS
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Original application October 30, 1945, Serial No. 625,694. Divided and this application April 17, 1947, Serial No. 742,194
6 Claims. (Cl. 260—683.15)

1. A process for the polymerization of olefins containing three or more carbon atoms per molecule which comprises contacting the olefins under polymerizing conditions with a catalyst consisting by weight of 80%–99.98% silica gel, 0.01%–10% chromia and 0.01%–10% of a metal selected from the group consisting of nickel and cobalt.

2,470,172
FRICTION BOLSTER SPRING
Charles P. Leese, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a corporation of New Jersey
Application March 8, 1944, Serial No. 525,536
9 Claims. (Cl. 267—9)



1. A friction bolster spring for a railway car truck comprising a load supporting spring, a plurality of friction shoes arranged within the load supporting spring to bear directly against the inner perimeter thereof and formed on their inner surfaces with inclined wedge forming faces, and

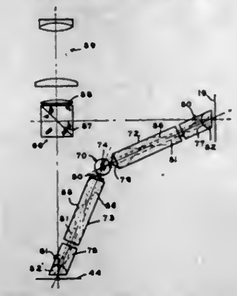
a resilient member arranged within the space defined by said shoes and formed at one end with a portion of decreasing diameter to provide an integral cone shaped wedge portion positioned to exert pressure against the wedge forming faces

of said shoes, means at the other end of the resilient member connecting said resilient member to the shoes, whereby the force exerted by said resilient member presses the shoes outwardly against said inner perimeter of the spring to damp the movement thereof.

2,470,173
PHOSPHOR MATERIALS
Humboldt W. Leverens, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,800
2 Claims. (Cl. 250—80)

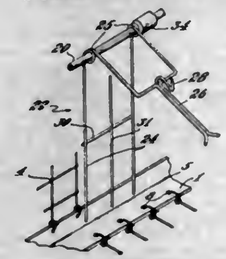
1. A composite phosphor screen comprising a layer of magnesium orthogermanate and manganese activator for excitation by corpuscular energy and a second layer of magnesium germanate of greater magnesium oxide content than that contained in said orthogermanate and manganese activator, said last-mentioned germanate containing a radio active material.

2,470,174
COLLAPSIBLE BOX
Albert M. Lewis and Peter B. Weller, Detroit, Mich.
Application December 22, 1947, Serial No. 793,206
5 Claims. (Cl. 229—41)



1. A collapsible box of the class described, formed from a single sheet of cardboard and comprising: a bottom; a pair of oppositely disposed side walls swingable to extend at right angles to said bottom and to extend parallel thereto; a cover swingable on one of said side walls and embodying a pair of swingable sections; a pair of oppositely disposed end walls swingable to extend at right angles to said bottom and to extend parallel thereto; a wire frame embodying a pair of oppositely disposed side rails and a pair of oppositely disposed end rails, said end rails extending exterior to said end walls and preventing outward swinging of the same and said side rails extending along the upper edge of said side walls; and a knuckle forming member on the upper edge of each of said side walls for swingably connecting the side wall at its upper edge to one of said side rails.

2,470,175
LIQUID HYDROGEN FLUORIDE COMPOSITION
Carl B. Linn, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Original application May 31, 1945, Serial No. 596,924, now Patent No. 2,421,951, dated June 10, 1947. Divided and this application November 29, 1946, Serial No. 713,073
6 Claims. (Cl. 252—429)

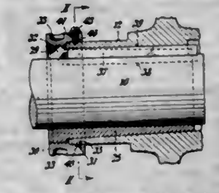


1. A composition of matter consisting essentially of liquid hydrogen fluoride having dissolved therein, in an amount of from about 1% to about 50% by weight of a substantially non-oxidizing compound soluble in liquid hydrogen fluoride and selected from the group consisting of the acids of phosphorus and their anhydrides and esters.

2,470,176
SURFACE COMPARISON MICROSCOPE HAVING LIGHT CONDUCTING MEMBERS PROVIDING GRAZING AND DIFFUSE ILLUMINATION
Nils Lindgren, Irondequoit, and Paul A. Roos, Greece, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 18, 1946, Serial No. 655,094
4 Claims. (Cl. 88—14)

1. In a surface comparison microscope, a body member having passages extending therethrough and a chamber connecting said passages, a locating member for holding a specimen surface in juxtaposition to one of said passages, a separable adapter member for holding a standard surface in juxtaposition to another of said passages, optical means within said chamber and passages for forming enlarged adjacent images of said surfaces in a field, and illuminating means for said surfaces comprising a single light source and a plurality of pairs of aligned light conducting members, one of the pairs having an outermost member thereof held within said separable adapter member to direct light rays onto the standard surface, said conductors having refracting and reflecting means in optical alignment therewith for directing from said source a beam of substantially parallel light rays at grazing incidence upon said surfaces and additionally providing from said source an illumination of diffused light rays on the surfaces.

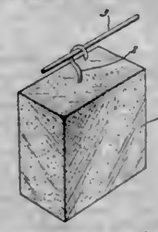
2,470,177
LOBSTER TRAP
Joseph R. MacDonald, Winchester, Mass., assignor to Macmor Corporation, Boston, Mass., a corporation of Massachusetts
Application February 2, 1946, Serial No. 645,125
2 Claims. (Cl. 43—100)



1. In a trap of the type having a box-like structure provided with at least one side wall having an elongate, horizontally extending opening, a trapdoor comprising a horizontally extending rod running lengthwise along the upper end of said opening, a plurality of counter-balanced gates pivotally supported by said rod to swing inwardly so as normally to close said opening, each gate comprising spaced wires extending vertically from the bottom of said opening with their central portions looped about said rod so as to provide a pivotal connection therewith permitting the gate to swing inwardly, the upper ends of said wires being bent inwardly into converging relation so as to provide a counterweight normally holding the gate closed, a lure-holder secured to said counterweight, and an upstanding abutment at the lower part of said opening engageable with the lower end of said gates to prevent outward swinging movement thereof.

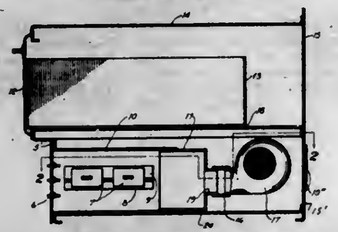
2,470,178
SEMIAUTOMATIC ARC WELDING APPARATUS AND METHOD
Karl Kristian Madsen, Lomas de Zamora F. C. S., Argentina, assignor to Aktieselskabet Esab, Copenhagen, Denmark
Application December 30, 1947, Serial No. 794,650
In Denmark March 16, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 16, 1965
5 Claims. (Cl. 219—8)

1. Apparatus for electric arc welding with rod-shaped coated electrodes, comprising a frame to rest on the work, a lever pivotally supported by said frame, and electrode holding means supported by said lever at one end thereof to hold an electrode at substantially right angles to the pivot axis of the lever, the aforesaid members being so designed and related to one another that the length of the perpendicular from said pivot axis to the longitudinal axis of the electrode is substantially equal to the length of the perpendicular from said pivot axis to the line of intersection between the work on which the frame is supported and the plane of rotation of the electrode.



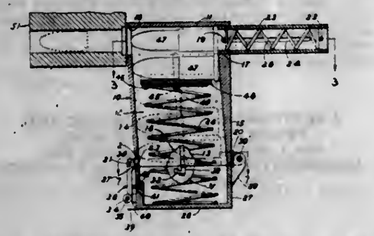
2,470,179
HOLDING ELEMENT FOR HUB COLLARS
Joseph Ellsworth McCloskey, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 26, 1945, Serial No. 607,133
1 Claim. (Cl. 287—52.06)

Means for holding a rotary part to a shaft which comprises a grooved hub on the rotary part, a split tapered bushing interposed between hub and shaft, the end of the bushing protruding from the hub and being threaded exteriorly of the hub; a grooved hub collar surrounding the protruding end of the bushing threaded interiorly to engage the thread on the protruding end of the bushing; the grooves of the hub collar and the hub being in opposed relation to each other; and holding elements in said grooves consisting of balls seated therein and preventing lateral translation of the hub collar in relation to the hub, whereby rotation of the hub collar effects even lateral translation of the bushing and tightens or loosens the hold of the hub on the shaft according to the direction in which the hub collar is rotated.



2,470,180
CARBONACEOUS DEODORIZER AND PROCESS OF MAKING SAME
Rex L. McHatton, South Bend, Ind.
Application October 2, 1945, Serial No. 619,878
3 Claims. (Cl. 252—427)

1. A deodorizer consisting of a mixture of activated charcoal, sawdust, and plaster of Paris in

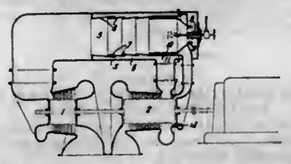


proportions of approximately two parts, three parts and three parts by volume respectively, the charcoal serving as an absorbing agent, the sawdust serving as a filler and the plaster of Paris serving as a bonding agent by which said materials are combined into a solidified odor permeable mass.

2,470,181
HEATING DEVICE ADAPTED TO ELECTRIC RANGES
Angus W. McIntyre, Victoria, British Columbia, Canada
Application March 10, 1948, Serial No. 14,013
In Canada February 13, 1948
1 Claim. (Cl. 219—39)

A heating device in combination with the toe cove base of an electric range, a housing secured in said base and consisting of two integral sections, one of said sections being rectangular and the other being funnel shaped and flexibly connected to a blower, angle members secured on the side walls of said rectangular section of the housing and supporting heating elements, a grill in the outer face of the base, said housing resting on an insulated plate, as shown and described.

2,470,182
LOADER FOR REVOLVERS
Ernest L. Peck, Erie, Pa.
Application September 27, 1946, Serial No. 699,602
2 Claims. (Cl. 42—89)

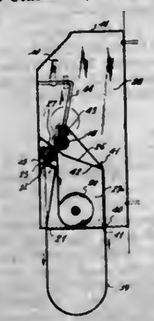


2. A device for loading a revolver or the like, comprising a magazine having a guide slot and an open end and provided with cartridge discharge means, ejecting means to discharge cartridges through said discharge means, a hinged cover secured to the magazine and adapted to cover the open end of the same and having a short guide slot and a locking slot, the arrangement being such that when the hinged cover is closed the short guide slot registers with and becomes a part of the first named guide slot, a follower plate including an extension for engaging within the guide slots and adapted for being locked within the locking slot, and a main spring associated with the follower plate and arranged within the magazine and within the cover and adapted for causing the follower plate to move cartridges into position for being injected into a revolver cylinder or the like.

2,470,183
GAUGE FOR LAYING ASPHALT SHINGLES
Henry P. Peters, Lester, Iowa
Application February 13, 1948, Serial No. 8,263
2 Claims. (Cl. 33—188)

2. A shingle spacing gauge, comprising a longitudinally tapered channel-like body member, an upstanding stop bracket secured to the bottom wall of the body member adjacent its forward end, said stop bracket being formed with a forwardly extending top flange overlying said forward end, the rear portion of the body member being apertured at its bottom wall, a looped leaf spring secured at one end thereof to said body member and formed with a depending bowed portion projecting through the aperture in said bottom wall, a vertical bar member adjustably secured to the rear end of the body member and formed with a forwardly extending arm spaced below said bottom wall and extending adjacent said depending bowed portion, and a lever pivoted to said body member and having a first arm underlying the other end of the leaf spring and a second arm projecting upwardly forwardly adjacent said vertical bar member.

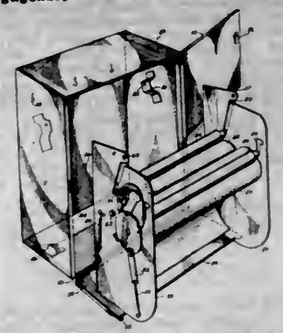
2,470,184
ARRANGEMENT FOR COOLING COMBUSTION CHAMBERS
Hans Pfenninger, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland
Application December 16, 1942, Serial No. 469,247
In Switzerland July 12, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 12, 1961
9 Claims. (Cl. 60—41)



1. In a combustion turbine plant including an air compressor driven by a turbine to supply compressed air to a combustion chamber that develops a pressure gas for driving the turbine; a combustion chamber comprising an outer pressure-resisting casing, a heat resistant wall within and spaced radially from the casing, said wall comprising a plurality of rings with annular passages between adjacent rings a burner assembly including a fuel nozzle within a shell spaced from said wall by an annular passage, said shell terminating short of the annular passage of the heat resistant wall which is the closest to the fuel nozzle, means for introducing cooling air under pressure around the fuel nozzle and to the entrance to the space between said wall and said casing, and means for introducing cooling air at the entrance to said annular passage between said wall and said burner assembly shell under a higher pressure than that of the air supplied to the fuel nozzle and to the entrance to the space between said wall and said casing.

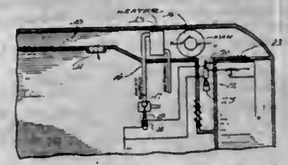
2,470,185
VIBRATION ISOLATOR
Ervin Pietz, Cambridge, Mass., assignor to Lawrence N. Barry, George W. Foss, and Ervin Pietz, doing business as The L. N. Barry Company, Cambridge, Mass.
Application May 29, 1945, Serial No. 596,483
2 Claims. (Cl. 248—22)

1. Means adapted to be interposed between two bodies for the purpose of isolating vibration one from the other comprising an upper cylindrical rubber element in at least partial telescoped relation with a lower cylindrical rubber element, and an interposed relatively rigid piece engaging both of said elements so that the weight of said body is carried by said elements in series, said piece having inclined walls out of contact with said elements whereby said elements are free to deflect laterally to maintain all natural frequencies of the system low.



2,470,186
CONTROL MEANS FOR TOWEL CABINETS
Laurence L. Price, Los Angeles, Calif.
Application March 29, 1946, Serial No. 658,042
3 Claims. (Cl. 312—38)

1. In a towel dispenser, a measuring roll over which toweling is trained from a supply, a mangle normally pressing the toweling against one side of the roll, a tilt bar movable by applying tension to the toweling for pressing the toweling against another side of the roll, and means for arresting rotation of the roll.

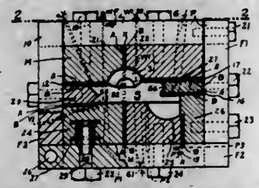


2,470,187
TOWEL DISPENSER
Laurence L. Price, Los Angeles, Calif.
Application July 3, 1947, Serial No. 758,869
9 Claims. (Cl. 312—38)

1. In a towel dispenser, a measuring roll rotatable as the toweling is dispensed, a stop mechanism actuated by and controlling the roll including mutually engageable stops, one of said stops being movable into and out of a position wherein it is engageable by the other stop, the other stop being movable by the measuring roll into a position engageable with the first stop, means for

automatically reversing the measuring roll after the stops have mutually engaged and tension on the toweling has been released, and means operable by reverse movement of the roll for causing the first stop to clear the second stop during the reverse movement.

2,470,188
SENSIBLE HEAT CONTROL SYSTEM
Lewis B. Rhodes, Washington, D. C., and Timothy J. Lehane, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation, a corporation of Delaware
Application December 3, 1943, Serial No. 512,698
14 Claims. (Cl. 236—44)



1. In a heat control system, means including an electrically energized element for supplying heat to an enclosed space and a control thermostat for opening and closing a control circuit for said element in response to any of a series of effective temperatures of corresponding comfort value within said space; said thermostat including a portion responsive to the temperature of the space, another portion including a cooling element whose effectiveness increases in relation to increased air movements across the thermostat, and means for applying auxiliary heat to the thermostat whereby the functioning temperature at the thermostat is normally greater than the temperature of said space.

2,470,189
METHOD FOR MANUFACTURING MOLDS
George A. Rubissow, New York, N. Y.
Application September 9, 1944, Serial No. 553,403
2 Claims. (Cl. 22—193)

1. A casting method for manufacturing a compound mold from a molten metal by means of an

empty mold casing, a pattern and sectioning sheets made from solid material, said compound mold being composed of at least two mold-parts and having inside of it a closed contour mold cavity which is a female impression of said pattern, said method comprising: (1) maintaining said pattern inside of said empty mold casing at a distance from the inner surfaces of said empty mold casing; (2) providing at least two pairs of adjacent, parallel one to another, and non-adherent one to another sectioning sheets, one edge of said sheets contacting said pattern on the surface thereof, the other edge of said sheets

extending to the inner surface of said empty mold casing; (3) filling said empty mold casing with said molten metal thereby entirely embedding in said molten metal said pattern and said sectioning sheets; (4) causing said molten metal to solidify into an integral solid with said pattern and with said sectioning sheets; (5) separating the sheets of each pair of sectioning sheets thus dividing said integral solid into said mold parts; (6) removing said pattern from said mold parts thus providing said female impression of said pattern inside of mold parts, whereby when said mold parts are assembled together they form said compound mold.

2,470,190
PRODUCTION OF OLEFIN POLYMERS
Louis Schmerling, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application November 29, 1946, Serial No. 713,108
12 Claims. (Cl. 260—683.15)

1. A process for producing a higher boiling hydrocarbon which comprises reacting an olefinic hydrocarbon and a monohaloalkane in the presence of a metal phosphate catalyst at conversion conditions of temperature and pressure.

2,470,191
RAPID RIPENING OF CELLULOSE ESTERS
George W. Seymour, Blanche B. White, and Anthony J. Bellucci, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application December 6, 1945, Serial No. 633,268
11 Claims. (Cl. 260—227)

1. In a process for the production of highly stable ripened organic acid esters of cellulose wherein cellulose is esterified with an aliphatic acid anhydride employing an inorganic acid as catalyst and an aliphatic acid as a solvent, the steps which comprise neutralizing the acid catalyst in the primary cellulose ester solution obtained on completion of esterification by adding an alkaline neutralizing agent thereto, and then ripening and stabilizing the cellulose ester in the primary solution to a secondary cellulose ester at a temperature of at least 125° C. and at a pressure of at least 20 pounds per square inch.

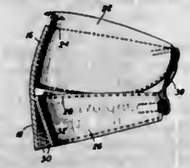
2,470,192
RAPID RIPENING OF CELLULOSE ESTERS
George W. Seymour, Maplewood, Blanche B. White, Summit, and Anthony J. Bellucci, East Orange, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 10, 1947, Serial No. 773,288
14 Claims. (Cl. 260—230)

1. In a process for the production of highly stable, ripened organic acid esters of cellulose wherein cellulose is esterified with a lower aliphatic acid anhydride, employing an inorganic acid as catalyst and an aliphatic acid as a solvent, the acid catalyst in the primary cellulose ester solution obtained on completion of esterification is neutralized by adding a neutralizing agent thereto, and the cellulose ester in the primary solution is ripened to a secondary cellulose ester of the desired acyl value, the step of effecting said ripening under pressure and at a temperature of at least 125° C. in an oxygen-free, inert atmosphere.

2,470,193
TREATMENT OF HYDROCARBONS
William M. Stratford, New York, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application December 31, 1940, Serial No. 372,493
1 Claim. (Cl. 196—52)

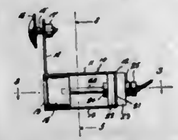
A method of converting higher boiling hydrocarbons to hydrocarbons of lower boiling point comprising vaporizing the higher boiling hydrocarbons and passing the vapors for a time sufficient to effect a substantial amount of such conversion, in contact at a cracking temperature with a magnesium silicate catalyst produced by subjecting lime and silica to reaction with a soluble magnesium salt in the presence of water at a superatmospheric temperature.

2,470,194
BURN-IN TOOL
Charles Roadnan Terry, Tulsa, Okla.
Application January 23, 1948, Serial No. 3,932
1 Claim. (Cl. 219—21)



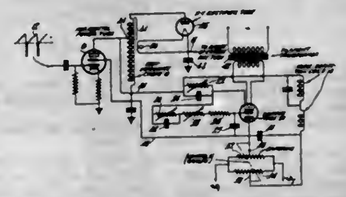
In a burn-in tool, the combination of a heated shank, a resilient work engaging blade secured at one end thereof to said shank and disposed at one side of the latter, said blade being urged by its resiliency in contact with the side of said shank but being adjustable from a position where a major portion of its length contacts said shank to a variably spaced position relative thereto, and means for adjusting said blade comprising a screw extending transversely through said shank and having an end thereof engageable with said blade for pressing a major portion of the blade out of contact with said shank to a variably spaced position relative thereto.

2,470,195
QUARTER BOOT
James G. Thompson, Winston-Salem, N. C.
Application January 19, 1948, Serial No. 2,991
1 Claim. (Cl. 54—82)



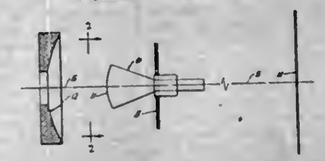
A boot for horses comprising an outer layer of flexible material having opposed notches therein

defining an integrally connected upper and lower section, cushioning material attached to each section, the said upper section being bowed to accommodate portions of a horse's foot, a shim disposed between a portion of the lower section



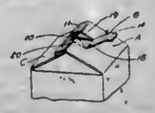
and said cushioning material forming a bight to fit in a recess normal in the foot region of horses, fastening means at the terminals of each section, means for connecting the fastening means to limit the relative travel of the upper and lower sections.

2,470,196
ELECTRICAL CONNECTOR
William Henry Thrasher, Birmingham, Ala.
Application November 28, 1947, Serial No. 788,543
1 Claim. (Cl. 173—361)



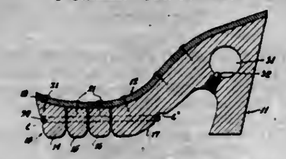
A device of the character described comprising a U-shaped body member, a socket member affixed between the arms thereof, a pair of contact members extending through the base of the body member to the socket member, insulation between the contact members, a clamping arm formed integrally with the body and extending at a right angle therefrom and fastening means carried at the outer end of said clamping arm.

2,470,197
ELECTRON BEAM DEFLECTION CONTROL SYSTEM
Charles Edward Torsch, Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application September 25, 1946, Serial No. 699,172
7 Claims. (Cl. 315—27)



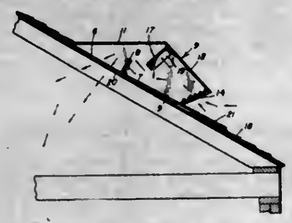
4. In a cathode ray beam deflection circuit, a power output tube including at least an anode and a cathode and adapted to deliver a cyclically varying current output, an autotransformer having a portion of its winding connected in the anode-cathode circuit of said power output tube, a pair of cathode ray beam deflection coils connected effectively in shunt with the said portion of said autotransformer winding, a source of anode potential for the said power output tube connected in series with said pair of cathode ray beam deflection coils and means including a rectifier for deriving a direct voltage from the entire winding of said auto-transformer.

2,470,198
IMAGE FORMING PROJECTION WITH SCHMIDT-TYPE OPTICAL SYSTEM
Ernest H. Traub, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 27, 1946, Serial No. 699,729
2 Claims. (Cl. 88—24)



1. In an image-forming optical system having an optical axis, a spherical mirror, a substantially rectangular image source, a correcting plate defining an aperture of a diameter sufficiently large normally to permit coma effects to appear in the viewed image, and stop means for preventing such effects, said stop means being located generally in the plane of the correcting plate and being so configured with respect to the marginal shape of said image source that the diameter of the effective light-transmitting area of said stop means varies from a minimum, in the direction of the diagonal through said rectangular image source, to a maximum in the direction of the smallest dimension taken across said rectangular image source and passing through the optical axis.

2,470,199
CARTON AND SECONDARY CLOSURE THEREFOR
George Stewart Vivian, Surbiton, England
Application September 7, 1945, Serial No. 614,896
2 Claims. (Cl. 229—17)



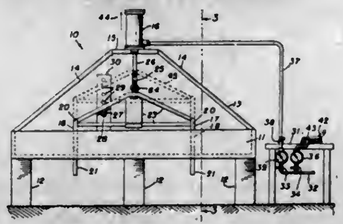
1. In a carton, the combination of, side walls, the centers of the upper edges of which are folded inwardly to form a bellows fold, and back and front walls flattened on either side of the top portions of said folded side walls to form a peaked roof, said back wall having a flap extending from the top thereof folded downwardly towards said front wall, said front wall having an area at the top thereof adapted to be torn downward and bent outward and downward to form an opening flap, the top edge of said opening flap overlying the edge of the downwardly folded flap of said back wall when the carton is in the initial sealed condition, the converging edges of said inwardly folded side walls confining the flow of material through said secondary opening when said flap is torn downward.

2,470,200
SHOE SOLE
Irving D. Wallach, Fort Washington, N. Y., assignor to Associated Development & Research Corporation, New York, N. Y., a corporation of New York
Application April 4, 1946, Serial No. 659,605
3 Claims. (Cl. 36—33)

1. A shoe sole comprising a plurality of adjacent, transversely extending, thick blocks which are normally in wall-to-wall abutting relationship and which collectively define the complete sole area, the bottom surfaces of said blocks being in a common plane and the respective abutting walls being normal thereto, the top surfaces of said blocks collectively defining a concave surface; and spring means extending through said blocks from the shank portion thereof to the toe and being normal to the said abutting wall surfaces of said blocks, said spring means being substantially symmetrical with respect to the toe-to-shank center line of the sole and secured at the ends thereof to articulate the respective blocks.

2,470,201
ROOF VENTILATOR
John F. Werner, Tracy, Minn.
Application August 8, 1947, Serial No. 767,566
1 Claim. (Cl. 98—42)

A roof ventilator comprising a base plate having an opening, an upwardly struck baffle at the front edge of the opening, a bottomless housing having its lower edges secured on top of said plate to enclose the baffle and covering the opening, said housing having an open front, a second baffle extending downwardly from the underside of the housing in front of the first baffle, a forwardly projecting lip on the upper edge of the first baffle and a forwardly projecting lip on the lower edge of the second baffle, and louvers supported at the open front of the housing.



2,470,202
FILTERING PROCESS
Leonard Wickenden, Westport, Conn.
No Drawing. Application April 19, 1947, Serial No. 742,725
6 Claims. (Cl. 127—55)

1. In the purification of a sugar syrup prior to a decolorizing treatment, the improvement which comprises filtering by gravity flow through a filter bed comprising granular particles of coke having on the exterior surfaces thereof a coating of uncalcined diatomaceous earth to remove both suspended and coloring matter.

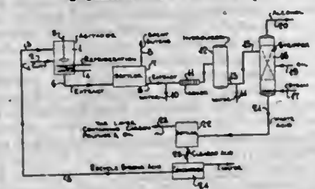
2,470,203
FILTER
Leonard Wickenden, Westport, Conn.
No Drawing. Application May 8, 1947, Serial No. 746,869
5 Claims. (Cl. 127—49)

1. An improved filter for the purification of solutions containing coloring and other organic impurities which comprises an admixture of particles of granular petroleum coke, some particles of which are coated with phosphoric acid and other particles of which are coated with a compound of a metal of the group consisting of calcium and magnesium which will react with the phosphoric acid to form an insoluble phosphate.

2,470,204
RADIATOR TESTING DEVICE
Dewey W. Wishon, Oak Ridge, Tenn.
Application April 3, 1947, Serial No. 739,202
1 Claim. (Cl. 73—51)

In a radiator testing device, the combination of a water tank supported in an elevated position, an upstanding frame provided at one edge of said tank, a set of vertical guides provided on said tank under said frame, a forwardly extending rack slidable in said guides and immersible in said tank, a pneumatic lift cylinder including a vertically reciprocable piston rod mounted on said frame, a connecting element secured to said piston rod and to said rack, an upright bar provided on said tank and formed with a vertical row of apertures, a locking bolt provided on said rack and receivable selectively in said apertures, a compressed air line connected to said cylinder, a radiator testing tube connected to said air line, and means for independently controlling air pressure in said cylinder and in said tube.

2,470,205
SOCKET ASSEMBLY
Marshall Homer Alidredge, Detroit, Mich., assignor to Thompson Products, Inc., a corporation of Ohio
Application April 20, 1944, Serial No. 531,885
8 Claims. (Cl. 287—90)



2. A tie rod joint assembly comprising a first socket member having a stem adapted to be secured to a tie rod, a second socket member nested in the first socket member having a stem adapted to be secured to a second tie rod, and a stud universally tiltable relative to both members and having a shank projecting through both members adapted to be secured to a steering arm.

5. A joint assembly comprising superimposed nested apertured socket members in universally tiltable and rotatable relation, said nested socket members forming a stack, and a stud having a head seated in one of said socket members at an
